Her form was less erect than of old, her speech  
less abrupt and vigorous. Sometimes Martha  
fancied that she was softening in her feelings  
toward Bessie, but she had met with so many  
rebuffs that she dared not broach the subject  
again.

"Laws! child, who can that be coming up  
the road?" exclaimed grandma as she and  
Martha sat busy with their sewing one morn-  
ing. "It looks like Seth Newman with the  
mail. He's waving something in the air, what-  
ever it may be. Run quick, Martha, and get  
it. Bless me, I believe it's a valentine! I  
most forgot this was Valentine's Day."

All of Aunt Martha's fifty years could not  
keep her from blushing. It was thirty years  
since she had received a valentine, and that was  
lying in her trunk yet, yellow with age and  
tied with a faded pink ribbon.

"Dear me!" she cried, nervously, as she  
came back from the gate, "there's two, one  
for each of us."

She opened hers, a large, square envelope  
with a quaint and dainty card within, and a  
note, with something she folded in it.

She could not speak for a moment, but stood  
looking at her mother with the tears filling her  
eyes.

"O mother!" she cried, "it's from Bessie's  
baby. He's just four months old to-day.  
Shall I read the letter Bessie sends with his  
little offering?"

Her mother nodded assent, taking off her  
spectacles and wiping them, and clearing her  
throat, as hard-hearted old people are apt to  
do when they do not wish to show that they  
are mastered by their emotions.

"We are all so happy," Martha read,  
"James and baby and I. Baby will be four  
months old when this reaches you on St. Val-  
entine's Day. James' talent has at last been  
recognized. He has played to some of the  
crowned heads of Europe; the Paris journals  
have lauded him to the skies, and he has been  
engaged by different musical societies in Lon-  
don and America to appear before the most  
cultured audiences at prices which to me ap-  
pear fabulous. You see we have already  
started on our tour, as I write this from Liver-  
pool. James bade me inclose this little  
check as a slight expression of the gratitude we  
owe you."

"Well, I'm glad the fiddlin' has come to some  
good," grandma said sharply, fearing to give in  
too much at once.

But Martha saw her vantage ground and  
claimed it every inch.

"Now open yours, mother—let's see what's  
in it."

Grandma's hand trembled as she sought to  
break the seal, but she had no need to do so,  
for a shadow darkened the doorway, and ere  
she had time to see what was coming some one  
threw into her lap a bundle of dainty em-

broideries and laces with a dimpled face in their  
midst—a laughing baby face that looked as if it  
were just made for grandmother to kiss.

"There's your valentine, grandma; you do  
forgive me, don't you?"

Who could resist those big brown eyes and  
that sweet, pleading face and the chubby little  
fists that were flying in all directions as their  
owner made himself quite at home in his  
grandma's lap.

"Law, it's so long since I've held a baby!"  
cried Grandma Ames, trying to speak grimly,  
but Bessie knew she was vanquished and her  
mother's heart rose in triumph.

With the maternal instinct still strong  
within her, the defeated old lady was trying to  
get the baby out of its long wraps.

Leaving the two together in their delightful  
struggle, Bessie ran into the next room for a  
moment with Aunt Martha.

"She's just 'struck all of a heap,' isn't  
she?" she cried, dancing a perfect war-dance  
of delight when they were out of hearing.  
"It's worth all these months of suffering just to  
see her."

Aunt Martha was too happy to speak.

When they went back a few moments later,  
they found grandma and her valentine on the  
best terms imaginable. The young king had  
asserted his despotism by burying his hands in  
her white hair and she was punishing him as all  
model grandmothers do by kissing him ecstas-  
tically from his head to his feet and declaring  
that he was the baby of all the world.

## DOMESTIC ECONOMY

SILVER CAKE.—One pound of sugar, three-  
quarters of a pound of flour dried and sifted,  
half a pound of butter, one pound of citron,  
the whites of fourteen eggs. Beat the sugar and  
butter to a cream, add the egg whites beaten to  
a stiff froth, and lastly, add the flour with half  
a teaspoonful of pounded mace and the grated  
rind of one lemon. Just before baking, stir in  
the citron, which must have been well floured.  
Bake carefully and ice.

COCONUT CAKE.—Beat yolks of five eggs,  
one-quarter pound butter and one pound of  
sugar together until very light. Then add one-  
half pint milk, one-half pound flour, beat well.  
Add juice and rind of one lemon and two cups  
grated coconut. Beat the whites of the eggs  
to a stiff froth and stir them, with two teaspoon-  
fuls of baking powder, into the cake. Pour  
into two square pans, dust thickly with pow-  
dered sugar and bake in moderate oven three-  
quarters of an hour.

MOLDED RICE.—Boil half a pound of rice in  
water till soft; dissolve half a pound of loaf  
sugar in the juice of two good lemons and a  
wineglass of rum; strain the rice from the  
water and mix with it the lemon juice, sugar  
and rum, adding the rind of the lemon grated  
very finely; stir it all well together and pour it  
into a previously wetted mold, and set it aside  
in a cool place till wanted, when serve with a  
rich custard, flavored with vanilla, over it.

GRAHAM BISCUITS.—Put one quart of graham  
flour into a bowl. Rub into it thoroughly two  
ounces of butter or lard. Add a teaspoonful of  
salt and two teaspoonfuls of baking powder.  
Mix and rub again, until thoroughly blended,  
then add sufficient milk, about a half-pint, to  
make a soft dough. Turn out on the board,  
knead lightly, roll it into a sheet about three-  
quarters of an inch thick. Cut into biscuits.  
Place in greased pans and bake in a quick oven  
20 minutes.

EXCELLENT MINCEMEAT.—Three pint bowls  
of meat, five of apples, one of molasses, one of  
boiled cider, one-half of butter, two of raisins,  
five of sugar, two level tablespoons each of  
cinnamon, nutmeg and cloves; one tablespoon  
each of salt and black pepper, juice and grated  
rind of three lemons. Chop the meat and  
apples fine, and boil all together about two  
hours. If too thick, thin it with a little of the  
liquor in which the meat was boiled. This  
makes about two gallons, but it will keep a  
long time if you don't have any one in the house  
very fond of mincemeat.

APPLE PUDDING.—Pare, quarter and core  
six tart apples. Put them in a porcelain-lined  
kettle. Add half a pint of water and grated  
rind of one orange and six ounces of sugar,  
cover the kettle and simmer continually, until  
the apples are reduced to about one-half. Stir  
frequently to prevent scorching. When clear  
and thoroughly done, turn them into a dish  
and put them away until very cold. Then beat  
the whites of six eggs to a stiff froth. Add  
four ounces of powdered sugar. Beat again, until  
white and dry. Pour this over the apples,  
dust thickly with chopped almond. Sprinkle  
with powdered sugar. Wrap a piece of brown  
paper around the dish and place in oven until  
it is a golden brown. Serve cold with cream.

BUCKWHEAT CAKES.—Nice buckwheat cakes  
are made of four cups of buckwheat flour, one  
scant cup of yellow Indian meal, a table-spoon-  
ful of salt mixed up with three cups of hot  
water and one cup of cold milk, making the  
mixture about blood warm. Beat this latter  
vigorously, and add a cup of liquid yeast or a  
yeast cake dissolved in a cup of lukewarm  
water. Buckwheat cakes, after the first rising,  
should be raised with some of the batter. For  
this purpose, there should always be made at  
least a pint more than is used each time, and  
this should be set away in a cool place to serve  
as yeast for the next batch of cakes. These  
cakes raised with buckwheat batter will be  
better than the first raised with yeast.

## The Week.

All the cyclones and anti-cyclones which have operated during the week have furnished only showers and drying winds which have exhausted more moisture than the showers bestowed. If the weather forces can show better work, they should be about it, or else people had better take to well digging and boring, ditch digging and buying pumping plants. It will not be amiss to look after these sources of supply, anyway. Many may not need them often, but they need them sometimes as badly as the traditional Texan needs a revolver. Winter flooding is being done in many places where water is available, and this followed by good cultivation is the best kind of irrigation for some growths.

The Assembly has passed the bill giving \$300,000 to the World's Fair enterprise, and the Senate is believed to be of the same mind. Oregon has gone in also to the extent of \$50,000. Nevada has resolved to hold aloof because of

the attitude of the Chicago people on the silver question, and several Southern States threatened to do the same if a proposed election law should be passed by Congress. The pathway of the World's Fair is not all flowers.

## A Report on Irrigation.

California will enjoy an excellent advertisement in the official reports on irrigation, even if measures for extension of the reclamation of arid areas by government aid should not be fully realized. There is much opposition at the East to using government money to foster and promote Western production to increase the competition with Eastern products, which has long been grievous to farmers on the Atlantic Slope. We have endeavored to show that much of such opposition is ill-conceived and unwise, and trust that it may not be too tenaciously maintained.

However this may be, as we have said, the publication of the results which are being achieved on this coast by investigators in the government service will result in attracting the attention of the world to opportunities here afforded, and will bring us hosts of individual promoters for our enterprises and will attract idle capital from all parts of the world. For this reason we look more complacently than we otherwise might upon the opposition to government aid to our enterprises which our Eastern relatives are so earnestly upholding; but it is more than likely that the truth about the West honestly set forth will disarm much of the very opposition which now confronts the measures urged by Western Representatives in Congress.

It is announced by telegraph that the report of the irrigation inquiry, with accompanying papers, will make a volume of about 275 pages. Besides the report of the special agent in charge, it will have a progress report from Chief Geologist Hay, Special Agents Nimmo and Gregory, a report from Prof. Carpenter of Colorado, two reports from Nevada by Messrs. Irish and Nichols, with papers on reclamation, the alkali soils of California, and a report of irrigation in Australia, with especial reference to Pacific Coast problems.

The Special Agent's report presented a summary of the progress of American irrigation up to and inclusive of 1890. It discusses the water supply, methods employed in irrigation, area under cultivation and ditch, character of works constructed and in progress, value of lands under irrigation and commercial importance of the products raised. It gives an extended review of the underflow theory for supplies that may be obtained from drainage waters of the earth. The artesian-wells investigation is reviewed and its results shown.

One feature of the report which will prove of most direct advantage to California will be found in a review of horticulture and irrigation as illustrated by the growth of Fresno and Riverside and other points in the State. The artesian basins of California are also carefully referred to. The estimate of 1889 of irrigated land was 3,294,000 acres. The increase for the past year is 200,000 acres.

In Arizona the estimate of the Senate Committee in 1889 was 529,200 acres under ditch. The last estimate by the Government Agent in 1890, under ditch, is 669,440 acres, of which over 300,000 are cultivated. Works in progress will reclaim 250,000 acres more.

In Eastern Washington the area under ditch in 1890 was 75,000 acres; cultivated, 35,000 acres; 1889, under ditch, 100,000 acres; cultivated, 45,000 acres.

The total given by the special agent for 1890 is 13,509,274 acres under ditch; cultivated by irrigation, 7,165,139 acres. Nearly the whole of this latter total is considered under actual fruit or farm cultivation.

One of the most important inquiries made has been into the present aspects of irrigation legislation. This shows the great interest in all the States and Territories, and an increasing tendency toward the adoption generally of some system of water ownership and control, like that known in California as irrigation districts.

Senator Stewart will introduce into the Senate an amendment to the Sundry Civil bill repealing that part of the law creating irrigation investigations by which the work was to be completed by July 1, 1891, and extending the time for completion of the report and investigations to January 1, 1892; also appropriating \$20,000 to enable the Secretary to collect and publish the information as to the best methods of cultivating the soil by irrigation.

## The Goat-Breeders' Petition.

Julius Weyand, secretary of the Angora Goat-Breeders' Association of California, has transmitted to our representatives in Congress the petition adopted at the last meeting of the association, and embodying the following pertinent suggestions:

First, to negotiate with the Government of Turkey for the permit to select and purchase a flock of at least 100 does or ewes and 25 bucks in Asia Minor, and to permit their exportation.

Second, to instruct the Secretary of Agriculture to engage some suitable person or persons to proceed to Turkey to examine goats of different localities, to select the very best obtainable, to purchase animals selected and to accompany this shipment to this country as directed.

Third, that the Secretary of Agriculture select a proper locality and appoint proper persons to remove the flock and keep them separate from any private property of this class, to attend to them, and also take charge of the propagation and care of the flock and increase.

Fourth, that the Secretary of Agriculture may set aside a suitable number of males and females, young or old, not diminishing the original number in the flock, selling them under a rule giving the different States where these animals are successfully raised equal chances, and at a price to cover expense and outlay for importation and for keeping this stock, but no more. It appears there cannot be a valid reason why this enterprise could not be added to one of the Government Experimental Stations, especially if a suitable locality can be determined upon.

The support of all goat-breeders is asked for these propositions, and those who approve them can exert due influence by addressing their representatives in Congress on the subject.

## Oleomargarine Again.

The periodic outbreak of indignation against the introduction and sale of oleomargarine in this city is now an absorbing topic among the dealers in the genuine product in this city. When the sale of oleomargarine was at its height, an association of dealers in legitimate dairy produce, called the Dairymen's Produce Exchange, was formed to look out for their interests and to see that the laws regarding "bnil butter," as it was called, were enforced. The exchange has not held a meeting for about four years, but now that oleomargarine is coming in again, will probably be revived. One of the members said to a *Call* reporter:

"It may be said that the exchange is defunct, but if there is much oleomargarine brought here, it will come to life again, as the sale of it hurts the sale of the legitimate article, and we shall see that the law is enforced."

Producers of pure butter will hear with pleasure that their agents, the commission merchants, propose to move in this matter. The dairyman is surely having difficulties enough to contend with this year without having to contend with the bogus product.

GOVERNMENT BAG MAKING.—A bill to enlarge the jute plant at the California State Prisons has passed one house of the California Legislature, and seems to be favorably looked upon. It is proposed to take up the manufacturing at Folsom, where the State has a magnificent water-power which can be utilized. It is now telegraphed from Olympia, Washington, that the Senate has passed the House bill appropriating \$100,000 toward the establishment and maintenance of a jute-bag plant at the Walla Walla penitentiary. The mill will contain 50 looms and be modeled after that of San Quentin, Cal.

THE NICARAGUA CANAL.—Ex-Senator Warner Miller of New York, President of the Nicaragua Canal Construction Co., has accepted by telegraph the invitation lately extended to him to visit San Francisco to address our citizens on the interoceanic canal. The following organizations joined in extending him the invitation: The Chamber of Commerce of San Francisco, the Board of Trade of San Francisco, the California Academy of Sciences, the Geographical Society of the Pacific, the Mechanics' Institute of San Francisco, the Produce Exchange of San Francisco.

THE QUEEN ABDICATES.—It is telegraphed that Robert Bonner says that Maud S. will be bred the coming season for the first time. She will never be driven against her record again. Sunol will be given three trials next summer to break the world's record of 2:08. It is claimed by Marvin, her driver, that she can trot a mile in 2:04 and a quarter mile in 29 seconds, a 1:56 gait.

## Death of W. G. Klee.

Many readers of the RURAL will be grieved to learn of the death of W. G. Klee, which occurred at the close of last week at his ranch near Santa Cruz. When he was obliged last fall to lay aside his work as Inspector of the University Experiment Stations, his friends feared that his days were numbered, but he had strong hope that by a quiet outdoor life he might be able to regain his strength. The relentless foe, consumption, had however secured too strong a hold upon his system, and moving quickly to its last stages, he passed away only about four months from his withdrawal from active labors. Friends speak feelingly of his fortitude and patience during the last few trying weeks of his life, of his anxiety, not for himself, but for the welfare of the little family in which his love centered, and for whom he had labored so hard to provide. But the end brought peace to the tortured frame, and on Sunday afternoon it was laid to rest in the cemetery at Santa Cruz, where a little group of old friends and kind neighbors gathered to express their respect for his memory and their sympathy for his bereaved wife and children.

Waldemar G. Klee was born about 38 years ago in Copenhagen, Denmark. His father filled a civil office, and his brothers and sisters were educated for the honorable places in professional and social life, which they now occupy in the Danish capital. Waldemar seemed less strongly endowed physically, and some open air parent seemed to promise best for him. He was accordingly educated in horticultural arts at the best Danish schools. As he approached manhood, he conceived the idea that America would afford better opportunities for advancement in his chosen line, and he came to this country at about the age of 19, and secured employment in a public park at Chicago. His pursuit of horticulture next led him to California, and he began his work here about 15 years ago. Ambitions to pursue his studies while following his art he came to the State University at Berkeley, and Prof. Hilgard, perceiving his true quality, and anxious to foster his aspirations, gave him a place on the University Experiment Grounds. Here he labored and studied, advancing his understanding of English and of botany, especially in the line of economic botany. He was a leading factor in the laying out and planting of the Economic Garden at Berkeley, and he sought far and wide for plants desirable for acclimation here, and many of the plants which have proved very popular in the University distributions are those of his introduction. He soon became foreman of that portion of the University grounds allotted to the Agricultural Department and advanced so satisfactorily in economic botany that he served as lecturer in that branch during one term.

Mr. Klee was an early member of the State Horticultural Society and a leader in discussions in his lines in that body. When the idea of showing collections of living California plants upon the grounds of the New Orleans Exposition was approved, Mr. Klee was appointed to collect, transport and install these California growths, and he discharged this duty with signal success and credit to the State.

Returning to California, Mr. Klee resumed his work at Berkeley until appointed in 1886 State Inspector of Fruit Pests by the State Board of Horticulture. This position he filled with eminent satisfaction to the California fruit-growers, going from end to end of the State spreading useful information by his personal visits and by published essays and reports. Many regrets were expressed when he was compelled to lay down this kind of work. His services were, however, in continued demand, for Prof. Hilgard secured his assistance in laying out and equipping the outlying stations of the University, and such temporary employment was soon followed by his appointment by the Regents to an office which they created, of which the title is Inspector of Experiment Stations. This was in the summer of 1889. In the winter of 1890 his limited physical strength began to show signs of inroad by his unremitting labors. An attack of la grippe followed and its after effects were still on when he obeyed a call of duty—a two-weeks vigil at the bedside of a cousin who died of consumption in Ventura county. Returning from this depressing experience, and while still weak himself, he went into the trying summer climate of the San Joaquin valley on an official errand and returned prostrated. Then followed his forced retirement, his months of illness and death.

Mr. Klee's work and its influence were wide-reaching. In addition to his writings in the reports of the University and the State Board of Horticulture, he prepared a valuable pamphlet on the date, which was published by the U. S. Department of Agriculture, also a special report on the growth of semitropical fruits in California, which formed a part of Bulletin 1 of the Pomological Division of the U. S. Department. He also made valuable contributions to the columns of the RURAL PRESS and other publications.

In 1885 Mr. Klee married Miss Jennie Barry, a graduate of the University, who, with three little ones, survive to mourn the loss which has befallen them, and in their affliction they have the sympathy of all.

Terraced Overflow Basins.

Among the many interesting natural phenomena that claim the attention of the visitor to the Yellowstone National Park, the geysers and hot springs rank first in general interest. Their novelty and beauty attract universal admiration, while the vast quantities of hot water that flow from the ground are convincing evidences of the nearness of internal heat. These steaming fountains and boiling pools are usually surrounded by snowy white borders of mineral matter deposited by the hot waters.

At the Mammoth Hot Springs this consists of carbonate of lime that forms the fretted rims of the pools and the heartily headed and coral-like deposits of the cones, and covers large areas of ground about the springs with a sheet of white and glaring sinter. Not only are the occurrence and the nature of these deposits such as make them of interest to every visitor, but the problem of their origin has proved to be one of the prominent features in the scientific investigation of the hydrothermal phenomena of the park, as it has been found that such deposits are very largely due to the growth and life of a brilliant colored alga vegetation, living in the hot waters.

Although the Yellowstone Park abounds in hot springs, calcareous hot waters are extremely rare and but one locality is known where such springs have formed deposits of travertine or calcareous tufa to any considerable extent. This is the Mammoth Hot Springs. At this place the heated waters rising through mesozoic limestone reach the surface heavily charged with carbonate of lime in solution, which is deposited by the hot waters in the form of travertine, affording an excellent opportunity for a study of the formation of this mineral. There are few places in the world where such deposits equal those of the Mammoth Hot Springs in magnitude, none exceed in beauty.

The terraced overflow basins form the most striking feature of these springs. No description can do justice to their beauty, for neither the delicate fretwork of their walls nor the frosted surface of the glistening deposit nor the brilliant colors of the pools and rims can be described. The engraving on first page of the Blue Springs, from a photograph by the U. S. Geological Survey, shows a few of the many basins, of which each differs from the others.

The walls are built up of pure white travertine, the surface resembling imbricated shells, or a multitude of miniature basins, and often covered with a brightly-colored vegetable jelly where the water is slightly cooled. These basin walls vary in height from a few inches to several feet. Their outline is rarely crescentic, usually irregular, wavy and scalloped. The water runs over the rims in thin sheets and little cascades, depositing travertine wherever it flows and constantly building up the basins until the flow is checked by the increased height of the rim. Yellow sulphur-coated algae

TERRACED BASINS OF BLUE SPRINGS, MAMMOTH HOT SPRINGS.

threads are abundant on the bowl of the spring and the rapid-flowing streams, but the exquisite blues and greens of the hottest basins are due solely to the depths of water. The bright lemon, red and green shades of the cooler pools are, however, entirely vegetable in their nature, and due to the presence of algae lining the basins and stripping their outer walls. In a general view of the entire collection of these basins, obtained from the edge of the terrace above, the effect is that of a brilliant mosaic, the colors occurring in well-defined areas outlined by the travertine rims. Looking at the pools nearer by proves that these colors are not pure, but are produced by a number of tints, minute differences in depth producing variations in color in the same basin. Large as is the overflow from the Blue Springs, little reaches the edge of the terrace, the water sinking into the porous deposit or flowing into holes and fissures in the travertine floor.

The Cruiser Baltimore.

The cruiser Baltimore is one of the class of unarmored cruisers of the "new navy" of the United States. She is 335 feet long, 48 feet 6 inches beam, 19 feet 6

inches draft and 4400 tons displacement. The propelling power of the vessel consists of two horizontal, direct-acting, triple-expansion screw engines, and boilers capable of developing 10,750-horse power when making 110 revolutions of the screws per minute. The two high pressure cylinders are each 42 inches diameter, intermediates 60 inches, and the two low-pressure 94 inches, having a piston stroke of 42 inches. The main steam valves are double-ported slides working on hard cast-iron seats.

The screw propellers are made of manganese bronze, having three blades each 14 feet 6 inches in diameter, set to a mean pitch of 20 feet with a variable pitch of 18 feet 6 inches and 21 feet 6 inches. The starboard propeller is right-handed and the other left-handed. She has four French breech-loading guns, six six-inch breech-loading rifled guns, eight six-pounder rapid-firing guns, and two gatlings. She is also fitted with five torpedo tubes.

The Baltimore is one of the series of ships built on the English drawings, and was built by Messrs. Cramp & Sons of Philadelphia. The accompanying engraving, made direct from a photograph, shows the general appearance of the cruiser.

THE UNARMORED CRUISER, BALTIMORE.

The World's Money.

Mr. Leach, the Director of the Mint, has prepared for the House Committee on Coinage a series of interesting tables showing the gold and silver estimated, and officially reported to be in circulation as money throughout the world, and the specie holdings of the leading European banks. The most comprehensive table is the following:

APPROXIMATE AMOUNT OF GOLD AND SILVER MONEY IN THE WORLD.		
Country.	Gold.	Silver.
United States	\$702,018,869	\$482,071,346
United Kingdom	550,000,000	100,000,000
France	900,000,000	700,000,000
Germany	100,000,000	145,000,000
Belgium	65,000,000	55,000,000
Italy	140,000,000	60,000,000
Switzerland	15,000,000	15,000,000
Greece	2,000,000	4,000,000
Spain	100,000,000	125,000,000
Portugal	40,000,000	10,000,000
Austria-Hungary	40,000,000	90,000,000
Netherlands	25,000,000	65,000,000
Scandinavian Union	32,000,000	10,000,000
Russia	190,000,000	60,000,000
Turkey	50,000,000	45,000,000
Australia	100,000,000	7,000,000
Egypt	100,000,000	15,000,000
Mexico	5,000,000	50,000,000
Central America	500,000	500,000
South America	45,000,000	25,000,000
Japan	90,000,000	50,000,000
India	900,000,000	900,000,000
China	700,000,000	700,000,000
The Straits	100,000,000	100,000,000
Canada	16,000,000	5,000,000
Cuba, Hayti, etc.	20,000,000	2,000,000
Totals	\$3,727,018,869	\$3,820,571,346

The silver money is classified by Director Leach, in the following table, into that which is full legal tender and that which is tender for but limited amounts:

	Full legal tender.	Limited tender.
United Kingdom	\$650,000,000	\$100,000,000
France	102,000,000	50,000,000
Germany	48,400,000	41,000,000
Belgium	25,800,000	6,000,000
Italy	11,400,000	34,200,000
Switzerland	1,800,000	3,600,000
Greece	90,000,000	2,100,000
Spain	40,000,000	35,000,000
Portugal	25,000,000	10,000,000
Austria-Hungary	61,800,000	3,200,000
Netherlands	22,000,000	10,000,000
Scandinavian Union	22,000,000	88,000,000
Russia	1,200,000	45,000,000
Turkey	50,000,000	7,000,000
Australia	50,000,000	15,000,000
Egypt	500,000	500,000
Mexico	25,000,000	25,000,000
Central America	50,000,000	50,000,000
South America	900,000,000	900,000,000
Japan	700,000,000	700,000,000
India	100,000,000	100,000,000
China	1,200,000	5,000,000
The Straits	1,200,000	800,000
Cuba, Hayti, etc.	1,200,000	800,000
Totals	\$2,929,900,000	\$408,800,000

The total stock of full legal tender silver coin in Europe is given at \$1 101 400,000.

ARID LANDS FOR THE SEVERAL STATES.— Senator Stewart reports that Senator Plumb of the Public Lands Committee has promised him that a special meeting of the committee will be held at an early date to consider the bill which cedes arid lands to the various States. Stewart says that he is urged by the Nevada people to press the bill.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Alameda.

**VINEYARD STATISTICS.**—Livermore Herald, Feb. 7: The State Viticultural Commission has employed W. P. Bartlett, of Livermore, to prepare a list of the vine-growers of Alameda county, together with their acreage in vines, varieties, and yield for 1890, for the forthcoming State Directory of Vineyards, soon to be issued by the board.

## Butte.

**GOOD OUTLOOK FOR CROPS.**—Chico Chronicle-Record, Feb. 5: Most of the grain throughout this section of the county is in excellent condition. Only that which has been sown recently is in need of rain. This will be retarded some if the pleasant weather continues, but there is no need for alarm. The ground contains a good deal of moisture from last year, and that, together with what has fallen thus far, will keep the grain moving for some time. To be sure, it would probably hasten the harvest if a good rain would put in its appearance. As a rule the farmers about here have increased their acreage considerably over the past few years and are quite pleased with the prospects of an immense crop.

## El Dorado.

**FRUIT INDUSTRY.**—El Dorado Republican, Feb. 5: Fruit-growing in this county has received a strong impetus from the successful sales of last season, and we hear of trees being planted in every quarter. In the neighborhood of Pleasant Valley, where but little has been done toward raising fruit for some time, a great many trees are being put out by various ranchers, the preference being mostly given to Bartlett pears. On the north side of the county, at Cave Valley, 3½ miles from Pilot Hill, on the Auburn and Georgetown road, a notable effort in fruit-raising is being made by D. Johnston, who has been improving a piece of land there for about five years and putting out the best varieties of shipping fruits. His place contains 640 acres, and is so well-fenced and arranged that it ought to serve as a model for those ranchers whose fences are in a chronic, broken-down condition. So far, the orchards on this place contain about 8000 trees, comprising Orange, Cling and Early Crawford peaches, Bartlett and Winter Nelis pears and some of the best shipping cherries. A novelty in this county is 1000 Mission olive trees, five years old, which are now bearing, and will soon test the adaptability of that part of the county to olive culture. The trees appear to thrive and there is every prospect that the venture will become profitable. There are also 150 orange trees and a number of Adriatic fig trees on the place, as well as a vineyard of some 20,000 vines, comprising Black Morocco, Rose of Peru, Tokay and Muscat grapes. Adjoining Johnston's place on the south is a place of about 1300 acres, all under fence, owned by Brown Brothers, who are employed on the railroad and turn their surplus funds into improving their place. They have 500 Bartlett pear trees growing and are putting out 1500 more this year. Both these places are irrigated, but another fruit-raiser of that neighborhood, Charles Niessel, is growing trees entirely without irrigation, and we are informed that his trees are fully equal to any grown in the State. He has an orchard of 1500 trees raised in this way, that are four years old.

## Lassen.

**INDIAN VALLEY FARM NOTES.**—Susanville Mail, Feb. 5: The farmers of Indian valley are all busy, plowing, repairing fences, ditches, etc. There is no fear of scarcity of water even though we have no more snow. There is always plenty of water for irrigating purposes in Indian valley, especially at the North Arm. On nearly every farm can be seen herds of fat cattle, and there is an abundance of hay to feed through the winter and plenty for sale.

## Monterey.

**GLANDERS.**—Salinas Index, Feb. 5: Dr. Buzard left Salinas on the 26th ult. and went to Slacks Canyon, where he found that a settler named Wayland had lost about \$2000 worth of horses in the last four or five years, and did not know what the matter was. He lost three horses a short time before the doctor's arrival. Dr. Buzard found in Mr. Wayland's band one glandered horse which was condemned, killed and burned. The disease was not propagated from Mr. Wayland's place, because he kept his horses inclosed in a pasture. The disease at that place was brought from Gilroy. The doctor proceeded from Slacks Canyon to Paris valley, near San Ardo, and found one glandered horse belonging to John Garriera. The horse was condemned and burned. He also found on the Trescony grant, near San Lucas, another glandered horse which was similarly disposed of. The horse belonged to a Mr. Perry. He found Long valley, Peach Tree, Hardscrabble and on the Trescony grant, where glanders existed last fall, free from the disease. The doctor reports encountering in some instances a disposition to thwart the efforts of the authorities to stamp out this dreaded disease by men who will jeopardize the property interests of a whole community for the insignificant service they can get out of a poor glandered horse. A horse with chronic glanders is capable of doing some work for awhile, and there have been one or two instances where owners of such animals, acting on a knowledge of the doctor's presence

in the county, have secreted their diseased horses in the hills. [Dr. Buzard called on us Feb. 9 and wishes us to state that in the districts he visited last year he found the horses free from disease.—EDS. PRESS.]

## Los Angeles

**SUCCESSFUL BROILER POULTRY FARM.**—L. A. Express, Feb. 6: A short distance from this city, Henry Till has established his broiler farm, which consists of about ten acres of good, loose soil, the best we have here to raise chickens on. Several incubators are kept running all the time, which keep two large brooder-houses filled with chicks. As soon as the chicks are old enough to leave the brooder-houses they are divided into small colonies and placed in roosting houses. Each house has a large yard, and the yards are planted to corn, alfalfa, etc. Gum and pepper trees were planted last summer and have made a good growth, and by next summer they will afford plenty of shade. Mr. Till started his ranch by putting up a practical brooder-house and buying an incubator. He has not an old fowl on his place and buys all eggs from his neighbors. He is now selling his largest chicks at \$4 and \$4.50 a dozen, and at present he has 3000 chicks on hand.

## Nevada.

**MOUNTAIN PRUNE RANCH.**—Nevada City Transcript: W. H. Smith has just completed planting at his farm, which is at the lower end of Cement Ridge four miles in a westerly direction from here, 2100 French prune trees. The altitude there is about 2100 feet above sea level, or 500 feet lower than this city. The orchard is the largest of the kind in the county.

## Placer.

**FRUIT PROSPECTS.**—Newcastle, Feb. 7: No bad effects are yet felt from the unusually dry winter. The rainfall Thursday was sufficient to moisten the soil and facilitate the clearing of land and the planting of trees. Fruit trees show an abundance of buds, and the prospects for another good season are promising.

## Santa Clara.

**CROPS LOOKING WELL.**—Agnew Cor. San Jose Mercury, Feb. 5: Crops in this vicinity are doing well, considering the small amount of rain. Weather continues fine, with scarcely any signs of rain. There is very little complaint from the farmers on account of dry weather as yet.

**TREE PLANTING AT GUBERSVILLE.**—San Jose Times, Feb. 5: Tree-planting is going rapidly on at the Quito farm, 2800 trees a day being set out.

## Santa Cruz.

**SUGAR BEETS IN YOUNG ORCHARDS.**—Watsonville, Feb. 5: The Western Beet Sugar Co. has recently published some facts gathered from the experience of last year about Watsonville. The expenses in this and all other cases are stated as if paid for in cash at current rates for labor and teams. Any one can see the difference in favor of the farmer who does his own work. Here is the record in a case where one-fifth of the land was occupied by fruit trees. The following is last year's record of a 20 acre patch 1½ miles from the factory sown the second week in May (after the last spring rains had fallen) with five pounds of seed per acre; rows 20 inches apart; thinned out second week in June; harvested in October:

Yield of beets, 405 160-2000 tons, or 20 508-2000 tons per acre.

Yield of sugar, 58 667-2000 tons, or 2 1832-2000 tons per acre.

Returns, \$1810.05, or \$90.50 per acre, or \$4.50 a ton.

## The expenses were:

	Per acre.
Value of rent of ground, say	\$15 00
Plowing, preparing the land and sowing	5 00
Thinning, hoeing and cultivating	4 50
Plowing out at 10 cents per ton	2 00
Topping at 65 cents per ton	13 00
Hauling at 50 cents per ton	10 00

Total expense ..... \$19 50  
Net profit per acre ..... \$41 50

These beets were planted in a two-year-old orchard, and in addition to the above-mentioned profit the young trees were benefited by the use of the land and also by the stirring of the ground incidental to the cultivation of the beets. Numerous more favorable instances might be given, showing profits up to \$70 per acre and polarization as high as 22 per cent, but we wish to point out that even at the price of \$4.50 a ton, beets are a good paying crop.

## San Diego.

**DISCUSSING CROP PROSPECTS.**—San Diego, Feb. 5: Nearly everywhere Wednesday, people were busy discussing the effects of the rain, and while opinions differed somewhat as to the outlook for grain, all were united in pronouncing the rain a great blessing, especially to stock-owners. Green feed was getting scarce and hay had advanced to \$15 and \$20 a ton. Feed will now soon be plentiful, and while a little early-sown grain has been damaged by the drought, it is thought that the bulk of the acreage seeded is assured a good crop. Most of those who have had experience here hold the opinion that all who sow now may feel reasonably sure of a good yield. At any rate, everybody feels happier and more hopeful for the liberal downpour of yesterday and last night.

**GRAIN FARMING IN TEMECULA VALLEY.**—Murrieta Valley Union: The acreage being devoted to grain this year in Temecula valley, exclusive of Wildomar, foots up 15,146 acres, as follows: Pauba tract, 5000 acres; A. Cochran and H. O. Thompson, 800 each; Joe Nicolas, R. E. Muncy and Joe Souve, 500 each;

Charles Wolf, Sparks Bros. and Carter and Aaron Gerringer, 400 each; R. B. Cassady, 350; G. H. Everett, 330; Hutchinson & Brown, Auld Bros., Claus Burfine and Charles Briggs, 300 each; A. Vial and Andrew Kittleson, 250 each; Ross Pelly, C. Banzani and E. H. Benton, 200 each; Chas. Beal, 160; Ed Beal, 150; Nathan Wilder and E. W. Everett, 140 each; Florence Keitz, 130; Lewis Platt and Ezra Macklebarker and William Harvey, 125 each; Wm. Walker and H. S. Mason, 110 each; Willis Shrode, David S. Davis, John Rawson and W. S. Pratt, 100 each; John Pingree, 90; S. A. Smith and Chas. Charnot, 75 each; Warren Bros., John Cheney and W. F. Badlong, 70 each; Miss Jestus, Drake Bros. and A. B. Sturgeon, 60 each; I. L. Palmer, Walter Sutton, Al Wagner, 50 each; W. L. Flagg, 45; G. W. Gallie and F. M. Sumner, 40 each; James Hebel, 35; Byron Walcott, Robert Venable, Harry Stevens and Fay Colby, 30 each; L. B. Lovejoy, 25; D. N. Buchanan and Edwin Jerrold, 20 each; Geo. Hind and Isaac Walters, 15; R. H. Taylor and Geo. Fezler, 10 each; Dr. Lashlee, 6.

**PINEAPPLE CULTURE.**—San Diegoan, Feb. 4: Mr. Morrison says his experience had satisfied him that pineapple culture could be successfully and profitably carried on in San Diego county. In fact, he said, the vitality shown by the plants here, and the vigor of their growth, proving as it did the adaptability of the conditions, constantly surprised him, and furthermore, caused him to wonder that the business of raising pineapples had not been undertaken before. In Florida millions of dollars were employed in growing pineapples and the business was found profitable. Pineapples were grown under glass and by artificial heat in England, and there the ground and buildings cost \$50,000 an acre, still the business was profitable. Here the cost of cultivation would be less, but the markets were about equally as good. As an illustration of the profits, Mr. Morrison said that some of his plants last year paid him \$2 each in fruit and new plants or suckers. In regard to culture, Mr. Morrison says the soil should be well prepared and worked fine. Furthermore, a well-drained and not a wet soil was wanted. In the first stages the plant needed but comparatively little water. Too much water during that time would kill the plants, as he had proved to his satisfaction if not to his sorrow. As the fruit grows and approaches the ripening stage, more water is needed, but even then the soil should be well drained so that the water would not become stagnant. In Florida, during the season when pineapples ripen, they have an average of seven inches of rain per month, but the soil there is mostly sandy and the water is rapidly drained off. In Florida they have 20 varieties of pineapples. Mr. Morrison has 12 varieties, but so far as his experience showed, they all act about the same in their growth and require about the same conditions and cultivation.

## San Joaquin.

**A SAMPLE OF WHEAT.**—Stockton Mail, Feb. 5: Conductor Stafford of the Oakland line today exhibited a sample of 1600 acres of wheat on the Hall ranch, on the extension of the road to Merced. The wheat, which is from summer-fallow land, is 2½ feet high. The new extension opens up a splendid farming country.

## San Mateo.

**ORCHARD IMPROVEMENTS.**—Redwood City Gazette, Feb. 7: A. S. Hallidie has imported 5000 German prune trees which will be set out on his place. They are of choice varieties. J. S. Dodge during the past year has put in a large number of fruit trees on his place in the East Greenwood tract. Wm. Watkins is setting out at La Honda 500 young fruit trees.

## Shasta.

**TREE PLANTING.**—Anderson, Feb. 7: Over 100,000 fruit trees have arrived here the last ten days, and more are to come. The season is most favorable for planting trees. The ground is in excellent condition, and all that is required will be the spring rains.

## Sonoma.

**CROP PROSPECTS.**—Santa Rosa Republican, Feb. 5: The general farm outlook in Sonoma county is very favorable. A larger acreage of land is being cultivated this season than for many years, and with half a show the farmer will "ride on the crest of the wave" of prosperity. One gentleman who has been over a large part of the county during the week says that small grain that had been sown early was up and growing well and that it covered the ground completely. Said another: "In some parts of Sonoma county, grass is rather short, but I have heard of no great amount of suffering among the stock." Another said that some fruit-raisers were just a little bit alarmed on account of the mild weather. They fear that it will cause the buds to come out and that an after-clap of cold weather will strike and injure them. In regard to the hop prospect, one farmer said that he heard of some hop-producers who were contracting half of their coming crop at 15 cents per pound. He thought the chances good for a fair price on hops this year.

## Sutter.

**SHIPMENT OF RAISINS.**—Yuba City, Feb. 6: John Wilkie loaded at this place a car of dried grapes, the last of his crop which he cured the past season. Over 12 tons were in the shipment, which is consigned to St. Paul, Minn.

**A LARGE GRAIN FIELD.**—Yuba City Farmer, Feb. 6: B. F. Frisbie informed us, Tuesday, that he had just finished seeding the last of his 700 acres of ground, all summer-fallow. Some

of it he has plowed the second time and a portion of it was cross-harrowed twice. He is now ready for rain, but while the weather remains dry he intends to continue harrowing until the grain is thoroughly under the ground.

## Tulare.

**TEN TIMES MORE TREE-PLANTING.**—Grangeville Cor. Visalia Times, Feb. 5: The planting of fruit trees is ten acres to one compared to last year; and it is a good sign, as it divides the fruit and raisin industry so that there will be inducements for more large packers and buyers to establish houses in this neighborhood.

**SHIPPING BY EXPRESS.**—Traver Advocate, Feb. 5: The reduction to \$1 per 100 pounds in expressage on fruit from Traver to San Francisco is highly appreciated by horticulturists, and nearly all the dried fruit shipped from here to the Bay now goes by express. The cost per hundred of freight is 88 cents, with drayage to pay. In the city, while the express company delivers the fruit free of charge for \$1 per 100 pounds. The fruit car attached to each passenger train going north through Traver each forenoon is the recipient of fruit shipments all along the line.

## Ventura.

**EDITORS PRESS:**—Farmers about Fillmore seem to have been quite busy plowing and sowing barley until it became too dry, when they took a slight rest. The rain of the 1st has again started the plows, and all are working for dear life with barley, potatoes, etc. The rain has put new life into the barley already up, and the prospects for good crops seem excellent, although more rain would help very much. There seems to be considerable improvement going on in this locality—new houses and barns, new water-ditches and new clearings for future crops, many trees and vines being set, especially oranges, prunes and grapes. Irrigation is much practiced here, and the Seepo river affords a large supply of water, besides many streams and springs in the mountains. The feed was getting quite short, and cattle-men contemplated their weakening cattle with what equanimity they could, but the late rain put fresh courage into their hearts and they go on their way again rejoicing.—S. P. SNOW, Fillmore.

**OUR BEAN TRAIN.**—Ventura Free Press, Feb. 6: The last bean train went from Ventura Jan. 6th, and was made up of shipments by Loy & Co. of Columbus, Ohio. This train was sent out as a special and made the remarkably good time of nine days. The route of the train was via New Orleans, over the Sunset and New Orleans route, thence over the Queen and Crescent line to Cincinnati. The train went through parts of Mississippi, Alabama, Kentucky and Tennessee—the heart of the Agricultural South. We can imagine the interest it must have excited in the people along the line as it thundered past, decorated with banners and flags. The product of the whole train—about 5000 sacks—was from the celebrated ranch of D. W. Thompson, near Ventura. When the train started from the station at Ventura, all the multitude of hands employed on this great ranch gathered along the track and gave three rousing cheers for "Dixie Thompson's beans."

**WALNUT-TREE PLANTING.**—Saticoy, Feb. 5: It is estimated, from careful figures, that the trees already set out and those which will be put in this month, will reach a total of 1000 acres at and around Saticoy for the past year. There is no part of the county which is making the progress just now that Saticoy is.

## Yolo.

**HOP-GROWING ON A LARGE SCALE.**—Woodland, Feb. 5: Mr. Larkin, a hop-grower from Sacramento county, has rented 80 acres of land near Fremont's Bend, on the Sacramento river, from Col. Wilcoxon, and has a large number of men employed in preparing for hop-raising on a large scale. We hope that the enterprise which has been so largely entered into by Mr. Larkin will prove a success. The hops grown on the river-bottoms of this county are of the best quality and command the highest prices in the market.

**IRRIGATION.**—Woodland Democrat, Feb. 5: L. A. Erwin, foreman of the Woodland Ditch Co., is busily engaged with a force of men rebuilding that portion of the dam on Cache creek that gave way, and expects to have the ditch running full of water within the next three or four days. This will be good news to many of our farmers who would irrigate their alfalfa-fields, as there has not been a sufficient amount of rain up to this date for the favorable growing of this valuable product. Besides, irrigation would drown out and kill the gophers, moles and other bothersome rodents that frequent the fields and greatly damage the crops.

**LAYING OUT AN ORCHARD.**—Cachoeville Cor. Woodland Mail, Feb. 7: The Yolo Orchard Co., headed by that experienced and successful fruit-raiser, A. T. Hatch, are booming things on their 400 acre tract on each side of town. They have received nine carloads of trees, numbering 28,000, which are being planted, 70 trees to the acre. Their land was first surveyed off into 500 foot blocks by an experienced surveyor, then a man of experience, with a machine made for the purpose, marked it off both ways into blocks of 25 feet square, and those marks were a miracle; a person could stand on the bank of the creek and look along one of those lines for a mile across the ranch, and not a waver of an inch could be seen. When the marking was completed, Mr. Siever, the foreman, measured a number of them with a steel tape, and stated that no line across the 400 acres was out of the way 1½ inches. A

team of 12 mules with a single plow, with mold-boards on each side, and driven on these lines, plowed a ditch 1½ feet wide and a foot deep; then a subsoiler, pulled by 14 mules, loosened up the soil a foot deeper in these trenches, then the trees were set in where the other lines crossed and filled in around by men with shovels; 20 men can in this way set out 3000 trees a day. The trees of this company will be pear, peach, nectarine, almond and prune.

**THE BOSS COW FAMILY.**—Woodland Democrat: Fred Springer of Blacks has the boss cow and family of cows on record. This magnificent cow, which is still living, has given birth to 16 calves. The first two births were nothing outside the ordinary, but for the next seven years she gave birth to twins regularly. Each time the calves were of different sex, each exactly alike in color and size, and both lived. This is a good record for a cow, but the history does not end here. Her oldest daughter grew to maturity and began raising a family of her own. Her first effort was a fine young heifer, then, profiting by her mother's experience, she went into the twin business, and for five years has given birth to twins regularly. These were also of opposite sex and all lived, thus making a total of 28. Pretty good-sized family, isn't it? But wait. You have not heard from the oldest granddaughter yet. She believes in keeping up the good name of the family, and does not propose to be outdone by any one. She has only been in business four years, but she has eight children to provide for. Again, they are of opposite sex, just alike and all living. A nice little family of 36, and only three mothers and nine years' work. Now, if anybody has got a cow story that will beat this, let him crack his whip and sail in. We want to hear it.

NEVADA

**THE SHEEP INDUSTRY.**—Reno Gazette, Feb. 5: Never before in the history of the State has there been such a winter for the sheepmen as this. There is an abundance of feed on the ranges and the weather could not have been finer for profitable results. The lamb crop promises to be very large and the wool clip as good as in any season for a long time. In this county alone there are 70,000 range ewes—a falling off of about 75,000 in the past two years. This was owing to the high price of mutton. The losses last winter were comparatively light, and sheepmen will make a profit this year of fully 33½ per cent on their flocks. Mutton has been scarce and high for three years past, and has netted the sheepmen a handsome profit and left the ranges well stocked with young and thrifty ewes. There are only 5000 mutton sheep being fed on the meadows at this time, and they have all been sold and will find their way to the shambles inside of a month. Of these, Wheeler & Ridenour are feeding 3500 and Gerlach & Fleck and McKay & McCullough 1500. Mutton sheep have averaged the producer about eight cents per pound for over a year. The wool clip will net the sheepmen \$1 per head, which means \$70,000 for this county alone.

THE VINEYARD.

A Reply to Prof. Husmann's Letter.

**EDITORS PRESS:**—In the Press of Jan. 31st I read with pleasure Mr. Husmann's letter, wherein he kindly remarks he thinks I represent the wine prospects from an erroneous standpoint. Your readers will understand that any prophecy as to the future of the wine industry is after all only guesswork; but by carefully studying the past, we have, as it were, a foundation on which to build our calculations. Mr. H.'s long experience in the wine and grape industry, running through a period of, as he says, 44 years, gives him truly, if time is any criterion, a right to speak on the matter, and beginners can surely say: "Let us sit at the feet of these old teachers and weep, and sip from their ripe experience lessons in wisdom."

I endeavored to tell your readers what seemed to me to be the future of the wine industry, taking a general view of it from a business standpoint. Owing to the amount of temperance education and temperance opposition brought to bear on every form of the drinking habit, also the small amount of encouragement that those interested in the production of the wine grape for a livelihood have, and owing to the extremely small price paid for the fruit, the planting of the wine grape was not pushed in this county and in my opinion it was not advisable to do so. Mr. H.'s letter has not made it clear to me that what I said does not hold good, and I would like to call up a few points of his statements.

He used the argument that light, dry wines such as are produced in the northern counties, 10 to 12 per cent of alcohol, assist digestion. If he will produce the best medical authority wherein alcohol helps digestion, I would be pleased to see it.

Politically speaking, he calls attention to the defeat of the Republican party in the East, and attributes it to the leaning of that party for the last 20 years toward the prohibition side. Now I would like to hear from the Farmers' Alliance, that has sprung up so like magic—an organization that now controls some 5,000,000 votes, over 50 per cent of which in the so-called Free States formerly were members of the Republican party. Either

they left their old party on account of its leaning toward prohibition or they did not, and I believe there is not one in 10,000, if any at all, that left that old party on that account, but because that old party had become the right bower of the protected and monopolized classes and had ceased to look after the interests of the honest tillers of the soil.

He further asks, in the way of substantiating his plea in favor of the wine interest: Is it right that I and my neighbor, who use wine as it ought to be used—moderately and as one of the best gifts of God, which should never be abused or taken in excess, should be deprived of its use because our other neighbor drinks whiskey and other vile stuff to excess? It is an infringement on personal liberty—unconstitutional—and I may add, is it right because my neighbor has not got the power of self-government so as to use it moderately, but drinks to excess, starves and abuses his family, murders his child and drives his wife into the insane asylum, that the innocent taxpayer should be compelled to bear the necessary expenses, and the innocent woman should suffer and the innocent child be murdered because some men can drink moderately? Is it not an infringement on the personal liberty of the taxpayer to compel him to pay so unjust and uncalled-for an expense—one he can't possibly be fittingly interested in or had any voice in contracting, and also on the personal liberty of the wife and child who have to suffer because the personal liberty of one who cannot restrain a morbid appetite? Then again the word unconstitutional surely is an old chestnut. Has not the Supreme Court (Justice Field) decided that there is no inherent right in a citizen to sell intoxicating liquors? That being so, is there any constitutional right, and if there is a constitutional right, have not the people the right to so change the Constitution, if need be, so that it be a misdemeanor to sell and handle so dangerous a stuff?

In speaking of the prohibition law in Kansas Mr. H. says it ruined the breweries and wineries, and kept emigration from its borders. I can fully agree with him that it ruined the two first mentioned industries completely; in fact annihilated them, although it is a familiar saying with those interested in the perpetuity of the drink traffic, that *Prohibition does not prohibit in Kansas*. But as to the immigration, that surely, friend H., is "a little off" on, as there is scarcely a State in the Union that has grown as fast as Kansas and none that has added a larger per cent per capita to its savings bank deposits. As to its going against the Republicans and giving a Democratic majority, does Mr. H. not know the Farmers' Alliance have captured the State and ousted the immortal Ingalls from the U. S. Senate in spite of his famous utterance that the ten commandments had no place in politics, and that pure politics is an iridescent dream? The farmers said "go," and he went. Mr. H. says, look at the practical workings of total abstinence in our households. I could name a great many of our winemen who forbid their sons the use of wine while they were under their control. But human nature is so constituted that forbidden fruit tastes the sweetest, and the result of all this has been invariably that the boys when they were at liberty to follow their own inclinations, became the worst of drunkards, and then he cites his experience in bringing up a family, which he allowed to have free excess to wine whenever they felt like drinking it. Now I infer from this that to bring up boys temperate, it is best to let them cloy themselves when young, or adopt the free-and-easy method, and let the children help themselves to intoxicating wines just as though it was water whenever they felt like drinking it; and by so doing they will learn to be temperate. Still he says, where boys were kept away from it for a time, when they were at liberty to follow their own inclinations, they became the worst of drunkards. The omen of this doctrine is, keep an open wine barrel in your house, parents; in fact, let the heads of the family set the example, if you want your children temperate men and women. Why should we legislate against polygamy, gambling, stealing, obscene literature and pictures or any crime? Just let the youngsters have a full swing at it, then when they get old they will not want to.

Again he said: "Let light wine take the place of fiery whiskey and brandy." How shall we do it? Would we not infringe on the personal liberty of the consumers of these drinks and would not that be unconstitutional? Besides taking Mr. H.'s line of argument to legislate against these products and for the wine industry would be class legislation, just the kind of legislation that has killed the Republican party in Kansas and is now building up the Farmers' Alliance.

Some years ago the good people of this country did all they reasonably could to encourage beer-drinking as a temperance measure, believing by so doing less strong drink would be used. What has been the result? The consumption of strong alcoholic drink has increased in this country from a little over five per cent to about twelve per cent per capita in a little over one generation, and the consumers that were only a whisky barrel are now both a whisky and a beer barrel combined. Now legislate so as to increase the consumption of wine and our people may be called a triplet at once, three in one, a whisky, beer, wine barrel, and if the hoops of any rational man can stand that, then there is no fear for the safety of the country, as our people will be ironclad and shot-

proof. But they are not going to stand it, for by the help of a growing intelligence and the breaking up of old party ties the intoxicating evil will find its just resting-place amid the relics of superstition, there to be resurrected only as a curiosity, like the old crooked stick that once acted in the capacity of a plow and is now only exhibited as a curiosity to a wiser generation that will follow us in the near future.

I. C. Wood.

Palm Rest, Ontario, San Bernardino Co.

[Both sides have now been heard in this question, and we do not desire to have the discussion go further at present. We decide thus not because we underestimate the importance of the subject, but because the discussion is interminable, and it crowds out matter which our readers would rather pay their money for. The positions taken by both writers have been clearly defined and there is little chance of their moving each other a hair's breadth by volumes of writing.—EDS. PRESS.]

Vine-Planting at Fresno.

**EDITORS PRESS:**—Notwithstanding the cry of "overproduction" of rooted vines, preparation of cuttings for next year's planting is larger than ever; one man has contracts to root a million cuttings, while several others will root out half a million each.

Grapevine planting is being done to as great, or greater extent, this year than usual. Prices on Muscat rootings range from \$7 to \$10 per thousand, with Sultanias much higher. Sultanias cuttings, however, are offered at \$1 per thousand. The Thompson Seedless (propagated by J. P. Onstott of Sutter county) is gaining in favor, but owing to high prices will not be planted in large areas. C. M. Fresno

### The Smyrna Fig at Fresno.

Geo. C. Roeding, of the Fancher Creek Nursery, has given fig culture much attention, and is probably to-day as well posted as any man in California on figs. In an interview with a Fresno *Expositor* reporter the other day, Mr. Roeding said:

"We have made great efforts to get the true Smyrna fig, and to learn as much as possible about the soil in which it is grown, the climate of its native country, the method of planting, cultivation, curing and packing, and we have succeeded in our endeavors to our entire satisfaction."

The best fig of commerce is grown in the districts of Aidin in Erbeli and Danceli in Asia Minor.

The fig districts are situated about 60 miles inland, and not, as many suppose, near the coast, and the dried fruit is sent to Smyrna, on the Mediterranean, for packing and sale, and hence it is known to the commercial world as the Smyrna fig.

The soil in this section of Asia is similar to that of the plains of Fresno county—a light sandy loam—and the climate dry and hot in summer, not unlike ours, and the winters a trifle colder.

The trees in the older orchards are planted irregularly at a distance of about 30 feet apart, but the newer orchards are planted in regular form, at an average distance of 50 feet apart. The original orchards are from 50 to 75 years old, and the trees are of great size. The trees are trimmed so as to branch at from 4 1/2 to 5 feet above the ground and are never pruned unless the branches interfere with one another.

For the first two years after planting the trees are irrigated, but in a very primitive manner. The water for irrigation is procured from wells and is carried to the trees in goat-skin sacks by the natives.

The trees begin bearing in from 6 to 7 years, but do not produce a first-class fruit until they are from 12 to 15 years old. The true fig produces but one crop of fruit annually.

The orchards are plowed only lightly, but are kept free from weeds. Deep plowing is objectionable, as it destroys the small roots which spread out near the surface of the ground. Long experience has shown that heavy calcareous soils are unsuited to the fig, it thriving best in light sandy loam.

Regarding the caprification of the fig—that is, the fertilizing of the pistillate or female figs with the staminate or male figs—there has been much discussion carried on by scientists, and a wide divergence of opinion exists, but the beneficial effects of caprification must be apparent from the fact that in the districts where the finest figs are grown it is followed by all growers—in fact the true Smyrna fig will not produce fruit without it.

Relating to caprification, R. I. Van Lennep of Smyrna writes to Mr. Roeding as follows:

Trees producing the proper figs for drying give but one yearly crop, and the same may be said of the wild trees. The female fruit begins to ripen toward the latter end of July and goes on ripening, according to locality, up to the end of August. The wild tree begins to give ripe fruit in June and July, precisely when the female fruit begins to increase in size. Then the male, or wild fruit, dries and falls, and toward the month of October small fruit makes its appearance at the intersection of the leaves. The female figs begin to appear only in April or May.

Caprification is a subject on which much has been written, many researches made, and opinions are at variance. Whether that term is proper or not is not a matter to be considered; it has come down under that term from olden times in the writings of Greek and Latin, but in its objects all agree, and that is to fertilize the figs or the fruit which would not ripen nor be of any use. The question is, then, to know in what way this operation takes place, and in consequence in what way to apply it scientifically so as to obtain the best results. The question at issue appears to be no other. Nature in all her workings is mysterious. All the owners of fig trees in Aidin and elsewhere, of the monocious kind (that is, where monocious kinds are found), producing figs to be dried or to be consumed in a fresh state, always put on each tree strings of wild or fertilizing figs. On inquiring why they do it, they unanimously answer that otherwise the figs of their trees would not succeed in giving fruit, would dry and fall before full maturity. Such is the existing conviction that many people have, and when the harvest is at hand they gather the wild figs and sell them in the town and village bazaars or markets as merchandises. If the wild figs are not sufficiently abundant, their price is higher than the best quality of dried figs. When a wild tree is left to grow in an orchard of female trees, the vicinity of that tree is sufficient to fertilize 20 or 30 trees of the female kind without having recourse to the coronets or strings of figs, excepting when the weather has been unfavorable to the full ripening of the wild fruit.

My late brother, Mr. Charles Van Lennep, possessor of a very large farm, made a special study of this subject. In the beginning of his studies he was of the opinion that the work of caprification took place only by means of insects and not otherwise, but continued to put coronets of wild fruits on his fig trees. On further investigation and further observations he came

to the conclusion that the wild figs contained the pollen that fertilized the female fig, either by natural means employed by nature or helped by insects, the wild being the staminate fruit and the fig the pistillate fruit.

Dried Smyrna figs are full of small yellow seeds, as you can notice by opening one of them, if the fig is not too old and is not damaged; if taken out with care, these seeds, which are nothing else than the result of the caprification, by washing them carefully can be sown in old manure and a great number of them will sprout, producing for most part the wild tree that gives the capri figs. This has often been tried here with seeds of the fresh and dried fig, giving about the same results.

The insects that come out of the figs are very, very small, and appear to be of two or three different kinds. They resemble small flies and seem to fly about in a fig tree for three or four days and then disappear. Some are found dead, but more can be found alive in some part of the tree, where they pass the winter through.

That Mr. Roeding has succeeded in securing the genuine fig of commerce is shown by the following certificate:

I hereby certify that I have supplied to Mr. W. C. West of California, for the Fancher Creek Nursery, Fresno, California, 25,000 cuttings of the true Smyrna commercial fig from the Erbeli district, known in the market as the Smyrna Fig; and also 2000 cuttings of the wild or male fig. The said cuttings were selected from the orchards of the said Erbeli district under the personal supervision of the above-named Mr. W. C. West, who visited and examined the said fig trees in September last, taking samples of fruit from the said fig trees while they were still with fruit, which was then being collected. The said Mr. W. C. West was then visited and examined the said fig trees during the present month of November after the fruit was collected and the leaves fallen. These cuttings were taken under the supervision and in the presence of Mr. W. C. West from the same fig trees from which he took samples of fruit in September last. He also took samples of soil from the said orchards in the Erbeli district.

In witness whereof I have hereunto set my hand and seal this 30th day of November, 1886.

U. S. Consul.

## THE VETERINARIAN.

### Worms in Horses.

EDITORS PRESS:—I have been very much interested in the Veterinary Department, and think Dr. Buzard is real kind and good to tell so many good things to help the people cure their sick animals; but as one good turn deserves another, let us still draw him out by asking how to treat a horse with lumbricoids—those big squirmers a foot long or so.—R. E. WOOD, St. Helena.

EDITORS PRESS:—Of the history of the development of the larger round worms, *ascaris lumbricoides*, our knowledge is very incomplete, nevertheless the causes of the prevalence of these worms in particular localities and during certain seasons are not far to seek. It is clear that their final stage of growth is accomplished with great rapidity, otherwise we should not meet with lumbricoids in pigs and puppies scarcely three weeks old. Large round worms have also been found in very young colts. The ordinary lumbricoids of the horse, of the pig, and of man, so very closely resemble each other that by some they are regarded as mere varieties of one species (*ascaris megaloccephala*, *ascaris suilla*, and *ascaris lumbricoides*). Whether they are so or not is of little practical moment, for it seems quite certain that a perfect knowledge of the earlier stages of development of any one of them would furnish a clue as to what obtains in the others. It is probable, also, that the lumbricoids of the dog and cat undergo similar changes.

Davaine has kept the eggs of the common round worm alive for more than five years, and observers have watched their development in fresh water up to the stage of imperfectly developed embryos, and have kept them alive in this condition for three months.

Davaine found that the eggs of many nematodes will retain their vitality though long exposed to dryness, but their contents will not develop during this period of exposure. It would seem, in short, that the eggs of nematodes, which normally take up their residence in cats, dogs and carnivorous animals which reside in arid regions, will develop embryos *in ovo* without a trace of moisture. Davaine is of opinion that it is not necessary that nematode embryos should pass through the body of any intermediary bearer, and he believes that they are often directly transferred to the stomach of their appropriate hosts while adhering, in the condition of an impalpable dust, to the coats of their bearers, whence they are detached by the animals themselves when licking the fur.

After the escape of these larvae from the egg, their growth, strength and activity are favored if they happen to have access to fluid media containing impurities. Muddy water would appear to be eminently favorable to the development of the escaped larvae up to a certain stage of growth. Warmth is also eminently favorable to the development of all kinds of parasites,

and in the case of most nematodes it is absolutely essential to the formation and hatching of the embryos.

### Treatment.

It is often a difficult matter to destroy these parasites. Oil of turpentine stands in high repute, and doubtless is more anthelmintic than any other in the horse, but it cannot always be depended upon. I have known asconite to expel these parasites when treating the animal with that drug for some disease. When the animal with worms is emaciated or debilitated, the salts of iron is of much service.

There are many other remedies recommended by helminthologists, many of which are serviceable, while others are only calculated to do harm. I need only refer to the insane practice of administering ground glass and other mechanical irritants, in order to warn you against what is absurd. A. E. BUZARD,  
11 Seventh St. S. F. Veterinary Surgeon.

## FRUIT MARKETING.

### California Fruit in New York.

The following letter was addressed by the writers to the Phoenix (Arizona) Fruit-Growers' Association, but it will be read with interest in California, for it relates to our products in New York during the last season:

APRICOTS.—We do not believe this fruit ever will do well here, because we find much of this fruit loses a great deal of its flavor after being seven days in the cars. When shipped in ventilated cars, it of course has to be put in green and then it arrives here sometimes green, sometimes just right, but generally ripe and with rot. When taken from the car it almost melts over night, and is unsatisfactory fruit for our buyers to deal in. When it comes from refrigerators it can be put in ripen in California, and arrives here in almost precisely the same condition as when it started. This fruit comes in hot weather and when taken from the refrigerator, melts as mentioned above. To dry or evaporate, it seems to us that the apricot is the finest fruit produced in your part of the country, and it has a heavy future in this way, but not in the green state as far as the extreme East is concerned.

PEACHES.—Last season we had absolutely none grown around here, and do not believe we ever will have again such crops as we have had in the past, because from one cause or another the trees and orchards are doing badly, and growers are disgusted. Notwithstanding this, the California crop did not do well this year except in the very early part of the season when it sold from \$3 to \$3.50 per 20 lbs. box net. This fruit loses much of its flavor after being off the tree so long. However, we think it will do pretty well in Chicago and Western cities, and it will do fairly well here, but we are not enthusiastic about it, notwithstanding our people have an immense quantity coming in from California.

CHEERRIES.—This is the grand fruit for New York, and after several years experience, so to speak, we find they can come in perfect shape in refrigerator cars, in fact, we had one little lot last year that came to Chicago in a refrigerator and was then sent on here, which we sold at auction for 34 cents a pound, say \$3 40 per ten-pound box, but the fruit was perfectly beautiful. These cherries come to our markets when there is absolutely no other fruit here, and are a month ahead of any produced around here. We have no such cherries, any way, as those that come from California.

PEARS.—The Bartlett is a grand pear, and like the cherries, we produce in this part of the country no such handsome Bartletts as those which come from California. However, only the best must come here and they always should come in refrigerator cars. There is a great future before the Bartlett, because with refrigerators they can be landed here green and will stand up quite long enough, even in the hottest of weather, and our street stands of this and adjoining cities will take an immense quantity of them.

GRAPES.—The Tokay is the grand grape for this city and sells far above all other varieties. Verdelis and Muscats are not liked and never will be liked here, in fact our people do not care for a white or green colored grape. In California our Mr. Day was told, last January, that the Muscat grape was better than the Tokay, but he told the speaker that the grapes were not sent here for the agents to eat, but to make money for the shippers, and as long as the New York people wanted the Tokays and would pay high prices for them against low prices for the so-called superior Muscat or Verdel, then we believe the Tokay should come. We believe the Tokay improves on the way here, and should always come in a ventilated car, never in a refrigerator. The Emperor and Cornichon are good grapes for New York, but the other varieties like Ferrera, Malaga, Malvoise, Fontainebleau, Rose of Peru, White Malaga, Verdel and Muscat, are no good.

PLUMS.—All large sized, dark colored plume do well and will continue to do well here, but no small sized or green colored plum should be sent this way. Few of our people know the name and do not care as long as it is a big dark colored plum. It is a California plum and that is enough for them. The future of this business in this city is wonderful because in the past

Chicago has had it almost all and New York has been neglected, but we have within 100 miles of this city fully 5,000,000 people and will get a big apple that not one-tenth of them have ever had California fruit. They have seen it and perhaps tasted it, but as far as any consumption of the fruit is concerned they have not been in it. There has been received in this city this season about 650 carloads of various California fruits, and we believe they have averaged not far from \$1300 gross per car, many running from \$2000 to \$2500 gross per car. When cars were delayed, especially if they had apricots, peaches or Bartlett pears in ventilated cars, and therefore arrived here in bad shape, they sold low, from \$600 to \$800 gross. Freight from California is \$520 per car on single car passenger trains, six days and a half through, but if ten cars went to Chicago and five of them came on to New York, then the freight was \$440 per car always of 20,000 pounds of fruit. On freight train, taking about twelve days, the freight was \$300 per car and almost all the refrigerators came in this way, but it costs from \$150 to \$175 extra for the use of refrigerators by the California Fruit Transportation (C. F. T.) and the Goodell cars. We have had a heavy season and our California friends are pleased over the result, so that we have every hope next season to increase this business largely. We have the city and the people, and they have the money in their pockets, so that more money can be had sent back from this city than can be had from any other city in the United States, always provided the fruit is sent. New York buyers are peculiar and they will not have common quality of fruit, but if fancy stock comes they go wild over it and that is what we try day and night to hammer into the heads of our people in California, who seem to think that in this big market any kind of fruit would sell well.

New York.

SOGBEL & DAY.

## Dewey & Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

## California's Breeding Interests.

From the report of the State Board of Agriculture, approved at the meeting last week, we quote as follows:

From its inception this society has been the advocate of improved breeding of live-stock. Our schedule of awards each season since organization, shows advancement in the inducements to breed the best.

Our aim has been to so impress upon the producer the fact that cost of maintenance of a well-bred animal is no more than that of one of an inferior breed, and the returns certainly more satisfactory, that he will in his selections be governed by the progressive spirit that prompted the advice.

The constant reiteration of this advice has had its effect, and it is with some degree of self-satisfaction that we refer to the character and breeding of all kinds of live-stock reared in this State.

The great State of Kentucky, with all her advantages for the carrying on of stock-breeding, owes her reputation to the intelligence shown by breeders in the selection of high-class stock, whereby they had attained a standing that was hard to overcome. She was for years the recipient of our gold for stock of all kinds, but now our breeders, with one-third the experience of those of Kentucky, have been able to surpass them in prominence and production, and obtain returns from this same State for our highly developed trotting stock, which illustrates they are not slow in recognizing merit, and are still seeking blood of standard character and demand in their endeavors to excel.

The trotting breeding interest of California now forms a most important part in the resources of the State; in fact, it is one of our leading interests, and must be maintained and encouraged to the extent its importance demands.

During the season just closed the public sales in the city of New York alone of California bred yearlings and two-year-old trotters aggregated over one-half million of dollars, and the demand for this class of stock is such that our prominent breeders have arranged to hold these sales annually, not unlike the handling of our great fruit output, as by this method quick returns are obtainable, and as long as satisfactory prices are available, the supply will be forthcoming.

The most remarkable returns during the season of 1890 by an individual breeder were those obtained by Hon. L. J. Rose of Los Angeles. This sale embraced the get of Stamboul (2:11) and Alcazar (3:20 1/2).

Of the former lot were ten yearlings and ten two-year-olds, which brought in aggregate \$74,800, or at an average of \$3740 each. Of Alcazar's get were offered six yearlings and six two-year-olds, bringing for the twelve head a total of \$31,800, or an average of \$2650 for each.

Add to these amounts the sale of Stamboul for \$50,000, and Alcazar for \$29,000, and we have a grand total of \$185,600 for the lot.

Can any State with double the experience of California make this showing?

That the judgment displayed in breeding was the leading factor we admit; that our climate and feed was an able adjunct we have no doubt; that it has been accomplished we know, and the part taken by this society in the encouragement of just this very idea of pre-eminence we are proud to claim was not a detrimental element in the make-up of the success. In the encouragement of speed in the trotting horses, we have accomplished much more than was believed to be possible by those who in the past were opposed to us for our proclivities in that direction.

That it has been a benefit to values in our property no one doubts.

The history of this society in the promotion of this great interest makes plain the necessity of stimulation in more remote industries, and the success resulting in the many already accomplished emboldens us to renewed efforts toward the others.

The advancement made in this pursuit has encouraged the investment of capital not otherwise attractive to this State. Early development is one of the essential advantages we have, and the climate that assists in this is here to be found.

Our custom is and has always been in the furtherance of this breeding interest, to supply the advantages to demonstrate the capabilities of our stock. Under it we inaugurated in 1888 a contest open to all sires in training that year, and those taking part attracted the attention of the trotting-horse world to California's champions. Soon after negotiations for their purchase began, and resulted in the sale of one for \$20,000, and another for \$50,000, and a refusal of a like amount for another, and those prices were not given and offered for the machine use of racing, but solely for breeding purposes.

That this great trial of speed was of much value to the interest and State there is no question, and as it was brought about through the agency fostered by the State, we feel a pride in referring to heretofore.

The same arguments in the breeding of thoroughbreds may also be used. As the most valuable events for this character of horses are given for the two and three-year-olds, early development of both body and speed will make

them also an important article of commerce in the near future.

The location here of the most extensive breeding farm—Rancho del Paso—in the world, is sure to be an additional attraction for California in the advancement and extension of this industry, and we say to those contemplating engaging in the breeding of any and all kinds of live-stock, examine our advantages before locating elsewhere, and you will surely agree with us that there is but one place for the successful continuance of the breeding of stock, and that place is California.

## Legislation Proposed.

EDITORS PRESS:—Irrigation districts and reclamation districts, where lands have to be bonded and pay taxes amounting in some cases to several dollars per acre, have given a new standpoint from which to view the right of suffrage. We who are in an irrigation district, and have to pay the taxes, believe that only land-owners should vote on matters pertaining to taxing the land solely to improve the land. We do not question, or wish to abridge, the right of any citizen to vote on bonding or taxing our lands for roads, bridges, school-houses, or any public improvement, but when it comes to taxing our lands to improve our lands, we, the owners of the lands, ought to rule. But we shall have to have our State Constitution amended in order to do so—amend the clause that states that no property qualification to vote shall ever be required, by adding: Except in voting taxes on land for their improvement by reclamation or irrigation, in which case only owners of land shall be allowed to vote; and non-resident owners may be allowed to vote under such restrictions as the Legislature may impose.

## Amend the Wright Law.

Under the so-called "Wright Law," the people of any locality, by a two-thirds vote, can organize themselves into an irrigation district. But if the day after organizing as a district, or at any subsequent time, if every man in the district wishes it discontinued—wishes to resume the same status as before voting to organize the district—they are powerless to do so. We need an amendment to this law making it possible for a district to be abrogated when no one will be injured by so doing, and a majority desires its abrogation.

Another much-needed amendment is to deprive the directors of an irrigation district of their absolute power in certain cases. As the law now is, the directors, if so disposed, could enrich themselves and their attorneys at the expense of the district. We wish an amendment that a majority of land-owners in any division of an irrigation district may, by petition, cause any matter to be taken from the Board of Directors, and adjudicated upon by a Superior Judge of the county; and also that a like petition shall cause a Superior Judge to take testimony, pertaining to and review any act of a Board of Directors of an irrigation district, and annul or modify their acts when justice requires.

Sanders P. O., Cal.

## A THRILLING EXPERIENCE.

Remarkable Statement of Personal Danger and Providential Escape.

The following story—which is attracting wide attention from the press—is so remarkable that we cannot excuse ourselves if we do not lay it before our readers, entire.

To the Editor Rochester (N. Y.) Democrat—SIR: On the first day of June, 1881, I lay at my residence in this city surrounded by my friends and waiting for death. Heaven only knows the agony I then endured, for words can never describe it. And yet, a few years previous any one had told me that I was to be brought so low, and by so terrible a disease, I should have scoffed at the idea. I had always been uncommonly strong and healthy, and weighed over 200 pounds and hardly knew in my own experience, what pain or sickness were. Very many people who will read this statement realize at times that they are unusually tired and cannot account for it. They feel dull pains in various parts of the body and do not understand why. Or they are exceedingly hungry one day and entirely without appetite the next. This was just the way I felt when the relentless malady which had fastened itself upon me first began. Still I thought nothing of it; that probably I had taken a cold which would soon pass away. Shortly after this I noticed a heavy, and at times neuralgic, pain in one side of my head, but as it would come one day and be gone the next, I paid little attention to it. Then my stomach would get out of order and my food often failed to digest, causing at times great inconvenience. Yet, even as a physician, I did not think that these things meant anything serious. I fancied I was suffering from malaria and doctored myself accordingly. But I got no better. I next noticed a peculiar color and odor about the fluids I was passing, also that there were large quantities one day and very little the next, and that a persistent froth and scum appeared on the surface, and a sediment settled. And yet I did not realize my danger, for, indeed, seeing these symptoms continually, I finally became accustomed to them, and my suspicion was wholly disarmed by the fact that I had no pain in the affected organs or in their vicinity. Why I should have been so blind I cannot understand.

I consulted the best medical skill in the land. I visited all the famed mineral springs in America and traveled from Maine to California. Still I grew worse. No two physicians agreed as to my malady. One said I was troubled with spinal irritation, another, dyspepsia; another, heart disease; another, general debility; another, congestion of the base of

the brain, and so on through a long list of common diseases, the symptoms of many of which I really had. In this way several years passed, during which time I was steadily growing worse. My condition had really become pitiable. The slight symptoms I had at first experienced were developed into terrible and constant disorders. My weight had been reduced from 207 to 130 pounds. My life was a burden to myself and friends. I could retain no food on my stomach, and lived wholly by injections. I was a living mass of pain. My pulse was uncontrollable. In my agony I frequently fell to the floor and clutched the carpet, and prayed for death. Morphine had little or no effect in deadening the pain. For six days and nights I had the death-premonitory hiccoughs constantly. My water was filled with tube-casts and albumen. I was struggling with Bright's Disease of the kidneys in its last stages!

While suffering thus I received a call from my pastor, the Rev. Dr. Foote, at that time rector of St. Paul's Episcopal Church, of this city. I felt that it was our last interview, but in the course of conversation Dr. Foote detailed to me the many remarkable cures of cases like my own which had come under his observation. As a practicing physician and a graduate of the schools, I derided the idea of any medicine outside the regular channels being in the least beneficial. So solicitous, however, was Dr. Foote, that I finally promised I would waive my prejudice. I began its use on the first day of June 1881, and took it according to directions. At first it sickened me; but this I thought was a good sign for one in my debilitated condition. I continued to take it; the sickening sensation departed and I was finally able to retain food upon my stomach. In a few days I noticed a decided change for the better, as also did my wife and friends. My hiccoughs ceased and I experienced less pain than formerly. I was so rejoiced at this improved condition that, upon what I had believed but a few days before was my dying bed, I vowed, in the presence of my family and friends, should I recover, I would both publicly and privately make known this remedy for the good of humanity, wherever and whenever I had an opportunity, and this letter is in fulfillment of that vow. My improvement was constant from that time, and in less than three months I had gained 26 pounds in flesh, became entirely free from pain, and I believe I owe my life and present condition wholly to Warner's Safe Cure, the remedy which I used.

Since my recovery, I have thoroughly reinvestigated the subject of kidney difficulties and Bright's disease, and the truths developed are astounding. I therefore state, deliberately, and as a physician, that I believe more than one-half the deaths which occur in America are caused by Bright's disease of the kidneys. This may sound like a rash statement, but I am prepared to fully verify it. Bright's disease has no distinctive features of its own (indeed, it often develops without any pain whatever in the kidneys or their vicinity), but has the symptoms of nearly every other common complaint. Hundreds of people die daily whose burials are authorized by a physician's certificate as occurring from "heart disease," "apoplexy," "paralysis," "spinal complaint," "rheumatism," "pneumonia" and other common complaints, when in reality it is from Bright's disease of the kidneys. Few physicians, and fewer people, realize the extent of this disease or its dangerous and insidious nature. It steals into the system like a thief, manifests its presence, if at all, by the commonest symptoms and fastens itself in the constitution before the victim is aware of it. It is nearly as hereditary as consumption, quite as common and fully as fatal. Entire families, inheriting it from their ancestors, have died, and yet none of the number knew or realized the mysterious power which was removing them. Instead of common symptoms, it often shows none whatever, but brings death suddenly, from convulsions, apoplexy or heart disease. As one who has suffered, and knows by bitter experience what he says, I implore every one who reads these words not to neglect the slightest symptoms of kidney difficulty. No one can afford to hazard such chances.

I make the foregoing statements based upon facts which I can substantiate to the letter. The welfare of those who may possibly be sufferers such as I was, is an ample inducement for me to take the step I have, and if I can successfully warn others from the dangerous path in which I once walked, I am willing to endure all professional and personal consequences.

J. B. HENION, M. D.  
Rochester, N. Y., Dec. 30th.

## Petaluma Incubator.

A RURAL representative made a visit one day last week to the incubator manufactory in the town of Petaluma. Mr. L. C. Byce, the manager, had a full force of men at work, and was just in receipt of a letter from C. Lillingston, Carpinteria, wishing him to send immediately a \$50 machine for hatching ostrich eggs. Mr. Lillingston has one in use now, and this one sent for was to meet the demand of his enlarged business in this line. Mr. E. Cawston, of Norwalk, wrote that he had hatched 15 chicks from 15 eggs with one of the Petaluma Incubators. Mrs. J. W. Whitney, of Conley Station, Sacramento, has two machines, one of 70 egg capacity and the other of 120 egg capacity, which she has used for six years. There is no doubt that by the use of the Petaluma Incubator, many henneries and small farms are made profitable. Mr. Byce has lately made improvements, and in this connection has a full line of all the machinery, egg-food, and medicines used in poultry yards. It is something of a curiosity to go through his large factory to see the various devices and accoutrements used in poultry farms. Any one interested would do well to send for his new catalogue, which contains a full description of how to make money by raising chickens.

## GOOD HEALTH.

### The San Francisco Cancer Remedy.

It is a Cure and not a Mere Extirpation.

The world-wide excitement attending the recent discovery of the Berlin consumption cure seems to have awakened a new and most active interest in the claim which for three or four years has been made that a well-known practitioner in this city, Dr. C. A. Cook, has discovered a cure for cancer. It has long been fully believed by all who have made any effort to examine into the facts connected with this alleged cure that it is a reality, that it is a genuine cure and not a mere extirpation—a rooting or cutting out.

Physicians of all countries, and numerous uneducated "specialists," as they are pleased to call themselves, have from time immemorial cut out cancers or drawn them out by means of "plasters," sometimes, indeed, in very mild or doubtful cases of this malady such practitioners may have dissipated or "scattered" cancerous tumors by outward applications without the aid of either knife or plaster. Cases of a similar nature are on record in medical books, where what were supposed to be cancers have gradually disappeared from the system without any special treatment. Such "cures," however, have been attributed to the action of nature operating on unusually healthy systems, when the patient has followed a careful system of diet, etc. Nature often works wonders in disintegrating and driving from the system foreign bodies, or broken-down tissues and even fragments of bone—and thus, for ages, cancers have sometimes thought to have been "cured." But until our attention was called to the practice of this San Francisco specialist, the writer has never heard of anything which could be considered a "specific" for cancer. So much interest is just now being taken in regard to this matter, that we feel it is due to the public to give some information as to

#### The Character and Method of the New Treatment.

This new treatment has no need for the knife, and only in a few exceptional and mild cases is anything like a "plaster" used. Even when the latter is used it is not compounded with the severe caustics usually employed, but nevertheless does its work in a manner equally effective and with very little torture to the patient. But, in all cases, what are denominated "specifics" are employed, which act gently and without giving pain. In fact, the action of the specific assuages the pains which always accompany the growing tumor immediately upon their application. They moreover destroy the offensive odors which are nearly always attendant upon advanced cases. No minerals of any kind are employed in any part of the curative process. Every particle of the several unguents and other compounds is either vegetable or animal.

This "cure" was not an accidental discovery, but consists of an elaborate treatment which has been evolved only after long years of careful study and experiment. Starting some 20 years ago from a mere germ, which was obtained for coin, the remedy has been worked until it has now assumed a well perfected specific for this most dreaded of all maladies with which the human race is afflicted.

#### The Remedy Is Simple as Well as Efficient.

Different from the idea of Dr. Koch, whose consumption remedy proceeds with violent and often dangerous action from the extremes or periphery of the body—the skin—through hypodermic injection under the skin, the constitutional portion of this cancer treatment is simply an alternative of pleasant and quite attractive taste introduced into the stomach—the fountain-head of nutrition, and thence, through physical movements, modifies and controls all the vital machinery of the system—absorption and nutrition—and in a way so vigorous and beneficent that morbid actions are forestalled and physiological ones so energetically and triumphantly substituted that, with the aid of the outward applications and the active endosmotic action set up by use of the battery, every cancerous germ is not only disintegrated and dissipated, but is fully and effectually driven from the system. The evidence that this is so is found in the important fact that not one single instance of a return of any cancerous trouble has been reported or discovered, even after many years of waiting. Scores of patients now in this city, many of whom have been operated upon by our best surgeons, and who have been pronounced again afflicted and all of whom have been pronounced undoubtedly suffering from the malady, have been treated, pronounced cured, and have never in any single case been subjected to a return. This may be regarded as evidence, beyond all question, of the reality of the cure! Evidence of this character has never yet failed to satisfy every person who has taken the trouble to look into it. Many physicians of standing are among those who have taken the trouble to investigate, and all have expressed themselves as perfectly satisfied that the facts are precisely as have been stated, but only two or three physicians have had the courage to publicly stand up to their convictions because of the fearful persecution which they have met and are sure to meet with from the ruling majority of the San Francisco faculty. Why this is so we leave for those

medical gentlemen most interested in ignoring and suppressing an important truth to say. There are at this time 18 patients now under treatment for cancer, all of whom are doing well and will soon be discharged as cured.

This Ascertained Remedy is Entitled to Respectful Consideration and Investigation.

By the medical faculty, because it is a reasonable and apparent truth of importance to medical science and to humanity everywhere. The practitioner has repeatedly offered to treat any patients in a reasonable stage of affliction, who may be submitted by any recognized body of local physicians. It is well known that the treatment is exceedingly mild and absolutely without danger. After years of waiting for our own health conservators to come forward and comply with so reasonable a request, the appeal has now been made to a city 3000 miles away.

#### Compared With Koch's Remedy.

That this remedy will be found preferable to that of Koch, which it is claimed has already been shown to be of some value in mild cases of cancer (lupus) as well as for consumption, is fully shown from the fact of its effective action in quite extreme cases, and with all classes of cancer—lupus, scirrhus, and especially with that peculiarly dangerous character of this malady which attacks female internal organs. In the latter case it is, if anything, more effective than in any other form of the malady. Such cases, when treated by this remedy, if taken in anything like the early stage, or about the time when a surgeon would suggest the use of the knife as the "only remedy," yield most readily and kindly, without any danger whatever of hemorrhage. Indeed, all natural hemorrhage in such cases is at once stopped, while the cancerous growth comes away gradually and without any suffering by the patient. In nearly all treatment, except in extreme cases, the patient is not confined even to the house—not even for a day. We know of what we are writing, from personal observation, in a great number of cases. The writer has never paid any attention to any case which has not been authoritatively pronounced cancer by some one or more of the most prominent physicians of the city.

The mode of treatment differs in toto from Koch's remedy and is all the more worthy of attention because it is analogous to the action of the usual remedies employed and in direct line with the practice which physicians all over the world have employed for thousands of years in the general treatment of diseases.

It should be stated that the preliminary act in treating either tumor or cancer by this method is by accelerating the passage of certain unguents through the skin by hand-rubbing and by electrical action. Electricity alone appears to be of but little account; but as an aid to the endosmotic action induced by simple rubbing, it is found of much service, and except in extreme cases, induces a more or less rapid dissolution of tumor or cancer, while the constitutional action of the remedies taken into the stomach causes an especially rapid excretion from the body of the diseased or broken-down tissue.

It is often the case that the physician is unable to say whether an apparent tumor is benign or malignant. With this remedy it makes no difference whether it is one or the other. The external applications and alternative remedies may be safely and effectively applied in either case.

#### Just How Remedies Cure

Will perhaps remain forever in the regions of the unknowable. Mankind may differ or even quarrel as bitterly as they are able as to opinions, but experience is the grand "hose" at last and subjugated by facts, opposition must rest in assent and silence. No crime against progress is so great as prejudiced, angry and persistent war against calm and analytical investigation. The latter is that which has been sought by the writer and his friends during the four-years' war which he has been compelled to wage against the prejudiced and persistent opposition of the medical faculty of this city, against the efforts at progress which a few humble but earnest citizens have been endeavoring to make.

Before closing this article, we wish to make a statement in refutation of charges which we understand have been urged to break the force of the articles which have heretofore appeared in these columns in reference to the matter of this cure. It has been charged that they were mere advertisements and paid for as such. We desire to say once for all that neither the writer nor any one connected with either of our publications has ever received, either directly or indirectly, one dollar or in any way the value of a dollar in payment for anything which has been written or printed, during the last four years or any other time, in regard to the matter under discussion. Whatever we have done or written has been purely in the interest of humanity and for the furtherance of medical science.

People who use arsenical preparations for their complexion, do so at the risk of their lives. Ayer's Sarsaparilla is guaranteed free from any injurious drug, and is, therefore, the safest as well as the most powerful blood medicine in the world. It makes the skin clear.

## THE BEST!

—THE—

## H. H. H. Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

MESSES. H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (104 gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful hitters. Respectfully yours, FRANK H. BURKE, Breeder of Registered Holsteins and Berkshires. Menlo Park, Cal., January 23d, 1890.

MANUFACTURED BY

H. H. MOORE & SONS, THE DRUGGISTS,

248 MAIN STREET, STOCKTON, CAL.

## BROWNE'S

Patent

## Squirrel Exterminator.

This is an apparatus for burning straw and sulphur and also forces the fumes down their holes which never fails to kill. I will give \$100 in case the exterminator does not kill (if properly applied) every ground squirrel that its deadly fumes comes in contact with. Thousands are in use. Price \$3.00. Send for circulars to

F. E. BROWNE,

30 S. Main St., Los Angeles, Cal.

## THE SUCCESS TRAP

Will hold Animals from a Gopher to a Coyote. Price for 30 days, postpaid, 25 cents. One dozen, \$2.00. SUCCESS TRAP CO., Stockton, Cal.

Drugs and Fruit in Common Coal.

Very few people have any idea of the almost numberless products of common coal, and least of all that essence of fruits, drugs, and even wines are found in the ordinary, every-day fuel of the time. Yet such is the fact; coal has many uses beyond the mere giving of heat and light. These last have only been discovered of late years, although pit coal has been known hundreds of years. Even illuminating gas was unknown a century ago, petroleum has been in use scarcely 40 years, and it is hardly more than 50 since some one discovered that stone coal was inflammable. Nearly all other products derived from soft coal have been discovered and applied in the interest of science or of fraud within the last 25 years. Some of them seem almost magical.

Besides heat and light, there are obtained from ordinary coal the means of producing over 400 shades of colors, among the chief of which are saffron, violet-blue and indigo. There are also obtained a great variety of perfumes—cinnamon, bitter almonds, queen of the meadows, clover, wintergreen, anise, camphor, thymol (a new French odor), vaniline and heliotropine.

Among the explosive agents whose discovery has been caused by the war spirit of the last few years in Europe are two, called dinitrobenzene or hellite and pitrate.

To medicine, coal has given hypnone, salicylic acid, naphthol, phenol antipyrine—the last a remedy for "La Grippe." Benzine and naphthalene are powerful insecticides.

There have been found in it ammoniacal salts useful as fertilizers, tannin, saccharin (a substitute for sugar), the flavor of orrant, raspberry and pepper, pyrogallol acid and hydroquinone, used in photography, and various substances familiar or unfamiliar, such as tarsin, asphaltum, lubricating oils, varnish, and the bitter taste of beer. By means of some of these we can have wine without the juice of the grape, beer without malt, preserves without either fruit or sugar, perfumes without flowers, and coloring matter without the vegetable or animal substances from which they have hitherto been chiefly derived. So it will be seen that coal is an exceedingly versatile commodity.—*Ex.*

**STRIKES.**—Those who believe strikes are of modern origin are likely to be disabused by a recent article in the *Pall Mall Gazette*. According to accounts, strikes were extensively indulged in in Egypt 3000 years ago. It appears that workmen in those times were paid at the beginning of the month, and their "blue Monday" lasted well into the month. Then they had a habit of striking to obtain the means of living. In the building of temples, King Pharaoh himself was sometimes appealed to, the workmen refusing to return to work until he had given his decision. These men appear to have been quite as obstinate as men of modern times, and generally made a "compromise," much as is done in these days. They appear to have had the habit of throwing down their tools on slight provocation, and assembling together to talk over their grievances. Sometimes efforts were made to prevent them leaving the buildings upon which they were at work, but these efforts do not appear to have been successful.

For the restoration of faded and gray hair to its original color and freshness, Ayer's Hair Vigor remains unrivaled. This is the most popular and valuable toilet preparation in the world; all who use it are perfectly satisfied that it is the best.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

Cough-Cures

Are abundant; but the one best known for its extraordinary anodyne and expectorant qualities is Ayer's Cherry Pectoral. For nearly half a century this preparation has been in greater demand than any other remedy for colds, coughs, bronchitis, and pulmonary complaints in general.

"I suffered for more than eight months from a severe cough accompanied with hemorrhage of the lungs and the expectation of matter. The physicians gave me up, but my druggist prevailed on me to try

Ayer's Cherry Pectoral.

I did so, and soon began to improve; my lungs healed, the cough ceased, and I became stouter and healthier than I have ever been before. I would suggest that the name of Ayer's Cherry Pectoral be changed to Elixir of Life, for it certainly saved my life."  
—F. J. O'Brien, Salto, Buenos Ayres.

"A few years ago I took a very bad cold, which settled on my lungs. I had night sweats, a racking cough, and great soreness. My doctor's medicine did me no good. I tried many remedies, but received no benefit; everybody despaired of my recovery. I was advised to use Ayer's Cherry Pectoral, and, as a last resort, did so. From the first dose I obtained relief, and, after using two bottles of it, was completely restored to health."  
—F. Adams, New Gretna, N. J.

Ayer's Cherry Pectoral,

PREPARED BY

ORANGE CULTURE

A practical treatise by T. A. GARY giving the results of long experience in Southern California. 100 pages, cloth bound. Sent post-paid at reduced price of 75 cts. per copy by NEWBY & CO., Publishers S. F.

### Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

**CAN-LABELING MACHINE.**—Henry Albert, Crescent City, assignor of one-third to Thos. R. Hayes of Pasadena, Cal. No. 445,418. Dated Jan. 27, 1891. This machine has a runway for the cans. A reciprocating can-puller and paste car operate in this runway. The can-puller in its movement toward the cans rises to a plane above them, and then drops down upon and engages the foremost can. This can is relieved by a suitable controlling device, and the can-puller rolls it along in the runway. In its course it passes over and picks up the topmost label of the pile, which said pile is confined in a box, and the top label is supplied with paste by the paste-roller which passes over it. The labeled can is discharged at the end of the stroke, and the can-puller and paste-roller repeat the operation. Suitable locks hold the paste pile, and are operated by the passing can-puller frame, to relieve only the topmost label while holding the remainder of the pile. The label pile is kept constantly fed up to the level of the runway.

**TRACK-HARNESS.**—John E. Foster, Ferndale, Humboldt Co., Cal. No. 445,428. Dated Jan. 27, 1891. This is a harness especially adapted for use on the track with a light sulky. The object is to provide a track-harness without the use of breeching, breast-strap or traces, at the same time providing for a perfect hold-back, and a strong and tight connection with the shafts of the vehicle which will give the horse perfect freedom.

**SEPARATOR.**—Austin Cook and Wm. L. Harvey, S. F., assignor of one-third to T. J. Parsons, No. 445,133. Dated Jan. 20, 1891. The invention relates to the general class of harvesting machines, and is especially adapted and intended for the separation of wild oats from cultivated oats or any other grain or material.

**TRAVELING HARVESTER.**—Geo. W. Haines, Stockton, No. 444,936. Dated Jan. 20, 1891. The patent covers a number of details of construction in traveling harvesters which improve and simplify the machines.

**FUEL-SAVING DEVICE.**—Miles B. Dodge, S. F., No. 444,976. Dated Jan. 20, 1891. This is an improved apparatus to be used in connection with steam engines and boiler furnaces for the purpose of economizing the fuel used under the boiler. The object of the invention is to introduce air into the furnace for the purpose of combustion at a high temperature and to utilize the exhaust steam of the engine and that waste heat from the boiler furnace successfully for the purpose of raising the temperature of the air, at the same time employing the air-blast which is thus being heated as a means for condensing the steam which exhausts from the engine.

**BALING PRESS.**—George Beamon Allen, San Leandro, Cal. No. 443,172. Dated Dec. 23, 1890. In this press there are two followers operating in separate haling chambers, one at each end. The followers are operated by a novel series of intermeshing gears, actuated by the power lever and connected with the followers by links. These connections force the followers out and draw them back alternately. The power is even and steady, avoiding friction in the baling chambers.

**STRAW-DUMP ATTACHMENT FOR COMBINED HARVESTERS.**—Alexander McDonald, Franklin, Cal. No. 443,648. Dated Dec. 30, 1890. This invention belongs to that class of devices to be attached to the tail end of harvesters to catch the straw. It consists of a wheeled frame having a dump body, and carriers to receive and deliver the straw to said body. It can be readily connected with and disconnected from the traveling harvester.

**WIND ENGINE.**—George S. Eastman, S. F., Cal. No. 443,641. Dated Dec. 30, 1890. This engine consists of traveling chains, carrying adjustable sails, whereby they are moved. The chains engage sprocket-wheels and these turn a shaft from which the power is taken. The whole is mounted on a turntable, whereby it can move into and out of the wind. The machine is intended for heavy work and is capable of developing great power.

**SPREADER FOR GAITING HORSES.**—James R. Phelps, Sacramento, No. 444,570. Dated Jan. 13, 1891. This invention relates to a device which is called a "spreader" for the purpose of giving horses a proper gait and causing them to spread the hind feet when traveling so as not to interfere or overreach. This is an improvement on a former patent by the same inventor. Continuous elastic arms are pivoted or swiveled so as to turn in a suitable support upon the back of the animal. These arms are bent in a curve and the lower ends have attachments by which straps may be connected with them. These straps or continuations of them pass around the hind legs of the animal, and the constant elastic pressure of the arms pulling upon these straps tends to draw the hind legs apart, which prevents "interference" while traveling.

**SEEDING-MACHINE.**—Daniel M. Baldwin, Florence, Los Angeles Co., No. 444,573. Dated Jan. 13, 1891. This invention relates to the class of seeding-machines; and the object of the invention is to provide a simple and accurately-operating device for attachment to any form of seeding-machine. By properly timing the rotation of any of the series of drop-plates, the dropping of the seed can be made to take place at any suitable intervals.

**\$500,000**

### FOR SALE!

**PINOLITO OLIVE RANCH!!!**

### FORTY-SIX ACRES OF HILL LAND

In the Town of Auburn, Placer Co.

Red soil, superimposed upon upturned, friable, decomposing slate, yielding iron and alumina, thus furnishing a soil which, as Prof. Hilgard said after his analysis, will retain moisture, will not require irrigation, and will not allow the vegetable mold to leech away; thus suited to the growth of fruit trees, especially the olive, as has been demonstrated both by the remarkable growth of the tree and the yield and the quality of oil.

It is situated only 15 minutes walk from Auburn Station—the C. P. R. passes along one side—and is a less distance from the Court House. Thirty acres improved and planted to olives, set at long distances for permanent growth, and other fruits planted between the rows for temporary profits, mostly peaches of three best varieties, ripening in succession: prunes, mostly Petite; plums of several varieties, as Kelsey, Japan, Shropshire Damsone, etc.; figs of several best varieties; a few apples, nectarines, blackberries, etc. Two acres of table and raisin grapes, never irrigated, the vines remarkably vigorous and in full bearing. The trees, especially the 1500 olive, have all been planted with regard to permanency. About one-half of them have an orchard growth of seven years; fruited last year 300 pounds, this year nearly one ton. They are mostly Mission and Picholine, with a few trees of other choice varieties. Two crops of the olives have been pressed. The yield has been, for the first press, 14 per cent of very clear delicious table oil, and four per cent from the second press—the Picholine yielding this, of a peculiarly clear, nutty oil.

There is on the ranch a few acres of grain sown for hay; two acres of well-set alfalfa, below the Auburn ditch, which crosses one corner of the property; also a small house of four rooms and a kitchen; a well of good water; a small barn; a strong, permanent spring of soft, cold water, which wells up through the slate; a two-inch iron pipe connects the spring with an iron-bound 20,000-gallon tank, situated on a beautiful pine clad hill, 40 feet above the spring, a point which overlooks the town and gives very charming distant views, and is one of the most lovely sites for a residence to be found. The water is pumped to the tank by a duplex pump; the power, a four-horse steam engine, which furnishes power sufficient to pump, saw wood, run an olive crusher and do all needed shop work.

The land is all suited to fruit, excepting along a rocky ridge, which furnishes three very desirable residence sites, and the olive, set promiscuously, thrives finely among the rocks. The property can be conveniently divided along a sag which separates two of the high knobs, and water from the spring can be pumped to each of them.

This desirable property is now offered for sale for less than the improvements cost. The land is fenced, the title good and unencumbered. It is connected by a roadway, which is one of the improvements made, with one of the principal streets of Auburn.

The sale will convey the entire plant, furniture in the house, all utensils, etc. If sold before April 1st the sale will include the coming crop. If later, the crop will be reserved, unless otherwise by special agreement. If desired, one-half the purchase money can remain five years, secured by mortgage at eight per cent. For price and any further information desired, address

# THE ONLY TRUE FERTILIZER

Is the GENUINE Compound of the MEXICAN PHOSPHATE & SULPHUR COMPANY prepared from GUANO and rendered soluble by the application of acids.

This manure is an ENRICHER of the soil and not, like others, a STIMULANT only; It will do for the land what no other can in rendering it PRODUCTIVE without IMPOVERISHMENT.

Its analysis is reliable; its work is immediate and effective, and for results we point with confidence to the ORCHARDS of RIVERSIDE, where it has been liberally used for the past three years.

It can be prepared to suit any land, with or without potash, as occasion may require. It is rich in PHOSPHORIC ACID, and can be made as rich in NITROGEN as the most deficient soil may exact.

## WE GUARANTEE ALL WE CLAIM FOR IT,

Viz.: TO BE THE MOST COMPLETE FERTILIZER ON THIS COAST.

Iron cut, punched and formed, for making pipe on ground. All kinds of Tools supplied for making Pipe. Estimates given. Are prepared for coating all sizes of Pipe with a composition of Coal Tar and Asphaltum.

K.C. HAY PRESS CO. KANSAS CITY, MO.

**The Armstrong Automatic PORTABLE ENGINE and BOILER.**

The Best, Lightest, Cheapest Engine in the world. Can be arranged to Burn Wood, Coal, Straw or Petroleum. 5 or 8 H.P. Mounted on skids or on wheels.

TRUMAN, HOOKER & CO., San Francisco.

The Sweet-Wine Law.

Producers of sweet wines have had much to vex and perplex them in the efforts of the revenue officials to comply with the new law. The Washington office took the wrong ground that California must should not contain over 26 1/2 per cent of sugar. This wrong conception of the facts was successfully combated by united action among the sweet-wine makers, the officials of the Viticultural Commission and other experts, and was corrected. It was claimed in Washington that there is no record in the reports of the Viticultural Department of the University of California of any musts containing more than 26 1/2 per cent of saccharine matter.

This is a mistake. The published records of the Viticultural Department are for the most part on dry wines, not sweet wines, yet even by them the revenue office is grossly in error, as may be seen by the following letter from Professor Hilgard:

To the Editor of the Examiner—SIR: Permit me to call your attention to the fact that the statement made in your issue of yesterday, that my reports on the musts and wines of California show no record of higher saccharine strength than 26 1/2, is incorrect. Page 22 of a report published in 1888, herewith inclosed, gives a list of musts ranging from 27.54 to 30.80 per cent. Why this should have been overlooked both at Washington and San Francisco is obscure; for that report was widely circulated at the time of publication. A large additional list of such musts is on record at this laboratory, and can be furnished if necessary. The above record, with a general statement of the facts in the premises, has been forwarded to Commissioner Mason early this week, in addition to telegrams previously sent.

The absence of a large number of such examples in the earlier reports is of course due to our investigations being entirely in the direction of dry wines, which heretofore have been by far the predominant interest. It was not easy to foresee that such a question as the present would be likely to arise.

Berkeley, Cal., Feb. 7th. E. W. HILGARD.

The saccharine strength of sweet-wine must, so far from being limited to 26 1/2 or even to 30.80 per cent, often runs as high as 36 per cent, and there are some instances in which it has reached 40 per cent.

This wrong conception of the facts was combated by strong statements sent to Washington by Mr. Wetmore and others, but there seems to have been another error by the Washington experts which has worked great hardship to the sweet-wine men. It is embodied in the following official letter which followed a telegram stating briefly the fact to the Washington office:

BERKELEY, Feb. 10, 1891.  
Hon. John W. Mason, Commissioner Internal Revenue, Washington.—DEAR SIR: I have this morning wired to you the result of an investigation made by me into the discrepancies between the determinations of alcohol in sweet wines made according to the saccharometer method prescribed by the Department and by the analytical method of distillation. My attention was called to it by Mr. John Gallegos of Irvington, Alameda county, and at his request I assisted Deputy Collector Borland in a series of comparative tests, which were afterward repeated with more delicate instruments at the station laboratory here. As in every instance the saccharometer test gave several per cent less than distillation, I was at once led to suspect that the tables were in fault, and upon a full comparison I find this to be undoubtedly the case. The figures in the tables headed "Alcohol by Volume" really represent "alcohol by weight" percentage, and require to be divided by about .8 in order to give the true result, although no calculation I have made on the basis of the standard tables for "Attenuation" give the exact figures of the official tables.

The seriousness of such an error, if left uncorrected in its bearing upon the legal status of the sweet wines now in the hands of our makers, involving such heavy pecuniary interests, needs no comment, whether as regards the fortifications already made or those which might be made hereafter on the basis of the erroneous determinations.

The instructions given for making the tests are also defective in this, that they fail to call the attention of the operators to the necessity of freeing the wines from carbonic gas before testing their saccharometer reading. Practically all sweet wines are at this time in more or less slow fermentation, and the gas bubbles adhering to the bulb of the spindle buoy it up so as to diminish, to a varying degree, the differences relied upon for the estimation of alcohol in the wine. To this cause may be traced the irregularities in the discrepancies due to the difference between "weight-per cent" and "volume-per cent" in actual observations; and to obviate it by aeration or warming involves more skill in manipulation than is ordinarily to be expected if graver errors are to be avoided. I think it would be altogether better, and as brief, to adopt the distillation ("salleron") instead of the saccharometer method for the determination of alcohol in the sweet wines.

As I write this I am in receipt of your telegram stating that the table in question is correct and is founded on Stevens' alcohol tables and Schulze's saccharine tables. As I wired you in reply, the table is correct for weight per cent of alcohol, but not for volume per cent, as stated in the table heading and in the text preceding it. But as this is a plain question of physics and figures, about which there can be no two opinions among experts, I abstain from any discussion of the subject. Very respectfully your obedient servant,

E. W. HILGARD,  
Director of California Experiment Station.

Must Have the Rural:

An esteemed subscriber formerly living at San Jose but now in Oregon sends the following substantial compliment: "I inclose \$2.50 for the RURAL PRESS during my stay here, as I am lost without the paper and do not get it regularly from home. The RURAL PRESS is where I see not only the faces of my friends mirrored but their souls also."

The Southern Citrus Fair.

A general canvass which has been made throughout the Sixth Congressional District, in behalf of the State Citrus Fair, shows highly satisfactory results. The people of almost every locality in the southern section of the State seem to be thoroughly awake to the necessity of making a suitable display of their citrus and other products, and there is ample reason to believe that the fair will be one of the most successful events of its character ever held on the coast.

The Citrus Fair is an enterprise inaugurated by the State for the purpose of encouraging the production of citrus and semi-tropic fruits. The sum of \$2500 is offered in premiums, to which the Fair Committee has added \$400 for special designs in exhibits. The first of these fairs was held last year and was attended by some 20,000 visitors. Fruit-growers and those interested in the sale of fruit land have generally declared that no one event ever gave such a stimulus to the citrus industry. For almost the first time producers from every part of Southern California met on common ground to inspect the results of one another's labor and to compare notes on methods. A keen but wholesome rivalry was aroused between various localities, whose representatives returned home determined to put forward their best efforts to win greater honor at the next fair. But perhaps the most valuable of all the results attained was the object-lesson to the public of the size and importance of this element of Southern California's natural wealth.

It is now about three weeks before the fair opens, yet active organizations have already been formed in six counties and in 21 individual localities. In every case a committee of energetic, public-spirited men has been selected, composed partly of orange-growers and partly of citizens who have an interest in seeing their section well represented at the fair. In some localities considerable sums of money have been raised to cover contingent expenses connected with making a fine exhibit.

It is generally conceded that the two citrus fairs held in the northern part of the State, the first at Oroville in 1890 and the second at Marysville in 1891, were thoroughly successful from a popular point of view—that is to say, they were attended by immense numbers of people. There can be no doubt that this result was achieved largely through the attractiveness of the display—the working out of elaborate designs and the elegant decoration of the building. Nearly every locality, which has thus far entered the lists for the fair in Los Angeles in March, has announced its intention of making its exhibit in some form which will not only serve as a medium for the display of its best fruit, but will at the same time satisfy the public taste for the beautiful. The management of the fair will co-operate with any section in its efforts in this direction, advising with regard to design, allowing adequate space and providing materials to be used in construction of the framework free of charge. To this same end special premiums have been offered by the committee for the most artistic display of citrus fruits: First, \$150; second, \$100; third, \$75; fourth, \$50; and fifth, \$25. Six localities have already decided upon their designs, and several more have the matter under active discussion.

The committee will spare no expense in decorating the building to be in perfect harmony with the displays. It is proposed to show our visitors and our own people not only the finest citrus fruit in the largest quantities ever gathered together, but also the most artistic and beautiful display of the same. It will be an orange palace rivaling in splendor the ice, coal and oorn palaces of various cities of the East.

The question which the Citrus Fair Committee has to ask of each locality is this: Are you awake to what is being done elsewhere, and will you hold your own in the contest?

E. W. JONES, C. M. WELLS, J. W. COOK, Executive Committee.

H. JAY HANCHETTE, Secretary and Superintendent.

Los Angeles Feb 7, 1891.

TWO FINE NEW BRIDGES.—The Los Angeles World thus describes two bridges which the Southern Pacific is to build at Los Angeles: The Southern Pacific Company has submitted plans to the City Engineer for two superb bridges which it proposes to build at once. The largest one is to cross the Los Angeles river north of the Santa Fe bridge at the base of the bluff by the reservoir at Elysian Park. This will be a double-track, steel "skew" bridge of two spans of 156.4 feet each. This will take the place of the bridge which was carried away by the flood of last winter, and which destroyed the bridges to the south by lodging against them. The other bridge will be of the same type and pattern, the only difference being that it will be single track. It will also consist of but two spans of 166.8 feet. This will be placed at the end of Mission street, on the Yuma division of the road. Both of these bridges will be the finest specimens of such work ever built in this city. They will rest on iron cylinders seven feet in diameter; these will be sunk 50 feet below the bottom of the river and then filled with concrete. These bridges will be the first in this locality to use only two spans in crossing the river. They will also be placed four feet higher above the level of the river than any heretofore built, thus reducing the danger of damage from debris float-

ing on high water. This elevation will necessitate the raising of the Santa Fe and Terminal Companies' tracks at their crossings. These bridges will involve an expense by the Southern Pacific Co. of \$100,000 or more.

QUERIES AND REPLIES.

Esparcet.

EDITORS PRESS:—Among the many that have tried Esparcet, the undersigned may be numbered. We sowed it about the time alfalfa is generally sown, the latter part of April, in 1888. The land was new, mellow and fertile, having raised a good crop of hay the year before. The seed, obtained from J. Bowen at the high figure of 17 cents per pound, was sown like grain and harrowed in. The little plants that actually came up could be counted at one's finger's ends. They grew to six inches in height and withered during the summer. The next year not a sign of Esparcet was to be seen. Our land is billy and alfalfa won't do well at all, but Esparcet also is, in our opinion, not suited for dry uplands in California.—R. JORDAN, Napa.

Grafting.

EDITORS PRESS:—Will you kindly inform many of your readers in your valuable paper whether it is true that any kind of fruit trees may be grafted successfully on the fig and vice versa? If not, which species can be grafted upon? Also, to improve a variety, is it enough to graft on it a scion of an identical species and variety?—A SUBSCRIBER.

We should say no to both questions. Who can answer otherwise?

Logs for Water-Pipes.

EDITORS PRESS:—I should like to ask through the columns of the PRESS which kind of logs will last longest under ground, for conveying water for irrigation—pine or spruce? Also, if any of the readers of the PRESS know of a cement that can be used about the joints of the logs to keep them from leaking. Also, what is the best composition to put on the logs to prevent their decay. I read some time ago of a man saturating underground timbers with coal oil and then covering them with tar. Has any one tried that method?—J. W. C., El Dorado Co.

We would like experience on these points.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

- FOR WEEK ENDING FEB. 3, 1891.  
445,742.—SHINGLE AND SHAKE MACHINE—Chas. W. Babcock, Crescent City, Cal.  
445,828.—SEPARATING CROSS-HEAD TIE-WIRES—G. B. Baer, Cloverdale, Cal.  
445,747.—STRIKING BAG—H. B. Cook, S. F.  
445,750.—LETTERING DEVICE—L. A. Gates, S. F.  
445,729.—STOVE TOP—Peter Haerst, S. F.  
445,892.—WATER-CLOSET—J. M. Holloway, Santa Barbara, Cal.  
445,753.—FRUIT-PITTER—James T. Isb, S. F.  
445,837.—PNEUMATIC BELL—G. F. Kincaid, S. F.  
445,730.—AX-HELVE FASTENER—H. M. Martin, Tacoma, Wash.  
445,818.—SHEAVE—Thomas O'Neill, S. F.

445,579.—VAGINAL ATOMIZER—W. E. Weldon, S. F.  
18,930.—TRADEMARK—R. D. Hume, S. F.

The following brief list by telegram for Feb. 10, will appear more complete on receipt of mail advices: California.—Lewis M. Clement, Oakland, cable street railway; Julia W. Craig, San Francisco, chair; Peter H. Jackson, San Francisco, lens for illuminating tile; Ammi M. Jewell, San Francisco, boring machine; Edwin McDonald, Willows, thrashing machine; James F. Waite, San Francisco (assignor of half to William Hollis), brake for cable-car.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

BERKSHIRE SALES.—Phil. M. Springer, Secretary American Berkshire Association, Springfield, Ill., sends the following transfers of recorded Berkshires: Alto's Charming 25192, Obermer's Sovereign 25193 and Alto's Gem 25, 194, J. B. Hamill, Alto, Wash., to Thompson & Brown, Pendleton, Oregon; Stony Oak Oregon Girl 25029, Thos. H. Tongue, Hillsboro, Oregon, to J. S. Wintemute, Tacoma, Wash.; Oxford Belle XX 25092, U. H. Gentry, Sedalia, Mo., to Walter R. Goodall, Livingston, Mont.; Wyo. Duke 25489, A. W. Cooley, Coldwater, Mich., to T. J. Dickinson, Fort Steel, Wyoming; Victoria 25509 and Victoria II 25510, A. J. Lovejoy & Son, Roscoe, Ill., to John H. Temple, Pnenta, Cal.

Of Interest to Fruit-Growers.

We are in receipt of the annual spring catalogue issued by Wm. Stahl, of Quincy, Ill., giving a full description of all injurious insects to fruits, also preventives for same by use of fungicides. This catalogue gives a detailed account of the above in full. Any of our readers who are interested in fruit culture will do well to send for this catalogue, which is mailed free upon application. The subject of spraying the fruit trees, plants and vines to prevent the ravages of insects and fungus diseases is a critical one, and should be investigated by every fruit-grower.

SAM C. PARTRIDGE has recently issued a circular of interest to owners or operators of magic lanterns. In order to stimulate interest in the use of magic lanterns and the making of slides, he submits four prize offers. The first is a "Star" sciopticon, valued at \$50, for the best set of eight slides; the second, a "Home" sciopticon, valued at \$25, for the second best set of eight slides; the third, a prize of 24 dozen lantern slide plates or other material, valued at \$15, for the best single slide, not in the winning sets; the fourth, any goods pertaining to the magic lantern, valued at \$10, for the second best single slide not in winning sets. The circular contains other information regarding this interesting matter, and all magic lantern owners should secure a copy and engage in the contest for one of these prizes. Mr. Partridge's address is 226 Bush St., S. F.

LAND  
WORTH LOOKING AFTER  
—AND—  
Likely to Double  
in Price Soon.

FINE VINEYARD  
CHOICE FRUIT  
RARE RAISIN  
AND ALFALFA  
LAND  
EXAMINE THIS RARE CHANCE.

A well-cultivated farm of 160 acres, with miles of fencing and cross fencing, good improvements, 7-room, two-story, hard-finished house, nearly new, plenty shade trees, large barn, blacksmith shop, milk house, grain house and other outbuildings; 7 acres of bearing orchard; 20 acres of alfalfa; large flowing artesian well of splendid water, and first-class surface wells of water; pleasantly located 7 miles from Tulare City; is offered for sale at about cost of improvements, on easy terms, by the owner, who is engaged in other business. Land sold, in lots, without improvements, at \$25 per acre. The readers of this journal are assured that this chance is worth looking after. Parties in San Francisco who know the property can be referred to. Some adjoining land can be secured at favorable rates if desired.

Address E. M. DEWEY, Porterville, or A. T. DEWEY, 220 Market St., S. F.

NOW READY!  
ABC BUTTER MAKING

By F. S. BURCH.

ILLUSTRATED.

Sixty-four pages, cloth bound, containing chapters on Milking, Milk Setting, Cream Raising, Churning, Working, Salting, Packing, Shipping and Marketing. A Hand Book for the Beginner. Full of useful information and worth many times its cost. Price, by mail, 30 cents. Address, DEWEY & CO., 220 Market St., San Francisco, Cal.

Injurious Insects of the Orchard, Vineyard Field, Garden, Conservatory, etc.,

Remedies for their extermination. By MATTHEW COOKE.

Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price \$4, postpaid. For sale by DEWEY & CO., publishers, 220 Market St., San Francisco.

## Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

### HORSES AND CATTLE.

**HENRY HAMILTON**, Westley, Cal., breeder of Kentucky Jacks and Jennies, Draft Horses and Holstein Cattle. Jacks, Horses and Mules for sale.

**JERSEY BULL**, No. 463 P. C. J. C. C. for sale cheap. A fine four-year-old animal. Address Dellwood Poultry Yards, Napa, Cal.

**J. R. ROSE**, Lakeville, Sonoma Co., Cal., breeder of Thoroughbred Devons, Roadsters and Draft Horses.

**P. PETERSEN**, Sites, Colusa Co., Importer & Breeder of registered Shorthorn Cattle. Young bulls for sale.

**WILD FLOWER STOCK FARM**, Fresno Co. A. Heilbron & Bro., Props., Sac. Breeders of thoroughbred strains and Cruikshank Shorthorns; also Registered Herefords; a fine lot of young bulls in each herd for sale.

**CHARLES E. HUMBERT**, Cloverdale, Cal., Importer and Breeder of Recorded Holstein-Friesian Cattle. Catalogues on application.

**PERCHERON HORSES**.—Pure bred horses and mares, all ages, and guaranteed breeders, for sale at my ranch near Lakeport, Lake Co., Cal. New catalogue now ready. Wm. B. Collier.

**WILLIAM NILES**, Los Angeles, Cal. Thoroughbred Registered Holstein and Jersey Cattle. None better.

**T. PHILLIPS**, Simi, Ventura Co., Cal. Pure Bred Percheron Horses for sale.

**OOTATE RANCH BREEDING FARM**, Page's Station, S. F. & N. P. R. R. P. O., Ponn's Grove, Sonoma Co., Cal. Willard Page, Manager. Breeders of Short Horn Cattle, English Draft Horses, Spanish Merino Sheep and Berkshire Swine.

**PURE-BRED HOLSTEIN FRIESIAN Cattle** for sale. Bonnie Brae Cattle Co., Hollister, Cal.

**JOHN LYNCH**, Petaluma, breeder of thoroughbred Shorthorns. Young stock for sale.

**J. H. WHITE**, Lakeville, Sonoma Co., Cal., breeder of Registered Holstein Cattle.

**M. D. HOPKINS**, Petaluma, Importer and dealer in Eastern registered Shorthorns, Red Polled Cattle, Holsteins, Devons and Shropshire Sheep.

**PETER SAXE & SON**, Lick House, San Francisco, Cal. Importers and Breeders, for past 18 years, of every variety of Cattle, Horses, Sheep and Hogs.

### POULTRY.

**MADISON H. CRITCHER**, Bonnie Doon, Santa Cruz Co., Cal. Thoroughbred Poultry. Settings, \$3.

**JOHN McFARLING**, 706 Twelfth St., Oakland, Cal., Importer and Breeder of Choice Poultry. Send for Circular. Thoroughbred Berkshire Pigs.

**E. HART**, Clements, San Joaquin Co., Cal. Breeding of Bronze Turkeys a specialty. Hens \$5, Toms \$8 each. Eggs, \$3 for 13; reduction on two more sittings.

**IF YOU KEEP ANY KIND OF FOWLS**, Pet Stock, Dogs, &c., it will pay you to send your address at once to C. R. Harker, Santa Clara, Cal. You cannot afford not to do it. It will cost you but one cent and you will receive something worth ten times that.

**GALT POULTRY YARDS**, Galt, Sac. Co., Cal. Breed most popular varieties of thoroughbred fowls.

**GEO. TREFZER**, 911 E St., Sacramento, Cal., breeder of Houdans, Black and White Leghorns, Prize Winners at late State Fair. Eggs, \$2.50 for 13; \$4 for 26.

**DELLWOOD POULTRY YARDS**, Napa. Light and Dark Brahmas, Buff Cochins, Langshans, Plymouth Rocks, Silver and Golden Wyandottes, Houdans, Minorcas, Spanish, Brown, Black and White Leghorns, Pekin Ducks. Birds for sale. Eggs, \$2 per 13.

**CALIFORNIA POULTRY FARM**, Stockton, Cal.; send for illustrated and descriptive catalogue, free.

**R. G. HEAD**, Napa, Importer and Breeder of Land and Water Fowls. Send for New Catalogue.

**E. F. MUSSON**, San Leandro. Box 155. Fine stock.

**W. O. DAMON**, Napa. Clearance sale of Brahmas, Leghorns and P. Rocks. Send for Price List.

**O. J. ALBEE**, Lawrence, Cal. Pure bred poultry.

### SHEEP AND GOATS.

**E. W. WOOLSEY & SON**, Fulton, Cal., Importers & breeders Spanish Merino Sheep; ewes & rams for sale.

**R. H. CRANE**, Petaluma, Cal., breeder and Importer. South Down Sheep from Illinois and England for sale.

**KIRKPATRICK & WHITTAKER**, Knights Ferry, Cal., breeders of Merino Sheep. Rams for sale.

**L. U. SHIPPEE**, Stockton, Cal., Importer and breeder of Spanish Merino Sheep, Durham Cattle, Jacks and Jennys & Berkshire Swine high graded rams for sale.

**ANDREW SMITH**, Redwood City, Cal.; see adv't.

### SWINE.

**JOSEPH MELVIN**, Davisville, Cal., Breeder of Poland-China Hogs.

**WILLIAM NILES**, Los Angeles, Cal. Thoroughbred Poland-China and Berkshire Pigs. Circulars free.

**TYLER BEACH**, San Jose, Cal., breeder of thoroughbred Berkshire and Essex Hogs.

**ANDREW SMITH**, Redwood City, Cal.; see adv't.

### BEEES.

**APIARIAN SUPPLIES** for sale by Mrs. J. D. Rnaa, Napa City, Cal.

**APIARIAN SUPPLIES**. Italian Queens, \$2.50 each; Black Queens, \$1 each. Swarms from \$2.50 each; Smoker, \$1. Comb Foundation, \$1.25 per pound; V-groove Sections, \$4 per 1000 Comb Honey wholesale and retail; Hives, etc. **W. STYAN & SON**, The Homestead Apiary, San Mateo, Cal.

## IMPORTANT!

That the public should know that for the past **Eighteen Years** our **Sole Business** has been, and now is importing (Over 100 Carloads) and breeding improved Live Stock—Horses, Jacks, Short Horns, Ayrshires, and Jerseys (or Aldornes) and their grades; also, all the varieties of breeding Sheep and Hogs. We can supply any and all good animals that may be wanted, and at very reasonable prices and on convenient terms. Write or call on us. **PETER SAXE and HOMER P. SAXE**. San Francisco, Cal., Oct. 22, 1883. **PETER SAXE & SON**, Lick House, S. F.

## CLOSING-OUT SALE

— OF —

## WELL-BRED TROTTER STALLIONS, BROOD MARES, COLTS AND FILLIES,

Being the Entire Stud of

**SAN MIGUEL BREEDING FARM, PROPERTY OF IRVIN AYRES, ESQ.**

Among them is the well-known Stallion, **MAMBRINO WILKES**, son of **GEO. WILKES**, the sire of five in the 2:30 list, and three others which all horsemen know could have been put there last season, as well as many others that can trot in 2:30. The great race horse **BALKAN**, can trot in 2:30 with as good a chance of lowering that mark as any horse of his age ever presented. The great brood mare **FANNY FERN**, with 12 of her immediate progeny—the phenomenal colt **FREEDOM**, yearling record 2:29, descends from Fanny Fern through Mollie Drew. A string of highly bred producing dams, among whose progeny are **GUS WILKES**, **BALKAN**, **MYLITA**, **CLARA P.**, **CHALDEAN**, **ALPHEUS**, **FRED ARNOLD**, **MOLLY DREW**, and numerous others. For description of which and extended pedigree send to undersigned for catalogue. Sale to take place

**ON SATURDAY, MARCH 7, 1891, AT 1 P. M., AT OAKLAND TROTTER PARK.**

Mr. Ayres having decided to retire permanently from the breeding of trotting horses, will dispose of every animal upon the farm, with the exception of two work horses, without limit or reserve. Catalogues will be ready February 9.

**KILLIP & CO., AUCTIONEERS,** 22 MONTGOMERY STREET, SAN FRANCISCO, CAL.

Improved Farm and Garden Tools for 1891.

BETTER, Both Horse & Hand, THAN EVER: better and more money saving. We cannot describe them here, but our new and handsome catalogue is free and interesting. A goodly number of new tools will meet your eye there. Among these, Gardner's Harrow, Cultivator & Pulverizer, combined, adjustable teeth; Market Gardener's & Beet Grower's Special Horse Hoe with Pulverizer; Special Furrower, Marker and Ridger, adjustable wings; Sweet Potatoe Horse Hoe, four tooth with vine turner; Heavy Grass Edger and Path Cleaner; new Nine Tooth Cultivator and Horse Hoe combined; Special Steel Leveler and Pulverizer combined; all interesting, nothing we have ever made so practical or perfect. Some improved things too are grafted upon our older favorites. A capital LEVER WHEEL, instantly adjustable for depth, is a great feature; put on all '91 goods unless ordered otherwise. Nor have our Hand Seed Drills been forgotten in the march of improvement, nor our Double and Single Wheel Hoes, Garden Flows, Grass Edgers, Etc. Some of them are greatly altered for the better; yet do not forget that no novelties are adopted by us without actual and exhaustive tests in the field. We therefore guarantee everything exactly as represented. Send for Catalogues now. **S. L. ALLEN & CO.,** Philadelphia, Pa.

## S. H. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Feb. 11, 1891.

Continued dry weather has a tendency to depress trading in farm products, and until it is definitely determined by time whether there will be much of a rainfall in this month, dealers and speculators will not operate much. With a generous, well-distributed rainfall within the next fortnight, confidence will be established that we will have good crops this year, and business will resume its wonted course; but without a rainfall within that time, speculators are apt to take charge of the market, particularly for grain. Money is fairly easy. Considerable money can be had after tax-assessment day. The wheat markets at the East and abroad have shaded off. The following is to-day's cablegram:

LIVERPOOL, Feb. 11.—Wheat—Firm and held higher. California spot lots, 75 6d to 75 9 1/2d; off coast, 38s 3d; just shipped, 37s 9d; nearly due, 38s; cargoes off coast, quiet; on passage, few bids in market; Mark Lane wheat, few buyers in market.

## Foreign Grain Review.

LONDON, Feb. 9.—The *Mark Lane Express* says: English wheats are firm, and prices of foreign are supported. Russian is 6d higher; California firm. Barley is firm; oats strong; corn steady. At today's market the best English wheats were well held. Foreign, excepting white sorts, dropped 6d under abundant shipments.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	Feb.	Mar.	April	May	June	July
Thursday.....	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d
Friday.....	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d
Saturday.....	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d
Monday.....	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d
Tuesday.....	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	38s 3d	38s 3d	38s 3d	Quiet.
Friday.....	38s 3d	38s 3d	38s 3d	Dealer.
Saturday.....	38s 3d	38s 3d	38s 3d	Quiet.
Monday.....	38s 3d	38s 3d	38s 3d	Quiet.
Tuesday.....	38s 3d	38s 3d	38s 3d	Inactive.

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

	Day.	Feb.	Mar.	April	May	June	July
Thursday.....	110 1/2	110 1/2	110 1/2	110 1/2	110 1/2	110 1/2	110 1/2
Friday.....	110	110	110	110	110	110	110
Saturday.....	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2
Monday.....	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2
Tuesday.....	111	110 1/2	110 1/2	110 1/2	110 1/2	110 1/2	110 1/2

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

	Day.	Mar.	June	July	Aug.
Thursday.....	99 1/2	99 1/2	99 1/2	99 1/2	99 1/2
Friday.....	99 1/2	99 1/2	99 1/2	99 1/2	99 1/2
Saturday.....	97 1/2	97 1/2	97 1/2	97 1/2	97 1/2
Monday.....	97 1/2	97 1/2	97 1/2	97 1/2	97 1/2
Tuesday.....	98 1/2	98 1/2	98 1/2	98 1/2	98 1/2

NEW YORK, Feb. 11.—Wheat—\$1.11 for February, \$1.10 1/2 for March, \$1.06 1/2 for May, \$1.04 1/2 for June, \$1.00 1/2 for July, and 98c for December.

CHICAGO, Feb. 11.—Wheat—97 1/2c for May and 93 1/2c for July.

## Dried Fruits.

NEW YORK, Feb. 7.—Small parcels of California seedless muscatel raisins were sold yesterday at 8 1/2c. Sultanias are quoted at 10 1/2c. The Roman brands crown loose raisins are quoted at \$1.80 per box. A freer movement in California evaporated apples is noted.

NEW YORK, Feb. 9.—The run of business in dried fruit is not large. The last values in prunes, peaches and apricots are supported. There is a more encouraging outlook for evaporated apples than noted earlier. They ought to make a fair profit. Landed price, \$13.40, with State stocks diminished and barreled apples almost out of reach.

Our important baking interest will endeavor to overcome the objection to the sweet flavor of California dried fruits, even if the sharpening effect of lemon juice has to be adopted.

Raisins move in a peddling sort of way, with prices favoring buyers. Two-crown boxes sold at \$1.25; other marks and bags as before.

## Eastern Wool Markets.

NEW YORK, Feb. 8.—Wool continues to go out freely at strong prices for interior holdings, and unimportant remnants are quoted beyond the seaboard limit. Stocks generally are light, some heavy buyers directing more attention to foreign good long staple. Australian for mixing sold freely at 36 1/2c. Though goods have not taken on the general movement expected, the attitude of manufacturers indicates confidence. Underwear replenishment should soon revive. It is not unlikely that the possible advance of raw material will prompt long line dealers to avail themselves of current prices. As it is, a fairly active demand prevails for popular priced clothing goods and deliveries.

## Oregon Hop Notes.

EUGENE, Feb. 7.—The Lane County Hop-Growers' Association was to have held its annual meeting to-day for the election of officers, but as the attendance was small they adjourned for two weeks. Buyers are offering to-day to contract for the hop-crop of 1891 at 16 1/2 cents per pound, which is very encouraging to the growers. The hop men of this county are preparing to make extra exertions and will produce more hops for the market than ever before.

## Miscellaneous.

NEW YORK, Feb. 9.—Lima beans are firm at 33 per bushel. The attempted advance was not met.

All honey is tending higher in a moderate way. Light amber is quoted at 7 1/2c.

Hops were dull most of the week. Recent ranges are not notably changed. At the close 300 bags Washington and Oregon brought 33 1/2c; 300

good state, 32 1/2c and useful old was held at 8c. Interior markets are firm. A London letter says that 5000 pounds comprise the unsold stock.

## Local Markets.

	Buyer Season.	Seller 1891.	Buyer 1891.
Thursday.....	149 1/2	149 1/2	149 1/2
Friday.....	148 1/2	148 1/2	148 1/2
Saturday.....	148 1/2	148 1/2	148 1/2
Monday.....	149 1/2	149 1/2	149 1/2
Tuesday.....	148 1/2	148 1/2	148 1/2

\*After August.

	Buyer Season.	Seller 1891.	Buyer 1891.
Thursday.....	147 1/2	147 1/2	147 1/2
Friday.....	147 1/2	147 1/2	147 1/2
Saturday.....	147 1/2	147 1/2	147 1/2
Monday.....	148 1/2	148 1/2	148 1/2
Tuesday.....	147 1/2	147 1/2	147 1/2

BAGS.—The market is dull at 6 1/2c to 6 3/4c for May-June delivery.

BARLEY.—The sample market has held strong under a good demand and moderate receipts. In futures, trading has been light. Under the rules of the Call Board, prices for futures can be sent down very low, but they cannot be sent up very high, which, of course, is in favor of bears. The following are the reported sales made at today's Call:

Morning Session: Buyer 1891—100 tons, \$1.48 1/2; Buyer Season—100 tons, \$1.48 1/2; 300, \$1.48 1/2; 100, \$1.48 1/2. Seller 1891—400 tons, \$1.12; 200, \$1.11 1/2. Afternoon Session: Buyer 1891—100 tons, \$1.48 1/2. Buyer season—100 tons, \$1.48 1/2. Seller 1891—100 tons, \$1.11 1/2.

BUTTER.—Receipts have been free considering the weather, which causes dealers not to anticipate their wants. The demand being more restricted causes a weaker tone.

CHEESE.—The market is poorly supplied, which causes a strong tone at full prices.

EGGS.—Stocks appear to be increasing, which cause some shading to place consignments. The demand, as usual in Lent, is good.

FLOUR.—The market is quiet but strong.

WHEAT.—The sample market is reported slow, pending exporters cleaning up before tax-assessment day. Over 20,000 tons were exported the past week. In futures, trading on Call has been light, operators apparently being more engaged in weather prognostications than in dealing in wheat. The reported sales at to-day's Call are as follows:

Morning Session: Buyer 1891—300 tons, \$1.48; 100, \$1.48 1/2; 1000, \$1.47 1/2. Buyer season—900 tons, \$1.42 1/2; 600, \$1.47 1/2. Afternoon Session: Buyer 1891—300 tons, \$1.47 1/2. Buyer season—200 tons, \$1.41 1/2.

## Market Information.

## Pear Crop In Georgia.

New York *Fruit Trade Journal*, Jan. 17: The area of LeConte pear groves in Southwest Georgia and Northwest Florida is getting to be very large. Planting these groves began in earnest about ten years ago, and thousands of trees have been set every year since. Although the trees begin bearing at six years of age, and the yield increases each year, they require to be ten years old before the output is more than a barrel to the tree. The number of bearing trees the coming season will be much larger than ever before, and will increase yearly for several years. All present indications are for an immense crop the coming season. The trees are now (Jan. 8) in prime condition. The weather during the summer, fall and early winter has been thoroughly favorable. The territory of which Thomasville, Ga., is the center, extending fifteen miles in every direction, abounds in LeConte pear groves. How we are to dispose of the fruit is a serious question. We have no canning establishment, and will need one or more that can use several thousand bushels daily. It will be impossible to gather and ship fresh fruit, although we have six weeks in which to do so. Shipping begins July 1, and continues until the middle of August. The Keiffer pear, ripening after the LeConte, is fast coming into prominence here, but most of the trees are small, and the product the coming season will be only a few hundred barrels.

## Washington Hop Items.

Anacortes *Farmer*, Jan. 23: The hop men at Puyallup are beginning to talk of starting out contracting for hops, despite their previous intention not to do so. It is believed that the hop lice will not be as numerous and as injurious as was at first expected.

A writer from Kent, Wash., says: The hop-growers of the valley propose to meet here soon to perfect an organization for mutual benefit and protection. Few hops remain in the hands of growers. Mr. D. Mullin is one, however, who retains his entire crop, being confident that prices will rule considerably higher before another crop is ready for the harvest. An examination of the hop-yards of the

Puyallup valley, as well as those of the Green river valley, reveals the fact that the hop lice of last season are still alive. It is, no doubt, a serious state of affairs, and some means should be employed to destroy the vermin. It has been urged on the hop-growers the absolute necessity of destroying by fire every bit of refuse left in the field after the hop-picking was over. Those who did not do so will now regret it, as it will be much more difficult to rid the yard of the vermin now than it was several months ago. There is much less disposition among growers to increase their acreage this year than last, nevertheless several in the Puyallup valley are putting out new roots, but general crops will be more numerous this year than on any previous occasion. There is considerable inquiry for market-gardening land, which indicates that this class of agriculture has not reached its maximum, nor indeed can it while the demand for such commodities is daily on the increase. It may be said that there is not such a thing in Puyallup now as a buyer. Those who are there are not doing any business.

## Wheat Crop of 1890.

The Department of Agriculture gives the following estimate of the 1890 wheat crop by States:

	Acres	Bushels.
Maine.....	40,213	543,000
New Hampshire.....	9,155	140,000
Vermont.....	19,478	335,000
Connecticut.....	1,876	30,000
New York.....	640,540	9,288,000
New Jersey.....	138,883	1,680,000
Pennsylvania.....	1,337,437	16,043,000
Delaware.....	94,790	919,000
Maryland.....	535,143	6,208,000
Virginia.....	801,956	5,614,000
North Carolina.....	717,228	3,156,000
South Carolina.....	178,069	1,411,000
Georgia.....	384,159	1,310,000
Alabama.....	293,049	1,310,000
Mississippi.....	60,750	286,000
Texas.....	510,711	3,675,000
Arkansas.....	221,848	1,575,000
Tennessee.....	1,175,052	7,873,000
West Virginia.....	302,086	2,326,000
Kentucky.....	943,518	9,152,000
Ohio.....	2,398,741	29,984,000
Michigan.....	1,601,561	20,271,000
Indiana.....	2,433,605	27,925,000
Illinois.....	1,853,173	18,161,000
Wisconsin.....	1,073,475	13,096,000
Minnesota.....	3,143,917	38,256,000
Iowa.....	1,685,080	19,041,000
Missouri.....	1,603,459	17,638,000
Kansas.....	2,054,000	28,195,000
Nebraska.....	1,418,059	15,315,000

## Cereals.

The local wheat market has held to weak prices throughout the past week. Buyers are evidently following their old tactics of holding off in the month of February, so as to get all the cheap bargains they can up to tax-assessment day. Exporters are giving as quick dispatch to vessels as their small holdings of grain warrant. It is claimed by many that after the middle of next month the market is likely to do better; at any rate, prices are considered low enough for an investment. In the absence of much of a legitimate demand, the bears on Call are amusing themselves by quoting, through cross-orders and wash sales, the market for futures at lower prices. They are undoubtedly actuated by a desire to send the sample market to lower figures. By securing low quotations on Call for futures, they hope to inspire a feeling of distrust among capitalists and others who have made advances on warehoused grains to call on farmers for more grain or else for money to make their margins stronger, and failing in securing a favorable response, then the grain would be thrown on the market. It is needless to say that the ring would take in all sold at low prices. The dealing in futures is against farmers; this the writer has, at different times, for four years past taken occasion to show producers. The low price of silver is against the wheat market abroad, but it is claimed that better prices will soon obtain for the metal. While silver is lower abroad, yet, with all things considered, the price of wheat in our market is below the English parity for Californian. Washington and Oregon wheat is still coming to hand fairly free, but as the markets in those States are slightly higher, it is not at all unlikely that shipments to us will fall off.

Complaints are beginning to be heard of dry weather. While this is the case, yet it is stated by each and all that the grain crops can stand a fortnight or so of the kind of weather we are experiencing at present. There is more or less humidity in the air which keeps the ground from drying entirely, and, if, perhaps, the sandy soil be excepted. The barley market has been fairly strong. The scarcity of natural feed causes more to be fed, and as the supply in this State is light, only full figures draw out sellers. Receipts from Oregon and Washington while not large, yet show an increase over receipts in 1890 from the same sources. The erecting at San Jose of large buildings for malting, will admit of concentrating the buying of brewing barley, and with lessened competitive buying, prices are not likely to be forced up. It is stated that the new malt enterprise will not only supply the coast brewers, but be able to send considerable hence, which will admit of a larger consumption of barley. Every monopoly has its silver lining with which to bait suckers.

There is a good inquiry for white corn for export. Outside of this, the market is quiet, but the tone is strong for both yellow and white.

Rye is steady at full prices.

Oats are coming in very freely from up north, and as dealers do not care to stock up heavily in this month, the market is lower and drags at the decline. As usual, the reports of limited obtainable supplies from up north are proving erroneous. It seems that with good prices the supplies from up north are almost endless. The consumption in this city and other cities in the State is reported to be quite large.

## Feedstuff.

Ground feed continues in good demand, due to cold weather and scarcity of grass. The receipts of bran, middlings and other ground feed are very

large, but the market absorbs all without any shading in prices.

Oil cake meal is used more freely than for several winters past. This is due to its relative cheapness.

Hay holds to high prices. Nevada is sending in liberal supplies, which goes into consumption at good prices. The grade is a good average quality. Some of the ranchers in that State use salt when baiting, which, when properly proportioned, causes cattle to feed it up clean. The cold weather is against growing grass.

## Live-stock.

The market for live-stock is well supplied, and as is usual during Lent, slaughterers are doing all they can to depress prices. The scarcity of grass and the high prices ruling for hay and ground feed are against stockmen. There are increasing numbers of poor cattle being slaughtered.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS.—On foot, light grain fed, 4 1/2c to 5c lb.; dressed, 7 1/2c to 8c lb.; heavy, 4 1/2c to 5c lb.; dressed, 6 1/2c to 7c lb. Stock hogs, 3 1/2c to 4c lb. BEEF.—Stall fed, 6 1/2c to 7c lb.; grass fed, extra, 6c to 7c lb.; first quality, 5 1/2c to 6c lb.; second quality 4 1/2c to 5c lb.; third quality, 3 1/2c to 4 1/2c lb.; bulls and thin cows, 2c to 3c lb.

VEAL.—Small, 6c to 7c lb.; large, 5c to 6c. MUTTON.—Wethers, 8c to 9c lb.; ewes, 7 1/2c to 8 1/2c lb.; spring lamb, 15c to 18c lb.

## Fruits.

The market for apples appears to be glutted with poor to fair, but choice to gilt-edged are not in oversupply, yet the large quantities of the former depress the market value of the latter.

Oranges barely hold their own. The cold weather is against them. With warmer weather the distributive demand could show a very large increase. Hucksters and dealers in low-priced fruits confine their purchases to the smaller sized oranges, those which can be sold at from 10 to 20 cts a dozen. The cold weather east of the Rocky mountains is said to be against the sending of large quantities overland. Growers are not crowding the market.

In some localities where it is said fruit trees had budded, fears are expressed that the cold wave has done some damage.

Dried fruits are dull, but as the supply is light, any increase in the demand this spring will, it is claimed, bring about slightly better prices for some varieties. With warmer weather at the East the markets there will probably improve.

Raisins are in poor demand, with a liberal supply for the season to draw from.

## Vegetables.

The cold weather checks the growth of garden truck. A heavy frost last night nipped the more tender plants. The southern counties continue to supply us with limited quantities of early spring vegetables.

Onions are slightly higher. The demand is reported good, but in a small way, that is, buyers confine their purchases as much as possible.

Potatoes are coming in quite freely, which causes concessions to place consignments. The receipts from up north show the largest increase. It takes the very best to fetch top prices. New, as yet, come in sparingly.

## Miscellaneous.

Poultry advanced slightly for the better conditioned, but is again weakening under increasing receipts.

Hams and bacon are weak under free supplies. Grass seed is slow. The demand appears to be about over for the season.

Almonds are in fair demand. There appears to be a stronger market. Other nuts are unchanged. The wine men feel encouraged, owing to a prospect of the present Legislature passing a uniform low-liquor license. Their belief in this being done is founded upon pledges made to the Wine and Liquor Dealers' Association by party managers that such a law would be passed if the party was successful at the State election in November of last year.

Hops are slow. Very few offerings. Some contracts for next crop delivery are reported at 16 cts (15 cts net to grower), but large conservative houses are not disposed to contract ahead.

Wool is dull.

An Old Reader Speaks His Mind.

PUBLISHERS RURAL PRESS:—I return you most sincere and hearty thanks for all past favors in general, and for the PACIFIC RURAL PRESS in particular for the past 15 years.

I thank you for publishing so good and so moral a paper—a paper that not only makes me and mine better, but makes the whole State better.

S. P. SNOW, Fillmore, Ventura Co.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it.

A postal card (postage one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

BEST TREE WASH.

VIEWS IN THE UPPER SAN JOAQUIN REGION—THE PORTERVILLE VALLEY ILLUSTRATED.

### Another Glance at the Upper San Joaquin Valley.

We present on this page another artistic grouping of views suggesting the progress and development of the upper regions of the San Joaquin valley. In our issue of January 31st the same theme was presented in connection with a different group of views, and it was then remarked that probably no area of the State can show more signs of advancement and development than the counties lying at the southern end of the San Joaquin valley. It is a region of vast plains irrigable by streams and artesian outflows, of moist meadows and of benches and foothill slopes and many small, rich valleys tributary to the great valley, while surrounding all is the rim of lofty mountains forest-clad and snow-crowned, from which flow inexhaustible supplies of pure water for the refreshment of the lowlands. It is a region of great picturequeness and of vast industrial resources, which are now beginning to be adequately appreciated, and as a result, popu-

lation and capital are pouring in seeking profitable opportunity and investment, and the result is the development to which we have alluded. The pictures show the achievements in a single region of the great upper valley which is known as Porterville valley, in which enterprise is now being especially manifested. Enough has been done in planting to show already the rewards of the grower, and enough in town building to demonstrate the progressive character of the people and the business resources of the country. In this view, the artist has thrown the vine first upon his plate as expressive of the fact that the grape is an important factor in the fruit future of the valley. In the center of the picture are the thrifty orange trees of Mr. Oliver Henry, who began planting at Porterville five years ago, and whose trees in this short time have shown the fitness of their surroundings by a wonderful growth and by early bearing—as the fruit is shown thickly clustered on the trees. Above the orange trees is the California fan palm, with two gems of the

valley in the foreground. In the upper left-hand corner is a view of the outskirts of Porterville, showing the grand native oaks. On the right center is an irrigation ditch, the water flowing softly through the rank vegetation which the touch of water brings bounding forth from the rich valley soil. The lowest sketch is a park-like scene, in which the eucalyptus appears towering skyward far above the rounded domes which the native oaks spread to the sunshine. All the pictures are characteristically Californian, and while showing actual scenes in one region of the State, are widely significant as reflecting the enchantments and delights which our favored State offers those who make homes within its borders. INTEROCEANIC CANAL.—Hon. Warner Miller, president of the Nicaragua Canal Construction Company, has telegraphed his acceptance of the invitation recently extended by various business and scientific organizations to visit this city at an early date and deliver a public address upon the Interoceanic Canal.

### The Southern Citrus Fair.

Preparations for the citrus fair to open in Los Angeles on March 3d are progressing favorably. The various localities in the southern half of the State are organizing and securing material for the grand competitive displays which will be made. The region embraced in the exhibition is a large one, viz: the Sixth Congressional District, which includes the following counties: Alpine, Fresno, Inyo, Kern, Los Angeles, Mono, Monterey, San Benito, San Bernardino, San Diego, San Luis Obispo, Santa Barbara, Tulare, Ventura. Thus, though the grand citrus-fruits counties south of the Tehachapi mountains will contribute most of the display, the citrus localities in the other counties should not fail to show what they can do. According to the announcement of the committee, which we recently printed, it is resolved that for style of exhibition, as well as for wealth of material, the fair shall be second to none of the grand series of citrus fairs already held in California.

## THE STOCK YARD.

## "The Block Test."

EDITORS PRESS:—The *Agricultural Gazette* of Jan. 12th gives, in tabulated form, the per cent of dressed carcasses to live weight of cattle slaughtered from the Smithfield Club show of 1890.

In this show there are no premiums offered for dressed carcasses of either beef, mutton or pork, as at Chicago, which is to be regretted, consequently, the whole of the returns depends on the courtesy of the butchers who buy and slaughter the show cattle. Let us hope that the managers of the English fat-stock shows will, before another year, wake up to the advantages of offering prizes for a class or classes of best carcasses of dressed meat, also for animals dressing greatest per cent of meat to live weight, which together afford interesting proof of profitable feeding. As it is at present, no really fair comparison can be made between the English and American fat cattle.

The returns, as any one is best able to obtain them at present, show a slight advantage in favor of the 74 head of English cattle in which the per cent of dressed beef to live weight varies all the way from 58.79 to 73.72, while the 17 dressed carcass prize animals at Chicago varied from 62 to 68 per cent of dressed carcasses to live weight.

In the 74 English cattle, only seven go below 62 per cent and only three of these below 60, while 23 animals dress over 68 per cent and ten of them over 70. Mr. G. T. Turner, in commenting on the subject of the table in the *Agricultural Gazette*, says:

The highest percentage of carcass to live weight is 73.72, attained by Mr. H. P. Green's Red Polled ox, winner of breed cup; last year it was 76.52 in respect of Mr. S. Utting's Shorthorn ox; and in 1888 it was 74.77 in respect of Mr. Alfred Agate's Sussex steer.

This in no respect affords a fair comparison of breeds as to their results on the block, because the numbers slaughtered are not the same, nor are the ages the same. But it may be permitted to call attention to the fact that Major Kirkpatrick's Young Careless steer was the heaviest in its class, and that its dam was by Stella's Oxford, a bull which was noticed to have got all the heaviest Sussex cattle at the 1888 show. Here, then, is an item which proves the worth of those fat-stock shows to breeders. Mr. John Cridlan's cup Shorthorn steer (best ox or steer) Chancellor made 71.85 per cent net to gross; a crossbred from Sandringham made 71.53; Mr. John Cridlan's breed cup (cross-bred heifer Queen of Scots) heifer 72.56; and Lord Coventry's Hereford cow Rosewater 72.43. These are among the highest percentages, and the cattle were among the winners of highest honors, as it should be.

By this it appears that no animal was slaughtered in 1890 equal to the Shorthorn ox of 1889 nor the Sussex steer of 1888.

There were other fat stock shows in England in which the Shorthorn blood in the prize animals was predominant, but, without going further into details, enough facts have been set forth to show that the Shorthorn was the winning beef breed for the year 1890.

Another year some other breed may come to the front; time alone will prove this. In the meantime, let us hope that those who are in a position to do so will use their best efforts to maintain the present position of the Shorthorn, not only for the honor that comes of winning prizes, but for the sake of the breed—the breed whose merits I have been upholding in this State (since 30 years ago this very day, when, on Feb. 11, 1861, I landed two Shorthorn bulls and three heifers from the old St. Louis), ever contending that there are more useful qualities combined in that one breed than in any other for the production of both milk and beef and for general usefulness on farms of mixed husbandry, so that the name Cosmopolitan which is sometimes applied to it is no misnomer.

If I have endeavored, to the best of my ability, under the circumstances in which I am placed, to champion the breed of cattle among which I have been all my life, I can truthfully say that I have not done it to the disparagement of any other breed. No one breed is best for all places and situations, nor under all circumstances. There is even a great difference in cattle of the same breed, in constitution and hardiness, in temperament and thrift, in making beef or the giving of milk; all are different in some one respect, so that they cannot do equally well when placed under equal conditions of treatment, climate, land, altitude and temperature, all of which have to be taken into consideration in the breeding and rearing of cattle, and, last but not least, the market to be supplied will be a guide to the kind to breed. If we have most customers for the increase of our herds from among dairymen, then we must breed cattle that are profitable in the dairy; but if we must sell to those who are raising beef cattle, then we will be guided accordingly.

In any case, our aim must ever be to breed healthy, growthy animals with strong constitutions, and in no case should we try how little food they will keep alive on. That experiment is sadly too much tried already, though it is long past the experimental stage.

I will now give a few facts as taken from the English papers, on

The London Dairy Show, which, though held before any of the fat-stock shows of 1890, and not being written of in the *Press* at the proper time, I have left to the last, thinking that the rib roasts are more naturally thought of about Christmas-time than the

milk, the cream and the butter, which are also now more in their season in this State. For profitable production in a cold climate or even in the experience we are now having with short pastures and high-priced feed, it requires as much if not more skill and attention to details than the getting up of a heast for a fat-stock show.

I know there are many people who regard the Shorthorn breed of cattle as a beef breed only, but those of us who have bred and used them as dairy cattle, know that when properly handled, they will produce a full average quantity of both milk and butter.

There are some breeds that give richer milk but less of it, and others that give more than the Shorthorn, but not so rich in solids.

The cow that is most profitable to keep in a dairy is the one, regardless of breed, that produces the greatest weight of solids per day. It used to be thought that the cow giving the most milk was most profitable, but people have found out that there is a difference in quality as well as quantity. There is probably no one agency in existence that has done more in calling the attention of the public to this fact than the London Dairy Show, which has for several years been testing the milk of the cows exhibited, both by weight and analysis, which results in showing the actual weight of the different solids produced by each animal in a day.

The following table (from the *Agricultural Gazette*) gives the results in compact form of what the first prize animal of each breed did at the show of 1890:

First Prize Cows.	Weight of Fat yielded in one day.	Weight of Casein, etc. yielded.
	Lbs.	Lbs.
Shorthorn.....	3.26	5.17
Jersey.....	1.89	3.06
Guernsey.....	2.00	4.40
Avshire.....	1.87	3.97
Dutch.....	1.85	3.87
Dexter Kerry.....	1.32	2.40
Red Poll.....	1.14	2.58

By the above it will be seen that the Shorthorn cow has the biggest yield of both weight of fat and casein, etc. The Guernsey cow is next, in both yields, to the Shorthorn. Both these cows had recently calved at the time of the show, therefore the milk was not so rich in solids as it would be likely to have been had they calved two or three months previously, while the quantity of milk given by them might have been about the same.

The Jersey calved 110 days, the Dutch cow 251, the Avshire 21, the Red Poll 89, and the Dexter Kerry 75 days before the show.

The prizes are awarded according to the number of points made by each cow, and the points are counted thus: One point for every 10 days since calving after the first 20 days; 1 point for each pound of milk per day; 20 points for each pound of fat per day and 4 points for each pound of solids other than fat. When the milk contains less than three per cent of fat, ten points are deducted. For instance, the third prize Shorthorn cow has the following number of points: For time since calving, 98 days, 17.8; pounds of milk, 58.7; weight of fat, 40.8; other solids, 20; total, 127.3, which would have entitled her to the champion prize, but as her milk contained less than three per cent of fat, the points to her credit were reduced to 117, or 4 points less than the best cow and a fraction less (.9) than the 2d prize Shorthorn, but still 1.5 more than the next best cow in number of points, the Dutch, which made 115.5, the prize Guernsey having 108.1; but her milk also containing less than three per cent of fat, she had only 98.1 to her credit, leaving the 1st, 2d and 3d prize Shorthorn cows with more points each than any other cow of any breed in the show.

Most of us know that by adopting certain methods of feeding milch cows the quantity of milk can be increased at the expense of quality, and it is no doubt with this fact in view that the ten points are deducted when the milk contains less than three per cent of fat, otherwise the cows might be trained and fed so that they would be little else than mere milk machines. Not only that, but when fed for milking trials at shows, or for the so-called "tests," whether public or private, the quantity and cost of feed consumed is so high that the milk or butter is often produced at an absolute loss, however large the quantity, so that such experiments are of very little use, practically, to the general dairyman, any more than are the artistic productions exhibited at the Fat-Stock Shows. One thing, however, the latter teach in a very impressive manner, and which, perhaps, I did not sufficiently emphasize at the proper place, whether necessary or not; the figures given show for themselves that the first year's growth of beef costs less than that of the second year in the life of an animal, and the second less than the third year, and so on through life, so that the younger an animal is when he becomes fit for the butcher, the more profit he is likely to leave to the feeder.

ROBERT ASHBURNER.  
Baden Station, San Mateo Co

## POULTRY YARD.

## Eggs During the Fall and Winter.

EDITORS PRESS:—It is probable that most varieties of hens, when well-fed and cared for, will lay something near the same number of eggs in a year. But in a country like this, where the price varies from 15 cents per dozen in the spring, being even a drug at that low figure, to 50 cents per dozen in the fall, there

being a good demand for them at that price, and the surrounding mountain towns offering a ready market for them at 60 cents per dozen for some weeks in the late fall and early winter, the question naturally arises, how can we secure a good supply of eggs when prices are high? The various methods of preserving them having at best met with but partial success, it is well for farmers or housewives who have the care of poultry to look well to the matter of securing fresh eggs in the fall, which result may usually be attained by any one who gives his poultry the proper attention, and who keeps the end to be attained in his mind in intelligently caring for them.

Being frequently questioned as to our success in having fresh eggs in the fall and winter, some items in regard to the same may not be amiss in the columns of the *RURAL*, the scarcity of eggs at that season being general on farms. If they are desired in the fall, the matter must receive attention in the spring. Early chickens are generally stronger than those hatched later in the season. If the spring is usually early in this region, chickens may be hatched by the middle of March and will make fine large pullets before the warm days of summer, which are hard on fowls, and will be ready to begin to lay, if well cared for, before the cold weather in autumn, and with continued proper care will lay through the fall and winter. In setting eggs, the largest and smoothest should be selected and each hen should be set in a fresh, clean box filled with new straw, and not in a nest previously used for laying and probably infested with vermin. No one ought to feel obliged to spend time trying to raise poultry without some few conveniences for it. A separate room for setting hens is a necessity, by which arrangement they need not be disturbed and the eggs shaken and broken by other hens laying in the nest. The setting-room should be well ventilated and kept clean. It should be constantly supplied with wheat, clean water and a box of fresh earth for the hens to dust themselves in. In the afternoon, when the hens are through laying for the day, the door of the setting-room may be opened for the setting hens to have a little exercise.

They will, if they leave their nest, usually return without trouble. In raising chickens early in the spring it is well to keep the hen confined in a coop longer than in warmer weather, so that she will have her chickens more and protect them from the cold winds. The hen can stand a week or two of confinement in a coop, if well-fed; and good care for the first few days of the life of the little chick is necessary for its future growth and healthfulness.

For good results in feeding nothing seems to give better satisfaction than cornmeal not made too wet; a little red pepper added occasionally in cool weather seems beneficial. If we expect our early chickens to lay well during the fall, there should never be a time when they are not well fed. To give a growing chicken a poor start, to expect it to "rustle" for itself, or subsist on a diet of sour milk for two or three or more months, and then to give us a good supply of eggs during the season of high prices, is preposterous.

One reason which may cause many a farmer's wife to fall of eggs in the fall is, being dependent on her poultry for many household necessities, the temptation is strong to dispose of the early pullets during the first summer months, when the demand is good and prices high. But no matter what the household need is, if one desires eggs through the fall and winter, the best way is to keep the early pullets. The pullets hatched later may bring less when put upon the market, but were we to keep them, if too young to lay in the fall, we could not expect them to begin laying during our cold winters. Therefore a pullet which is hatched from the last of May to the last of June or later will not be old enough to lay before the weather grows cool; consequently we can hardly expect them to be of any use before they are nine months old. We have had chickens hatched in the early part of March begin to lay at four and one-half months and continue during the whole of one of our most severe winters. Were it profitable to pay little attention to our fowls and allow the pullets to be pensioners on our bounty, contributing nothing to our household larder or purse until they were eight or nine months old, instead of "lending their kindest service" to help along at a little more than half that age, we might keep old hens for fall laying, but as the number of eggs decreases materially as a hen advances in age, and considerable time in early fall is required for the molting season by older hens, in which young strong pullets kept purposely for home use might be laying, to sell all hens at from 18 to 20 months, and select the best of the early pullets to take their places, is attended with good results. To keep fowls laying through the fall and winter after they have begun in the late summer requires both attention and labor.

Chickens as well as ourselves desire a variety of food. They devour table scraps with avidity; also curd made from sour milk seems to be enjoyed occasionally. Cabbage and onions (not the outside leaves but the eatable portion), chopped in a chopping-bowl, are usually eaten greedily by fowls during the fall and winter when they can get nothing green at which to peck. All gravies or liquors in which meat has been boiled, mixed with wheat bran, are appetizing food for chickens.

Besides the things mentioned, fowls need a continual supply of grain. Wheat or barley

boiled and given warm is good of cold mornings, in which it is well to add a little red pepper or sulphur occasionally. When in homes remote from towns, beef and pork are supplied for table use by butchering done on the farm, the liver, lights, or any part of the animal which can be cooked, which is not needed for table use, should be boiled and chopped for the fowls. This means work for the housewife, but she will receive her own again with nury in the increased number of eggs the hens will lay. The meat might be fed raw, but the result would be much of it would be wasted by being dragged in the dirt so that it could not be eaten, while by boiling, chopping and feeding in clean troughs or pans, the fowls get the whole benefit of it. Chickens need burnt bones. Lime alone does not take the place of bones. A few bones occasionally burnt in the cook-stove are not all that is needed, but a generous supply burnt frequently in the yard, where the chickens can pick among them at pleasure. One of the most important things to be kept continually before the mind in poultry-raising is cleanliness—cleanliness in feeding, in providing fresh nests, and in the frequent cleaning of chicken-houses. It is not a matter of surprise that fowls do not lay better, but that, considering the care they receive on many farms, they do as well as they do.

Beckwith, Plumas Co.

M. P. ARMS.

## ENTOMOLOGICAL

## Cabbages Without Lice.

EDITORS PRESS:—In your last issue of the *RURAL*, N. Flanagan wishes to know "What will eradicate cabbage lice." Allow me to say that I have tried almost everything to exterminate them by using both cold and hot water, ashes, lime, soot, coal oil, hushack, tobacco dust, etc., but owing to the fact that many of them are under the leaves where the application does not reach them, enough generally survive to nearly, if not quite, destroy the plants. It is an old saying, and a true one, that "an ounce of prevention is worth a pound of cure," and it applies very forcibly to the case in hand. It is a well-known fact that lice of different kinds almost invariably attack everything first, either in the vegetable or animal kingdom, that has a stunted, dwarfed or scrubby growth. Therefore, if you want your chickens, calves, pigs, etc., to be free from these detestable pests, keep your stock growing. The same applies to cabbage as well as other kinds of vegetables. If I want very early cabbage, I sow the seed here early in September, in a very rich seed-bed elevated a foot or more above the general service of the ground, keeping the soil moist, but not wet, by frequent applications of water that has been made warm by standing in the sun. Later in the season, I warm it on the stove. When the plants are two or three inches high, I transplant a part of them into another bed, leaving them in both beds four or five inches apart. By the time the first frost comes, generally early in October, I have very strong, stocky plants from six to eight inches high. I keep them protected by a temporary roof during the coldest nights, as well as in very violent, cold rainstorms. Plants treated in this manner are very hardy, but will not make scarcely any growth (here) during the months of November, December and January, but early in February are ready to be transplanted to the open field, where they will make a rapid growth. Do not be afraid of making the soil too rich, and be sure to give them plenty of water in some way, in absence of rain. Cultivate often, and the result will be very fine cabbage and no lice.

## Cabbage Culture.

In my article on "Cauliflower and Cabbage," written for your paper in January, 1890, I entered into minute details in relation to raising early plants by preparing a warm bed early in February, etc., and therefore it is of course not necessary for me to repeat what was then written. I neglected, however, in my haste while preparing said article, to state that fine plants could be raised very easily and successfully by planting the seed in September, as above stated. However, if the season should prove to be as dry as the present one, thus far, a great deal of labor would be avoided by planting the seed in February. I have always found by many years of experience that it is not advisable to depend altogether on one seed-bed for any one particular kind of seed, or plant, as "accidents will happen," and consequently I invariably make at least two or three sowings at different intervals. In this manner I always succeed in having plenty of nice plants for my own use, and if all the beds do well, I can always dispose of my surplus plants to those who will not take the pains necessary to raise them. I also neglected to state what I used on the young plants to destroy insects of different kinds that are often very troublesome and destructive; therefore I have mentioned this also in the foregoing, in answer to your correspondent who made inquiries on the subject.

In such a remarkably dry winter as the present one, accompanied more or less with strong north winds, especially at night, great care must be taken to see that your seed-beds do not get too dry, as they will often dry up so badly in one night as to almost destroy the healthy growth of the young plants. It is always best, therefore, to cover the beds at night; by so doing you are sure to be on the safe side. For second early cabbage, I generally raise up a bed

in the open field the size required, making it a foot or more above the general level. On this I burn a small pile of brush early in February, and after mixing the ashes thoroughly with the soil to the depth of two or three inches, sow the seed and rake them well in. If the weather is propitious, I seldom fail to get the very best of plants with but very little trouble and perfectly free from insects of any kinds.

I have also found in over thirty-nine years of California life, that owing to the great diversity of seasons, the methods that prove best for either gardening or farming in one season may not be advisable for the next, and therefore one must be continually on the lookout, as well as very observing, and be governed altogether by the circumstances that surround him. For instance, last February, I had great trouble to find a small piece of ground that was dry enough to set out my cabbage and cauliflower plants, that owing to the excessive moisture, had grown very rapidly and were actually suffering for the want of being transplanted. This month, I cannot find a piece of ground moist enough to justify me in setting out my young plants, unless I resort to irrigation, and as yet I have no facilities for that, other than hand-pumping, and that will not pay for cabbage, although it will for my twenty-two blackberry vines when they need it. I am consequently more than ever convinced that it is the best of economy in the end to provide some plan for irrigation, at least in a small way, so that in an unusually dry season as the present one has proved thus far, vegetables of many kinds can be successfully raised, and thereby save a large amount in the grocery bill, as well as to keep your wife in good humor.

IRA W. ADAMS

Bay State Garden, Calistoga, Cal., Feb. 9, 1891.

## TEXTILE INDUSTRIES.

### The Production of Ramie.

University Experiment Station Bulletin No. 90.

The revival of interest in the culture of ramie that has followed the announcement of the apparently successful tests, made of a new decorticating machine at the late Mechanics' Fair, renders it desirable to review some of the main points of this industry as bearing upon its adaptation to California. The great beauty of the fiber and the almost unlimited commercial demand for it when brought into the market in available form; its adaptation to a great variety of soils and climates, the high production, the perennial nature of the plant that renders its culture very inexpensive; last, but not least, the possibility of easily maintaining the productiveness of the soil by a return of the "trash," placing ramie near to cotton (when the seed is returned) as bearing very lightly on the soil's native fertility; and finally the relatively high value and light weight of the merchantable product when shipped—all these advantages concur in rendering the culture of this fiber plant specially desirable wherever it is feasible. That it has not become more widely spread, and has not largely superseded the much more costly and exhaustive culture of flax, is mainly due to the difficulty of accomplishing the separation and cleaning of the fiber by a machine sufficiently effective to compete with the scraping by cheap hand labor, which in the Orient is the habitual and the only mode of supplying to commerce the "China grass" fiber.

This difficulty arises from the presence in the bark of a tough gummy substance that encases the fiber, and from which it must be thoroughly freed by either mechanical or chemical processes, or by both combined, before it can be worked.

Two essentially different plans have been pursued in the effort to accomplish this. One is the "wet" process, in which (as in the Orient) the green stalk is operated upon, requiring appliances somewhat distinct from those used in the preparation of hemp or flax fiber; while in the "dry" process, the mechanical operations are substantially the same in kind as the case of our familiar fiber plants, but modified to suit a specially difficult case. In either mode, the mechanical treatment has to be followed by a more or less intense chemical one, for the removal of the last remaining greenish gum from the silky fiber before the latter is ready for the spinning machine. The latter, in view of the great length of the ramie fiber, should be of the kind adapted for "line" spinning; but of course it is quite feasible to convert the fiber into a tow or short-length material resembling long-staple cotton. Some of the older machines have done this; and if, as is now stated, such material can find purchasers among the workers in wool and cotton at remunerative prices, there is little difficulty about its production in large quantities. But one of the merits of the ramie fiber—its resemblance to silk—is thus grievously impaired, and it may be fairly said that no machine or process that does not produce the fiber in a condition for line-spinning can claim to have solved the problem of making ramie as profitable a crop as it can be.

The "wet" processes seem to have had the best success in the countries whose climatic conditions involve a perennially moist atmosphere, and where a thorough drying of the stems is therefore difficult. The principle upon which the work is done is, in general, the breaking of the more or less brittle and

"brash" stems, fresh from the field and stripped of their leaves, by means of a suitable modification of the ordinary breaking process as applied to dry stems of hemp, etc. The stemless but undecorticated fiber, usually rolled into bands for the better preservation of its parallelism, is then dried, partially or wholly by artificial heat, so as to render the gum and bark brittle enough to be removed by subsequent beating and combing.

Sometimes this mechanical after-treatment has been omitted and the stemless crude fiber passed directly into the alkaline bath (mostly of common or of caustic soda), which is always required to remove the last of the gummy matter, but a too prolonged action of which will impair the strength of the fiber. The latter is then ready for a final combing and for spinning with or without preliminary bleaching.

The "dry" process differs from the "wet" in that the stalks, cut at the time when their oldest portion is just turning color from green to a brownish tint, are first allowed to dry in the field if this can be done, and when fully dry are at once subjected to the action of breaking, and of beating or combing machines that remove stalk and bark with gum in proportion to their perfection, leaving, again, the crude fiber more or less ready for the alkaline bath, as in the wet process.

It will readily be understood that the dry mode of working is best adapted to a dry climate, in which the stalks and gummy bark become so brittle that the breaking and beating is effective to a degree, which it would be impossible to attain in moist climates like those of Louisiana or Guatemala except by artificial heat, which, as stated, is therefore generally used in connection with the wet process. Hence the dry mode of working promises exceptional advantages where, as in the interior of this State, the dryness of the summer air is proverbial. The dry process also possesses the advantage that each machine can be kept running continuously, on practically uniform material; while in the wet mode of treatment the plants must, in a large field, either be worked at very different degrees of maturity or else the crop must be attacked with a large number of machines, in order to secure uniformity of the product; after which the machines will lie idle. It would therefore seem, on the most general principles, that where the dry process is climatically feasible, it offers advantages over the other method, provided an equally good merchantable product can be turned out.

Without discussing the merits of the different machines now offered to producers as a guarantee that their crop when grown will be convertible into a merchantable article, and of which I personally am not at present fully informed, it should be said as regards the culture of ramie, that by actual trial it has been found to be readily feasible in all the larger valley regions of the State, so far as the successful growth of the plant is concerned, but that it will doubtless prove most profitable where a long growing-season, combined with irrigation, permits of making three or four cuts annually. In the Kern valley there is little difficulty in getting four cuts of good size and quality, and the same is probably true on the stronger soils as far north as Fresno, and southward in the valley of South California. In the Sacramento valley, three cuts can doubtless be obtained, at least when irrigation is employed, or in naturally moist land. At Berkeley and elsewhere on the immediate coast, two cuts (the second usually a small one) is all that can be counted on; but in warm valleys of the Coast Range doubtless from two to three full crops, according to the supply of moisture and the strength of the soil, may be looked for.

The following table shows the record of crops of the white-leaved ramie (*Urtica nivea*) harvested during four years on the Berkeley experimental grounds, the last of seven. No manure was used on the plot, but it was re-set in 1888 in order to equalize the stand which had been impaired by the distribution of roots; hence doubtless the low production in that year, and a later cut. The size of the plots of which the record is here given is 18x34 feet, or about one-fifth of an acre. The green plants were weighed with the leaves, which are estimated at about one-half of the "live weight." The dry stalks were weighed practically leafless.

RESULTS OF EXPERIMENTAL CULTURE OF RAMIE ON THE UNIVERSITY GROUNDS, BERKELEY.

FIRST CROP.				
Date of Cutting.	Plot.	Yield, lbs.	Yield per acre.	Percentage Dry to Green.
1887—June 24	1	576½ green	25835.7	
1888—July 16	1	491 green 135½ dry	22004.0 6072.4	27.6
1889	1	624 green 133 dry	28616.0 6095.2	21.3
1890—July 9	1	763 green 122 dry	34194.0 5471.0	16.0
1890—July 9	2	623½ green 117 dry	27942.0 5283.1	18.8
SECOND CROP.				
1887—Oct. 31		174 green	7797.8	
1890—Nov. 21	1	210 green 74 dry	9411.1 3312.7	35.2
1890—Nov. 21	2	210 green 74 dry	9411.1 3312.7	35.2

Assuming for the years during which the observations of the product were (on account of frequent calls for samples) not as full as during the last, the same average ratio as to the weight of the two crops and the percentage of dry stalks yielded, we find that the product has

been at an average rate of about 5700 pounds of dry stalks per acre for the first cut and about 3300 pounds for the second. This gross weight of course would be somewhat less in the dry air of the interior of the State; but the figures show that on strong soils the expectation of eighteen to twenty thousand pounds per acre, where four cuts can be made, is not extravagant. The minimum product from dry stalks is estimated to be 15 per cent of raw merchantable fiber. Upon these data an approximate estimate of the crop, and of its financial outcome in the several climatic regions of the State, may be based.

It is hardly necessary to remind any intelligent farmer that only strong soils can be expected to produce, in one season, a crop of ten tons of dry stalks of any kind, and that few can continue to produce such crops for many years without substantial returns to the land, no matter how fertile originally; but there is no reason why the offal of the ramie or p—the leaves and stalk-trash—should not be regularly returned to the soil. The leaves can be, and are usually, dealt with by stripping the stalk on the ground, leaving them where they grew. As to the stalks, it is true that with three or four cuts per season it will be difficult to deal with the large mass of refuse by spreading it on the stubble, although in the more northerly portions of the area of cultivation it may be desirable to use this material for protection against frost. But as the return must either be made, or fertilizers purchased, the proper mode of procedure will be to make compost-beaps of the trash and thus render it less bulky and convenient for spreading on the stubble after the last cut. This, in the case of strong soils, is all that will be required to keep up production for a long time, although the raw fiber sold represents a larger proportion of the soil's plant-food than in the case of cotton, in which the return of seed and stalk will maintain production indefinitely on any soil capable of yielding a profitable crop. When no returns are made, ramie will prove even a more exhaustive crop than is cotton when the seed is not returned, and those engaging in its culture had better understand from the outset that they can "rob the soil" with ramie even more effectually than with wheat.

On the strong, black, adobe soil of the Berkeley experimental plot, where purposely no return or fertilization of any kind has taken place, the crop of 1890 was fully as large as any previous one within the four years in which weighings have been made. Owing to the constant call for plants, the ground has never been solidly occupied by the crop; but even in the year in which the plot was reset in spring, with half the stocks, the product was nearly up to the average, so rapidly do the plants tiller and spread.

Among the strongest soils in the State are those containing more or less of "alkali," and as these are mostly valley lands, the question of their adaptation to ramie culture is important. Experiments have shown that while ramie is a little more sensitive to alkali than alfalfa, it will stand all but the strongest spots provided the alkali is not of the "black" kind, viz., carbonate of soda; and as the conversion of black alkali into "white" is easily effected by the use of proper doses of plaster or gypsum, it may fairly be said that with this proviso, ramie may be grown in alkali lands available for little else, since the growing of alfalfa cannot be carried beyond a limited point with profit to the producer on account of its relatively low value and heavy weight in transportation. The main reason why ramie will grow in alkali ground is the same as in the case of alfalfa—because it shades the ground, and hence the evaporation, going on through the leaves of the plants instead of at the surface of the soil, will not accumulate the noxious salts around the root crowns so as to corrode them. But it must not be forgotten that until the plants fully shade the ground, the rise of alkali in the middles must be prevented by thorough tillage, otherwise damage may result in that the outermost shoots suffer and the spread of the plants is retarded. As against alfalfa, ramie also possesses the advantage that, as it is not propagated from seed (in the field at least), but by the division and setting out of plants or their roots, the difficulty of obtaining a stand on account of the rotting of the seed by the alkali, does not exist.

So far, then, as the successful and profitable growth of the plant is concerned, there need be little doubt in the valleys of the central and southern parts of the State, so soon as the processes for marketing the fiber shall be an assured success.

E. W. HILGARD.

### Flax for Seed and Fiber.

Occasional efforts have been made during the last 15 years to establish the manufacture of linen fabrics in California by those claiming to be practically acquainted with the industry elsewhere, but the projectors of such enterprises have abandoned the undertakings because of the alleged lack of interest among local capitalists. Whether this is the true reason for the failure to establish flax-spinning in this State or not, we do not pretend to state.

It has been frequently stated that the production of flax for both seed and fiber is not feasible, and our farmers who have grown flax for seed have therefore abandoned the thought, which has frequently arisen in their minds, of gaining something for their flax-straw as well as for the seed crop. It seems likely that an erroneous impression has thus been engendered, for there are recent authoritative statements to the effect that not only is the production of both seed and fiber from the same plant not impracticable, but that "by far the larger part of the flax grown the world over is for the double crop and double profit of both the seed and the fiber."\* We are also assured that "it

is possible to grow for both seed and fiber, though the fiber will be coarse, naturally, and only fit for the lower classes of manufacture."

It is possible, then, that even in growing flax for seed, as now practiced in this country, the fiber could be made a source of income, providing the straw was not disintegrated as in the prevailing mode of threshing. It is also possible that, by selecting a better variety of flax than commonly grown for seed, and by sowing more thickly so that the growth of lateral branches on the main stem is measurably repressed, there might be secured a fiber product vastly better than is now obtained and therefore fitted for a higher class of manufactures. This procedure might result in a lessened production of seed by the individual plant and perhaps a reduction in the aggregate yield per acre; in fact, in our experiments with flax varieties, we find that the best European fiber varieties yield much less seed than the variety commonly grown for seed in this State.

It may be concluded, then, that, though to grow flax both for seed and fiber requires closer thought and greater effort than is usually given to the flax crop, and that to make the straw available to manufacturers requires some investigation and investment on the part of the flax-grower, the current claim that one cannot grow flax for both seed and fiber is not necessarily true in the nature of the case nor in the experience of the greater number of the flax-growers of the world.

In order to minister to the oft-recurring demand from inventors for California-grown flax-straw for trial in their machines and processes, and to furnish seed to growers who desired to experiment, we secured from Europe, years ago, four of the best fiber-flax varieties and have grown them from year to year on the experiment grounds of the Berkeley station. They have attracted much attention from visitors for their beautiful, straight, tall growth of stem and bright, clear color. The growth of the four varieties has been quite similar, as shown by the record of 1890:

Variety.	Sown.	Germi-nated.	Bloomed.	vested.	Har-
Russian.....	Apr. 12	Apr. 23	June 3	July 24	
Yellow-Seeded.....	Apr. 12	Apr. 23	June 2	July 24	
White-Flowered.....	Apr. 12	Apr. 23	June 2	July 24	
Royal.....	Apr. 12	Apr. 23	June 5	July 24	
California.....	Apr. 12	Apr. 23	June 10	Aug. 4	

The European fiber varieties are thus shown to require a shorter growing period than the California-seed variety. The fiber varieties averaged one-third longer in straw than the California; they branched less and produced much less seed. Accurate weighings of straw and seed have not been secured hitherto because the plots were invaded from time to time to furnish specimens for exhibition and for experimental fiber extraction by local inventors. This year, careful weighings will be made.

Though these flaxes have aroused considerable interest here in the manner stated, there has been no result in local fiber treatment that is worth mentioning. Seed was sent to Washington Territory, and straw grown there was sent to European flax manipulators, who returned a very favorable report. On April 29, 1890, we received a circular request addressed by Mr. S. S. Boyce, President of the Boyce Fiber Company of New York, to the various experiment stations of the United States asking for samples of flax straw, which he agreed to work for fiber and report results. Mr. Boyce did not describe his process, but it is stated by Mr. Dodge (in his report to which allusion has been already made) to be "a process for cleaning flax without first submitting the straw to the process of retting, thereby obtaining the fiber at once." Such a process naturally would be more attractive to the flax-grower, for the time, labor and water required in retting are all probably of higher cost and more difficult to command in this State than in other regions where flax is grown.

The New York *Dry Goods Economist* of Oct. 18, 1890, contained a description of the working of the flax straw sent to Mr. Boyce from this station, with engravings of the several hundles as received by him. The following is a condensed tabular statement, which we compile from the data in the article referred to:

WEIGHTS OF SEED, STRAW AND FINE FIBER FROM CALIFORNIA-GROWN FLAX VARIETIES.				
Variety.	Gross Weight.	Seed.	Straw.	Fine Fiber.
Yellow-Seeded.....	19	7	12	2½
Russian.....	16	6	10	2½
Royal.....	15	6	9	2½
White-Flowered.....	15	7	8	2
California.....	14	7	7	1½

Comments upon the experiments are, that the Russian and Royal seemed to be best, both for seed and fiber. The California gave much the largest yield of seed, and the seed was very large and plump, but the fiber was coarse and weak.

Of the general results of the experiment the *Economist* says:

There is no tow by this process of retting. The natural color of the straw was very light; that of the fiber almost perfectly white in each sample. The total yield of the fiber, 23 per cent of the weight of the straw, was rather a light yield of fiber but very fine. The yield of fiber is greater when the straw is not over-ripe. The samples treated had been allowed to get riper than required for either seed or fiber.

The results of this trial are of interest as showing clearly the superiority, from a textile point of view, of the flax varieties which this station has introduced to this coast over the common variety which is grown for seed. Whether it is possible to realize more by the attempt to produce both seed and fiber here, and to substitute one of these varieties for the one commonly grown, is an industrial question depending upon manufacturers and capitalists for solution. The farmer cannot afford to produce a crop of any kind until a market is assured.

E. J. WICKSON.

Berkeley, Jan. 23, 1891.

\*Report on Flax Hemp, etc., by C. R. Dodge, U. S. Dept. Agr., 1890.

\*New York "Dry Goods Economist," Oct. 18, 1890

\*The gross inappropriateness of the latter name may render it desirable to repeat here, for the benefit of those to whom the subject is new, that the ramie plant is a large, stinging, broad-leaved nettle, and therefore belongs to a family of plants of which many other members supply valuable fibers.

## PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

### What About the Legislature?

There is much concern about matters at the State Capitol. It seems time that the alarm should be sounded. The Mutual Fire Insurance Co. bill has been killed by its enemies; also the bill for collecting delinquent taxes; the Australian Reform and Ballot law is also said to be in danger of defeat. In fact, it appears as if but few, if any, of the needed reform acts, recommended by the Grange and Alliance, are likely to be passed by the present Legislature. When we consider that the boss of the dominant party is worse than an ordinary government defaulter, is it not time all honest legislators and citizens should be on their guard?

It is intimated that instead of passing out the sack among the members of the Legislature this year, the business is done wholesale, through a well-known leader of the dominant party.

Bro. Ohleyer, Chairman of the Legislative Committee of the State Grange, early in the week made a call for the members of that committee on Wednesday. We hope that they will be able with the aid of those interested in honest legislation to secure the passage of a good Australian Ballot law and possibly the introduction and adoption of a new enabling Act for "Mutual Fire Insurance Co."

The following quotations from two of our daily papers are significant in this connection:

#### Farmers Should Organize.

Every measure in the interest of the farmer, and every proposition looking to a reduction of taxation that has been offered in the present session of the Legislature, have met with defeat. Pledges made prior to the election have been disregarded and the plain provisions of the Constitution of the State have been violated, and large sums taken from the treasury under the plea of urgency and prior to the passage of the general appropriation bill.—*Marysville Democrat*, Feb. 14.

"You can estate for me," said E. M. Piercy, of the Legislative Committee of the Farmers' Alliance, to a Bee reporter, Wednesday night, "that there is many a man on the floor of this Legislature who will never have a seat there again. Every measure and bill that has been brought up in this session in the interest of the farmers has been promptly voted down. The Mutual Insurance bill is an instance of this. On the face of it, there is no reason why the majority of the legislators should oppose a measure universally demanded by the farmers. I say on the face of it. We cannot tell what other influences may have been brought to bear. Since we are refused justice by this Legislature, we will take good care that our influence is felt in the next election and the next Legislature. The Alliance was not formed and did not intend to take an active part in politics, provided we could get justice from either of the existing parties. But since all of our demands have been ignored, our plans will change accordingly, and at the next election there will be 'music in the air.'"

Mr. Piercy's remarks were indorsed by a gentleman standing by, high in the councils of the Grangers. "There is no doubt that there is a determination upon the part of the Grange and Alliance to enter the field of politics, and the parties and persons who have slighted their requests will be marked in the future."—*Sacramento Bee*.

We wish the Masters of every subordinate Grange in this State could visit the Capitol and support our Legislative Committee during the next week or ten days. Every Patron and farmer, discuss the matter in your Grange and see what help you can render. All honest, industrial citizens should use their best directed influence to try and secure the much-needed reform legislation proposed.

### Reception to W. M., Hayes.

A reception was given W. M., H. E. Hayes of Oregon State Grange, by Temescal Grange, on Friday evening, 13th inst. On account of the shortness of time for issuing notices, the meeting was not as well attended as under other circumstances it would have been.

P. M., Woodhams was called upon to open the meeting, which he did by introducing Bro. Hayes as the guest of Temescal Grange and asking him to address a few words to those assembled.

Bro. Hayes then made the meeting a most excellent and instructive talk of about an hour's duration, in which he touched upon the various topics of interest to Patrons and all farmers, advancing some new and original ideas on the Stanford Loan bill and free coinage of silver, making quite a point in talking of the educational features of the Grange and how desirable it was that the young people of the farm should join the Grange to learn that they had rights, to know them and how to battle for them.

At the conclusion of our brother's speech, the chairman called upon each one present to offer a sentiment on the occasion. Nearly all present responded.

Bro. and Sister Dewey each spoke a few

words of welcome and of thanks for the speaker's efforts in behalf of the Grange in California, also gratefully and appreciatively of the goodwill and kindness shown each of them by the Patrons of Oregon during their visit to the Oregon State Grange at its last session, and particularly did they mention the special attention shown them by Oregon's W. M. and his most estimable wife.

The W. O., Judge Gibson, had a few words to say on the honorable calling of the farmer, that a large proportion of our country's best, greatest and most able men, from Washington down to the present day, had been either themselves farmers or had been brought up on a farm; that in fact the farming population furnished a very large part of the hrawn and brain of the land. He also spoke of the beauties of nature as an every-day sight to the farmer, of the comforts and restfulness of being able to sit under the shade of one's own vine and fig tree, not enjoyed by the denizens of a city—in language, however, that the writer does not pretend to portray.

Nearly all present said something—a word or two of kindly and fraternal feeling toward the guest of the evening, and as on the next day Bro. Hayes had determined to start homeward, the breaking up of the meeting was a perfect love-feast of good wishes and fraternal farewells to our worthy brother.

Although the weather was threatening, the loyal sisters turned out in good numbers and Oregon's Master was made to enjoy the friendly greeting. On motion, a resolution was unanimously adopted, thanking Brother Hayes for his able and generous services in speaking before Temescal and other Granges, and farmers meetings, in various parts of the State.

The hope was expressed that his visit might be repeated in company with Sister Hayes.

M. W.

### The People's Petition

For a Government Trunk Line Railroad.

By request of a brother, Past Master J. V. Webster has written the following statement and petition to Congress, which has been furnished us for publication, hoping that many Granges and other organizations or individual members who may favor it, will use it for preparing suitable petitions for signatures which they may secure and then forward the same to the Members of Congress from their respective districts. Secretaries of Granges and other associations can thus easily present the matter before their members, circulate the petitions, forward them to their Congressman or Senator, and report action to this and other papers:

#### Petition.

To the President and Congress of the United States:

WHEREAS, The Union and Central Pacific Railroad Companies are justly indebted to the National Government to the extent of one hundred and twenty-five million dollars principal and interest, for aid furnished said companies in the construction of said roads; and

Whereas, Said companies have utterly failed to comply with the terms of the Congressional Acts under which these immense loans were made, and the date of possible payments under the provisions of said Acts, fully expiring in 1895, or soon thereafter; and

Whereas, It is expedient, proper, and the necessities of the case are urgent, that the Government should regulate and control all transportation charges; and

Whereas, State and Interstate Railroad Commissions appear powerless in accomplishing the end for which they were created; and

Whereas, The whole history and experience of the controversy fully demonstrates that there can be no relief for the people from extortionate rates of freights and fares, short of Government ownership and control of at least one trunk line railroad across the continent;

Therefore, we the undersigned, citizens of the State of California, hereby respectfully petition and implore the Congress of the United States to refuse said railroad companies any further extension of time for the payment of their indebtedness to the Government, but instead thereof, at the earliest opportunity, take measures for the condemnation and appropriation of said roads for Government use, and furthermore condemn and appropriate at least one trunk line of railroad from Omaha to New York, to the end that the Government may own and operate at least one through line from the Atlantic to the Pacific ocean, that reasonable rates of freights and fares may be established and uniformly maintained, and thereby tend to regulate and control the whole carrying trade, which, as at present managed and manipulated, will ultimately impoverish the people to an extent unbearable, that a few men may roll in riches.

And furthermore, your petitioners respectfully pray that Congress may provide for a special issue of Legal-Tender notes, with which to pay off the first mortgage bonds of said Union and Central Pacific railroads, and to supply funds for the further use of condemning and appropriating an additional line of railway from Omaha to New York.

NAMES.

ADDRESS.

BROS. MARTIN AND DENMAN of Two Rock Grange, members of subcommittee on Co-operative Buying, were recently in S. F. two days, and with members of the State Grange at the Secretary's office, have been doing good service in working up the plan adopted by the Patrons of Pennsylvania known as the "Pennsylvania Plan" of buying and selling. They have succeeded in obtaining favorable answers from a number of the leading merchants. Bro. Martin has reported progress to the Executive Committee, also asking the members to come together at an early day to perfect the system.

### The Master's Desk.

R. W. DAVIS, W. M. S. G. OF CALIFORNIA.

#### Membership Fee.

Article VII of the Constitution of the National Grange, as amended, now reads as follows:

The minimum fee for membership in a subordinate Grange shall be, for men three dollars, and for women one dollar for the four degrees: *provided*, that State Granges shall have the power to reduce the fees within their respective jurisdictions to any sum not less than one dollar for men and fifty cents for women.

Please cut this out and paste it in your copy of the National Grange Constitution. By so doing you will have the law handy, reliable and correct on the subject of fees for membership. The State Grange of California has not yet reduced the fee from the original sum of three dollars for men and one dollar for women.

It is an abiding principle with the Grange to relieve any of its oppressed and suffering members by any means that are honorable, just and worthy. Don't you want to join such an Order? That is the work, in part, of the Grange.

The Grange has no affiliation with or sympathy for any species of socialism, nihilism, agrarianism, one-tax landism, or communism. The Grange believes in government by the people, for the people and of the people; justice to all, special favors to none.

Be a jewel in your Grange. If you can't be a blazing diamond, be at least a shining pearl. "Where there's a will there's a way."

Call the roll of officers at every Grange meeting. Note the absentees and let it so appear on the proceedings of the Grange. Every officer has a duty to perform; at the end of the year you will want to know about promotion.

The crop of combines, trusts, monopolies and associations is so flourishing that nothing but a combine of farmers will check it. Farmers everywhere must organize and elect men to public office regardless of party politics, if they would have any relief from grain, insurance, machinery, railroad, banking and shipping combines. Self-protection is as much the first law of nature to the hands that feed them all—the farmer—as it is to any one on earth. Let's organize the farmers into one solid, staunch band of brothers and sisters—not for the purpose of pillage, but for the purposes of education and self-protection.

The Grange, though proud of its conservative history, does not propose to be too conservative to deal with live issues. It does not intend to be so conservative that politicians may betray its requests without feeling the heavy hand of its members on election day. The Grange in California asks for some relief from the extortion of insurance companies, and political woe be to the Honorables in this Legislature who refuse this demand on the part of the farmers. The record is being kept, and the Grange will be fully informed.

Sister Jennie Buell, the efficient Secretary of Michigan State Grange, has our thanks for a copy of the Journal of Proceedings of the late session of that State Grange. Having read, with much interest and profit, the report of the Executive Committee and the address of the W. M., Bro. Thos. Marra, we most heartily commend the perusal of these papers to the farmers of California.

In the Grange "there abideth Faith, Hope, and Charity—these three; but the greatest of these is Charity." Therefore let us have the fullest abundance of charity for our own erring and needy ones; for all who are working, either in our grand Order or in other Orders or associations, for the upbuilding of society, for the education of humanity, for the protection of the weak, for the control of the vicious, and "for the good that they may do." While we would like to have every farmer and his wife, sons and daughters join the Grange who believe that there are wrongs to be righted, children to be educated, and good to be done, yet we must practice that charity we teach, and wish them Godspeed in the work their hands find to do, even though they do not join the grand, good, true old Grange.

The road question is yet before the Legislature; but the chances for any great measure of relief seem more than doubtful. Now won't the Grange make this a fight for the next Legislature? Don't vote for any man who is not solid on that question. Let the State Grange agree on a bill and then we can pass it, without doubt. The trouble has been, we were not fully agreed among ourselves. How about doing away with a direct road tax, and have every man under 60 years of age work out his tax? Something must be done for the roads. Send opinions to the RURAL PRESS. The question is an important and very difficult one, for California is a large State with all sorts of soil and all kinds of plains, mountains, streams and canyons. Give the subject thought and then tell how to solve the problem.

Splendid schools, better roads, postal telegraph, free coinage of silver, Senators elected by the people, pure-food laws, anti-trust laws, mutual insurance law, railroads to pay their

just debts to the Government and their taxes to the State and to the several counties, and a higher and better manhood and womanhood everywhere, are among the things demanded by the Grange. Don't you, fellow-farmers, approve of such a platform? If so, then join the Grange and help bring about these results. If there is no Grange near you, get up a list of not less than nine men and four women and organize a Grange. A Deputy will be sent on application to A. T. Dewey, 220 Market St., San Francisco.

Young men, middle-aged men, old men, be sure to keep a clean record. The record is what counts. The clean record will tell. Be ever anxious to keep your record spotless, pure, clean.

Be sure to have music at your Grange meetings. Have the best music you can secure, but if you can't get the best be sure to have the next to the best. Don't wait for your best singers. Go on with the music and perhaps the best singers will be on time at the next meeting. Don't neglect the music!

The season for lecture work is near at hand. Whenever a subordinate Grange will get a good meeting—not a mere handful of staid Patrons but a big audience of farmers who are interested in self-advancement and the protection of family, home and vocation—we will try to furnish them a good speaker; some one who will tell the people what the Grange has done, is now doing and proposes to do. But to secure such a speaker, the Grange or Granges making the demand should first be sure of a good attendance of members and farmers; then they should give ample time to the speaker whom they want, and lastly, advertise the meeting fully and freely by posters in public places, by postal cards sent to neighbors and friends, and best of all, by word of mouth and personal effort. The Grange is going to grow; it is on the "forward march." Are you willing to do your share, and are you going with the procession?

Fertilize your mind and the mind will find fertilizers for the soil. Thus both the crop of ideas and of cereals is enlarged. Humanity is benefited while no harm has been done any person or any thing.

### Sacramento Co. Pomona Grange.

EDITORS PRESS:—At the regular meeting of Sacramento County Pomona Grange, the following resolution was introduced by Bro. Charles Hall:

*Resolved*, That Sacramento County Pomona Grange indorses the bill introduced in the United States Senate by Leland Stanford authorizing the Government to make loans to farmers direct, having the same secured by mortgage on land unincumbered, and further ask our representatives in the Legislature to use all honorable means to secure the passage of the same.

The following resolutions were introduced by Bro. E. Greer:

*Resolved*, That our representatives in the Legislature be instructed to use all honorable means to have an appropriation made by the Legislature for the erection of a Governor's mansion, the same to be erected in the State Capitol Park.

*Resolved*, That we, the members of Sacramento County Pomona Grange, would most earnestly request our representatives in the Legislature to use all honorable means to secure a reasonable appropriation for the repairing and preserving of Sutter's Fort in the City of Sacramento.

This being the last meeting before our annual picnic, it was moved that the necessary arrangements be made and committees be appointed, which was done.

Bro. Jackman introduced the following resolution:

*Resolved*, That no intoxicating liquors shall be allowed to be sold on the grounds of said picnic on said day.

The resolution caused a lively discussion in which the sisters took part. The resolution was adopted by an almost unanimous vote.

Work on, brothers, don't grow weary;

Still maintain your noble stand;

Though the skies at times look dreary,

Work on, brothers, hand in hand.

Pity still a fallen brother,

Still assist the weak to rise;

Love not only one another,

But each soul beneath the skies.

Work on, sisters, work in patience

With your gentle, loving hearts;

In the vanguard take your station,

Bravely there discharge your parts.

Pity still a sister's mourning,

Still assist the weak to rise;

Let your lamp be trimmed and burning,

Pointing upward to the skies.

Work on, brothers, be not daunted

Though the harvest seems so small;

If the farmer had not planted,

None had gathered in the fall.

Brothers, sisters, work together,

Plant the seed and watch with care;

Though to-day be gloomy weather,

By and by it will be fair.

A. A. K.

WATSONVILLE GRANGE, though waiting for rain, has not been idle. It will hold a George Washington meeting, with exercises appropriate to the occasion, on Feb. 21st, and will initiate another class at the first regular meeting in March.

Later.—Watsonville rejoices with all Patrons for the glorious rain.

FARMERS' ALLIANCE.

SUBSCRIBERS wishing fuller information of the Alliance can have their names changed to the Grange Edition of the RURAL PRESS free, much to their advantage, this department being continued in the same.

The Aims and Future of the Order.

State President Cannon writes to the Ventura Democrat as follows:

Editors Democrat: In the lull of my immense correspondence a few thoughts may be of benefit to the toiling masses. The mariner often pines upon the boundless ocean and takes the meridian sun to determine the exact position in which his vessel is placed upon the bosom of the mighty deep; so with us, we should occasionally make a reckoning to determine where we are. The farmer has at last broken the spell that bound him. He has smashed the traditions of centuries. He has kicked out of the shafts and is running away, and the men who have driven him with tight reins are buried into the ditch and crushed beneath the wheels. It has been so sudden they hardly know what struck them. Some say it is a cyclone and will soon blow over. Old man Tradition runs his hands, forces a smile through his chattering teeth, says he knows it is a cold day, but then he looks for warmer weather to-morrow. But he is not sure of his own prophecy. The trouble is, the people have begun to think—the masses of the people, the old farmer, the patient beast of burden, who has toiled for ages that others might reap. When the masses begin to think, it shakes the world. It is this mighty movement of the masses that is shaking the very foundations of the civilization of the nineteenth century, and even now drawing in dim outline the new civilization of the next century.

The time was when all eyes were fixed upon the great and powerful kings and warriors of history. Poets sang of them. Literature fawned at their feet. But to-day all is changed. The eyes of the world are now fixed on the toiling masses. The story of a nation is the history of their condition. The "Song of the Shlr" thrills the heart of a world. There are mighty forces beneath, lifting up these millions into a new life. They are at last becoming conscious of their needs, and with their capacities as a lever and their needs as a fulcrum, they are tugging away at the very foundations of social, economic and political life, and our civilization to-day quivers from foundation to keystone beneath these assaults.

All the nations of the earth feel this new power. The Czar of Russia shivers in his palace and adds another regiment to his bodyguards. The Emperor of Germany, seeing the handwriting on the wall, hastens to make friends with the "unrighteous." The drum-beat of the Salvation Army echoes around the world calling mankind to the rescue of the submerged millions from the filth of the great cities.

The Farmers' Alliance is a gigantic wave of this world-wide movement of the human race. It holds in its hands not only the possibilities of a higher life for this generation, it holds the hopes of unnumbered generations yet unborn. Our organization is superb. It is the strongest social and political machine ever devised by man. We are determined to lift up the toiling hosts and make their life worth living. We are teaching that it is just as honorable to plow with a mule as to make laws, or to run a bank or a railroad. We have many crude ideas as yet about law and finance, but we will learn as we go along. Absurd demands will take reasonable shape in the red-hot forge of public debate and education. Demagogues will try to mislead it for a time, but we will kill two demagogues where we will nourish one. Our greatest danger lies in the possibility of selfish intrigues in politics, in which our lofty principles will be forgotten in a mad struggle for immediate power. Holding fast to our principles, we will ultimately sweep this nation in triumph. We represent the grandest moral issues of the age. Standing firmly on these issues, we are as sure to win as that there is a God who rules the universe. Fall in line, or hunt shelter.

The above shows President Cannon to be worthy of his cause and position.—EDS. PRESS.]

STRENGTH OF THE ALLIANCE.—Under this head the Fresno Republican editorially declares that the recent victory of the Kansas farmers has proven them clever and astute politicians, thus disproving the prediction by disgruntled parties that defeat would be their portion. That the farmers are no tyros, says the Republican, is attested by Pfeffer's election and Ingalls' overwhelming defeat. In addition, they are fast gaining ground in Nebraska and have absolute control of the Illinois Legislature, while indications point to the election of their candidate as United States Senator from the latter State. The article concludes as follows: "These are facts that cannot be disguised and that no politician will overlook. The Farmers' Alliance is ably managed, that's clear, and its political strength must not be underestimated. It isn't safe to do. Its recent successes will greatly strengthen it."

LA GRIPPE.—Bro. John S. Dore, Chairman State Executive Committee, who has lately been suffering from this unwelcome visitor, we are glad to report is recovering and able to wield his vigorous pen again. Bro. D. appears to be an inveterate worker whom we would like to see a little more kind to himself.

Secretary's Column.

[C. W. PEDLAR, Sec. Cal. State F. A. & L. U., Gilroy.]

EDITORS PRESS:—I am in receipt of a letter from D. Edson Smith of Los Angeles, announcing the organization of San Diego County Alliance by himself and Sister Anna F. Smith, the latter of whom has been at work for some time in the county as State Organizer (and who, by the way, is one of the most efficient Organizers now at work), with delegates from 13 sub-Alliances, about 50 in number. The following officers were elected to serve until July next: Pres., Wm. Haslam, P. O., Winchester; V. P., Wm. Justice, Richland; Sec'y, C. M. Kirkpatrick, Menifee; Treas., L. Yates, Elsinore; Lect., J. H. Sberard, Menifee; Ass't L., W. L. Wilhite, Valley Center; Steward, W. C. Ball; D. K., D. Trussell; Ass't D. K., C. W. Newhall, San Ignacio. C. W. PEDLAR. Gilroy, Feb. 16.

Attend Barbee's Meetings.

Bro. J. S. Barbee is now on a lecturing tour and will give the ritualistic work of the Farmers' Alliance according to the latest regulations of the late National Alliance meeting at Ocala, which varies considerably from the work as first given out in this State.

He will post the brethren up on unpublished transactions at Ocala and his observations of the signs of the times in the East, etc. Is ready to answer all questions and do whatever work he can for the good of the Order in his travels. His list of announcements appears this week. The meetings are called for 10 A. M., and whenever it is desired by an Alliance he will give a public lecture during the first hour.

Without waiting to be invited, members of the Order, not only in the places named, but in neighboring districts, should, as far as possible, come in to listen to Bro. Barbee. We hope to have a report of each meeting and that each will be a success.

Readers should pass the information around as early and as far as possible. Bro. Barbee is not only a persistent worker, but a pleasant one to meet.

National Organizer's Appointments.

I will meet Alliance officers and members at 10 o'clock A. M. at the time and places mentioned as follows:

Wednesday, Feb. 18th, Niles; Thursday, 19th, San Jose; Friday, 20th, Hollister; Saturday, 21st, Watsonville; Monday, 23d, Soledad; Wednesday, 25th, Enterprise (Sacramento Co.); Thursday, 26th, Modesto; Friday, 27th, Selma; Saturday, 28th, Tulare; Monday, March 2d, Tracy; Wednesday, 4th, Santa Rosa; Friday, 6th, Blacks Station; Saturday, 7th, Arbnckle.

The President and Lecturer of Merced County Alliance, with all the sub-Alliance Presidents and Organizers, are requested to meet me at Tracy on Monday, at 10 A. M., March 2d, and receive the new unwritten work. All members of the Alliance in Merced, Stanislaus and San Joaquin counties are cordially invited to attend the Tracy meeting.

J. S. BARBEE, National Organizer.

[Turn out and give Bro. Barbee a generous and hearty reception.—EDS.]

SANTA ROSA ALLIANCE.—Bro. J. Roberts writes that at the last meeting of this Alliance, Feb. 16, National Organizer Barbee was present and made some very encouraging remarks, after which he initiated a class of nine. The county is being organized, a County Alliance formed, and a Business Agent appointed. Bro. Roberts adds that many of the Grange members have joined the Alliance, and that with this powerful combination, a better day is dawning for Sonoma county.

Bro. R. is County Business Agent and on Tuesday visited State Agent Moore in company with Bro. Barbee.

WORK PROGRESSING.—Sec'y Pedlar writes from Gilroy, Feb. 14: There are several more counties in which work is being done, but only a beginning has been made as yet, except in Humboldt, which will be reported as organized in a few days. I will send you a brief report of Bro. Rigdon's work as County Lecturer for Santa Clara county in a few days.

The officers of the Bloomfield (Sonoma Co.) Farmers' Alliance are: Pres., John Tabor; V. P., Rev. John Phillips; Sec., Mrs. E. C. Henshaw; Treas., John Johnson; Lec., C. P. Smith; S., G. F. Woodson; D. K., John Slaterly; Ass't D. K., Louis Johnson; Chap., Mrs. John Phillips.

WHAT is said to be the only strictly commercial journal in the country, devoted to the business interests of the Alliance, is the Wall Street Farmer, published at 335 Broadway, New York.

THE indications are that Harrison will veto the Silver bill. If so, and the Republicans do not pass it over his veto, they will hear a heavier drop in '92 than they did in '90.—Farm View.

A BALL will be given by Farmersville, Tulare county, Alliance, Feb. 27, to raise funds to buy an organ for the Lodge-room.

FRUIT MARKETING.

Santa Clara Valley Fruit Grades.

In our issue of Feb. 7th we gave the grades of deciduous fruits proposed by buyers in the Santa Clara valley. The following terms, conditions and grades below named were adopted by the Fruit-Driers' and Packers' Association of Santa Clara Valley Jan. 17, 1891, as the standard:

Grades and Conditions.

All fruits shall be uniformly graded, shall be fully matured and not overripe for the purpose named in this contract. All fruit delivered graded, which on examination shall be found to be improperly graded, may be re-graded by buyer, for which seller agrees to allow buyer cost of grading.

APRICOTS.—Extra.—Shall measure not less than 2½ inches in diameter, shall be sound, clean, free from blemish or imperfection. No. 1 shall measure not less than 2 inches in diameter, shall be sound, clean, free from blemish; No. 2 shall measure not less than 1½ inches in diameter, shall be sound, clean, free from blemish; No. 3 shall measure not less than 1 inch in diameter, and shall be of good merchantable quality.

CHERRIES.—Extra.—Shall measure not less than ¾ inch in diameter, shall be sound, clean, free from blemish or imperfection; No. 1 shall measure not less than ¾ inch in diameter, shall be sound, clean, free from blemish; No. 2 shall be sound, clean and of good merchantable quality.

PEACHES.—Extra.—Shall measure not less than 2½ inches in diameter, shall be sound, clean, free from blemish or imperfection. No. 1 shall measure not less than 2½ inches in diameter, shall be sound, clean, free from blemish, of uniform ripeness; No. 2 shall measure not less than 2½ inches in diameter, shall be sound, clean, free from blemish; No. 3 shall measure not less than 1½ inches in diameter and be of good merchantable quality.

BARTLETT PEARS.—Extra.—Must be delivered as soon as picked. Shall measure not less than 2½ inches in diameter, shall be sound, clean, free from scab, scale, blemish or imperfection. No. 1 shall measure not less than 2½ inches in diameter, shall be sound, clean, free from scab, scale, blemish or imperfection; No. 2 shall measure not less than 2½ inches in diameter, shall be sound, clean, free from blemish; No. 3 shall measure not less than 2 inches in diameter and be of good merchantable quality.

PLUMS.—Extra.—Shall number — to pound, shall be sound, clean, free from blemish or imperfection. No. 1 shall number — to pound, shall be sound, clean, free from blemish; No. 2 shall be sound, clean, free from blemish; No. 3 shall be sound, clean fruit of good merchantable quality for purpose named in contract.

PRUNES.—Extra.—Shall number between 15 and 20 to pound, shall be sound, clean, free from stems, blemish or imperfection. No. 1 shall number from 20 to 28 to pound, shall be sound, clean, free from blemish; No. 2 shall number from 28 to 35 to pound, shall be sound, clean, free from blemish; No. 3 shall be uniformly graded, be sound, clean fruit of good merchantable quality.

Fruits not enumerated in the above schedule shall be specially graded as per agreement between buyer and seller.

W. F. PARKER, Secretary. N. J. HAINES, President.

FORESTRY.

Starting Tree Seedlings.

EDITORS PRESS:—I would like to give your readers the result of what was to me a new method of starting blue gum plants. One year ago the first of this month I got my seed, 1 cz. Eucalyptus Globulus. The directions on package said to sow in light soil. Wishing to experiment, I prepared three boxes filled with pure fine sand from the river bed, and mixed with well-rotted stable manure in proportion of two parts sand to one of manure, which must be worked up fine and well mixed with the sand.

I also prepared at the same time and gave the same treatment to one box sowed in light soil mixed with a small amount of manure. The seed was covered lightly about ½ inch deep, and kept moist until the young plants came up. The result was that almost every seed came up in the sand, while not one in ten came up in the soil. One advantage is that in transplanting from the boxes of sand, the roots of the plants separate much better than from soil, so that nearly all the roots are got without breaking. The plants grow more vigorously in the boxes of sand than in the soil. These were transplanted to permanent site in April, mostly, and all grew very well.

In October last, I sowed in 23 boxes with sand prepared as before, using about four or five ounces seed, and have now about 13,000 young plants ready to transplant.

Some neighbors who I told of my success adopted this method with good results, where before they had poor success planting in soil. I have tried other varieties of eucalyptus with equally good results. The young plants, until they get the second or third leaf, must be pro-

tected from hot sun or from frost by light thin cloth. I use unbleached muslin for this. In transplanting, use very little water, just enough to mix a little mud with the finger in the small hole dug for the plant. The ground of course must be well worked and in good condition. Now as eucalyptus seed most certainly germinates better in sand and manure than in soil, why will not all tree and vegetable seed that require transplanting start best that way? Santa Paula, Cal. J. B. CARR.

[This experience is interesting and will be useful to many. Most seedling growers use much sand. Readers should notice that well-rotted stable manure was used. That is an important item.—EDS. PRESS.]

Baden Stock-Yards.

The Enterprise Inaugurated at San Bruno Point.

Articles of incorporation were filed Tuesday with the Secretary of State of the South San Francisco Land and Improvement Company. The objects of its formation are stated to be to purchase, subdivide, cultivate or sell farming lands, town lots and colony tracts, to construct, maintain or dispose of dwellings, stores, warehouses, hotels, manufacturing buildings; to connect these by railroad tracks, to construct canals, elips and docks and to carry on a general hotel, warehouse and merchandise business; to deal in mortgages, bonds, stocks and notes, to loan money, to furnish fresh water for domestic, manufacturing, mechanical and irrigating purposes, to construct, operate or sell canals, pipes, ditches, reservoirs and all other improvements necessary for the perfection of a water system and to manufacture and furnish gas and electricity for lighting and other purposes and any other incidental or auxiliary business.

Baden, in San Mateo county, 12 miles distant from this city, on the coast division, is designated as the place where will be transacted the principal business of the corporation, which is to exist for a term of 50 years.

The seven Directors appointed for the first year are Gustavus F. Swift, Nelson Morris and Edward J. Martyn of Chicago, Peter E. Iler, Henry Miller, E. R. Lillenthal and Charles W. Smith of San Francisco. A meeting of the Directors for the election of officers will probably be held this week. It is expected that Gustavus F. Swift, President of Swift & Co., the largest pressed-beef firm in the world, will be President of this new enterprise. P. E. Iler will be retained as general manager and Charles W. Smith will be Vice-President with offices in San Francisco, and will be the chief executive officer of the corporation.

The capital stock is \$2,000,000, divided into 20,000 shares of the par value of \$100 each. The stock already subscribed amounts to \$1,695,500, and 40 per cent of this has been paid up.

Work will be commenced at once and vigorously prosecuted upon the buildings, roads and canal at Baden. Albert A. Veeder and Edward J. Martyn, Chicago attorneys, are here, representing the Chicago capitalists, in whose interest they are acting. Final plans have been adopted for the immediate erection of an abattoir, to cost \$125,000, which will have, among other appliances, an ice machine, for refrigerating purposes, with a capacity of 75 tons per day. Packing-houses, stock-yards, a hotel, banking and exchange offices at San Bruno Point, will also be constructed.

Engineers have been at work for some days on the 3400-acre tract at Baden, which is being laid out into roads and streets and subdivided into blocks and lots. The racecourse has also been surveyed and preparations made for the dredging of the canal, which will be 1½ miles long.

Some very prominent Chicago and San Francisco capitalists are connected with this enterprise. Armour & Co., G. F. Swift, and Nelson and Edward Morris hold among them \$800,000 of the capital stock, while many San Franciscans are also large shareholders in the company.—Call.

Loco Weed Again.

EDITORS PRESS:—There are numerous cattle and horses here that got loosed by eating loco or rattle weed. Do you know whether it is the leaves or the pod that hurts them, and do you know any remedy? WM. ROGERS. Twin River, Nye Co., Nevada.

[We have had many discussions on this subject, which have not shown much agreement among observers. Who has learned something more about it? We would like to have the discussion renewed.—EDS. PRESS.]

Three-Year-Old Rooted Vines.

EDITORS PRESS:—In answer to your correspondent "Novice's" inquiry in the PRESS of Jan. 31st as to planting three-year-old rooted grapevines, I would say that two-year-old roots here are much more profitable to plant than one year-old, and I do not see any reason why three-year-olds, even if they have fruited the past season, should not do well. Extra care should be used in transplanting. Riverside. JAMES BOYD.

### He Worried About It.

"The sun's heat will give out in ten million years more,"

"It will sure give out then, if it doesn't before,"

And he worried about it;  
It would surely give out, so the scientists said  
In all scientific books that he read,  
And the whole mighty universe then would be dead,  
And he worried about it.

"And some day the earth will fall into the sun,"

"Just as sure, and as straight, as if shot from a gun,"

And he worried about it;  
"When strong gravitation unbuckles her straps  
Just picture," he said, "what a fearful collapse!  
It will come in a few million ages, perhaps,"  
And he worried about it.

"The earth will become much too small for the race,"

"When we pay thirty dollars an inch for pure space,"

"The earth will be crowded so much, without doubt,  
That there'll be no room for one's tongue to stick out,  
And no room for one's thoughts to wander about,"

"The Gulf Stream will curve and New England grow torrid,"

"Than was ever the climate of southernmost Florida,"

"The ice crop will be knocked into small smithereens,  
And crocodiles block up our mowing machines,  
And we'll lose our fine crops of potatoes and beans,"

"And in less than ten thousand years, there's no doubt,"

"Our supply of lumber and coal will give out,"

"Just then the Ice Age will return cold and raw,  
Frozen men will stand stiff with arms outstretched in awe,  
As if vainly beseeching a general thaw,"

"His wife took in washing (a dollar a day),  
He didn't worry about it;  
His daughter sewed shirts the rude grocer to pay,  
He didn't worry about it;  
While his wife beat her tireless rub a dub  
On the washboard drum in her old wooden tub,  
He just sat by the stove and just let her rub,  
He didn't worry about it."

—Yankee Blade.

### "They Washed Out a Little Dead Baby."

"Did I ever tell you about the baby they washed out of a bank?"

My friend, Mrs. Strong, had just come down from the high Sierras, and I had already been listening all day to her stories of mining life; but I threw aside my worsted work and curled myself up on the lounge to listen again.

"And the singular part of it is, it was as natural and perfect as life—just like a wax model."

I expressed my surprise, but she was very much in earnest, and went on:

"It was a lost grave, in among the brush on the hill back of town. It had been grown up to pines and brush for years, and one forgets about lone graves in the mountains.

"Strong had been washing out the hill—they call it the Red Bank mine. That morning they washed out a little dead baby was quite exciting for Long Flat, it is so seldom that anything ever happens up there. Everybody in town crowded into the hotel; they thought the box was full of money, sure.

"It was in the spring after a warm rain, when the last snow was melting, and Strong and two hands were out there washing down things in a hurry. They were playing the water on full force, and every little while a young pine would come down. Strong saw the box start, but they couldn't stop the water soon enough, and it came sliding down with a cave of earth.

"The men thought they had found a buried treasure, and rushed after it, but Strong made them tie ropes around it and carry it into town.

"He intended to bring it to the house, but as he was following along he made up his mind that it was no treasure—it was too large and too light—so he let them carry it into the hotel. Half the town rushed in to see what they had."

I wanted to ask if it was a very large hotel, or a very small town, but refrained.

"Then there was the new boarder, a lady who had come on the stage the day before—"

"Who was she?"

"No one knew her then; but I think Strong knew her as soon as he saw her, though her face was partly screened by a veil; but she had lovely dark eyes that shone through, and pretty, refined features that one could not easily forget. She was crossing the porch, going for a walk when they came up. She always looks so stylish and genteel, at least we all think so," and my friend thoughtfully passed her hand over the sleeve of her own faultless attire.

"Go on about the box."

"Well, they set the box on a card-table in the barroom and pried off the cover. There was a plain, tight box inside, but it didn't look like a coffin, so they pried off the top, and there lay a pretty little child as perfect as life, and it had been dead fifteen years."

"Oh, no!"

"It is a fact; they all saw it. It was as round and plump as a live baby, and there was color in its cheeks, and its yellow curls and little white dress, and knots of white and blue ribbons, were just as when they were put in the ground. But the flowers in its hands were shriveled away."

"Was it petrified?"

"No; but you would have thought the people were, standing there looking at it, because no one knew about a child being buried on the hill.

"All at once that woman pushed the crowd aside and stood there, white as the baby's arm and trembling all over. She clasped her hands to hold them still; they heard her say:

"O my Rose, my Rose, my own baby!"

Then she lifted up her head and leaned forward calmly, and drew a white ribbon out of the bosom of the little dress, and, tied on to that ribbon, hung a beautiful diamond ring. She held it up and looked around at them all.

"I want you all to see that I took it out," she said.

"Then Strong came out of the crowd and took her hand, and spoke to her.

"I can testify, Mrs. Weldon," he said; "I know all about it. Don't you remember Will Strong?"

"She just nodded, and sighed, and shivered, and quietly fainted away.

"Will gave the ring to Hill, the hotel man."

"You just look that up in the safe," he said. "It belongs to her."

"They carried her into the parlor, and those who were in the bar-room said when they looked at the baby again, it had all changed and fallen away to nothing. Strong had them close it up just as it was, and they found a faded writing—Rose Weldon, aged 9 mos., 1873."

"Strong ordered a buggy and brought her up to our house. I asked Will why he didn't have her walk—she was able to. He said, 'Because she's Tom Weldon's wife.'

"I didn't know before that Weldon had a wife, but Will hushed me up and told me to do everything I could for her—and so I did.

"She cried gently all the afternoon; then at night she dressed up pretty and fresh in a white wool dress trimmed with lovely yellow lace, and went to the piano and played and sang—well, you never heard such music. And when we went into raptures over it, she took it very quietly.

"This is the way I make my living," she said. "The Catholic churches where I sing want good music, and they pay for it." Then she went on and sang little snatches from her church solos—such lovely things I never dreamt of before.

"When we went to our room that night, Will said: 'I've telegraphed for Weldon.'

"I took him by the throat. 'Now,' I said, 'I'll just choke you till you tell me all about her.'"

Mrs. Strong paused.

"Now, go on."

"It's a short and simple story. Sixteen years ago Tom Weldon came to Long Flat with his pretty young wife and baby, and commenced to build the White Ridge ditch, the one we own in now, you know. He was very proud of his wife, and built her a pretty home a little out of town on Red Hill.

"She had a piano, the only one in the mountains then, and when Von Wilder, a handsome young fellow, came up from Marysville to snore on the ditch, and brought a violin and a guitar, he soon took to spending his evenings on Red Hill. The only music in the country was what they two made, so I couldn't blame him much. Will says Weldon was furiously jealous from the first, and made her unhappy without the shadow of an excuse.

"One night he came home late, and found them singing together at twelve o'clock. Some say he struck her—anyway there was a furious scene; and the next night the baby died suddenly of roup.

"People said she never left it till it was covered in the ground; then she kept by herself and never complained. She didn't notice her husband or any one, poor thing.

"But Weldon acted like a fool. He accidentally met Von Wilder in the bar-room at the hotel, and Von Wilder was showing a fine diamond ring to a crowd. It seems Mrs. Weldon had one just like it—her engagement ring. Weldon rushed home like a madman and demanded it. The woman who was with her said she rose up cool as an icicle, and said:

"Tom Weldon, my engagement ring has gone where my heart is, and hope with it as long as you act in this way."

"That was all—nobody knew what that

meant. Weldon sold out his interest in the ditch the same day—that was easy done in those times—knocked Von Wilder over in the mud, but not to hurt him, and left town.

"There was a great scandal about her; everybody thought Von Wilder had her ring, and the little wretch denied it in such a feeble manner that no one believed him. She sold her furniture, took her piano, and went to San Francisco. The baby's grave was never marked. The house was moved down and became a part of the hotel."

"And Weldon?"

"Oh, he went down to the county seat, bought and sold mines; then he went to the railroad town of W— and had all the benefit of the valley boom. He's a rich man, been in the Legislature twice, and a popular man, too—they say he's as moderate as he used to be hasty."

"And he never applied for a divorce?"

"Oh, no!"

"And you telegraphed him the ring was found?"

"Yes; and he answered 'Hold her—I'm coming.'

"You can't keep anything still up there, and every one was on the lookout for the stage the next day."

"Every one in town and the country too," I venture to say.

"Yes, the miners straggled in, and the girls stayed home from school; but Weldon came through about two hours before the stage with his own team. He drove straight to our house, but there were three men there ready to take the horses. Poor horses—they had been driven nearly to death."

"But about him?"

"He was a fine-looking man, but as much too gray for forty as she looked too young for thirty-three."

"Never mind how he looked," cried I impatiently. "What did he do?"

"Strong took him straight down to the hotel and got him the ring, and there were plenty there to corroborate the story.

"Mrs. Weldon seemed glad to stay with me. She had come up to the old town to rest, she said, away from scholars and concerts, and if I would keep her, she would be so glad.

"Strong told me not to let her know what he had done till the last, but when I saw them start back from the hotel, I thought I ought to prepare her. She looked lovely; she had on a long, trailing dress of cream cashmere and black velvet, and she seemed so reserved and refined I hardly knew how to approach her.

"So I just put my arm around her waist and said, 'There is some one coming I think you know,' and led her to the front window.

"She drew in her breath, and caught my hand like a child, and dropped her head on my shoulder, and looked at them all the time as they came up the hill and along the path to the gate—it was just like holding a little, frightened, trembling bird in your hand.

"Tom Weldon looked very handsome and grand in his fine clothes beside my husband in his every-day coat, but I was very proud of my good Will just then, I can tell you."

"Yes—go on."

"Well, when they came to the gate, he looked up and saw her lying in my arms; then she shivered as if she was cold and drew herself up, and shrank into my white lace curtains, and there she stood proud and still when they came in.

"Will beckoned me to come out, but she caught my sleeve and implored me with a look to stay.

"Tom Weldon stood in the middle of the room holding his hat and overcoat.

"Then she turned to him quite calm and cool, and said with a world of bitterness in her voice:

"And did you find your ring at last? Are you convinced now? Why should I want your ring when you thought me untrue? I thought baby ought to keep it."

"Weldon looked so white and sad—he stretched out his arms and said so humbly, 'O Lily, my poor wife, don't speak to me so, but come—'

Mrs. Strong paused.

"And she went—"

"No, indeed she didn't; she was too proud for that. She lifted up her head, and her cheeks were like flame, and she said:

"I will never go to any man with a blackened reputation. Fifteen years ago, Tom Weldon, you made my name a byword up here. People will think no better of me for going back to you. I have a fair name below and I can earn my living. You left me—how dare you ask me back to revive my shame. Go, please."

"Weldon stood looking at her a moment, then he said quietly: 'Madam, I am your servant,' and turned and went out, and Will kept with him, and they went out the back way together.

"As soon as they were out of hearing she broke down completely, and came into my arms, sobbing and crying. I put her on the lounge and stayed with her.

"Oh, my poor Tom, my darling!" she would say. "He has been faithful all these years, and I love him so! Oh, my dear, my dear!"

"Then when I would want to go and get him she would stiffen up and say she wouldn't see him at all.

"The next day she was perfectly cool and firm, and we went down for the box and buried little Rose again in the town burying-ground.

"In two days Weldon had a stone-cutter up

from the city, and he must have spent a thousand dollars on that little grave before he was through with it."

"And she?"

"Oh, she staid quietly with me, and I took her for walks and rides, and tried to amuse her, but she failed constantly, and I was afraid she would die on our hands. Weldon sent up doctor after doctor, but she wouldn't see them."

"I think she was right."

"No, I think Weldon worked out a forgiveness, poor fellow. He stayed there at the hotel and showed that ring and ribbon to every old settler he could find; nearly everybody in the county knew about it, and people began to feel sorry for him. But he is too bright a man to do nothing, and it wasn't three weeks before he and Strong were driving over the mountains and he started the excitement about the Dry Valley irrigating ditch—that's helped our country a great deal.

"All this time he hadn't seen her, and he told Will one day that if he could only hear her sing once more he thought he could go away."

"So we planned it and got up an entertainment for the town hall. We had hard work to coax her to sing for us, but she finally consented, if Weldon wouldn't be there. So Weldon agreed to keep out of sight and we put her on the program.

"I forget what she sang first, but the crowd fairly went mad. They kept calling her out, and she sang the ballad 'Annie Laurie' and 'Bonnie Doon,' and that only made them worse. Then some one wanted 'Home, Sweet Home,' and they kept stamping and ohsering and calling.

"I was in the dressing-room with her, and she clung to me pitifully.

"I can't sing that here," she said.

"But the ladies fairly pushed her out. It was awfully cruel I think. Her voice began to fail and tremble on the second verse. She struggled through with the chorus, then I rang the curtain down. She was trembling so she could hardly walk.

"I was sure she was going to break down entirely, so I threw my circular around her and dragged her out the back door. It was completely hid by flags and evergreens, so no one knew in the confusion where we went. But Weldon must have known, for when she lifted up her face from my arm, there he stood in the moonlight, calm and handsome as ever, dear fellow. I don't wonder he is so popular."

"Then what did you do?"

"I didn't have time to do anything. They needed me inside, so I just put her in his arms and slipped back."

"Did she stay there?"

Mrs. Strong stretched out her long, shapely arms.

"I presume so. At least she was there half an hour after when I had a chance to slip out again."

"Weldon looked up at me.

"We've found 'Home, Sweet Home,'" he said.

"And I sometimes fancy," said Mrs. Strong, rising, "that the baby literally came to life to deliver up the proof of her innocence."—L. H. Shuey in *Overland Monthly*.

#### Mechanical Labor.

I well remember when I was a child and did not perform my simple duties satisfactorily, I was told to keep my mind on my work.

"No one can do good work with her head in the clouds," was heard so often that it remained with me for years as a sort of an axiom. Perhaps I was too fond of building fair castles in Spain, and of weaving for myself stories far excelling in splendor of detail the most gorgeous ones in my fairy tales.

I remember how hateful the drudgery of dish-washing seemed to me, and how impatient I grew when reminded that the sink was not clean; and how hard it seemed to me to have one of my loveliest day dreams broken in on by a voice questioning anxiously: "Did you scald the milk pans?"

My long-suffering aunt would probably, if here, remember that I usually answered vacantly, "I don't know. I can't remember."

Of course this was not as it should be, and yet—and yet—consider how I hated dish-washing. I remember thinking, with briny tears coursing swiftly down my cheeks, that I would probably live seventy years longer and have to wash dishes seventy times three hundred and sixty-five times three!

This bit of arithmetic so appalled me that I lost all power of retelling, even when a dear-leave relative, on ascertaining the cause of my grief, tried to console me by suggesting that I could drop one day for every leap year. I agreed with him meekly, but in the face of the thousands of times I seemed fated to gather up, wash, wipe, and put away the dishes, I took but little comfort in this rednotation.

It was years before I came to the comforting realization that I could work and think at the same time on foreign subjects, with no detriment to the result of my labors.

The knowledge, however, that would have comforted me so much in my season of despair, only came to me through experience, the dear teacher of whom we all must learn, it seems.

As I grew older, I had to "keep my mind

on "the new duties I was gradually gaining skill in; but it came over me like a flash one day that those parts of my work which long practice had made mechanical, might bear a powerful accompaniment of study, thought, and even, in a small way, of composition with them.

Since then I have been able to accomplish so much more than I used, and have seemed able to make nearly twenty-six hours a day out of my twenty-four.

From my own experience, then, comes a thought that may, perchance, help some one else.

Little children rarely work alone; their first efforts must be personally guided and directed. With a little care and patience they may be trained to make mind and body work together, yet independently of each other.

This training will, of course, need to be oral, and as much by example as by precept; and the mother will need to make herself quite young again to fit the capacity of the little mind for which she is striving.

The result to be attained will be slow in maturing. It is all life work with us in caring for these little ones. We cannot begrudge time and labor spent for their ultimate good, even if the benefit is not at once apparent.

#### An "Original" Autograph Album.

Counting many literary people among my friends, I had a strong desire to preserve some memento of their work.

Accordingly, I procured a large autograph album, square in shape, and resolved to devote it to such of my friends as would contribute some of their own efforts.

I avoided the manner and guise of an autograph fiend, and forbore to urge my friends beyond their own inclinations.

Most of them responded graciously, and a few wrote lines especially for the purpose, lines that were never printed.

Some friends who were skillful with the brush and pencil made my book, already beyond price to me, beautiful with the work of their willing hands.

One sweet friend, whose music came from her own pure soul, wrote a little melody especially for its pages.

I could not estimate the pleasure I have derived from my book, nor the admiration it has won wherever seen.

#### Chaff.

ELDERLY PARTY (who has just finished dining in New York hotel): Waiter, this here card says that dinner is served from five to seven. I've eaten everything on the list, and it's only six o'clock. If I've got to stay here until seven, you've got to get me a newspaper 'r a book 'r something.

"Now, Mr. Bronson, we want a Scriptural quotation for our church fair tickets. Can't you think of one?" asked the fair maid.

"Certainly," said Bronson. "How will 'A certain man fell among thieves' do?"

"How times have changed!" said Dr. Sarcasticon, as he paused in his discourse on the evolution of man. "In the Old Testament, it was a miracle for an ass to speak, and now nothing short of a miracle would keep one quiet!"

DOODLE: Did you not hear what I said, Miss Mabel? I said that I loved you—loved you with all my soul, my mind, my every thought. Miss Mabel: Yee, I know; but all that seems so little.

"GEORGE calls me his idol and says I shall never have to do anything but let him worship me." "Well, after you're married he'll find plenty for idol hands to do."

GUS: Poor Reguins got discouraged and blew his brains out. May: What an excellent shot he must have been!

A MAN who was eating a large raw carrot stopped a woman on the street the day after New Year's and said:

"Madam, could you give me ten cents to buy food with?"

"Why, you seem to have plenty," she answered.

"Raw carrot—see?" he said as he extended it.

"Yes, but don't you know that raw carrot contains 93 per cent of clear nutriment, against only 33 in mince pie or plum pudding. You ought to be thankful, sir—very thankful."

—EX.

HOW TO DECIDE THE "ALL-WOOL" QUESTION.—A fire test for wool is recommended by the *Lancet*. After separating the warp from the wool, hold each to a flame. No threads can be traced in the ash of wool, which burns to a shapeless mass or ceases to be size if removed from the fire before combustion is complete. Cotton, however, continues to burn steadily, and the shape of the thread is retained in the ash. Try it.

YOUNG WOMEN AND TIMBER CLAIMS.—Over 150 young ladies have taken up timber claims in Washington during the past six months. Several of these are recorded as being in Lewis county. Surely this is a good indorsement of the pluck of our Western daughters.

GOLD is very scintillating—that is, it can be out and shaved with a knife, like a piece of wood or horn, while pyrites and other worthless minerals will crumble under the knife-blade like a lump of sugar.

## YOUNG FOLKS' COLUMN.

### The Story of a Foolish Cat.

[Written for the RURAL PRESS by KATHERINA BRYANT NOLAN.]

His name was Punch, and he stood among the daisies and clover in the clear June sunshine, with his head held a little to one side in a listening attitude.

"W-row, w-row, w-row!" came to his quick ear on the fresh breeze, mingling with the lazy drone of a big yellow bumble bee, the shrill chirp of a cricket, and the whirr and buzz of a busy locust.

"It's Judy," said Punch to himself, giving his head a knowing shake as the wind blew a daisy against his little white nose. Judy, sure enough it was, and she came rushing along, anxiously sniffing the breeze and glancing warily from side to side until she saw Punch, then she stopped short and looked at him.

"How do do, Judy?" said he in a lordly fashion. For an answer, she pounced upon his long tail, gave it a sharp little bite, and then looked very much astonished because he lashed it angrily. Punch was a handsome kitten; his breast and forepaws were pure white. He had the air of a gentleman in a full dress suit and Judy was his sister. She was a gentle, sweet little cat, but she was not handsome. Her coat was short and uneven, of a dull and dingy mouse color, while Punch looked very glossy and dainty as he stood beside her in the tall grass.

There were six kittens altogether, and the five Lawton children had claimed one apiece and given Punch to Mrs. Graham, their next-door neighbor.

"Did you have your breakfast, Punch?" Judy asked when she was tired of jumping after his tail.

"Yes."

"I'm sure it was just awful to give you away, Punch. Some people never feed cats," said Judy.

"Oh, I can always find a mouse," answered Punch; "besides, I manage to keep on the right side of that cook."

Judy gazed down toward the brook with a far-away look in her eyes. It might be high-toned to live with a family who kept a cook, but she was satisfied to depend upon the five rollicking youngsters across the way for companionship and care. All this time, since reaching the piazza of the Graham residence, cook had been going on at a great rate, and it was really impossible not to overhear some things she said to her visitor.

"An' you ought to see Punch. An' he's the cute cat. Sure an' didn't I love the beefsteak oonder his nose an' he never touched it at all, at all. Sure I'd never be bothered with no cats before nor since, but that Punch he'd kill ye wid de laughin' when he plays wid his tail."

Punch sat and washed his face calmly and did not seem very sociable, so Judy went home to see her brothers and sisters and the five little Lawtons. Punch had an elegant cat basket with a soft blue cushion, and he soon fell into the fashion of spending a deal of time in it. He stretched himself out in a lazy way and slept with one eye open, while his mistress entertained her callers. Thus he in time knew all the neighborhood gossip, and became very well acquainted with the neighbors themselves. He was very sad when he heard that Mrs. Riskey's twins had the measles and whooping cough. Those twins were the delight of the gossips; everybody was so glad they were girls—boys were so rough—and they had been described so often as "little angels," that Punch was fearful they might die and plunge the neighborhood into mourning. The twins recovered, however, and came in state to visit Mrs. Graham, and he got out of his basket to chase his tail, he felt so glad.

"I really believe Punch loves babies," said his mistress. "He's generally too lazy to do anything but eat and sleep."

Then there was Mrs. Hall's sister's baby to worry over. When he first heard the story he did not wash himself for a whole day. Mrs. Hall's sister had married and gone out to the West Indies and had died. There was a wee baby left to the mercies of those natives, and his mistress was very much concerned as to the fate of this little relative of Mrs. Hall who often visited them, and often fretted over the infant.

Punch could sit up and beg, and sometimes when a visitor admired him he was hauled out of his basket and compelled to do this little trick, and this was not pleasant, especially when he felt blue. Once Mr. Graham came home with a homely yellow dog. He was a disagreeable barking animal, and Punch was very angry, so he flew at him snarling and spitting and there was a great row.

"Shnt 'em up together awhile; they'll fight it out and be good friends after that," Mr. Graham said with a sly twinkle in his eye.

"But you see, I don't like that dog," declared Mrs. Graham. "Where did you get him?"

"From one of the boys in the store. He has some good blood in him. He'll make a fine watchdog," the gentleman answered.

"But I don't like the dog."

"Very well, my dear," said Mr. Graham, "you needn't have him. I will give him away."

Punch was relieved to hear this; still he felt sulky and he continued to indulge his ill

humors and little worries until they grew on him. His mistress cared less and less for him as time went on, for he lashed his tail, glared his eyes and showed his claws at the slightest provocation to everybody.

On a fine day in September, Mr. Graham brought home a Skye terrier. He had long, silvery hair and a little black nose.

"What lovely eyes he has!" said Punch's mistress, putting the long locks aside as she looked at them. "Where did you get him?" she asked.

"Bought him."

"I think I like him. We'll name him Sancho."

Punch flew upstairs at that and howled dismally from the corner where he had taken refuge, and when called he only howled still louder. He would not be consoled and was perfectly determined not to accept the intruder upon any terms. Sancho did not mind him the least bit, however, and he soon found this dog had come to stay, so he just walked down the path and out of the gate. He had decided to run away and find a home among pleasant people who had sense enough to dislike dogs and keep them at a distance. He trotted briskly on, lashing his tail with wrath, and struck straight across the fields and through the pine woods until he reached a fine-looking house. He entered the yard cautiously, but there was no sign of a dog anywhere, so he went up to the side door boldly.

"Oh what a lovely cat!" said a young girl who came to the door just then. "Here kitty, kitty, kitty, come in, kitty! Why, it's Punch Graham. We must get him in here and take him home! Mrs. Graham thinks a great deal of him!"

Alas for Punch and his vision of a pleasant home at this place! He rushed away from the door and up the road on hearing this. The dogs came out and barked at him. It grew cold and dark, so at last he went to bed under an old barn without any supper. He did not care much, he felt so angry at all the dogs and at the world. Having started out as a tramp-cat, it was not so easy to reform. He got up the next morning, crawled forth from his hiding-place, and stole a chicken for his breakfast, when a black cat came along and wanted it. Punch's blood was up and he proceeded to a fierce combat with the black cat in which he received severe injuries; afterward the black cat ate the chicken up and Punch gazed wrathfully out of one eye at the big bunches of his fur which the wind blew hither and thither.

He was now ashamed to go home and so he prowled about and became quarrelsome with even his own race. He lived in the fine State of Massachusetts, but when winter came he died a miserable death of starvation. The cold and snow and sleet chilled him through and through and there were no chickens or field mice to catch. He was a most foolish little cat to run away from home, just for a dog, if he had only known it.

Judy raised a lovely family of kittens the next year and Sancho barked at them time after time, but that didn't hurt them the least bit that ever was.

## DOMESTIC ECONOMY

### Cooking and Kitchen Conveniences.

[Written for the RURAL PRESS by CARRIE E. ROBINSON.]

As a branch of education, cooking has, of late years, attracted much attention both in England and the United States. Cooking has now come to be considered one of the "fine arts," a fine and cultivated taste being as necessary in the preparation of food as in the furnishing and decoration of parlors. Chemistry has done much to make the work of the cook interesting and in elevating the work and the worker.

Rusklin, when asked what cookery meant, said: "It means carefulness and willingness, watchfulness and readiness in appliances; it means the economy of your great-grandmothers combined with the science of modern chemists; it means much tasting and little wasting; it means English thoroughness, French art and Arabian hospitality."

Very true were the words of the lady who said: "Our women wield more power with the cooking-spoon than they ever will with the ballot."

Our kitchens should be considered the most important rooms in the house, since from this room emanates what must most influence the physical comfort, and through this the mentality of every member of the family.

The power of mind over matter is great, but I much doubt if any modern Alexander would go forth, serene, to conquer nations from an ill-served breakfast of muddy coffee, soggy oakes, scorched potatoes and tasteless steak, which lay in his stomach like so much sole leather. Nor can you expect any great accomplishment of mental labor when half the nerves of the body are acutely suffering from distress of the digestive organs.

Indeed, the food prepared and served at some of the tables in our land would make the plumes of the ostrich droop and fade; but better times in this regard are dawning—indeed, we may say are already here.

All over our land cooking schools are being established, and women, even those dainty ones born and bred in luxury and ease, are laying aside the sensational novel or the abstruse

work of science, and are giving of their time, money and influence, and in some cases, doing actual labor to forward the work of education in this branch.

The size and location of the kitchen, the materials of the floor, the arrangement of the doors and windows, and the arrangement and kind of furniture, are the much-discussed questions; but wherever your kitchen, be it small or large, and be your means much or little, have its arrangement such as will be the greatest saving of time, strength and steps for the worker therein. In this is there the greatest economy.

There should be plenty of good fuel in the most convenient location. A good pump to bring the water from the cistern or well, if that be soft, into the kitchen sink, from which there should be a perfect conductor for the waste water. The opening into this should be covered with a perforated cover to prevent the passage of such things as have no business in a waste pipe. Good screens at the windows and doors; these last should be closed by good springs, more elastic and prompt even than the omnipresent and festive fly.

In furnishing this room many may feel that the best tools cannot be afforded. This is mistaken economy. Better do with less in the parlor, or save in the furnishings of the rest of the house, than to do without whatever will save labor in the kitchen.

It is within my remembrance that a feather from a goose wing, or at best a steel fork, was the instrument with which the whites of eggs were whipped into lightness; the time consumed and the aching arms and weary shoulders of the housekeeper, or the unlucky child pressed into this service, seems appalling now in the light of the many excellent patents for whipping the translucent albumen into the lightest foam in the shortest possible space of time.

There are many little tools, whose cost is small, for lightening labor and enabling one to put the work of many minutes into one, and making disagreeable work pleasanter as well as lighter.

A thoroughly good cook stove of coal or wood in winter, and never forgetting the gasoline stove for summer, are the first requirements. One who has never used a gasoline stove can have no realization of the great convenience, comfort and the lessening of labor there is in the use of one. If economy of fuel were no consideration, so that one could keep a heater in the kitchen and use gasoline only for cooking purposes, it would keep many wrinkles from the brow of the mother and housekeeper, and very possibly the father of the family also, if he is the one who doesn't let "Maria" start the morning fire. A sufficient number of good light cooking utensils comes next in order. Those called granite ware are best, and if the best quality is obtained, they last well; not as long as the old-fashioned iron ones, perhaps, but the saving of strength in handling is great, and food of all kinds cooked in the granite ware has a nicer flavor and color. Again, the granite ware is used without removing the covers of the stove, therefore the sooty bottoms of the saucepans and kettles, which are such a bugbear to the dish-washer, are avoided. I say, blessings on the man who invented the granite ware. He deserves a chromo of the largest kind.

It saves time and temper to have a sufficient supply of cooking utensils, that there may be no need of stopping to wash certain ones for a second service until the time for washing all the dishes arrives. Do not fail to provide two large dishpans, one for the washing and the second to scald the dishes in, ready for wiping, nor forget to provide an abundance of suitable wiping towels, never failing to have some of the soft linen ones to wipe the glass ware and silver, as it is quite impossible to make these look nicely if you use a fuzzy towel. Good crash for common dishes is satisfactory, especially after they are well "broken in."

A variety of dishcloths is a necessity also, using one for only the glass and silver, and perhaps the china or table dishes, and another for the coarser ware, tins, cooking utensils, etc., and do not forget the iron dishcloth, which is such a saving of time, temper and finger-nails in washing sticky or scorched dishes. There is also a little flat-brush of wood fiber, which is of the greatest service in this branch of dish-washing. These brushes come in different sizes and are useful for so many purposes. One should always be kept to clean the vegetables, a larger one to scrub the sink, and these used only for the purpose for which they are provided. A little rack, or drainer, should be placed in or over a corner of the sink, whereon these should be dried after using. Near them should be a hook for the iron dishcloth.

As wall room is always more plenty than shelf room, it is best to hang up everything you can, and in such places as shall be most convenient, so as to save every possible step.

Make the kitchen as pleasant and sunshiny as possible, and provide shades for shielding from the summer sun also. In this room the housekeeper, who is not infrequently the mother of the family, must spend not less than two-thirds of her waking hours, and with her must of necessity be the little ones for a great portion of the time.

Surroundings go very far toward influencing the lives of human beings—the wisdom of making things as bright as possible in this room.

## The Week.

The talk is still of the weather, but in such a different strain. Old Uncle Cycloone and Anti-cycloone for once seemed to pull together and the result was that they pulled one of the wettest storms out of the Japanese current which has lately been made up in that famous storm factory. The way it did rain on Sunday was a joy beyond the figures of the arithmetic to measure, as a legislator is reported to have wisely said.

Many points report a downpour of from three to six inches for the single storm, which brings the rain record to respectable figures at one bound. The storm was wide, as well as deep, and all parts of the State were generously visited. The result is a quick increase to repins and apprehensions, and an uprising of confidence so strong that storekeepers have restored credits and bankers have unlocked their vaults.

The outlook is certainly now for a year of

great production. The rain comes just at a time when with the season of warm weather the plants will turn every drop to good account and ordinary late rains will enable them to finish up their work handsomely. Considering the great sowings and plantings which the long clear season made possible, the assurance of adequate rainfall becomes the warrant of a weight of produce than which the State has never seen greater.

## The Chance in Beef Cattle.

We notice that our exchanges from the range regions of the interior are urging stockmen to efforts to rebuild the herds which a period of low values followed by a winter of disastrous severity had decimated. According to our own knowledge of the facts and forecast of the future, this advice seems well grounded. The country must have meat for its rapidly advancing population. The great rush into range industry naturally resulted in over-production, the reaction came with a vengeance aided by the terrible winter of 1890, and it seems a fair conclusion that the cattle census has now been reduced below the probable requirements of the immediate future. It may not be desirable to plunge into such ventures as men plunged a few years ago, in fact the lessons of experience are all against it, but this does not argue against restocking the ranges upon a more conservative and wisely contrived plan. The following is from the Yuma Sentinel:

Shall we raise more cattle? What shall we do with those we already have? Is the present a safe time to invest in cattle? are questions daily heard, and they are of the most vital importance to the live-stock growers of Arizona. Our cattlemen are of the opinion that for several years the prospects have not been as encouraging as they are at the present time. Values are very low indeed, probably on the hedlock. No one believes they can go any lower. The heavy losses of last winter, in all of the colder northern portions of the grazing regions, where the snow was deep and the storms terribly severe, created a shortage of more than 5,000,000 head of cattle. By some it is estimated at not less than 10,000,000. On account of the losses in the herds, as well as the drainage of the surplus by shipments abroad and the consumption at home, there has been a heavy decrease in the number of cattle in the United States, while the demand for beef is constantly on the increase. Less cattle were taken into market in 1889 than in 1886, by more than 2,000,000, as shown by the records. The increase will be very slow, comparatively, with that of ten years ago, from the fact, as may be seen by the statistics, that 300,000 cows and heifers were slaughtered last year and hence are not available for breeding at the present time.

Five hundred thousand head of calves have been butchered in the last two years, and not less than 1,000,000 heifers have been spayed during the same time, hence the shortage which must be felt for at least the next five or six years. The shortage of available cattle for the present, or immediate future market, extends all over the East and begins to be felt in the States and Territories west of the Mississippi and Missouri rivers, and is, no doubt, the cause of the present advance, not only in beef cattle but in good feeders, also in the price of range stock.

The heavy shipments from the Indian Territory have had some effect in staying the advance in prices, but this is only temporary. With heavier weekly receipts than ever known, present prices in Chicago and other markets have held their own fairly well. Three-year-old fat steers, good, beef-matured cows are not made to order, or in a day, hence we believe that we are safe in advising our live-stock growers to invest in cattle. Young men, you who have fair herds as starters, do not sell them. Hold on to them, and five years from to-day you will see that your heads were level.

This is good advice, providing the young man will not go faster than his resources warrant. Generally speaking, something should be done toward breeding better cattle and handling them upon a more humane and business-like plan. Good blood can now be obtained very cheap as compared with prices which prevailed a few years ago, and breeds have been introduced which show their ability to thrive under ordinary range conditions. But the cattle-growing of the future will tend farther and farther away from the dangerous old policies. Fewer cattle better cared for and protected will be the new order. Provision for winter feed and shelter will be more thought of. There may not be the vast gains and the vast losses of the earlier years, but there will be a safer business and surer net returns. In this line of progress we believe there is room for effort and investment which promise well.

THE RUSSIAN GOVERNMENT is building an enormous ironclad of 12,480 tons.

## California Malt.

The excellence of California barley, especially the heavy, bright, brewing barley which is chiefly produced in the valleys south of the bay of San Francisco, is well known throughout the United States. Every year there are considerable Eastern shipments of our brewing barley to the Eastern States, where it competes with the traditionally fine barley from Canada, both Canadian and California barleys being superior for brewing purposes to the product of the Atlantic States. It is now thought possible that a more systematic and extended distribution of California barley may be made in the form of California malt. There is a malt-house now being constructed in Santa Clara county which it is calculated will cost a quarter of a million. It will have a capacity of 1500 cisterns per day, and when finished will be the largest and best equipped malt-house in the United States, and that he will make the best malt the builder is doubly assured by the fact that he will have the rich grain of the Santa Clara valley to draw from.

What will be done with this great output of malt is described by the builder of the malt-house as follows:

The product of this establishment will give us enough malt to supply our own breweries here in San Francisco and there will be some for shipment to the East. If we find, as we hope to, that the exportation of malt to the Eastern States is profitable, just such another building as this will be started here, so that in all likelihood hereafter instead of shipping barley to the East we will ship the prepared malt, which will develop into an important industry. We expect to draw our entire supply of barley from the Santa Clara and Salinas valleys—the best on the coast for brewing purposes.

The work on the structure is being pushed vigorously and will be completed by June, when it will become one of the most important factories in Santa Clara county. The success of such enterprises will probably be of advantage to our barley-growers and may open a trade the extent of which cannot be foreseen.

## Why Pyrethrum Kills.

As the Dalmatian insect powder plant is grown nearly everywhere in this State and is produced in large commercial quantities at the buhach ranch in Merced county, it may interest many to know just what there is in the plant which makes its presence so deadly to insects. The active principle of pyrethrum flowers is said to be an acid (pyrethrotoxic acid) soluble in alcohol, amylic alcohol, ether, and chloroform, which may be isolated by means of ether, after having been converted into an alkaline salt and decomposed by tartaric acid in aqueous solution. When this acid was hypodermically injected into animals, it was observed that the poison produced its effects in two distinct stages. In the first there was an excitement more or less pronounced, proportional to the quantity administered; in the second there was a complete prostration, accompanied always by paralysis of the lower extremities, which might disappear after a time, or be the precursor of a fatal issue, the respiration and circulation being effected only in the latter case.

Fortunately, to get its work in upon a flea or other small game, the powder is not reduced to the necessity of going around all these scientific curves, but makes a crosscut and gets there just the same. To effect the larger animal it apparently has to be doubly concentrated in the way described above.

"AFRICAN BASS" is the name given to a fiber obtained in the colony of Lagos from the bamboo palm. In appearance it is stiff and wiry, varying in color from dark brown to light red, and dependent for its shades on duration of soaking. It is most readily obtained in lengths of from three to four feet, beyond which length it is inconvenient to pack and difficult to procure without injury to the tree. In diameter it varies from one-sixteenth to one-thirtieth of an inch, the latter of which may be accepted as the limit of fineness to be admitted in a commercial sample for the European market. It is said to be used mainly in the manufacture of hard brushes for various domestic and manufacturing purposes. The demand appears to be very large, and the price is exceedingly satisfactory. The source of its supply in Lagos alone may be said to be practically inexhaustible.

## Horticulture at the World's Fair.

As it has been announced that Director-General Davis of the World's Fair is disposed toward the appointment of a Californian as chief of the Bureau of Horticulture of the exposition, the State Board of Trade at its meeting in this city on Tuesday passed resolutions indorsing Gen. N. P. Chipman of Red Bluff "as one well qualified by knowledge and experience to fill the position." Gen. Chipman is practically acquainted with California horticulture, both by reason of his own investments therein and by his thorough study of the subject. He has also had much experience in public affairs and is calculated to succeed in the work for which he has been nominated.

There has been considerable objection at the East to the plan for the classification of the horticultural exhibits which was adopted by the National Commissioners at the earnest solicitation of the California Representatives. This classification gives great prominence to orchard and vineyard products and less to other horticultural branches. The Eastern horticulturists are endeavoring to change the scheme already adopted to meet provisions which seem to them more desirable. It is perhaps unavoidable that this issue should have arisen, but we see nothing in it which cannot be finally arranged to give all interests a fair showing and to permit each part of the country to fully shine in the light of its own products.

## An Anti-Pest Bill.

The Legislature does not seem to be making much progress with desirable legislation, but many horticulturists will be interested to hear that the Senate has passed a bill which provides that it shall be the duty of the Board of Horticultural Commissioners in each county, whenever deemed necessary, to cause an inspection to be made of any orchard or nursery, trees, plants, vegetables, vines, fruits, or any fruit-packing house, storeroom, salesroom or any other place or articles in their jurisdiction, and if found infested with scale insects or the codlin moth, or other pests injurious to fruits, plants, vegetables, trees or vines, or with their eggs or larvae, shall notify the owner or person in charge of said places that the same are infested with said insects or other pests, or their eggs or larvae, and they shall require such persons to eradicate or destroy said insects or pests, eggs or larvae, within a certain time to be specified.

We shall have the full text of this measure if it should become a law.

THE RESEARCHES OF EMINENT BACTERIOLOGISTS and the discussions lately held regarding the causation and prevention of tuberculosis and other diseases have invested with profound interest the question of the relations of the diseases of lower animals to those of man. At the International Congress of Hygiene and Demography, to be held in London next August, a section will devote special attention to the infectious, contagious, parasitic and other diseases communicable from animals to man, and vice versa; the methods of the propagation of diseases affecting mankind by means of animals and animal products; the infection of meat, milk and other comestibles, and the restrictions to be placed on the sale of infected food and the movement of infected animals. A number of the high authorities in the medical, veterinary and agricultural world are expected to participate and throw light on investigations that are of great importance to the welfare of mankind.

DEATH OF GEN. SHERMAN.—Gen. W. T. Sherman, the last of the three great Northern generals of the war, died at his residence in New York City on Saturday afternoon, February 14th. He had been ill for several days with pneumonia, and his end was quiet and peaceful. He was born in Ohio, February 8, 1820. He was a pioneer Californian and resided in San Francisco until 1857. Gen. Sherman will be buried in St. Louis. His death has called forth exceptional tokens of regret and of respect for his memory.

We expect to issue, next week, an edition of the RURAL PRESS especially devoted to the Southern Citrus Fair, in which horticultural matters will naturally hold a leading place.

# FLORIST AND GARDENER.

## Spring Show of the State Floral Society.

The third annual spring exhibition of the California State Floral Society will be held in San Francisco, May 6th, 7th and 8th, 1891, the place of exhibition to be fixed hereafter. The attention of exhibitors is particularly called to the rules and regulations governing the exhibition, which are given in full below. Each member of the society is earnestly requested to make an exhibit either for competition or display. Even a single plant or flower, if meritorious, will be given a place in the exhibition.

### Premium List.

#### CLASS A—CUT FLOWERS.

#### I. Open to Amateurs Who Do Not Employ Skilled Labor.

- 1—Roses, largest and best collection, silver medal; 2—Roses, second largest and best collection of cut blooms, bronze medal; 3—Roses, best twelve cut blooms, certificate; 4—Camellias, largest and best collection, certificate; 5—Carnations, largest and best general collection, silver medal; 6—Carnations, twelve best cut blooms, in twelve distinct varieties, certificate; 7—Cut Flowers, best general collection in society's glasses, each variety in a separate glass, silver cup; 8—Cut Flowers, second best general collection in society's glasses, each variety in a separate glass, certificate; 9—Geraniums, largest and best collection of cut blooms, \$3; 10—Geraniums, twelve best cut blooms in twelve distinct varieties, \$2; 11—Pansies, best collection, bronze medal; 12—Pansies, second best collection, certificate; 13—Pelargoniums, largest and best collection of cut blooms, \$3; 14—Pelargoniums, twelve best cut blooms in twelve distinct varieties, \$2; 15—Sweet Peas, largest and best collection, certificate; 16—Clematis, largest and best collection, certificate.

#### II. Open to Amateurs Who Do Employ Skilled Labor.

- 17—Roses, largest and best collection of cut blooms, silver medal; 18—Roses, second largest and best collection of cut blooms, bronze medal; 19—Roses, best twelve cut blooms, certificate; 20—Camellias, largest and best collection, certificate; 21—Carnations, largest and best collection, silver medal; 22—Carnations, twelve best cut blooms in twelve distinct varieties, certificate; 23—Cut Flowers, best general collection in society's glasses, each variety in a separate glass, silver cup; 24—Cut Flowers, second best general collection in society's glasses, each variety in a separate glass, certificate; 25—Geraniums, largest and best collection of cut blooms, \$3; 26—Geraniums, twelve best cut blooms in twelve distinct varieties, \$2; 27—Pelargoniums, largest and best collection, \$3; 28—Pelargoniums, twelve best cut blooms in twelve distinct varieties, \$2; 29—Clematis, largest and best collection, certificate.

#### III. Open to Professionals.

- 30—Roses, largest and best collection of cut blooms, one specimen of each variety, silver medal; 31—Roses, second largest and best collection of cut blooms, one specimen of each variety, bronze medal; 32—Camellias, largest and best collection, certificate; 33—Carnations, largest and best collection, silver medal; 34—Geraniums, largest and best collection, \$5; 35—Pelargoniums, largest and best collection, \$5; 36—Sweet Peas, largest and best collection, certificate; 37—Clematis, largest and best collection, certificate.

#### CLASS B—PLANTS.

#### I. Open to Amateurs Who Do Not Employ Skilled Labor.

- 38—Azaleas, best collection in bloom, \$5; 39—Flowering plants in bloom, largest and best collection, silver medal; 40—Flowering plants in bloom, best 12 plants, bronze medal; 41—Foliage and decorative plants, largest and best collection, \$5; 42—Rex Begonias, largest and best collection, certificate; 43—Tuberous-Rooted Begonias, largest and best collection, bronze medal; 44—Coleus, best 12 plants in 12 varieties, \$2; 45—Ferns, largest and best collection, \$5; 46—Ferns, best single plant, certificate.

#### II. Open to Amateurs Who Do Employ Skilled Labor.

- 47—Flowering plants in bloom, largest and best collection, silver medal; 48—Flowering plants in bloom, 12 best plants, bronze medal; 49—Foliage and decorative plants, largest and best collection, \$5; 50—Rex Begonias, largest and best collection, certificate; 51—Tuberous-Rooted Begonias, largest and best collection, bronze medal; 52—Ferns, largest and best collection, \$5; 53—Ferns, best single plant, certificate.

#### III. Open to Professionals.

- 54—Roses in pots, best collection, \$5; 55—Azaleas, best collection in bloom, \$5; 56—Tuberous-Rooted Begonias, largest and best collection, bronze medal; 57—Ferns, largest and best collection, \$5; 58—Flowering plants in bloom, largest and best collection, \$10; 59—Foliage and decorative plants, largest and best collection, \$5.

#### CLASS C.—OPEN TO ALL COMPETITORS.

- 60—California wild flowers, largest and best collection, \$10; 61—Fuchsias, best collection of plants in bloom, certificate; 62—Bulbous and

tuberous rooted plants in bloom, including out blooms, largest and best collection, \$10; 63—Rhododendrons, best display of plants or blooms, \$5; 64—Foliage, flowering and decorative plants, most meritorious general exhibit, first prize, \$25; 65—Foliage, flowering and decorative plants, most meritorious general exhibit, second prize, \$15.

#### SPECIAL PREMIUMS.

- 66—For the largest and best collection of Tea Roses, cut blooms, by E. E. Smith, \$25; 67—For the largest and best collection of Pelargoniums in bloom, by Thos. A. Cox & Co., seed merchants, \$10; Best 12 out blooms of roses in 12 distinct varieties, not entered as a collection for any other premium, by Fruitvale Rose Company; 68—First prize, twelve choice rose bushes; 69—Second prize, six choice rose bushes.

#### RULES AND REGULATIONS.

1. All articles for exhibition must be properly entered, and be ready for examination by 2 o'clock P. M. on the opening day of the exhibition.
2. All flowers and plants entered for premiums must be properly labeled and named as far as practicable.
3. Plants offered for competition shall have been the property of the exhibitor for at least three months prior to the exhibition.
4. Flowers for competition must have been grown by the exhibitor.
5. No cards of business nature will be allowed in the exhibition until after the premiums have been awarded.
6. Cut flowers exhibited shall be accompanied by some of their foliage and buds.
7. The Committee on Awards is authorized to award suitable prizes for any meritorious exhibit not named on the premium list.
8. No prize shall be awarded for any articles on exhibition unless they possess points of superiority.
9. In no case can any article placed on exhibition be removed until after the close of the exhibition.
10. Any plant or flower placed in a collection competing for a certain premium shall not compete for any other premium.
11. Express charges upon packages of plants or flowers, intended for exhibition and coming from a distance, will be paid by the society upon previous notification to the chairman of the Committee of Arrangements.

For further information address Committee of Arrangements, Mrs. Austin Sperry, chairman, 2100 Pacific avenue, or Mrs. C. Hohwiesner, secretary, 1920 Washington street.

### Time of Local Blooming.

EDITORS PRESS:—Would it not be a good idea to revive a suggestion made some time ago in the PRESS, that the different sections of our State keep the PRESS posted as to the time of blooming of our wild plants, and possibly of our cultivated plants? Comparisons of the statements made in such a record would have a manifold value, not only to those who might be seeking certain locations on account of temperature, but knowing relative climatic characteristics one would be assisted in determination of suitable plants, fruits, etc., for local planting. The native plants of any section are a far better guide to a comparative knowledge of climatic conditions than the most carefully kept thermometrical observations.

Again, plants in their native State bloom earliest and thrive best in locations best suited to their development, where soil as well as climate favors.

There is this difficulty in the way of our project, viz., that many plants will be called by as many names as they have locations. This difficulty can be met by the PRESS by giving the botanical name and the more general common names.

This would necessitate the sending of pressed specimens of flowers, leaves and fruits (seed vessels) where practicable. Frequently the specimens could be sent in the letter, but in case they could not, a one-cent stamp would suffice for each two ounces in weight of each package.

The work suggested might be carried still further and do what our schools are so strangely neglecting to do, viz., make botany, as the actual study of plant life, the medium for the development of the power of observation, which is the only true basis of a real education. With the editor's permission, more in this line of thought will be presented in the future.

The writer of this article would be glad to receive communications and specimens in the line suggested from any readers of the RURAL PRESS, and particularly from those living in the foothills of the Sierras. Communications may be addressed to Box 90, Gonzales, Monterey Co., Cal.

A. L. LIANCE.

[We heartily approve of the suggestions made by our correspondent, and we hope our readers will take active interest in his proposition so that it may be made widely successful. Our correspondent writes under a *nom de plume*, but we hope he will soon appear in his true style. He is a botanist fully able to discharge the work he undertakes. Let all who are attracted by his offer avail themselves of it, and the results will appear in the RURAL for the entertainment and instruction of all.—EDS. PRESS.]

### Edging Plants.

[Read by Mrs. C. HOHWIESNER before the California State Floral Society.]

One would scarcely believe that Nature had provided us with such a multitude of plants, each variety of which possesses its own peculiarities that make it desirable for edging or bordering. It seemed so easy, a month ago at our last meeting, to name and praise one variety suitable for this purpose; but when on returning home I happened, in passing through our little garden, to notice some bright cowslips peeping out from their green foliage, and, on another side, double white violets ready to bloom into sweet fragrance at the first kiss of next day's sun, I suddenly remembered so many, many others that had the same advantages that I decided to consider several of our bordering beauties and leave it to you others to decide which are the best.

I never knew the name of the little vine I would like to have more widely known, nor can I say where it is at home. It seems to adapt itself to any place given it, and to thrive well in sun or shade, though I do think it loves warm locations. The leaves are indented, fern-like, and are put forth in great profusion. It has no perfume, but is very graceful in its growth, and the way in which its flowers alternate with foliage and buds to the end of the branches is quite charming. All through last spring, summer and fall, its delicate sprays were covered with their tiny, daisy-like, pink and white flowers. Each branch, as it touches the ground, rapidly puts forth new roots, forming innumerable plants that can be removed without difficulty or injury to the mother plant. I have never grown this little vine as a border before, but think it will become my favorite, as besides all its other good properties it will bravely withstand ill treatment, spading off, etc. Snails gather beneath it, as they do in all borders; but they seem to dislike the foliage, for it never seems eaten away, as is so often the case with that of other edging plants.

Everybody knows the sweet, fragrant violet, its lovely green leaves through summer and fall, and the graceful blooms that gladden our hearts in winter and spring. The violet has always been my favorite flower, but I have had a slight grudge against it lately, as all the care I have bestowed on the numerous plants we possess would not induce the buds, that looked so promising, to bloom. Violets seem to grow best in loamy soil under oak trees, sheltered from the hot rays of the sun, but who has wide-spreading oak trees in San Francisco? When planted in a border, the suckers should be often removed and the old plants taken up, divided and replanted every fall. In Europe, and especially in the very south of Germany, the yellow cowslip grows wild, covering meadows and hillsides in spring, filling the air with its delicate fragrance. From these have originated the many-colored cowslips we know here, which, though old-fashioned, are very pretty if well grown, and very desirable for edging, as their foliage is evergreen, like that of the daisy. *Ballis Perennis*, or daisy, grows like a weed, if left to itself, but will always be liked. There are pink, crimson, white and variegated ones, white and pink doing best.

*Armenia rosea* is very desirable growing in orderly little hedges with fine leaves like grass, and bearing many small pink flowers all through spring and summer, these growing about three inches higher than the foliage. *Armenia*, as well as the daisy and cowslip and *Echevaria*, should be divided at least once a year, as they multiply very quickly. *Echevaria*, in its many varieties that resemble each other very much, seems to grow all over the world. I have found it on the highest mountains in Switzerland, on the Rocky mountains, Sierra Nevada, and on the rocks by the sea, both here and in Europe. Some call it the Hen and Chickens, and perhaps it is better known here by this name. *Auricula* is very pretty, but not well known here. It blooms in spring and summer. Its blossoms resemble those of the cowslip but are more delicate in texture and color. Its foliage is smooth and strong and of a whitish-green.

In selecting an edging plant, the place it is to adorn should be considered. Daisy and cowslip look well around a lawn, and *gazzania splendens*, with its bright, black centered, orange blossoms that close at night, looks very striking, but *Armenia rosea*'s glossy leaves would hardly contrast enough, and show to better advantage around beds of roses or carnations. Some like Ivy and Vinca, or Periwinkle trained into a border, and they look very well around a shrubby corner in a large garden or surrounding a bed of ferns. Whoever is fond of straight, long, unbroken lines, will admire a border of Boxwood, which when once well established makes (perhaps) the closest, most impenetrable border, if cut and trimmed two to three times annually. *Lanrostinus* is also used for edging, but I only like it in a place where it can be allowed to grow as a hedge two feet high and show its exceedingly pretty flowers. If kept shorter it would have to be cut very often, as it grows rapidly. There is a perennial forget-me-not, *Omphalodes verna*, that has dark-blue flowers that appear in April. It is of a dwarf growth than the forget-me-not generally planted and consequently more desirable for the purpose of edging.

*Pyrethrum aureum*, or feverfew, is too well known to need description. Its small, white, double flowers grow in clusters, the foliage being of a decidedly yellowish shade. *Mesem-*

*bryanthemum* has fleshy foliage, the flowers are rayed of a rich, purplish red, with delicate white stamens. There are few flowers as delicately shaped and molded as this, and it will be a surprise to every one looking at it closely for the first time. There is also a white variety, and a number of small, flowering sorts in various shades. It does very well as a border, but San Franciscans seem to admire it most when grown in large vases on their front steps.

*Lobelia*, some fancy leaved geraniums and *Salvias* are also desirable. Golden Thyme and curly parsley, if kept from blooming and going to seed, are both ornamental and useful. Besides these, there are a number of moss-like growths that we all have seen and admired, but I am not familiar with their names. We have tried Strawberries as a border and find them a grand success when they can be given enough water during their blooming and ripening season, for they, like all afore-named plants, make a good border and are really very tempting, especially to the small boy passing by, when their ripe, red fruits glitter from beneath the dark leaves. All these plants I have named are perennials and do well enough if left to themselves; but a little extra care, a little time and trouble devoted to them, will always be repaid. To do well they should be lifted, separated and replanted into well-worked ground every year. Among our annuals there are a large number suitable for borders, the best being pansies, *milgonette*, forget-me-not, dwarf nasturtiums, phlox. In a different way there is also a considerable amount of work and labor attached with the growing of these flowers; but, in every condition of life, for everything we undertake, we are prepared to toil in some way to gain the desired result; so can we reasonably expect success in our gardens without some exertion on our part?

## THE ORNITHOLOGIST.

### Song Birds.

[An essay by C. S. AIKEN, read at the California State Floral Society, Feb. 13.]

Exactly what a paper on song birds, or birds of any kind, has to do with a floral society meeting it is possible many bearers are curious to know. No attempt at a definite answer will be given. The amateur gardener and lover of flowers asks for no reason for the presence of the humming-bird on the honeysuckle or jasmine, or for the meadow-lark hopping about in the violet patch. It seems a part of the eternal fitness of things that birds and blossoms should be associated together, and many are the artists and many the poets whose works have given recognition to this plan of nature. It may be fair to assume, then, that flowers and feathered songsters are very fit companions. The naturalist will tell you that birds are more than garden ornaments. He will tell you that many varieties of huge, worms and grubs are destroyed by them, of pollen carried on delicate hills for flower fertilization and of devastating moles and young gophers caught by the vigorous, sharp eyed owls.

That California has but few singing-birds compared to those of New England and European countries is generally conceded. That more bird songsters, sweeter singers, than even the meadow-lark in the early morning are generally desired by all who are out of doors as much as all horticulturists must be, is something that may be assumed. Oregon has recently received large importations of sweet singers and a movement to bring similar song birds into California has lately been inaugurated. That the State Floral Society may be informed of what is being done in this matter and may consider the wisdom of endorsing a plan that will tend to make all out-of-door California more attractive and possibly individual flower gardens more pleasing, is the object of this paper.

In the month of May, 1889, the Oregon Society imported from Clansethal, in Germany, under a contract with a German bird-dealer, the following birds in pairs of males and females, viz.: Ten pairs black-headed nightingales, 8 pairs of gray song thrushes, 15 pairs of black song thrushes, 22 pairs skylarks, 4 pairs of singing quail, 20 pairs black starlings, 19 hullfinches, 40 pairs of goldfinches, 40 pairs of chaffinches, 35 pairs of linnets, 40 pairs of ziskins (green finches), 20 pairs grosbeaks, 1 pair real nightingales (the rest had died on the way), and several pairs of red-breasted English robins, wrens, forest finches, yellow-hammers, green finches. The secretary, O. F. Pfleger, reports that all these birds, with their cages, were placed on exhibition for four days to the public. Thousands of people went to see them, and the society realized about \$500 by this show, which went toward paying for the expense of bringing them out. At the close of the exhibition all the birds were turned loose in the suburbs of Portland and a large number in other counties. The larks were let loose outside of the city near clover meadows. The birds have done well ever since they were let loose. Some nested in Portland and some in the suburbs, while others went far off into the State.

The society has received reports from numerous places that the birds have prospered, and that the scheme has been a grand success. At H. Dosh's place, back of Portland, black thrushes, song thrushes, goldfinches and black-headed nightingales have made their home and reared their young ones. Mr. Dosh has a large orchard and an abundance of water on his

place, which makes it sought by the birds. Linnets have remained in and around the city, and their sweet songs have been heard all over the city and in East Portland. A pair of black-headed nightingales nested near Silverton, 40 miles south of Portland, last summer, and a pair were seen near Forest Grove, 50 miles from Portland. Mr. Maher of North Portland reports a nightingale singling near his place after dark during all summer. At Mr. Munk's place, back of the city, a pair of song thrushes made their nest and raised five young ones this summer. Frank Dekum found a pair of song thrushes nesting back of the Exposition building last season. Several bullfinches were seen by H. D. McDonald, a short time since, back of the city. Mr. Stohr, the Portland bird-dealer, saw a flock of green finches in South Portland not long ago.

The Oregon Society has now sent for more sweet singers, to reach there about March 1st. This coming consignment consists of vocalists of South American and European reputations. Among them are skylarks, mocking-birds, bullfinches, black and gray thrushes, red-breasted English robins, goldfinches, black-headed nightingales, chaffinches, linnets and black startings. It is birds of this class that will likely be brought to California. The present plan is to bring here, as soon as sufficient funds can be raised either by a society or private subscription, about 600 pairs of songsters. Different counties desiring birds may send at the same time. At Santa Cruz, according to the *Surf*, A. P. Stanton, well known in this city, has taken the subscription paper in charge, headed with his own subscription of \$50. The paper is as follows. It may contain suggestions for similar county movements elsewhere. A plan for the importation of useful, insectivorous song birds:

Forty pair sky-larks, \$4.....	\$160 00
Forty pair mocking-birds, \$5.50.....	220 00
Forty pair nightingales, \$5.50.....	220 00
Forty pair bullfinches, \$4.....	100 00
Forty pair gold and green finches, \$2.50.....	100 00

Total.....	\$860 00
Expenses for afterward, delivery, etc.....	40 00

Total.....\$900 00

We, the undersigned, hereby agree to contribute the amount subscribed opposite our names to form a fund to be used in importing useful insectivorous song birds into Santa Cruz county, the birds to be let loose soon after their arrival in such place or places as shall be determined to be the most suitable.

An Oregon dispatch, only a few days since, notes that large flocks of goldfinches, bullfinches, European robins and other birds, descendants of those imported by the Society for the Importation of Song Birds, have returned from their winter migration and are making the orchards in the vicinity of Portland vocal with their songs. Linnets and some other birds have remained here all winter, and are perfectly at home in the gardens about the town. All these birds are insectivorous, and will be useful in destroying orchard pests as well as furnishing melody. The Legislature has passed an Act providing for the protection of both imported and native song birds and their nests and eggs. A correspondent writes recently that the Santa Cruz movement indicates a strong action in the direction of removing the stigma from California that we have only birds that chirp and none that sing. The success has been so marked in Oregon that we ought to have the same good fortune for California, and while San Francisco county is hardly suitable for the birds, yet the interior ones should be well adapted. A similar subscription to the one alluded to, as under way in Santa Cruz, has already been started in Santa Clara county, and Napa and Marin counties are understood to be moving in the matter also.

## AGRICULTURAL NOTES

### CALIFORNIA.

#### Fresno.

**A PACKING HOUSE**—EDITORS PRESS: The El Modelo packing-house, the largest in Washington Colony and one of the largest in the country, was destroyed by fire on the night of the 10th inst. The owner, A. D. Barling, has achieved a splendid reputation for several brands of raisins, the three principal ones being "El Modelo," "Old Mission" and "Colony." The insurance on building, stock and machinery foots up something over \$23,000, while Mr. Barling estimates his loss to be nearly \$15,000 in excess of that amount. There were several carloads of goods on hand, two carloads of which were to have been shipped the day following. The El Modelo is to be rebuilt.—C. M.

**VINE AND TREE-PLANTING**.—Fresno, Feb. 12: Vine and tree-planting around Fresno, Fowler and Sanger is going on rapidly, and the acreage will be very large. Muscat rootings are abundant at \$7 to \$10 per thousand; Sultanas are very scarce and cuttings are worth \$1 per thousand. Other varieties, possibly excepting Malagas, do not figure to any extent in the market.—C. M.

**THE FIRST CROP**.—Kingsburg Cor. Selma Enterprise, Feb. 13: Kingsburg shows signs of waking up. About 400 small farmers will this year harvest their first crop of fruit.

#### Humboldt.

**THE SILO**.—Eureka Standard, Feb. 11: Capt. Geer of Blue Lake says that he is doing what

many Eastern farmers have been doing for years past. The Eastern farmer began by building an air-tight pit under ground, into which green feed of any kind—green corn, oats, wheat, clover, or other grass—is packed under pressure and allowed to commence heating until about 135° F. is reached, when the top of the pit is hermetically sealed or covered air-tight under pressure, and the green feed allowed to cure in its own heat. This is on the same principle of canning vegetables, to preserve them from decomposition, in their own juices. But Capt. Geer says the underground silo is not the thing for California—probably not the thing for any section of the country—and that the only requisite is a strong, air-tight building with sills imbedded in the ground and no floor. The silo he is building is 21x32 feet on the ground and 20 feet high. It is built of refuse lumber on a stout framework, covered with tarred paper so painted as to be air-tight and then covered with another layer of lumber. The feed is out green (be will fill this silo with peas) and packed into the building from above until it is full, then covered with loose boards (of course there is a water-tight roof over the silo) and allowed to ferment until a heat of about 135 to 140 degrees is reached, when it is covered air-tight, under pressure, and allowed to remain sealed like a fruit can for about six weeks. The silo can then be opened and the feed is ready for use. It is estimated, and correctly, that 50 cubic feet of feed cured in the silo will weigh a ton, and that a ton will last an average cow 40 days. Capt. Geer's silo will contain 260 tons. The farmer who builds a silo can thus have green feed for his cattle the year round, where they have cold weather, and in the valleys will allow him to take his cattle off the pasture and turn most of it into meadow or hay land, as he may desire, or to rest his pasture when he chooses. There is now but one silo in use in this county, and that was built and put to successful use by S. F. Pine on his dairy ranch near this city. The result of Mr. Pine's venture is most satisfactory, and the cows kept on the food thus preserved thrive, yield as much and as good milk—and sometimes better milk—than is given from pasture feeding.

#### Kern.

**TREE AND VINE PLANTING**.—Bakersfield Californian, Feb. 14: A company is now engaged in planting 320 acres, in the vicinity of Madera, in vines and fruit trees. The company does not believe in the one-product idea, and only 100 acres will be planted in raisin grapes. The balance will be planted in all those varieties of fruit to which the soil and climate is believed to be adapted.

#### Los Angeles.

**TAHITI ORANGES**.—L. A. Express, Feb. 10: "We shall regard it as a great exploit if we succeed in growing Tahiti oranges with their native strength here in Southern California," says Harry Messerve, who has just returned from the Society Islands. "The Tahiti oranges are all seedlings, but they are far superior to any seedlings which we now produce in the United States. They are in point of fact the best all-around orange that can be grown. The trees are very large. They bear three crops a year on the islands, and the heaviest crop is over 4000 oranges to the tree. This crop is ready for gathering in the middle of June, by September another crop is ripe, and in February the third crop is ready for picking. These two latter crops are light—they will run about 800 to the tree. Even they are an ordinary annual crop for a seedling here. We believe the Tahiti oranges will bear more than once a year here, and will bear as heavy crops. In other words, we believe this luxuriansness of growth and bearing is incident to the variety and not entirely to the climate in which they grow. The oranges are a fine, firm, juicy fruit, with little pulp, and runs of a uniform size—about 126's and 128's. A peculiarity of the Tahiti orange is that it does not ripen, or rather the skin does not turn yellow, on the tree. This is very odd—that they must be taken from the tree before they will turn. This makes them somewhat better for shipping, because they turn on their way and are fully ripe by the time they reach their destination. We believe, however, they will ripen on the trees in this climate. In fact we know that to be the case, for there is a seedling orchard in Riverside from Tahiti seedlings which is just coming into bearing and is being watched with much interest. These oranges have the gold color on ripening."

#### Mendocino.

**INCREASING HIS HOPYARD**.—Oscar Foss called the past week and states that he is increasing his hopyard near Hopland to 32 acres, by setting out 12 acres to hops this year.

**TREE-PLANTING**.—Oscar Foss, of San Francisco, is setting out an orchard. He has planted 450 trees this year, mostly prunes, and will add to the number each year until he has the most of his 590 acres in fruit.

**FRUIT VS. SHEEP**.—Utah Republic Press, Feb. 12: It has recently been demonstrated in these columns that land planted in Bartlett pears or prunes will yield in a few years from \$250 to \$500 per acre. In wool the same land would do well if it paid a dollar an acre, and yet there are thousands of acres of good fruit land in this county that is used for sheep only.

#### Napa.

**THE NEXT AGRICULTURAL FAIR**.—Calistoga Independent, Feb. 11: The next agricultural fair in Napa will begin Aug. 17th and continue to and include the 24th. All persons attending

the races "fair week" will be required to wear a badge conspicuously displayed. This is for the purpose of guarding against imposition, many having heretofore surreptitiously gained admission to the grounds without paying the usual price of admission.

#### Orange.

**OUR FRUIT INDUSTRY**.—Santa Ana Blade, Feb. 12: The shippers, packers and buyers about the depot grounds of this city are exceedingly busy packing and shipping the orange crop of the valley. J. H. Moesser, Manager of the Santa Ana Fruit Packing Co., is rushed with business at the packing establishment near the Southern Pacific depot. The company does no purchasing nor shipping, but simply packs such fruit as is brought to their store-rooms. At present Mr. Moesser is packing three carloads of oranges for Paul Seger, who will ship them East the latter part of this week. Smart & Collins, buyers, packers and shippers, are doing a rushing business at their drying and packing establishment. They are engaged in packing, for shipment to Chicago, several carloads of oranges, which will be branded with their own stencil, showing from whom and where they are shipped. G. Getty, of Tustin, representative of the Earl Fruit Co., is packing and loading three cars on the switch of the Santa Fe, in those beautiful patent refrigerator cars which that company owns.

#### Sacramento.

**A CENSUS OF FRUIT TREES**.—Sacramento, Feb. 15: The State Board of Equalization instructs the assessors that when they commence the annual assessment this year they shall in conjunction take a census of the number of fruit trees and their kinds, number of acres planted and the acreage in table and wine grapes. The State Board desires these figures, not for the purpose of taxation, but to benefit the county and its citizens. In order to facilitate the work and have the returns as nearly correct as possible, it would be well for all the fruit-growers to have these statistics down on a slip of paper before the arrival of the assessor.

#### San Bernardino.

**PLANTING DANCY TANGERINE ORANGES**.—Riverside Press and Horticulturist, Feb. 14: E. R. Skelley exhibited in our office to-day a bunch of six Dancy Tangerine oranges, just received from S. B. Hill of Maitland, Florida. The fruit is of a deep rich orange color and the flavor delicious. The leaves are of a glossy dark green. Specimens of the yellow and red Tangerine were also sent, and of Hart's Tardiff, the latter of a pale yellow color and as firm as an apple. Mr. Skelley is setting out ten acres in Dancy Tangerines, as he considers it one of the best varieties grown.

#### San Diego.

**FARM PROGRESS**.—Cor. San Diego, Feb. 14: Where a few years ago was a dreary mountain side is now a pleasant drive through scores of orchards and vineyards at Lakeside, Spring Valley and Mesa Grande. The settlements throughout the county will doubtless show an average addition of 50 per cent to the amount heretofore tilled, and a degree of care and prudence never before equaled. Winchester's output of 50,000 sacks of grain came from far less ground than now spreads for miles along its fertile valley. Herds of the finest Holsteins, Durhams, Jerseys and other fine breeds of cattle on the extensive alfalfa-fields of San Jacinto are duplicated by other herds of Devonshires, Alderneys and Polled Angus on the Santa Margarita, Montecito and other ranches nearer the city. Brick business blocks are under construction in San Jacinto, Escondido, Temecula, Oceanside, Winchester, and hundreds of acres of newly-cultivated lands are to be seen at nearly every settlement visited. During a residence of nearly sixteen years in Southern California, and six in San Diego, I have never witnessed the vast amount of solid development, progress and business that characterizes the opening of '91. Prices are good for everything, and no effort is being spared to produce just as much and just as fine as is possible. Now, prices and improvements are so changing the country that the oldest inhabitant feels his way by new roads and by-laws, and looks on a promise of great and lasting wealth.

**FRUIT COMMISSIONERS DIVIDE UP THE COUNTY AND BEGIN WORK**.—S. D. Union, Feb. 12: The new County Board of Horticultural Commissioners, which is just getting to work, is composed of J. P. Jones of this city, ex-fruit inspector, S. P. Abell of Encinitas and Dr. W. R. Perry of Perris. Each member has a deputy, J. F. Brooks being Mr. Jones' assistant. When they organized a few days ago, Mr. Jones was chosen president and Mr. Abell secretary. They divided the county to suit each. The first district, under Mr. Jones, extends from the frontier to Encinitas, and across the county to include Mesa Grande, Julian, Banner and Stonewall, and all the territory lying farther east. District 2, under Mr. Abell, extends from Encinitas to Vallecito, county wide. District 3 extends from Vallecito to the northern boundary. They also adopted a resolution to ascertain the area under cultivation throughout the county. President Jones has just sent galvanized iron tanks to Dr. Perry to be used in disinfecting trees at Perris and San Jacinto.

**AMOUNT OF WATER TO THE ACRE ON IRRIGATED LAND**.—San Diego, Feb. 12: Alessandro has a good water right. It has an inch to four acres, as have also Riverside and Redlands. Arlington Heights, under the Gage canal, has

an inch to five acres. Highlands, under the North Fork ditch, has an inch to six acres. South Riverside and Jurupa have an inch to 7½ acres. Etiwanda has an inch to eight acres. Ontario, Rialto and Pomona have an inch to ten acres.

#### San Joaquin.

**THE BOTHWELL CANAL WILL BE CONSTRUCTED**.—Lodi Sentinel, Feb. 14: Mr. George W. Bothwell assures the Sentinel that the ditch will be constructed and water brought upon the lands of those who have contracted with him for water. Arrangements have been made to put a corps of surveyors in the field and the work will be pushed zealously to completion. It might be stated that the projectors will see to it that their ditch will carry just enough water—no more and no less—than to irrigate those lands for which water rights have been secured, and those who are backward in coming forward now and subscribing for water will be exceedingly backward in getting forward in the advance guard of the progressive and successful farmers and fruitmen of this locality. The Bothwells have made every accession that has been asked of them and have given the land-owners every opportunity to look into the matter, and those who are left out in the cold and dry when the water comes will have no one to blame but themselves. A bright future for Lodi is now assured.

#### Solano.

**CROPS AND RAIN**.—Davisville Cor. Dixon Tribune, Feb. 10: Grain on the adobe soil is said to be looking fine, and from this source at least we may expect more than an average crop. Fruitmen are still hopeful, and having availed themselves of the dry weather to put the land in good condition, await the coming storm with perfect faith. Mr. Treat declares that he has not the least doubt, since he can recall seasons similar to this in which the late rains more than compensated for the drouth of midwinter. I must helieve with Mr. Treat, because we can hardly stand a second failure, though it should proceed from an exactly opposite course to that of the past season.

**TREE-PLANTING IN A GRAIN DISTRICT**.—Vacaville Reporter, Feb. 12: The fruit belt of Solano county will include in a few years many of the districts now devoted to grain. An enterprise of this kind is on foot near Dixon, in an out-and-out grain country. The work of planting is being done by J. B. Jobson on a 40-acre tract belonging to him which lies two miles west of Dixon. This experiment of transforming grain-fields into orchards will be watched with interest.

**ORCHARD RETURNS**.—Suisun Republican, Feb. 13: The following figures, given us by Mr. Sheldon, manager of J. H. White's orchard in Suisun valley, are worthy of publication. From 5 4-7 acres, upon which are 604 French prune trees seven years old, he sold \$1494.70 worth of dried prunes and the cost of drying and handling was \$102. He made, clear of all expenses, a little over \$500 on 2½ acres of Bartlett pears, seven years old. Mr. White's orchard contains 44 acres, which cost him \$20,000 about two and a half years ago.

**SALE OF A STALLION**.—Suisun, Feb. 13: Mr. Hammond has purchased of Mr. Wiley, of Petaluma, a coal-black stallion, of French stock, pure blood and testified record. It is a superior horse, about 17 bands high, and turns the scales at 1650. The price paid was nearly \$1300.

#### Sonoma.

**THE AGRICULTURAL PROSPECT**.—Santa Rosa Democrat, Feb. 14: S. T. Coulter says that the agricultural prospects have not been better for 20 years. "There is no suffering for lack of a rain so far, and I think there will be none in this part of the State. I have been traveling over the county considerably of late, and find that the crops are in excellent condition, and in the western part of the county there is no suffering for lack of feed. The weather has been just right to keep the fruit buds back, too, and the farmers have made unusual progress with their work. There is a class of people who would grumble at anything, and now they are complaining for fear we won't have too much rain."

#### Tulare.

**WHAT IS REQUIRED OF FOREIGN BORN CITIZENS TO FILE ON GOVERNMENT LAND**.—Porterville Farm View, Feb. 13: Foreign-born citizens applying to file on government lands are now required to file with their papers either their naturalization papers, their declaration of intention, or certified copies. In proving up, a foreign-born citizen must show his own papers, or if his father was naturalized before he was 18 years of age, his father's papers, and must show that he has ever since resided within the jurisdiction of the United States. Many whose fathers were naturalized when they were quite young and have voted right along for years, when they come before this land office, find they must procure naturalization papers.

**NAME YOUR RANCHES**.—Hanford Sentinel, Feb. 12: Every good thing should have a name. Nearly everything is designated by a title excepting the farms of the country, and we are glad to note the tendency in the direction of naming the farms. Owners of these farms will change, but the name given to them will remain forever. Among the places about Hanford that have been named, we know of several. There is B. A. Bateman's Newlyn ranch; George Dodge's Sandy Loam Farm; C. T. Hecker's Walnut Grove; O. H. Wyane, Darban; W. G. Nicholson, Willows Ranch, and so on. A small sign-board with the name on it put up at the entrance to the farm would

oost but little and would not only look well but be a great help and guide to the travelling public, especially if the distance to the nearest town was marked upon it. Many of the principal vineyards of the country have already put up signboards.

Yolo.

VINEYARD WORK.—Winters Express, Feb. 14: The vineyards at Danville have had from 2 to 20 hands in them for some time. The Briggs, Gould and Eade vineyards are all pruned and the trimmings burned. The Larne vineyard is about finished also. The Gould orchard is plowed. Several teams have been manuring the Briggs vineyard for a month, hauling it out in wagon and sled loads. This is wise, as the soil must be fed for grapes and fruit as well as for grain. Horticulturists must learn this and profit by it. The young vineyards are doing finely.

Yuba.

THE PHILLIPS CLING PEACH.—Marysville Democrat, Feb. 13: Joseph Phillips, one of the best-informed fruitmen in the State, is the originator of the now famous Phillips Cling peach. The peach, which is a chance seedling, was discovered by Mr. Phillips while working the Abbott & Phillips orchard in Sutter county and he has improved it and now it is considered by cannermen to be a very valuable acquisition. The peach was first given the name Phillips' Cling in the book "California Fruits and How to Grow Them," where, on page 308, the following brief description is given: "Fine, large, yellow cling, no color at pit, which is very small. Exceedingly rich and high colored. Described by Mr. Skinner, Superintendent of the Marysville Cannery, as the best peach he ever used."

ARIZONA.

EXPERIMENTAL STATIONS.—Phoenix Herald, Feb. 12: A work is going on in Southern Arizona at the present time which is of much interest and importance, and very little knowledge concerning its scope of usefulness has been disseminated. Bulletin No. 1, issued from Tucson, gives an idea of what a great undertaking has been inaugurated. Four stations have been established and others will be started as soon as practicable. The one at Tucson will be watched with more interest by the people of that section. It is located on the University grounds and the soil is described as a gravelly loam overlying a soft lime rock of from two to six feet. Permanent water is found at 80 feet, and on a small piece of adjoining land with no hard pan, water at 30 feet. The Phoenix station, out on Grand avenue, has been cleared, leveled and plowed. It is about ready for the actual work of experimentation. In speaking of the future work of this department the report says: A large number of varieties of fruits, including nearly all that have been found of value in California, will be planted at the four stations during the winter, as well as other plants of economic interest, including the sugar beet, sugar cane, cotton, grasses, forage plants, etc. etc., and the results obtained recorded and published from time to time. As soon as the chemical laboratory is equipped, which will be about the last of January, we shall begin an examination of the waters of the several streams and of the wells in the Territory used for irrigation, and a chemical analysis of soils and other materials. Analysis of soils and of water of the Territory will be made free of cost when such examination is of public interest. Correspondence is solicited from persons interested in having such work done.

NEVADA

CLOVER VALLEY BEEF.—Reno Gazette, Feb. 12: The Clover Valley, Nevada Ranch & Stock Company has just shipped 400 three and four-year-old steers to the California market, for which it gets three cents, live weight, at the ranch. These steers weighed between 1350 and 1400 pounds each and were fattened on alfalfa hay, and no better beef ever went to market than these animals. They were taken off the range Nov. 15th and put in pens of 200 each, with just room enough for them to feed and move around and grow fat. The Clover Valley Co. raises alfalfa and wild hay. Last season 2000 tons of alfalfa and 2000 tons of wild hay were put up at a cost of \$1.40 per ton for cutting and stacking, and the cost of irrigation was estimated at less than 25 cents per ton.

THE LAUNDRY QUEEN

SAVES TIME, LABOR, STRENGTH AND THE CLOTHES WASHED. Will last a lifetime and is always in order. Send for circular. B. F. LEEDS, Agent, Santa Clara, Cal.

BLISTER FOR HORSES. WHAT TO USE.

For a blister to use on live-stock,

COMBAULT'S CAUSTIC BALSAM

Has NO EQUAL. Why?

Because it is a perfectly safe remedy for any one to use. After applying as directed it needs no attention, acts quickly and is effective. Removes all bunches or enlargements and guaranteed not to leave scar or blemish. Supersedes all cautery or firing. Every bottle sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by all druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars. Address LAWRENCE, WILLIAMS & CO., Cleveland, O.

FREE!

Catalogue of Seeds,

Containing 100 pages of matters of interest to the Farmer and Gardener, with illustrations and descriptions of Garden, Field and Flower Seeds. Send for Catalogue to

Cheaper Than Windmills for Farmers!

Our Perfected "Safety" Engines Cost to Run only 1-8 Gallon of Gasoline per Horsepower per Hour. No Boiler, Fire, Smoke, Steam, Ashes or Heat. No Engineer, No License, No Danger. Single and Double Acting. 1/2-H.P. to 20-H.P.

GENTLEMEN—The 2-H. P. Engine received and set up yesterday. We attached it to part of the machinery in my shop, and it ran my Drill Press, a small Lathe, a large 24 inch by 14-foot Lathe, and a set of Emery Wheels, all of which it handled easily, to our great surprise. Yours very respectfully, J. B. HENDERSON.

GENTLEMEN—I am satisfied, after running for over a month my Bean Cleaner, etc., with the 4-H. P. Engine you sent me, that it is much the best Gas Engine I have seen. The electrodes are certainly superior to all others; also your safety rotary slide-valve, which is the personification of simplicity, positiveness and durability; I am satisfied it will develop much more power than we have need for. I also want a 3 or 1-H. P. for my wife and daughters to use about the house; we have a rotary clothes washer, can also do the churning, etc. I do not know of any better recommendation than to order a second engine. Respectfully yours, P. C. HIGGINS.

NOTE.—Both of these Engines were shipped to the parties named, and were set up by them solely by the diagram and printed directions we sent them.

## THE DAIRY.

## The De Laval Cream Separator.

The use of the De Laval cream separator has become so general in every dairy district of the world that the principle of centrifugal separation of cream from milk needs little description. Moreover, the process is simply one of nature, the centrifugal force generated by the revolving speed of the machine causing a complete separation or division of the cream from the other parts of the milk by reason of the difference in the specific gravity or weight, the cream after separation being discharged from the machine through one outlet, and the remainder, or skim milk, through another.

So perfect and complete is the separation effected by thus employing specific gravity, that, as years of experience have fully demonstrated, and beyond any contradiction, an actual increase of fully 10 per cent in the yield of butter is insured over the most modern

De Laval Belt Separator of 1890

De Laval Turbine Separator of 1890

methods of setting milk in ice, and from 15 per cent to 20 per cent and more increased yield over ordinary setting in pans, according to the surroundings, the gain being greater, of course, in warm and stormy weather. At the same time a decided improvement in the quality is noticed, as following the introduction of the centrifugal system into dairies that are regular shippers to market. Recently, we examined a list of opinions from 100 of the leading dairy commission merchants of New York City, each giving their individual opinion of separator butter as compared with butter made by other methods, and the universal opinion seemed to favor the product of the machine in all the essentials of quality, flavor, texture, and keeping and selling features.

Other advantages resulting from the use of the separator in addition to increased yield and improved quality may be briefly mentioned as securing a uniformity of the product even under varying extremes of the climate, for while this depends largely on the churning process, the bulk before churning is so materially decreased by separating the cream from the milk immediately after milking that the care of the few cans of cream while same is ripening preparatory to churning is a comparatively simple and easy task. Sweet cream gathering leaves sweet skim milk, and by this process the latter may all be fed out to young stock within an hour after it leaves the cow, and while its value as a feed is still retained. Thus separating while milking, both proceed simultaneously, and shortly after the last cow is milked the cream is all secured, the skim milk fed out, machinery and cans cleaned up and the dairy work is finished and well done.

Following the development of the large power De Laval, great pains have been taken to perfect a hand-power separator that should be entirely practical for use in small dairies, and in this connection Dr. De Laval has at last achieved complete success, and now the Baby De Laval separator also illustrated herewith is offered to all milk-producers whose requirements do not warrant a larger investment.

The Baby De Laval Separator.

The small machine upon examination proves to be as perfect in construction as its large partner, and operates so easily and being so simple and compact, it cannot fail to come into general use, having already attained a marvelous sale in Europe.

We have yet to learn of the first case where a De Laval separator has been introduced on this coast and its use afterward discontinued. There is no longer any question but that the separator is a great step in advancement,

## EXCITEMENT IN ROCHESTER.

## The Commotion Caused by the Statement of a Physician.

An unusual article from the Rochester, N. Y., *Democrat and Chronicle*, was recently republished in this paper and was a subject of much comment. That the article caused even more commotion in Rochester, the following from the same paper shows:

Dr. J. B. Henion, who is well known not only in Rochester but in nearly every part of America, sent an extended article to this paper a few days since, which was duly published, detailing his remarkable experience and rescue from what seemed to be certain death. It would be impossible to enumerate the personal inquiries which have been made at our office as to the validity of the article, but they have been so numerous that further investigation of the subject was deemed necessary.

With this end in view, a representative of this paper called on Dr. Henion at his residence, when the following interview occurred: "That article of yours, Doctor, has created quite a whirlwind. Are the statements about the terrible condition you were

in, and the way you were rescued, such as you can sustain?"

"Every one of them and many additional ones. I was brought so low by neglecting the first and most simple symptoms. I did not think I was sick. It is true I had frequent headaches; felt tired most of the time; could eat nothing one day and was ravenous the next; felt dull pains and my stomach was out of order, but I did not think it meant anything serious."

"The medical profession has been treating symptoms instead of diseases for years, and it is high time it ceased. The symptoms I have just mentioned, or any unusual action or irritation of the water channels, indicate the approach of kidney disease more than a cough announces the coming of consumption. We do not treat the cough, but try to help the lungs. We should not waste our time trying to relieve the headache, pains about the body or other symptoms, but go directly to the kidneys, the source of most of these ailments."

"This, then, is what you meant when you said that more than one-half the deaths which occur arise from Bright's disease, is it, Doctor?"

"Precisely. Thousands of diseases are torturing people to-day, which in reality are Bright's disease in some of its many forms. It is a Hydra-headed monster, and the slightest symptoms should strike terror to every one who has them. I can look back and recall hundreds of deaths which physicians declared at the time were caused by paralysis, apoplexy, heart disease, pneumonia, malarial fever and other common complaints which I see now were caused by Bright's disease."

"And did all these cases have simple symptoms at first?"

"Every one of them, and might have been cured as I was by the timely use of the same remedy. I am getting my eyes thoroughly opened in this matter and think I am helping others to see the facts and their possible danger also."

Mr. Warner, who was visited at his establishment on N. St. Paul street, spoke very earnestly:

"It is true that Bright's disease had increased wonderfully, and we find, by reliable statistics, that from '70 to '80 its growth was over 250 per cent. Look at the prominent men it has carried off, and is taking off every year, for while many are dying apparently of paralysis and apoplexy, they are really victims of kidney disorder, which causes heart disease, paralysis, apoplexy, etc. Nearly every week the papers record the death of some prominent man from this scourge. Recently, however, the increase has been checked and I attribute this to the general use of my remedy."

"Do you think many people are afflicted with it to-day who do not realize it, Mr. Warner?"

"A prominent professor in a New Orleans medical college was lecturing before his class on the subject of Bright's disease. He had various fluids under microscopic analysis and was showing the students what the indications of this terrible malady were. 'And now, gentlemen,' he said, 'as we have seen the unhealthy indications, I will show you how it appears in a state of perfect health,' and he submitted his own fluid to the usual test. As he watched the results his countenance suddenly changed—his color and command both left him and in a trembling voice he said: 'Gentlemen, I have made a painful discovery, I have Bright's disease of the kidneys,' and in less than a year he was dead. The slightest indications of any kidney difficulty should be enough to strike terror to any one."

"You know of Dr. Henion's case?"

"Yes, I have both read and heard of it."

"It is very wonderful, is it not?"

"No more so than a great many others that have come to my notice as having been cured by the same means."

"You believe, then, that Bright's disease can be cured?"

"I know it can. I know it from my own and the experience of thousands of prominent persons who were given up to die by both their physicians and friends."

"You speak of your own experience; what was it?"

"A fearful one. I had felt languid and unfitted for business for years. But I did not know what ailed me. When, however, I found it was kidney difficulty I thought there was little hope and so did the doctors. I have since learned that one of the physicians of this city pointed me out to a gentleman on the street one day, saying: 'There goes a man who will be dead within a year.' I believe his words would have proved true if I had not fortunately used the remedy now known as Warner's Safe Cure."

"Did you make a chemical analysis of the case of Mr. H. H. Warner some three years ago, Doctor?" was asked Dr. S. A. Lattimore, one of the analysts of the State Board of Health.

"Yes, sir."

"What did this analysis show you?"

"A serious disease of the kidneys."

"Did you think Mr. Warner could recover?"

"No, sir, I did not think it possible."

"Do you know anything about the remedy which cured him?"

"I have chemically analyzed it and find it pure and harmless."

The standing of Dr. Henion, Mr. Warner and Dr. Lattimore in the community is beyond question, and the statements they make cannot for a moment be doubted. Dr. Henion's experience shows that Bright's disease of the kidneys is one of the most deceptive and dangerous of all diseases, that it is exceedingly common, but that it can be cured if taken in time.

You can Whitewash your GRAIN HOUSES, Chicken Houses, Barns and Fences at a great saving of time, and every crack in the ceiling will get a dose.

Tree spraying is made easy and cheap by using "THE BEAN." With our LARGE pump four strong sprays can be used.

The NEW Bean Nozzle is not injured by the Lime, Sulphur and Salt Wash, which ruins all brass nozzles. Price \$1.

Send for circulars and testimonials to

**BEAN SPRAY PUMP CO.,** LOS GATOS, CAL.

## SPRAY PUMPS!

Star Spray Pump.

WITH BAMBOO EXTENSION ALL FITTED UP, COMPLETE WITH HOSE, BARREL AND SPRAY NOZZLE. These cuts show in faithful operation our Gould's and Star Spray Pumps. They are utilized for spraying Fruit Trees, Orange Groves, Vines, and in fact, all trees or shrubbery infested with the destructive insects which infest and do so much injury to Orchards, Vineyards, Orange Groves, etc. They are made entirely of brass, with the exception of frame and handle, and are strong and heavy; the valves being made entirely of metal and rubber, and will not be affected by the corrosive solutions such as Caustic Soda Acids, Lye, or any other solution that may be used to kill the destructive insect. Send for Special Circular and Prices of Spray Pumps.

**NOTICE.**—ONGERT'S LIQUID TREE PROTECTOR is the best Spray for killing Red Scale, Black Scale, White Cushion Cottony Scale, San Jose Scale, or any other insect. Send for Special Circular.

**WOODIN & LITTLE,** 312 and 314 Market Street, junction of Bush, SAN FRANCISCO, CAL.

## The Celebrated Chapman-Climax Spray Pump

Is still ahead of all competitors, and is the most popular spraying machine in the market. THE CLIMAX NO. 1, represented by this cut, is the cheapest reliable sprayer made, and its economy in the amount of wash required for a given amount of work will save its cost in a few days' operation. IMPROVED CLIMAX NO. 2 is a large double pump, made entirely of brass, and equipped complete with two lines of hose, four improved Pacific Cyclone Spray Tips, extensions, shut-off valves, etc. Guaranteed the safest, most satisfactory, and, in the end, the cheapest large spraying outfit in existence. Correspondence solicited. Address all communications to

**R. S. CHAPMAN, 18 California St., San Francisco, Cal.**

THE SCIENCE OF METEOROLOGY is by no means an exact science as yet, but there is a steady gain toward exactness. Many problems which seemed insoluble a few years ago have been satisfactorily answered, and many more are being studied with favorable prospects of being determined before very long. As observation stations are multiplied and more data for calculations furnished, the chances of securing better results will be increased, and the predictions will be of more and more value. We are taught, says a cotemporary, that the wind bloweth where it listeth, and whence it comes or whither it goes no man knoweth; but the weather bureau has undertaken to find out not only whence the wind comes but why it comes and when it may be looked for. To accomplish this must require the patient labor and incessant observation and study of years, and we should rather be grateful for what has been accomplished than displeased because perfection has not been attained. If any one will keep tally on the weather predictions for two or three months, he will be surprised to find that the bureau is right a great many more times than wrong, and that there is certainly something of value in the system which it has adopted and is trying to make more nearly perfect.

**CONTROLLING SEX IN BUTTERFLIES.**—A suggestive article as to the possibility of controlling sexes in butterflies has been communicated to the *American Naturalist* by Mrs. Mary Treat, and from the results of numerous experiments she finds occasion to believe that the larvae to which the freshest and most tempting food was supplied in unlimited quantity nearly always developed into female butterflies, while those for which the supply of food was limited, almost as uniformly proved to be males. Dr. Packard is, however, inclined to think that the sex of this insect, as well as that of all animals from eggs, is determined at or about the time of conception, or, at least, early in the embryonic condition. In the honey-bee, especially, it has been proved that the sex is decided at the time the egg leaves the oviduct. The sex in man, according to Koelliker, becomes fixed toward the end of the second month of fetal life.

"I have used Ayer's Pills for the past 30 years, and am satisfied I should not be alive to-day if it had not been for them. They cured me of dyspepsia when all other remedies failed."—T. P. Bonner, Chester, Pa. Ayer's Pills are sold by all druggists.

## GOOD HEALTH.

### Changing Climate for Health.

EDITORS PRESS:—This is doubtless often done with beneficial results and yet not always. When the deprivations, discomforts, annoyances of leaving home and all that that implies are very great, the benefits are more than overbalanced, the sufferer had best remain at home and study and practice diligently all the laws of physiology; practice a little self-denial to result in after-increased health and enjoyment.

Much of the benefit ascribed to change of climate is due to change of occupation, scenery, associates, friends. Still there are doubtless many cases where a change of climate, even from a good to a comparatively poor one, is absolutely necessary to a restoration to health. Let the physician prescribe, yet such is my lack of faith in all drugs and physicians—the keenness of my horror at the disastrous results they often induce—that I must be very sick indeed before I will consent to call in their aid.

Sixteen years ago I came from Kansas to Santa Barbara with throat complaint that had troubled me since 1862. In a few weeks my throat was apparently well and so continued for years. Gradually, however, it grew worse until nearly as bad as before I came to California. Two weeks ago I came to Ventura county, 400 or 500 feet above the surface of the ocean and 20 miles back. My throat is better than for many months, although for a day or two, during stormy, rainy weather, it troubled me somewhat. Santa Barbara has a moist climate and is doubtless the best climate in the world for some diseases. Here the climate is dry. My buggy, which had withstood the Santa Barbara climate six or eight years with unloosened tires, had not been here a week until every tire was loose. The air seems clearer, cooler, purer, more bracing and exhilarating. In strict justice, I must also add more windy, much more windy. S. P. SNOW.

Fillmore, Ventura Co.

POISON IN HAT-BANDS.—Enamelled hat-bands should not be worn during the hot summer months. "A good many sore faces," said a well-known physician to a New York Sun reporter, "are caused every summer by poisonous sweat-hands in hats. Some men always insist on buying Derby hats with enamelled sweat-hands, and if they wear them during the summer months a mild sort of blood poisoning is apt to result. As a man's head always perspires very freely under the sweat-band of his hat, the poison in the enamelling composition is softened and released, but its unpleasant effects are seldom noticeable there. The very fact that the perspiration is constantly coming out of those particular pores prevents the poison from going in. But as each little bead of perspiration rolls down his face, it is charged with the poison, and if it happens to run over a little pimple, or a place where he has scratched his face, or cut it with a razor, the result will probably be unpleasant. A dozen tiny pimples will appear, and no matter how many 'blood-purifiers' he doses himself with, his face will be dotted with little sores until he buys a hat with a good sweat-band. Straw hats are seldom made up with the enamelled sweat-hands, and that fact is another reason why every man should wear them in the summer. Of course this warning does not apply to all hats with enamelled sweat-hands. Some of them are perfectly harmless, but as it is impossible to tell which are good and which are bad without a chemical analysis, and as a chemical analysis would spoil the hat, enamelled sweat-hands are good things to avoid in hot weather."

DISBELIEVERS IN VACCINATION for smallpox should consider the statements just made to the French Academy of Medicine by Dr. Brouardel. While Germany loses only 110 persons per annum from smallpox, France actually loses 14,000, to be accounted for by the rigid way in which vaccination is enforced in Germany and by the carelessness of the Frenchmen. In 1865, when vaccination was not obligatory in Prussia, the mortality was 27 per 100,000 inhabitants. After vaccination was enforced, the mortality fell in 1874 to 3.60 per 100,000 and in 1886 to 0.049. At the present time, the mortality from this cause in France is 43 per 100,000.

To the question, Which is your favorite poem? there may be a great variety of answers; but when asked, Which is your favorite blood-purifier? there can be only one reply—Ayer's Sarsaparilla, because it is the purest, safest, and most economical.

## The Use Of

Harsh, drastic purgatives to relieve costiveness is a dangerous practice, and more liable to fasten the disease on the patient than to cure it. What is needed is a medicine that, in effectually opening the bowels, corrects the costive habit and establishes a natural daily action. Such an aperient is found in

### Ayer's Pills,

which, while thorough in action, strengthen as well as stimulate the bowels and excretory organs.

"For eight years I was afflicted with constipation, which at last became so bad that the doctors could do no more for me. Then I began to take Ayer's Pills, and soon the bowels became regular and natural in their movements. I am now in excellent health."  
—Wm. H. DeLancett, Dorset, Ont.

"When I feel the need of a cathartic, I take Ayer's Pills, and find them to be more

### Effective

than any other pill I ever took." — Mrs. B. C. Grubb, Burwellville, Va.

"For years I have been subject to constipation and nervous headaches, caused by derangement of the liver. After taking various remedies, I have become convinced that Ayer's Pills are the best. They have never failed to relieve my bilious attacks in a short time; and I am sure my system retains its tone longer after the use of these Pills, than has been the case with any other medicine I have tried." — H. S. Sledge, Weimar, Texas.

## ALL METAL SPADING HARROW.

HORTICULTURISTS AND FARMERS, TRY IT!

SPECIALLY ADAPTED FOR ORCHARDS AND VINEYARDS.

### TESTIMONIALS.

HAYWARDS, CAL., Jan. 15, 1891.  
H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: Your Triumph Spading Harrow is all that is claimed for it. It is the most perfect pulverizer I ever used in my orchard and is not wearying or exhausting on the team. Yours truly,  
WILLIAM C. BLACKWOOD.

SAN FRANCISCO, CAL., Jan. 16, 1891.  
H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: The gentleman using the Triumph Spading Harrow we bought from you for him writes us as follows:

"That the Triumph Spading Harrow is in fact a triumph over all the harrows I have ever used. The first trial I made was on a 30-acre field sowed with barley; 15 acres were harrowed with the Triumph in one day as perfect as it is possible to be. The other 15 acres I harrowed with a common harrow and it took me three days, and then it was not in as good condition as that harrowed with the Triumph. The Triumph does splendid work and as a harrow I consider it worth three times as much as the ordinary harrow, as well in the field as in the orchard and vineyard. It is a perfect pulverizer and weeder.—C. STROEBEL, Eagle Home Farm, Searsville, Cal." Yours Truly,

PIXLEY, CAL., Jan. 12, 1891.  
H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: Regarding the Triumph Spading Harrow would state that we are satisfied it is as light draft as any, and lighter than the average cultivator of its kind, and, as to its work, we think it cannot be beat. Yours truly,  
PIXLEY COMMERCIAL CO.,  
By L. E. SMITH, Secretary.

CHAMBERS OF THE JUDGE OF THE SUPERIOR COURT, JOHN C. GRAY, JUDGE.

OROVILLE, BUTTE CO., CAL., Jan. 17, 1891.  
H. C. SHAW, Esq., Stockton, Cal.—DEAR SIR: I purchased from your Agent, Mr. Hill, one six-foot Triumph Spading Harrow, and sent the same out to my olive farm to try. My foreman declares that it will do the work of four plow teams, and requests me to get another to put into the field by the first of March. He is highly delighted with it and calls it the greatest improvement in farm machinery he has yet seen. Instead of putting a number of teams into the field to plow and then harrow the ground, I shall go over it with the Spading Harrow twice and the work will be more thoroughly done, and at one-third of the expense. This is one of the most complete pieces of farming machinery that I have yet seen, and I cheerfully recommend it to those, who, like me, want the most and best work done for the money. It gives entire satisfaction. Yours truly,  
JOHN C. GRAY.

## THE ROCHESTER STEEL FRAME ORCHARD and VINEYARD GANG.

LIGHT WEIGHT! EASY DRAFT!  
AMPLE STRENGTH!

STEEL FRAME OUTSIDE OF WHEEL

Prevents Injury During Close Cultivation.

LEVER ADJUSTS DEPTH WHILE PLOWING.

Steel Frame, Steel Molds, Steel or Chilled Shares and Lands, Tonguebars, Self-guiding, Simple, Strong. A simple adjustment permits plow nearest vines or trees to make shallow furrow, say two inches, thus avoiding danger to the roots, the others plowing required depth. Weight of Three-Gang 7-inch only 200 pounds, and simply strong for hard soils. Price complete, \$38.00. The only implement with advantages of both Plow and Cultivator, thus satisfying the advocates of either. Send for Catalogue and Testimonials.

HORTICULTURE.

Some Profits in Fruit Culture in Fresno and Tulare Counties.

Mr. D. T. Fowler, Snpt. of Del Rio Rey Raisin and Fig Co., whose lands are near Clifton, Fresno Co., writes, Jan. 9, 1891, as follows:

A. T. DEWEY, ESQ., S. F.—Dear Sir: Below you will find the figures of fruit profits made from the orchards of Page & Morton. Mr. Sweet of Los Angeles Co. obtained them from the books of Page & Morton, so Mr. Sweet informed me, after visiting the Page & Morton grounds.

Figures taken from the books of Page & Morton, whose large irrigated orchard and vineyard is located four miles west of Tulare City, by Mr. Sweet, Sept., 1890:

Kinds of fruit.	Cost per acre 1st yr.	Cost per acre 2d yr.	Age of trees.	Cost of care and hand-ling crop, 1890.	Gross receipts, 1890.	Net receipts, 1890.
Apricots.....	\$30	\$20	5	\$132	\$343	\$211
Nectarines.....	30	20	5	132	400	268
Peaches.....	30	20	5	150	500	350
Yel'w Egg Pl's...	30	20	5	100	500	400
French Prunes...	30	20	6	120	720	600
Pears.....	30	20	6	75	502	427
Raisins 1889.....	30	15	5	65	305	240

Area of orchard, 500 acres.  
Area of vineyard, 800 acres.  
They are surprising figures, yet they have been equaled and surpassed, as far as the peach crop is concerned.  
One of my neighbors here sold over \$600 worth of dried peaches from two acres of trees. These trees will be four years old next February.  
From 18 acres, Mr. Gartenlanhe sold this year over \$9000 worth of dried peaches. His place is one mile from the Del Rio Rey.

Rates for Exhibition Purposes.

The Southern Pacific has issued a circular touching upon the rates upon exhibits for the coming State Citrus Fair at Los Angeles from the 3d to the 10th of March.  
It says that all citrus, deciduous or dried fruits, in glass, nuts and raisins, and the showcases in which they are to be exhibited, will be shipped to Los Angeles from all points on the line within the State at regular rates, but they will be returned to the point of shipment free of charge if the exhibitor will surrender to the company's agent at Los Angeles the expense bill showing the charges to that point, along with a certificate from the secretary of the association to the effect that the property had been exhibited and had not changed hands.  
When perishable goods are found to be worthless at the close of the fair, the exhibitor can present his expense bill and the secretary's certificate and receive from the agent one-half of the amount paid for the shipment of the goods. The provisions amount in the end to a rate of one-half the regular tariff on the articles for exhibition. The road wants to be sure that what it carried is exhibited.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

- FOR WEEK ENDING FEB. 10, 1891.
- 446,316.—DIVIDER ATTACHMENT FOR MOWERS Mark Anthony, S. F.

Springer, Sec retary American Berkshire Association, Springfield, Ill., sends the following transfers of recorded Berkshires: Calistoga 15665, by John Rider, Sacramento, Cal., to John McFarling, Oakland, Cal.; Hero 25519 by John McFarling, Oakland, Cal., to Ohas. A. Stowe, Stockton, Cal.; Redwood Mary 25530, Sultan 25531, Napa Belle 25532 and Napa Model 25617 by Andrew Smith, Redwood City, Cal., to A. McFarland, Napa, Cal.; Redwood Chieftain 25621, Model Beauty 25622 and Model Belle 25623 by Andrew Smith, Redwood City, Cal., to Thos. B. Hall, Sacramento, Cal.

The Aspinwall Potato Planter.

The excellent picture on this page represents quite a new claimant for public favor, and one that seems to win its way very thoroughly wherever it is tried. The machine will plant from five to eight acres per day, and all the work of marking, furrowing, dropping and covering is done in a single operation. The planting can be varied in depth from three to nine inches, and the covering is uniform. Instead of the dry earth on top, the covers of the planter draw upon the seed the moist under earth, and the value of this is well known to all potato-growers, for few things are more fatal to the start-

ing of the seed than to cover it with dry earth. The work is superior to hand-planting. The furrow being V-shaped, the seed must necessarily be dropped in the bottom in perfect line, and cultivation can be made early and close.  
The planter is adjustable for planting either whole or cut seed, and will plant from 10 to 26 inches apart. At all these variable distances it drops the potato with absolute regularity. The distance of planting is exactly the same in each row.  
A fertilizer attachment can be used, which deposits the fertilizer above the potato, just as a portion of the earth has fallen upon it; thus all chance for injury to seed is avoided.  
The mechanical construction of the planter is

good. The materials are of the best and it will last for many years. There is no cog gear or no fast motion. Excepting the pole and hopper, the whole machine is made of steel and iron.  
A corn-planter attachment is now made which will be wanted by many who purchase the potato-planter.  
Altogether in its present high perfection, the Aspinwall Potato Planter is an implement few potato-growers will care to do without.  
Mention this paper and you can secure the catalogue of the makers by addressing the Aspinwall Manufacturing Co., Three Rivers, Michigan. Truman, Hooker & Co. of this city are the Pacific Coast agents.

QUERIES AND REPLIES.

Squirrels and Gophers.

EDITORS PRESS:—At a regular meeting of West Park Alliance, I was instructed to ask you to advise us through the columns of your paper, the best way of destroying gophers, squirrels and Johnson grass. W. P. BOWEN, Sec'y.  
Measures for the destruction of squirrels and gophers are continually appearing in our columns as the experience of our individual readers leads them to commend certain methods. We had a full chapter on gopher destruction in the RURAL of Dec. 17, 1887, describing many means and materials, and another of the same character on squirrels in the RURAL of March 2, 1889. Readers who keep files can refer to these dates easily.  
The destruction of Johnson grass is, we believe, best accomplished by plowing the roots up to the sun in midsummer. This would succeed in dry land, but not so well, probably, in moist soil. We should like to know what our readers do with Johnson grass, and how they succeed with eradication measures.

San Ramon Valley.

EDITORS PRESS:—Having become a regular, and certainly a very much pleased, reader of your paper, may I venture to try and help along a little by giving you some of the features and good qualities of the great valley lying at the foot of Mt. Diablo known as San Ramon? No prettier one exists in Northern California.  
Entering it from the north, you have on your left huge, vast, rock-ribbed and canyon-seamed old Diablo looking like some old sentinel over a great stretch of country and ocean. Far away to the north lies the fertile Sacramento valley, while "far, vague and dim" Shasta butte stands with all between filled with beautiful, varied assortment of grain, orchard and meadow, with the waters of Sacramento river to add the charm of subtle attraction, that moving nature ever gives to quiet scenery. All this beauty can be gathered in from many points along the sides of our valley, and, as time rolls on, wealth, seeking country homes, will dot our hillsides with residences, where not only will rest and quiet be found, but profit as well.  
Last night a fine rain set in and to-day the smiling faces of our farmers attest the satisfaction they feel that the long continued drought is over; in addition to a large acreage of grain sown, many of our fruit-growers are adding to their orchards, as the past few years have demonstrated that our lands are rich in the material to bring the choicest fruits to the highest perfection; and the day will come when the hillsides of this valley will be covered with vineyards, producing wines that will rival if not outdo our friends in Southern Empire. Alamo. O. W. D.

Horse Sales at the South.

Holbert & Conger, importers of Cleveland Bay, English Shire and German coach horses of Los Angeles, report an active demand for these larger horses, especially English Shire, and notwithstanding the dry season quite satisfactory sales have been made in San Diego, Ventura, Kern and Los Angeles counties. A remarkably large Shire stallion named "Midge" goes to Compton, where these parties sold two fine Cleveland and two Shires from their first and second importations, and now this stallion goes from their third importation, for \$3000, into the same neighborhood, where the scrubs are obliged to move out. Good stallions will make their own way.

DEATH OF DR. WILKINS.—The dread disease la grippe is again prevalent, and in many cases is attended with serious and even fatal results. One victim was Dr. E. T. Wilkins, resident physician at the State Asylum for the Insane at Napa, who died on Tuesday. He was 66 years of age, and had been in charge of the asylum for 19 years. He was a prominent Mason and Knight Templar and was highly esteemed throughout the State.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

## CLOSING-OUT SALE

— OF —

## WELL-BRED TROTTER STALLIONS, BROOD MARES, COLTS AND FILLIES,

Being the Entire Stud of

**SAN MIGUEL BREEDING FARM, PROPERTY OF IRVIN AYRES, ESQ.**

Among them is the well-known Stallion, MAMBRINO WILKES, son of GEO. WILKES, the sire of five in the 2:30 list, and three others which all horsemen know could have been put there last season, as well as many others that can trot in 2:30. The great race horse BALKAN, can trot in 2:20 with as good a chance of lowering that mark as any horse of his age ever presented. The great brood mare FANNY FERN, with 12 of her immediate progeny—the phenomenal colt FREEDOM, yearling record 2:29, descends from Fanny Fern through Mollis Drew. A string of highly bred producing dams, among whose progeny are GUS WILKES, BALKAN, MYLITA, CLARA P., CHALDEAN, ALPHEUS, FRED ARNOLD, MOLLY DREW, and numerous others. For description of which and extended pedigree send to undersigned for catalogue. Sale to take place

**ON SATURDAY, MARCH 7, 1891, AT 1 P. M., AT OAKLAND TROTTER PARK.**

Mr. Ayres having decided to retire permanently from the breeding of trotting horses, will dispose of every animal upon the farm, with the exception of two work horses, without limit or reserve.

Catalogues will be ready February 9.

Grass, Field, Garden and Tree Seeds, Onion Sets, Etc.  
Send for Catalogue. Mailed Free.  
1428-1429 St. Louis Ave., KANSAS CITY, MO.

**SEEDS**

## THE BEST FENCE YET!

Cheap, Durable, Portable and Safe.

**THE SPALDING HUMANE WIRE FENCE** is composed of eight No. 12 galvanized steel wires, woven into four cables of two wires each; interwoven every five feet is a corrugated iron stay or guard, and held in place by the cables, thereby holding the cables firmly in place, preventing them being spread apart and letting stock through. The stays or guards are corrugated and an inch and three-quarters in width, making the fence as visible as a board fence, which is a very essential point. Write for circulars and prices. Address **BIRD-TURNBULL MFG. CO.,** 195 La Salle St., Chicago.

## NOTICE!

**ALWAYS ON HAND AND FOR SALE, IMPORTED** A home-bred registered Clydesdale Stallions and Mares, weighing from 1600 to 2000 lbs. each, from the most noted families. Largest and finest Stud of Clydesdales west of the Rocky Mountains. Also Holstein Friesian Cattle and Dish-faced Berkshire Pigs, all registered, at figures 50 per cent lower than any other in the State for the same quality. All open to Veterinary's examination. Stock all acclimated.

Call on or address **H. P. MOHR, MOUNT EDEN**, Alameda Co., Cal., 20 miles southeast from San Francisco. Take train for Haywards Station on broad gauge or Mount Eden on narrow gauge railroad. Gentlemen met by appointment at either station. Telegrams, "Mohr, Mount Eden."

## New Importation!

**THEO. SKILLMAN**

Has just arrived in Petaluma with a new Importation of

## CHOICE YOUNG STALLIONS

Consisting of

**PERCHERONS, SUFFOLKS, SHIRES AND FRENCH COACHERS.**

Prices moderate and terms liberal to suit the times. Catalogues for 1891 on application. **THEO. SKILLMAN.**

## DROP IT

If you are in any business not paying you, drop it, and buy a Petaluma Incubator. PRICES REDUCED. A large 32-page Illustrated Catalogue describing Incubators, Brooders, Brooding Houses, How and What to Feed, How Long to keep them in the Brooder, Drinking Fountains, Diseases and their Cure, Egg Testers, Bone and Shell Mills, Wire Netting, Thermometers, Lath Fencing, Flood's Roup Cure, "Creosote," the only thing that will exterminate vermin among chickens, in fact, more information than is given in many 25-cent books. Sent to any address on receipt of four cents in stamps.

PETALUMA INCUBATOR CO., Petaluma, Cal.

## IMPROVED INCUBATOR

Simple, Perfect and Self-Regulating. Hundreds in successful operation. Guaranteed to hatch a larger percentage of fertile eggs at less cost than any other hatcher. Send 6c. for this Catalogue. Circulars free. CEO. H. STAHL, QUINCY, ILL.

THE  
HALSTED INCUBATOR  
COMPANY,  
1312 Myrtle Street, Oakland, Cal.  
Send Stamp for Circular.

H. ANDERSON, Rio Vista, Cal.  
Breeder of Light Brahma, Plymouth Rocks, Black Minorcas, Brown and Black Leghorns; also Rouen Ducks. Birds from \$2.50 to \$5 each; Eggs, \$2.50 for 13. Stock extra fine and satisfaction given to all.

## CHOICE PURELY BRED

## COOKER SPANIEL PUPPIES

THE HANDSOMEST, MOST INTELLIGENT, MOST companionable, best house, watch and carriage dogs in existence, as well as the best ALL-AROUND sportsman's dog with the gun. Mention this paper, and for particulars address M. P. McKOON, El Cajon, San Diego County, California.

## BAY VIEW STOCK FARM,

BREEDERS OF  
Pure-Bred Shorthorn Cattle and Improved Poland China Hogs.

CHOICE YOUNG PIGS, AND ONE BOAR, 16 MONTHS old, for sale. Address J. P. THOMPSON, Manager, Napa Junction, Cal.

Dana's White Metallic Ear Marking Label, stamped to order with name, or name and address and numbers. It is reliable, cheap and convenient. Sells at sight and gives perfect satisfaction. Illustrated Price-List and samples free. Agents wanted.

C. H. DANA, West Lebanon, N. H.

## NEW YORK VETERINARY HOSPITAL.

DR. E. J. CREELY,  
(Winner of Faculty Gold Medal, class '90.)  
Veterinary Surgeon. Hospital—510 Golden Gate Ave., bet. Polk St. & Van Ness Ave. Telephone 2287. The latest improved Price Operating Table at the Hospital.

## DR. W. H. WOODRUFF,

Veterinary Dentist.  
Member of Cal. State Veterinary Medical Association. P. O. Address, FASHION STABLE, 221 Ellis St. S. F., Cal.

## THE GIANT POWDER COMPANY.

PATENT OWNERS OF

NOBEL'S DYNAMITE,  
NOBEL'S EXPLOSIVE GELATINE,  
NOBEL'S GELATINE-DYNAMITE,  
Best and Strongest Explosives in the World.

As other makers IMITATE our Giant Powder, so do they Judson, by Manufacturing a second-grade, inferior to Judson.

BANDMANN, NIELSEN & CO. General Agents, San Francisco.

## JUDSON POWDER,

The Only Reliable and Efficient Powder  
For Stump and Bank Blasting. From 5 to 20 pounds blows any Stump, Tree or Root clear out of ground at less cost than grubbing. Railroaders and Farmers use no other.

## MANHATTAN STOCK FOOD.

Saves One-Quarter of Grain Feed.

FRAUDULENT PARTIES have been selling an article, claiming theirs to be the same, and, in order to mislead, have added a prefix to "Manhattan." Our genuine food is called simple "Manhattan Food," with the Red Ball Brand.

623 Howard St., San Francisco, Cal.

GRANGERS' BUSINESS ASSOCIATION,  
SHIPPING AND COMMISSION HOUSE.

OFFICE, 108 DAVIS STREET, SAN FRANCISCO, CAL.

Warehouse and Wharf at Port Costa.

CONSIGNMENTS OF GRAIN, WOOL, AND ALL KINDS OF PRODUCE SOLICITED.

Money advanced on Grain in Store at lowest possible rates of interest.  
Full Cargoes of Wheat furnished Shippers at short notice.

ALSO ORDERS FOR GRAIN BAGS, Agricultural Implements, Wagons, Groceries and Merchandise of every description solicited.

E. VAN EVERY, Manager.

Is the thinnest ground Razor made, and needs but little stropping. If you want to own and use the best Razor it is possible to make, send us an order for this one at \$2.00.

\$2.00

WIDTHS.  
X & X in.

We carry a great variety of Razors, but have selected this one as the most desirable we or any one can offer. This is a ROYAL RAZOR, believe us. Sent by mail. Postage paid.

ALLING & LODGE, MADISON, IND.

## S. F. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Feb. 18, 1891.

Rains the past week, with clear skies and warmer weather to-day, inspire confidence, which is calculated to promote more active trading, if not to create a spirit of speculation in the more speculative farm products. After next week, money is expected to rule easier. To a certain extent, cereals feel the weather influence. Owing to light supplies, the effect is not very decided. Wheat abroad has strengthened some. The following is to-day's cablegram:

LIVERPOOL, Feb. 18.—Wheat—Firm. California spot lots, 75 10d; off coast, 38s 9d@39s; just shipped, 38s; nearly due, 38s 6d, cargoes off coast and on passage, steady; Mark Lane wheat, firm but not active; wheat and flour in Paris, steady; weather in England, frosty.

## Foreign Grain Review.

LONDON, Feb. 16.—The *Mark Lane Express* in its review of the British grain trade says: English wheats are firm; average value, 33s; the finest whites sell at 38s. California are strong and to-day were up 6d. Prices of flour are in favor of holders. Corn is well held; the finest old American sells at 27s 3d; new crop, 26s. Oats are firm and barley is irregular.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	Feb.	Mar.	April.	May.	June.	July.
Thursday.....	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2
Friday.....	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2
Saturday.....	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2
Monday.....	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2
Tuesday.....	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2	78 1/2

The following are the prices for California cargoes off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	38s 3d	37s 9d	38s 0d	Firm.
Friday.....	38s 3d	37s 9d	38s 0d	Firm.
Saturday.....	38s 3d	37s 9d	38s 0d	Strong.
Monday.....	38s 3d	37s 9d	38s 0d	Firm.
Tuesday.....	38s 3d	37s 9d	38s 0d	H'd higher

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

Day.	Feb.	Mar.	April.	May.	June.	July.
Thursday.....	110 1/2	110 1/2	110 1/2	110 1/2	110 1/2	110 1/2
Friday.....	111 1/2	111 1/2	111 1/2	111 1/2	111 1/2	111 1/2
Saturday.....	111 1/2	111 1/2	111 1/2	111 1/2	111 1/2	111 1/2
Monday.....	111 1/2	111 1/2	111 1/2	111 1/2	111 1/2	111 1/2
Tuesday.....	111 1/2	111 1/2	111 1/2	111 1/2	111 1/2	111 1/2

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

Day.	May.	June.	July.	Aug.
Thursday.....	97 1/2	97 1/2	97 1/2	97 1/2
Friday.....	98 1/2	98 1/2	98 1/2	98 1/2
Saturday.....	97 1/2	97 1/2	97 1/2	97 1/2
Monday.....	97 1/2	97 1/2	97 1/2	97 1/2
Tuesday.....	98 1/2	98 1/2	98 1/2	98 1/2

CHICAGO, Feb. 18.—Wheat—98c for May and 93 3/4c for July.

## Eastern Wool Markets.

NEW YORK, Feb. 13.—Bradstreet's will say: The sales of wool during the week were not large. This has been due in part to the scarcity of good wools, and also to the fact that most mills have secured a full supply. The demand at present is confined almost exclusively to yarn mills, which are consuming a much larger quantity of wool than usual. Reports from the London sales have assisted in strengthening values. Sales of Australian wools have been the principal feature of the trade during the week. In domestic stocks of pulled wools has been the most activity. Ohio and Michigan fleeces and Territory are quieter. Texas and California wools are in fair demand and values are holding very firm. Carpet wools are again moving slowly under a very weak demand.

NEW YORK, Feb. 15.—Trading is in domestic; foreign, active; buyers willing to operate at full prices, but resist all suggestions of an advance in present conditions of good market. The situation of manufacturers of woollens is quite as healthy as last noted, delaines showing most steadiness. Fair package buying in other stuffs. Eastern markets exhibit much confidence in raw, all goods picked up. Manufacturers who are carrying three to four hundred thousand pounds of stock are still eager customers for all straight and useful blending parcels. 150,000 pounds California spring private terms; 15,000 pounds fine medium Territory, 21@21 1/2c; 10,000 pounds fall New Mexico, 20@22c; 30,000 pounds XX and above, 34@34 1/2c. Boston reports extremely strong prices and large sales considering the drained condition of stocks. Sales of 770,000 pounds of foreign, including half a million of Australian, 36@42c; priced grade; 2,344,000 pounds domestic, including 75,000 pounds of southern and middle county California spring, 17@20c.

## Raisins.

NEW YORK, Feb. 15.—The wholesale grocers are getting ready for the interior spring demands. From the tenor of their inquiries they want California produce adjusted to attractively easy prices to meet the coming country orders. Cheap reputation raisins bring out some force of the buyers. No large business has yet developed. Few brands are accorded a full quality of merit. In the general pressure to sell, holders would rather accept faulty estimates than let the customer go. Soft in bags sold at 4 1/2@5c; sound, but not showy, 5 1/2@5 1/2c. Prime can be had at all kinds of shadings of the last prices down to 6 1/2c. Boxes weak, last outside rates not named in any style.

## Miscellaneous.

NEW YORK, Feb. 15.—Mustard Seed—Quoted with some steadiness at 3 1/2c for yellow and 4 1/4c for choice brown.

Hops—Good to best, firm; held at former figures. The recent loss by fire did not hurt the market. Good useful Pacific go to brewers in a small way at 30@32c. Top price about equals best. London quoted same.

## Local Markets.

Buyer Season.		Seller 1891.		Buyer 1891.	
H.	L.	H.	L.	H.	L.
Thursday....	148	147 1/2	111 1/2	111 1/2	148 1/2
Friday.....	148	146 1/2	111 1/2	110 1/2	148 1/2
Saturday....	146 1/2	146 1/2	111 1/2	111	148 1/2
Monday.....	145	144 1/2	108 1/2	107 1/2	148 1/2
Tuesday....	142 1/2	141	107	106 1/2	148 1/2

\*After August

BAGS—The market is steady, with a firmer tone at 6 1/2 to 6 3/4 cents for May-June delivery. Some operators look for better prices soon.

BARLEY—The rains gave the bears a splendid opportunity to hammer the market, which they were not slow in taking advantage of. Large dealers and feeders of course aid the bears by withdrawing temporarily from the market. Well-informed parties are still bullish. On Call, trading by cross-orders or otherwise has been more active. The following are today's reported Call Board sales:

Morning Session: Seller 1891—100 tons, \$1.06; 300, \$1.05 1/4; 100, \$1.05 1/2. Buyer season—100 tons, \$1.40 1/2; 100, \$1.40 1/4; 300, \$1.40 1/2. May—100 tons, \$1.35 1/2; 100, \$1.35; 100, \$1.35 1/4; 100, \$1.35 1/2; 100, \$1.35 1/4; 100, \$1.35; 100, \$1.34 1/2; 100, \$1.35 1/2.

BUTTER—The market has receded, closing to-day weak and feverish. Stocks have been and are still steadily increasing, while the outlet is being restricted. The rains cause dealers to anticipate free arrivals. Receipts by rail from the central States are larger. Oleomargarine is on the market, with more to come.

CHEESE—The market is strong at full prices, under moderate receipts and a good demand.

EGGS—Immediately following our last week's review, the market set off from 2 to 3 cents a dozen under a stronger selling pressure. To-day the market is slow with buyers bidding down. It looks as if a lower range will follow. A consignment parcel of 100 boxes good to choice eggs were offered to-day at 18 cents without bringing a buyer.

FLOUR—The market is very strong, with an advance not at all unlikely.

WHEAT—The sample market shows continued strength. Reducing flour to wheat, the exports for the season to date aggregate over 500,000 tons. Considerable wheat, owing to its relative cheapness, has been fed to stock. In futures, trading is only fair. The following are the reported sales made on to-day's Call Board:

Morning Session: Buyer 1891—100 tons, \$1.45 1/2; 300, \$1.45 1/4; 100, \$1.45 1/2. Buyer Season—400 tons, \$1.41 1/2; 300, \$1.41 1/4; 1600, \$1.41 1/2.

## Market Information.

## Produce Receipts.

Receipts of produce at this port for the week ending Feb. 17th, were as follows:

Flour, qr. sks.....	107,557	Middlings, sks....	1,272

## Cereals.

In its annual review of 1890 the *Times of India* summarizes the crop position as follows: Prospects of the coming crops are generally good. Taken all round, the monsoon was very favorable. We never remember to have seen such a heavy rice crop around Bombay. After the fields were cleared the ground was thick with grain that had been shaken out in harvesting, and the yield in straw seems especially good. Portions of Guzerat, such as Wadwan, Dholera, and neighboring districts have not had enough rain. The northwest provinces received a bountiful supply. Barsee and Sholapore have recently had a heavy fall, which will not do cotton any good. Rain has also fallen in the Berars, where it was not required for cotton.

H. Kains Jackson in London *Farmer*, Jan. 26: Blustering winds and rain have succeeded to the great frost that locked up land and water for a couple of months. The land has rested and should be better for its rest, and now demands active work from horses and men to be wrought into seeding condition. Undoubtedly the area planted with wheat this season must be reckoned very short, yet a fine spring and summer may well produce a good yield from fields that have not had their fertility washed out of them for two consecutive winters. The present improved prices of oats should stimulate the sowing of an increased breadth this spring. The special cold winter of the last half of the nineteenth century has had its influences nullified through an available supply of wheat being "visible" on board English ships. Millers and others have felt warranted in waiting for these coming stores, and in going on contentedly working up their mill stocks.

In answer to an inquiry the writer will state that farmers are as much if not more interested in having silver remonetized than are mine-owners. From 1868 to 1878 the price of wheat averaged at the port of New York \$1.32 1/4 a bushel, while from 1885 to

1888 the average was 87 9-10 cts per bushel. To illustrate still further the following table is given of the average prices at the port of New York:

	1868 to 1875.	1886 to 1888.
Corn, bushels.....	\$ 77 1/2	\$ 50 3-5
Wheat, bushels.....	1 32 1/2	87 9-10
Cotton, lb.....	15 1/2	10
Butter, lb.....	25	16
Cheese, lb.....	18 1/2	10

The price of silver from 1868 to 1875 continued at par \$1.29 1/2 per ounce, but from 1885 to 1888 the average price went below 80 cts an ounce. When the United States began in last year to purchase 4,500,000 ounces of silver per month, the price of silver advanced to over \$1 an ounce, and the price of wheat at the port of New York to over \$1.05 per bushel. Corn fetched more money, as did cotton, butter and cheese. Without going into details and giving exact figures we will state that with free coinage of silver, while mine-owners would be benefited about 30 per cent over to-day's prices, farmers would be benefited 25 per cent in the increased price of farm products. While mine-owners on their 52,000,000 ounces output of silver would get an increase of \$15,600,000 per year, farmers on wheat alone would get an increase of fully \$100,000,000 on their output of 400,000,000 bushels of wheat, while on corn a much larger sum would be realized, as they would also on cotton and dairy products.

General rains the past week, with well-distributed rains in the spring months, will give us the largest crop of wheat on record. The acreage seeded to wheat last year was about 2,550,000 acres, while this year our advices warrant the statement that it is fully 3,800,000 acres. The cool weather this winter caused the plant to stool out well and take strong root.

The local wheat market has held strong at full prices. The strength of the market is due to a freer export demand, owing to a slight advance in prices abroad. If there was an ample supply of disengaged spot tonnage in port, spot wheat would rule much higher; as it is, any advance in the wheat market abroad goes to ships at this port. In last month the ship ring commenced its usual tactics of decrying crop prospects so as to prevent ships from coming here for outward cargoes, which would mean, if successful, higher outward charters for wheat; but the rains this week have assured a large crop of cereals, which, if properly represented, will bring plenty of ships here to move the surplus grain. What our farmers want is cheap outward freights, cheap railroad freights to the East and cheap ship freights to the consumptive markets of the world. The high wheat charters this season should attract more ships to us. Oregon and Washington continue to send us wheat, but the receipts the past week from that source show a falling off.

The rains have allowed the bears on Call to hammer the barley market for futures, and in sympathy, spot barley has moved to lower figures. At the lower bids, sellers are more reserved, believing that the decline is temporary and that a recovery in prices must soon set in. The supply of barley in this State, Oregon and Washington is very light, while the consumption is large, and next season's barley will not be available much, if any, within four or five months. The Hawaiian Islands continue to draw freely. The demand from that source is for both the rolled and the grain.

Under continued free receipts and a stronger selling pressure, oats are weak at lower prices. As usual, when the market shades off, large buyers are offish, only buying freely when offered inducements by concessions. Advices report a large acreage seeded to oats.

Corn is fairly strong. The export inquiry for white is an important factor in keeping values up, as is the established fact that the supply in this State available to new crop season is light.

Rye and buckwheat are steady.

## Feedstuff.

Ground feed is slower, with holders shading prices. The stock of bran and middlings is large, owing to heavy receipts from Oregon and Washington, with the available supply up north still large. The rains naturally cause feeders to buy sparingly.

Hay is being shaded. Dealers and feeders buy as sparingly as possible. This they do owing to the rains assuring a large crop. The high prices that have ruled for hay for three years past will undoubtedly cause many fields of grain to be cut for hay. Indeed a large increase in the acreage seeded to grain was done for the purpose of cutting for hay. The feeding of hay in this State has doubled within the past five years, owing to more fruit farming.

## Live-stock.

The beef market exhibits more strength under lighter receipts and a free slaughtering demand. The poor scrubby stock appears to have been sold off. Mutton sheep are easier. Calves are firmer and fetch a slight advance. Hogs are easier. Fresh milk cows are about as heretofore reported. The market for dressed cattle is quoted as follows (to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent):

HOGS—On foot, light grain fed, 4 1/2@4 3/4c # lb.; dressed, 7@8 1/2c # lb.; heavy, 4 1/4@4 3/4c # lb.; dressed, 6 1/2@7 1/2c # lb. Stock hogs, 3 1/2@4c # lb. BEEF—Stall fed, 6 1/2@7c # lb.; grass fed, extra, 6@6 1/2c # lb.; first quality, 5 1/2@6c # lb.; second quality 4 1/2@5c # lb.; third quality, 3 1/2@4 1/2c # lb.; bulls and thin cows, 2@3c # lb. VEAL—Small, 8@9c # lb.; large, 6@7c. MUTTON—Wethers, 8@9c # lb.; ewes, 7 1/2@8 1/2c # lb.; spring lamb, 15@16c # lb.

## Fruits.

Common to fair apples are in buyers' favor, but choice to something extra bold firm, owing to limited supplies. Receipts continue free.

Rains and the weather in general are favorable to the fruit crops. With the average spring weather, the yield of all kinds will be large. The large majority of fruit-growers are giving more attention to systematic fruit-growing. This will cause dealers in this city to look for better fruits.

Dried fruits are more inquired after on Eastern orders, causing slightly higher bids for prunes, apples, grapes and figs. Peaches are reported slow, with buyers offish, but with a better market for the other kinds, peaches will also improve.

A strong systematic bear move is being made against raisins. There is really no occasion for it, unless it is a desire on the part of buyers to bear the

market so as to buy up the stock. It is many months before the new-crop season, and to meet trade requirements up to that time, the supply in this State is light.

The same kind of bearing noted in raisins is being done in oranges. Some so-called fruit-growing papers aid the bear movement by giving only unfavorable statistics so as to discourage growers and induce selling. There is nothing in the present situation to warrant a selling pressure for the better kinds possessed of good keeping qualities. The weather does not force maturing, and with slow ripening the market is more evenly fed. Heavy shipments are being made to Eastern distributive centers.

With clearing skies, there is a better inquiry for oranges. While we quote Navel's slightly lower, yet sales are made in a small way at last week's quotations, or 25 cents a box over to-day's quoted prices. Limes are scarce and higher.

## Vegetables.

Garden truck is making good progress with more favorable growing weather. Asparagus is coming in more freely, as is lettuce and other early vegetables. With next month the market will be well supplied with all kinds of early vegetables.

Onions are in light supply and higher under a fair demand. Table onions are, as yet, in light supply. There will be a large increase this year in the acreage devoted to onions in California, Oregon and Washington.

Potatoes are higher. Shipments overland in last month were quite large. Rains the past week interrupted receipts, which was taken advantage of by a few speculative dealers here to send prices up. The warehouse stock in this city is quite large, while the available supply at many shipping points is said to be large. The better prices will naturally induce heavy shipments from Oregon and Washington.

Seasonable garden truck (asparagus, etc.) is on the down-grade, while cabbage and cauliflower are higher. There is a good demand for cabbage for shipment both Eastward by rail and up north by sea. It is claimed that the market will go higher.

## Miscellaneous.

From the *Commercial News* of Feb. 18th the following summary of tonnage movement is compiled:

On the way to	1891.	1890.
San Francisco.....	300,989	187,858
San Diego.....	10,934	13,127
San Pedro.....	6,433	3,783
Oregon.....	30,173	26,700
Puget Sound.....	14,154	16,692
Totals.....	362,683	248,160

In port at

San Francisco, disengaged.....	7,000	9,639
" engaged for wheat.....	44,652	73,421
San Diego.....	3,451	
San Pedro.....		3,365
Columbia River.....	10,174	
Puget Sound.....		
Totals.....	65,277	80,425

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to Feb. 13, 1891, the following are the exports from this port:

Wheat, cts.....	7,710,489	8,444,052
Flour, bbls.....	726,335	718,864
Barley.....	201,686	874,055

Poultry is fairly firm. The action of the supervisors of this city in passing an ordinance, forbidding the selling of wild ducks and English snipes in this city from March 1 to September 1 of each year will have a beneficial influence on the poultry market. The heavy supply of wild ducks always has a bad effect on the poultry market.

Honey is in light supply. The demand is light. Opinions differ regarding the yield this year.

A large dealer in beans has been and is still systematically bearing the bean market. While doing this, openly, he is, through others, quietly buying all he can get at lower prices. The demand East will soon increase, and as the supply here is light, there does not appear to be any valid reason why holders should press sales.

Hops are reported unchanged. To buy gilt-edged, full prices have to be paid. In wools there is absolutely nothing new to report. Scourers are about the only buyers.

A better inquiry, since the rains, is reported for grass seed.

Overland shipments in last month over the Southern Pacific railroad route aggregate as follows, in pounds: Beans, 2,849,625; brandy, gals, 69,750; wine, gals, 1,028,738; fruits, dried, 2,007,350; citrus, 672,630; deciduous, 22,900; canned fruits, 942,710; honey, 62,950; hops, 86,660; potatoes, 1,759,670; raisins, 1,329,740; vegetables, 664,150 wool, grease, 1,228,420, pulled, 227,190, scoured 497,160.

Exports by sea the past week aggregate as follows: Flour, bbls, Tomaco, 80; Guayaquil, 980; Panama, 655; Mexico, 490; Central America, 4225; Liverpool, 12,005; China, 23,745; Japan, 1577; Hilo, 375; Wheat, cts, Liverpool, 14,759; Dunkirk, 86,733; Cork, 112,188. Beans, lbs, Panama, 1534; Mexico, 10,000; China, 8059; Hilo, 5821; Hong Kong, 29,800. Wine, gals, Mexico 1124; Central America, 3407; Brooklyn, 300; Philadelphia, 1250; Buffalo, 481; New York, 49,562; Liverpool, 1457; Victoria, 718. Raisins, bxs, Mexico, 883; Central America, 51. Barley, rolled, cts, Hilo, 1792. Corn, cts, Central America, 1810. Brandy, gals, New York, 1647; Liverpool, 9597. Hay, bbls, Hilo, 725. Dried fruits, lbs, Scotland, 380. Canned fruits, cs, China, 153. Wool, lbs, Liverpool, 45,804. Cotton, lbs, Liverpool, 50,719. Bran, sks, Hilo, 2110. Honey, cs, Liverpool 407. Sugar, lbs, Japan, 192,344; Hong Kong, 6200.

## "Worth Thrice Its Cost."

A fruit-grower of Tulare county writes as follows: I find the book "California Fruits and How to Grow Them" worth thrice its cost to any one who is raising fruit trees and vines.

He sends a dozen names of fruit-planters in his neighborhood who would be likely to purchase the work. Such commendation and interest are very encouraging.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

FOR SALE!

PINOLITO OLIVE RANCH!!!

FORTY-SIX ACRES OF HILL LAND

In the Town of Auburn, Placer Co.

Red soil, superimposed upon upturned, friable, decomposing slate, yielding iron and alumina, thus furnishing a soil which, as Prof. Hilgard said after his analysis, will retain moisture, will not require irrigation, and will not allow the vegetable mold to leech away; thus suited to the growth of fruit trees, especially the olive, as has been demonstrated both by the remarkable growth of the tree and the yield and the quality of oil.

It is situated only 15 minutes walk from Auburn Station—the C. P. R. R. passes along one side—and is a less distance from the Court House. Thirty acres improved and planted to olives, set at long distances for permanent growth, and other fruits planted between the rows for temporary profits, mostly peaches of three best varieties, ripening in succession; prunes, mostly Petite; plums of several varieties, as Kelsey, Japan, Shropshire Damson, etc.; figs of several best varieties; a few apples, nectarines, blackberries, etc. Two acres of table and raisin grapes, never irrigated, the vines remarkably vigorous and in full bearing. The trees, especially the 1500 olive, have all been planted with regard to permanency. About one-half of them have an orchard growth of seven years; fruited last year 300 pounds, this year nearly one ton. They are mostly Mission and Picholine, with a few trees of other choice varieties. Two crops of the olives have been pressed. The yield has been, for the first press, 14 per cent of very clear delicious table oil, and four per cent from the second press—the Picholine yielding this, of a peculiarly clear, nutty oil.

There is on the ranch a few acres of grain sown for hay; two acres of well-set alfalfa, below the Auburn ditch, which crosses one corner of the property; also a small house of four rooms and a kitchen; a well of good water; a small barn; a strong, permanent spring of soft, cold water, which wells up through the slate; a two-inch iron pipe connects the spring with an iron-bound 20,000-gallon tank, situated on a beautiful pine clad hill, 40 feet above the spring, a point which overlooks the town and gives very charming distant views, and is one of the most lovely sites for a residence to be found. The water is pumped to the tank by a duplex pump; the power, a four-horse steam engine, which furnishes power sufficient to pump, saw wood, run an olive crusher and do all needed shop work.

The land is all suited to fruit, excepting along a rocky ridge, which furnishes three very desirable residence sites, and the olive, set promiscuously, thrives finely among the rocks. The property can be conveniently divided along a sag which separates two of the big knobs, and water from the spring can be pumped to each of them.

This desirable property is now offered for sale for less than the improvements cost. The land is fenced, the title good and unencumbered. It is connected by a roadway, which is one of the improvements made, with one of the principal streets of Auburn.

The sale will convey the entire plant, furniture in the house, all utensils, etc. If sold before April 1st the sale will include the coming crop. If later, the crop will be reserved, unless otherwise by special agreement. If desired, one-half the purchase money can remain five years, secured by mortgage at eight per cent. For price and any further information desired, address

Penryn, Placer County, Cal.

**WHY ARE SOME PEOPLE ALWAYS LATE?**—They never look ahead nor think. People have been known to wait till planting season, run to the grocery for their seeds, and then repent over it for 12 months, rather than stop and think what they will want for the garden. If it is Flower or Vegetable Seeds, Plants, Bulbs, or anything in this line, MAKE NO MISTAKE this year, but send 10 cents for VICK'S FLORAL GUIDE, deduct the 10 cents from first order, it costs nothing. This pioneer catalogue contains 3 colored plates. \$200 in cash premiums to those sending club orders. \$1000 cash prizes at one of the State Fairs. Grand offer, chance for all. Made in different shape from ever before; 100 pages 8½x10½ inches. JAMES VICK, SEEDSMAN, Rochester, N. Y.

## CORRESPONDENCE

Correspondents are alone responsible for their opinions.

## A Colony in Capay.

EDITORS PRESS:—A year ago a couple of gentlemen from Oakland, wishing to buy a piece of land and make a fruit farm of it, came to this valley and were very much pleased with it. When they returned they found friends that wanted land also. They then came up and selected a tract of 220 acres of hill land lying half-way up the valley, which they bought and divided among themselves.

By this time there were so many wanting land that there was not enough to go round. It was then suggested that they organize a stock company and buy a larger tract of land. The result was that in June following the Western Co-operative Colonization and Improvement Co. was incorporated with a capital of \$100,000. They then bought 400 acres of valley land joining the above tract. This was soon all sold and the company has lately added 200 acres more to it. This is nearly all sold. The company is selling all of its lands on five years' time, provided each year's interest is paid in advance and the land is improved. This enables people of small means to get a nice home. The company does the work for the colonists that do not live here and gives work to all those living here.

There are being put out here about 40,000 trees and 20,000 vines. This includes 800 oranges and lemons. There are orange trees growing in the valley which do well and bear good crops. The largest number of the trees to be put out are peaches and apricots for early shipment. This valley is claimed to be the earliest section in the State. Besides the planting in the colony, there have been some over 200 acres set out to trees and vines. There are here at present 15 colonists besides children. There has been some building done, and more will be done this spring and summer.

We do not expect to have much of a town here, but expect to have quite a colony here and a lovely place to live. Capay valley is located about 90 miles by railroad northeast of San Francisco. It is a beautiful valley, 20 miles in length and an average width of two and one-half miles. Cache creek, which is the outlet of Clear Lake, flows the full length of it and will furnish a large amount of water for irrigation if it is necessary.

Irrigation is practiced but a very little here, as all deciduous fruits do well without it. The Clear Lake division of the S. P. runs through the valley.

BERT L. HICKOK.

Tancred Colony, Capay Valley.

## Wooden Water Pipes.

EDITORS PRESS:—J. W. C., of El Dorado Co., asks about water logs. I have had an experience of over 40 years with them.

Ordinarily, pine will outlast spruce. No "coating" has yet been discovered of much value. Wood to be benefited by any preservative substance under ground, must be filled—saturated with it. Often these "coatings" are a positive detriment.

Redwood is the best. Easily rived, easily worked and durable. We cut them post length, so that what will not do for water pipes will go for posts. I have often selected them from piles of posts.

No cement is needed at the joints. One end is bored out large, the other tenoned to fit and driven water tight.

There is some difficulty in making large pipes of wood. I have been in pursuit for several months of an auger to make four-inch pipes. It is made of gas pipe 10 or 12 feet long, and should clear itself in making the whole joint, leaving a core in the center. I should be much obliged to any reader of the PRESS who would give me the required information. There is one in San Francisco, but the owner does not know who made it, where he got it, or what it cost. He makes pipes for sale.

Wooden pipes have some advantages over metallic. Where good material is at hand they are cheaper. Nearly if not all the work can be done upon the farm. Repairs and alterations are easily made without the aid of a plumber, which most will appreciate. They are less affected by heat or frost, and keep cleaner inside than metallic pipes which choke up with rust and sediment, and deliver the water pure and safe.

D. M. LOCKE.

Santa Cruz.

## Who Will Help in This Matter?

EDITORS PRESS:—I was glad to see in your issue of Feb. 7th that part of the report of the Secretary of Agriculture relating to California. It ought to show to the farmers of our State that the Department is doing all in its power to place the claims of the State where they belong and is anxious and willing to do all it can to represent the agricultural resources of our community. But I must say that we get little response to all the exertions we make to obtain reliable information. I have been State Statistical Agent now for six years and have not been able to organize such a corps of county correspondents as I could wish to fully repre-

sent the manifold resources of our glorious State, destined, as I believe it to be, to become the first in our Union. I have tried to obtain it through our county assessors, but from all the counties in the State I obtained about a dozen responses, yet the labor and trouble is so insignificant. The circulars are sent to the correspondents each month with the queries plainly printed under a return envelope addressed to me, and five minutes' work will fill them out, yet the majority of our assessors are not even willing to take this slight trouble.

As your paper reaches all the leading farmers and fruit-growers of the State, I have thought that an appeal through its columns would perhaps secure such a corps of contributors as we need. Will not some enterprising farmer and fruit-grower in each county who is willing to take this slight labor upon himself give me his or her address, so that I can send the circular every month? As remarked before, it will only be the labor of a few minutes to fill them out, inclose them in a free envelope, sent to them and return by next mail. The trouble is very slight, and the advantages accruing to the State by being truthfully represented in the reports of the Department should be apparent to every one. Besides, it entitles the correspondents to the distribution of new and valuable seeds and plants, and such documents as are issued from time to time by the Department.

I wish to hear from every county in the State. Is there not enterprise enough in a few citizens of each to send me their address? I shall be glad to obtain any assistance in representing the State as it should be. Let me hope that this appeal will not be in vain, and that among the thousands of intelligent farmers whom the RURAL PRESS reaches, enough will be found to respond to it.

GEORGE HUSMANN,

Napa Cal.

S. S. Agent, Dept. of Agr.

## THE APIARY.

## Honey-Houses.

EDITORS PRESS:—I think that all persons who contemplate going into the bee business to any extent should have a good honey-house and storeroom combined, where they may keep their comb and extracted honey, empty hives, frames, sections and implements used in an apiary.

One of the best honey-houses I ever saw belonged to Mr. Adam Warner of Clarksburg, Yolo county, Cal. It was a two-story building, size, about 12x30; the outside boarded with rustic, the inside lined with flooring, tongue and groove, which made a house perfectly bee-tight. The cost, he informed me, was about \$300. The upstairs part of the building he used for a workshop, where he put his hives together and one-piece sections; the lower part of the building was divided into two rooms; one room was for storing honey and preparing it for market, the other a kind of a wax-room where he melted his wax and where he intended making his comb foundation.

He had quite a novel arrangement for keeping ants out of the honey-house, which he assured me worked first-rate.

He had the foundation posts of the building setting in small cans of tar. (He had taken an ordinary five-gallon oil can and cut it off about four inches from the bottom, making a can almost four inches deep.) The building stood off of the ground about two feet; eighteen inches of that distance was a mason work, and the other six inches foundation posts, which rested in cans of tar.

I asked him if the ants would not crawl over the tar after it became hardened with the influence of the weather, and he informed me that they would not; he said that once a month he stirred the tar up a little with a stick.

I think it is the smell of the tar, more than their fear of crawling over it, that keeps them from crossing.

I looked well while I was there to see if I could find any ants attempting to cross it, but I did not notice any.

## Honey Plants of Sacramento Valley.

The bee pasturage in the Sacramento valley is getting better every year, as more land is being set to alfalfa and fruit.

I find that the principal honey plants of Sacramento, Yolo and adjoining valley counties are wild grape, wild rose, swamp willow, alfalfa, clover, Spanish needle, sycamore, several different varieties of mints, fruit bloom, corn, wild chloory, button bush, white button willow and Canada thistle.

This last, the Canada thistle, has got a pretty good start in that country in the pastures and waste pieces of land. Canada thistles are excellent honey plants.

The levees in that section of the country have a thickest growth of alfalfa on both sides, which, it is claimed by some, help to strengthen the levees against the high waters in the winter-time, while by others it is claimed that growing alfalfa on the sides of the levees is a nuisance and a damage; that the gophers tunnel the levee searching for the roots of the alfalfa, and thus undermine it and make it insecure against the high waters.

Last winter, and until late in the spring, the bee pasturage was flooded with water and bees did not do very well this last season.

Mr. Warner has his apiaries elevated from

the ground from 8 to 12 feet. He has a good strong platform made, which is about six feet wide at the top. He places about 50 hives on a platform. All the hives set side by side and all are painted red, and he tells me that the bees never have any trouble in discerning or finding their right hive. Underneath the platform I saw where he had taken off a great number of combs, where the bees, after filling their hives, had commenced building out in the open air. Colonies had built side by side, and I suppose on warm days the bees of one colony must have surely intermixed with the bees of another.

If bees were inclined to rob in that location like they do in some places, the bee-keeper would have endless trouble by the colonies building out in the open air, but Mr. Warner informs me that he has never been troubled by bees robbing. They always seem to have sufficient pasturage to keep them out of mischief.

I asked him if he did not lose a good many queens by having the hives set so close together and he informed me that he rarely if ever lost a queen that way.

All his hives are the Harbison style, and open at the top and back. We opened several; they all seemed to have an abundance of bees and honey. All Mr. Warner's apiaries were surrounded by water until late in the season this year, and as a consequence a great many bees were lost in the water.

Mr. Warner keeps from 250 to 300 stands of bees, all of them elevated from 8 to 12 feet above the ground.

S. L. WATKINS.

Grizzly Flats, Cal.

## Bee Notes.

EDITORS PRESS:—Gleanings in Bee Culture recently stated that California was a good country for bee men to emigrate from, because a Mr. Trickley had advised them that coal oil was \$2.50 a can, lumber \$50 a M., wages \$5 a day, etc. I sent Mr. Root a retail price-list and market reports showing him that Trickley had tricked him, and at the same time regretting that wages were not \$5 a day. Instead of acknowledging the corn, Root writes me that I must "remember that Trickley lives away out of civilization, the eastern slope of the Rockies" (Nevada). I wonder if "Uncle Moses" has ever heard that touching ballad: "Where was Moses when the light went out?" California offers advantages to the bee-keeper not possessed by any other portion of the United States. The past season the fruit and honey crop of all the East was a dismal failure—California excelled herself. This winter the Eastern bee-man has had to borrow money to buy sugar to feed his starving bees, while the California bee-keeper has not only not needed to feed, but on examination will find that the bees are full of supplies; in fact don't seem to have drawn on their supplies at all, as almost every day so far this winter, the bees have gathered from some source sufficient for their needs, and unless the weather changes, a portion of their supplies will have to be extracted next spring to make room for the queen's egg-laying. Contrast this with the Eastern man's 20 pounds of honey to a hive, for the season, with our 100 to 400 pounds. Their expensive hive and cellar, our absence of the same; their heavy expense for feed, our excess of supplies, and where does the Eastern bee-man stand? The only advantage he has had over us has been the fact that there was no regular beehive factory on this coast, and in consequence all of our supplies had to come from the East at an added cost of 50 per cent for freight, to say nothing of the loss from delay. To remedy this I called the attention of Mr. S. F. Woodworth, the proprietor of the Clipper Gap box factory, Placer Co., to the wants of the Pacific Coast bee-men, and he promised me he would think of it. To think is evidently to act with him, as Mr. Root of Medina, O., has just written me: "Mr. Woodworth of Clipper Gap called yesterday and ordered machinery for the manufacture of bee supplies, so I suppose you will be placing your future orders with him." This handicap removed and cheap supplies promptly furnished at Eastern prices, the California bee-man can make honey at a profit for one-half the price required by the Eastern apiarian.

## POULTRY YARD.

## Poultry Talk.

EDITORS PRESS:—The season up to date at least and with fair promise of its continuance for some time to come, has been somewhat unfortunate for poultry raisers in this locality; and so far as I have been able to learn, most other localities as well. It would seem to furnish a new experience almost in the raising of fowls. The general prevalence of roup and diphtheria in their various forms has called forth all efforts to arrest and cure these deadly destroyers, but as usual in large flocks, the loss has been considerable; in fact I think greater than has been known for many years, while in cases where the number of fowls kept were smaller as for family use simply and for the sale of a few surplus eggs and fowls, these diseases have made themselves sensibly felt. It

has been principally, however, among young and half-grown fowls, not confining itself, however, to them solely, but showing itself among the older and fully grown fowls, and in spite of all known remedies and preventives, apparently ruining its course. Among my own fowls I do not think that in any case where either of these has shown itself, I have been able to effect a cure, as the development of the disease has been so rapid as to take such strong hold of the system as to defy all efforts in the direction of cure, and the result has been speedy death and burial. I am afraid almost to say how many chicks and even fully grown young fowls I have lost and others seem to have lost in like proportion. Many come and many write to know what can be done to cure their fowls already sick, and to stop the spread of it among their well ones, but there seems to be no stop to it until the weather becomes milder, warm days and sunshine, with, of course, all that one can do in the use of remedies and preventives will, I think, end it.

Some of my inquiring visitors were surprised that I, whom they looked on as authority in the matter of keeping fowls in health and condition, should have sick and dead fowls from causes which they supposed, from my long experience and reputation as a successful poultry raiser, I should be able to control and avoid. It was a sort of case of "physician heal thyself," but even physicians' families and physicians' poultry-yards are not exempt, even with all care and watchfulness, from the common ills of humanity or of poultry, and they can only do as they advise others to do in like cases, and trust to a higher power than their own. No remedies are infallible, and no care or watchfulness certain of success, but none the less should they be observed or made intelligent use of, for a portion of the yard is almost any case, by the persistent efforts and untiring watchfulness of the owner, may be saved and not all of them lost, as would almost certainly be the case were the keeper indifferent or discouraged.

The long continuance of the cold foggy spell during the months of December and January was a time peculiarly favorable to the development of these diseases among fowls and in many cases would seem to have infected the entire flock, making the usual remedies seemingly almost of no avail, but none the less should one continue to use them or any others that they think may lead to a cure. I know of nothing better than a free use of lime in their water and in their quarters, which should be kept scrupulously clean and well aired, changing the water at least twice a day, and oftener if you like, as it becomes unfit for use from the contagious matter.

One cannot always know when a fowl is sick until it is sick enough and has been so long enough to cause harm to others, or it would be easier to arrest the spread of the disease. The sick ones, however, should as soon as they are known to be infected be immediately removed from the flock and given warm, well-aired quarters and treated with sulphate of potash, or what I find to be just as effective, unsalted lime in their water freely for the diphtheria patients and a free use of sulphur for the roup. I do not know of anything better or more effective for a cure than these two simple but really powerful agents—"sure cures," to the contrary notwithstanding.

An acquaintance with whom I was comparing notes said: "I've experimented a heap," and I suppose the fact of the matter is with fowls as with humans, a great deal depends on the faithfulness and effectiveness of the nurse, probably not less than on the proper use of remedies.

This season has gone far in its effects to revolutionize somewhat my ideas in the matter of hen-house, and I incline more to the idea of having them as open as one can and avoid draughts on the fowls. How to do this I have not as yet settled in my own mind. In passing not long since by the place of a neighbor, a new settler, I noticed that his poultry-house had only corner-posts, roosts and roof, and on remarking to him that I thought it rather open, he replied: "I've never had healthier-looking fowls or had fowls lay better than these have done. I had not time, or in fact material to complete the house, and it had to go as it is." In my own case, my brightest-looking fowls are some which have insisted on roosting in trees or on fences.

As to eggs I can't say, but am inclined to think that one gets more eggs from yarded and housed fowls, but at the expense of greater care and more labor. It seems to be a fact among poultry-raisers that fowls yarded will yield 20 per cent more eggs than fowls ranging at large. It may consist in the fact that yarded fowls have certain known places in which to lay, while the free ones may lay where one does not find the eggs always. This is during the warm season, however, but in the colder months warmly housed fowls will undoubtedly lead in the matter of eggs.

As to houses in which to house poultry, while I don't altogether fall in with the open-all-around theory, yet I would approach as near to it as necessary to insure pure fresh air for the fowls, but without having it blow directly through the house on a line with the inmates. This object could be obtained by having, as I have often seen, one entire side of the house finished in lattice-work, when if all other sides are closed the wind cannot enter with sufficient force to cause a draught, as the air within being somewhat confined will present considerable resistance, enough, in fact, to

keep in check an ordinary wind, but this style seems to present some objectionable features, as for instance in the case of an unusual wind, of which we have more or less at all seasons of the year; the fowls would be subjected to discomfort and possible sickness, colds which often end in roup or diphtheria, or rheumatism or some other derangement of the system which is very apt to end fatally. Therefore a medium shelter seems necessary and one would, I think, find this in houses constructed in the manner I will describe in my next letter.

Lodi.

T. B. GÖFFROY.

### Poultry in San Diego County.

A very practical article, read at the County Horticultural Convention, held at San Diego, Feb. 3d and 4th, was that of Mrs. C. F. Thomas of Nestor, entitled "Poultry Raising." The National City Record says: Mrs. Thomas and her husband are both adepts in the business. After reading the paper, she answered quite a number of questions, one of which brought out the fact that some who start in the business do not succeed because they are afraid of the little necessary work it takes to make a success. She said that others went into the business too largely. They didn't commence in a small way and work up as they should. She stated further that too many chickens together would not do well. She noticed that when her flock reached over 100 the ratio of profit decreased as the number of chickens increased. The article is as follows:

The few remarks I shall make are from careful observation and the actual experience of several years. The keeping of poultry for profit means, in the first case, careful watching of the fowls and work. From my observation many persons aspire or wish to be doctors, lawyers, singers, public readers, fruit-growers, fowl-keepers, and many have other desires, but make very little effort to acquire their objects. One of the conditions most needed is work. If you wish to keep poultry for profit, as I remarked before, it means care and work. My experience has been the keeping of fowls for the production of eggs for market. For a nest for hatching we use an oil can with one end and one side cut out, and place the cut side down on the ground, then put in an inch of wood ashes, with soft straw on top. We have used this kind of nest for several years, and are quite satisfied with it.

We have never found mites in such a nest. Of course we clean the nest and use new ashes before using it a second time. If we have a hen that is a little unruly and we wish to set her, we use eggs for a day or two until she becomes satisfied with her nest, then we exchange the eggs for those we wish to hatch. We sprinkle water over the eggs when we set the hen, and then once a week until the day before the eggs hatch, when we immerse them in tepid water. We keep wheat and water always in the nest, and we have found it a very good plan to let the hen out in the later part of the afternoon, then she will return to her nest in proper time. If we wish to change hens that desire to set, we shut them up in a box or yard and allow them to fast, without food or water for three days, then give them sufficient food and water for one meal; then allow them to fast three days more. We have used this means for several years with success, and are satisfied that the hens lay sooner after this treatment. When the chickens hatch, put the hen and chickens in a good-sized box and set it in the sun for one day, after which the hen is put in a coop or box and the chickens allowed to run in and out at will. After the first day, feed cooked cornmeal and the warm breakfast, such as we prepare for all the fowls, also fresh water. Cracked corn and wheat as soon as the chickens will eat it. We have very good success with our little chickens. I use a feeding net for little chickens; the food is not wasted or trampled upon. Take a board three or four inches wide and a foot long, then take an inch and a quarter wire netting, make a half-circle by fastening to the sides of the board. The soft food is put in at the ends. I have known persons to recommend obtaining something from nothing in the feeding of hens. I have not been successful with such a method.

We give our fowls a warm breakfast every day in the year, and all the whole wheat they wish to eat from morning until night.

We feed red pepper, ground bone and charcoal, supply ground shells, are careful to supply fresh water and keep the water vessels clean.

During the last twelve months we sold \$200 worth of eggs at the market price, not including the eggs consumed by the family nor the eggs used for setting. My flock of hens laid in the last twelve months 11,522 eggs. In March they laid 1720. In October, 545, this being the smallest number laid in any month. The flock consists of Brown Leghorns. Over a year ago I endeavored to obtain a pure Brown Leghorn cockerel to improve my stock. I was unable to obtain such a cockerel in San Diego county. I failed to find it at the Escondido Fair of '89. I wrote to my brother at San Bernardino, asking him to obtain for me a pure Brown Leghorn cockerel and pullet, but was unable to find what I wished. A friend, who was interested, was going to Los Angeles, wishing to obtain some pure fowls for his own use. This friend did not obtain what was desired until he visited the Los Angeles Fair and saw Mr. Thurston's pure Brown Leghorn fowls on exhibi-

tion. Mr. Thurston received the first premium for pure Brown Leghorns.

I purchased from him one of the pullets for which he received the premium. I also purchased from him a cockerel of another family from the pullet.

Mr. Thurston keeps only pure Brown Leghorns. Last season, after setting all the eggs, from this pure stock, that I wished to hatch, I sold since last May \$30 worth of pure Brown Leghorn eggs and cockerels. I am selling eggs and cockerels to my neighbors. Sold eight pure fowl for the Otay mesa, also sold cockerels in National City, San Diego and Potrero. Shipped four cockerels to Vista to-day. We have now forty pure chickens hatched this winter. We have had but one chicken die this winter. The Brown Leghorns are excellent layers, as I have proven. They are good foragers, non-setters. They are a small fowl and require but little food to sustain them and are not inclined to fatten.

## THE FIELD.

### Castor Bean Growing.

We have so many inquiries about the growth of this crop that we republish the following essay, prepared some years ago by Geo. H. Peck, of El Monte, Los Angeles county.

My farm is on dry land; soil, a light-colored sandy loam. A good crop on such land is about six hundred pounds to the acre; on damp land, one thousand pounds and upward; on dry land irrigated and properly cultivated, the same. Dry land, over-irrigated and not suitably cultivated, yields no more than dry land without irrigation. Further: as excessive irrigation causes a heavy growth of stalk instead of beans, it may not produce as much as dry land seasonably and suitably cultivated.

If properly managed, the castor bean is more certain than most crops; gives small chance for loss, a good margin for profit, and is easily worked. It is an exceedingly good crop for farmers who have boys ten years old and upward, for they make good pickers, and picking is the heaviest and the only labor expense that the producer should be subject to.

PREPARING THE GROUND.—It should be plowed early and deep; the earlier and the deeper the better. If the plow leaves the land rough, fill the vacancies with the harrow or drag; otherwise, too much heat and air being admitted, it will dry out. Check out the rows six feet apart; leave avenues nine—or, if it be damp land, ten—feet wide, for wagons to pass through while gathering. When 25 acres or less are planted, make four rows; 25 to 75 acres, six; and on a larger area, eight rows. The acres planted should always be according to the number of pickers which can be kept constantly picking. Here is often a great and unnecessary loss; for if the crop be sufficient to employ pickers for only four days, and it becomes necessary to make work for them four more days until the next pick, picking will certainly cost two cents when it should be only about one cent per pound. About 80 acres on damp and 100 acres on up land will keep eight pickers and two teams constantly at work.

PREPARING THE SEED.—Soak for a few hours, until the chit is well swollen. This is known by opening the bean; when sufficiently soaked, the embryo leaf will be very visible inside. Plant as soon as the ground underneath is warm, and danger from heavy frost is past—say during the last of March or to the middle of April—three seeds to the hill; four or five inches deep on upland so that the beans will be sure to be in moisture during the germinating period. Deep planting is not so necessary in damp land; but planting soaked beans shallow, in dry earth, is labor lost.

On these points Mr. F. R. Totman, an experienced castor bean raiser at Marysville, says:

"The ground should be quite warm to have the seed come quickly, otherwise they will be in the ground a month or six weeks. To hasten their coming up, I soak the seed thirty or forty hours, then put them into a sack and bury them in fresh horse manure for as many hours longer, or until they begin to sprout. Then plant; and if the ground is moist on top, cover lightly with the foot; if dry, cover deeper, so the seed may have moisture as well as heat from the sun. Not over three pounds of seed are required to the acre. Two teams—one to strike furrows and one to cover—and one dropper, will plant ten acres a day. The rows, especially on each side of the wagon spaces, should be perfectly straight. When two or three inches high, pull out all but the strongest plant, being careful not to disturb it. One hand should trim eight to ten acres a day.

CULTIVATION.—Now is the time to cultivate, which may be done in the same manner as corn. A turning plow may do in the northern part of the State, or on damp land. In Los Angeles and other southern counties, using the turning plow after the warm weather has set in dries out the uplands; consequently underground stirring implements are required, such as the bull-tongue plow and cultivator with diamond points. The Texas sweeps is a most desirable implement for accomplishing much work, destroying weeds, pulverizing and leaving the ground smooth, and with but little loss of moisture. Three men with hoes can not do as much or as good work as this. A good crop is not ob-

tainable except by early cultivation and keeping down the weeds.

VOLUNTEER CROPS.—Plow early and deep. Keep down the weeds with harrow. Before the beans begin to appear, which will be early in March, strike out the rows and cross-check. Hills should be six feet apart in the row, and rows the same distance—except wagon rows, which should be from eight to ten feet wide, as before represented, and according to the nature of the land and the width of the wagon. If any hills fail, drop in seed with a spade. One hand with a spade will plant five acres a day. After two volunteer seasons, new seed should be planted.

IRRIGATING should be done when the spikes begin to form, and cultivation should follow. Some say that between the first and second pick is the best time, but as this is the picking season, there is but little time to cultivate. I prefer the former rule. Late irrigation retards the ripening of the subsequent picks much—a great item.

PICKERS AND PICKINGS.—Chinamen, Indians and 10 to 15 year old boys are good. Steady and intelligent white labor is the best, and I engage the same for the picking season. If the season be good, it will be over by Oct. 15; but cold, foggy weather, or late irrigation, may prolong the growing and ripening of the spikes to December. A small-sized butcher knife is best adapted for picking. From the last of July to middle of August, according to the season and amount of moisture in the plants the spikes show that they are fit to pick, by the bolls beginning to open and by changing from blue to green. The former is the safer sign, and shows that the bean is ripe and filled. Picking the bean before it is filled out is unprofitable. Two pickers and one team is enough for 25 acres; six pickers, two teams, and a man at the popping-ground, for 50 to 75 acres. The spikes are tossed into the wagon. If the supply of teams be short, baskets will supply the pickers while the teams are discharging. If beans, when ready, be not quickly removed, they will be lost.

The first three picks are about eight days apart; the intervals are more uncertain after this. The chief profit is in the long spikes of the first three picks. It will pay to pick as long as spikes form, which is until frost kills the plants.

Stalks should be cut as soon as possible after the pickings are over, as they are tough when dry. A heavy plantation hoe is a good cutter. One hand should cut at least four acres a day.

THE POPPING GROUND should be at the center of the end of the field. Smooth off a piece of ground and harden it like a brickyard. Its area should be at least one acre for each 50 planted. Spread the spikes over it about two inches deep, leaving a popping margin of about 20 feet; turn daily. The sun pops out the beans. In the long, hot days no turning is necessary. The best time to prepare the popping-ground is in the beginning of winter. Then the only summer work necessary will be to sweep off the dried grass.

CLEANING may be done by the pickers during the intervals of the picks. A No. 3 or 4 fanning-mill, zinc screen with holes for the beans to go through, a hand-barrow and scoop-shovel, are necessary. Put down a platform about 15 feet long, of the width of the mill, and fasten the latter on it; also, put a platform at the side of the mill, to feed from. Put No. 3 screen at the top; next below, the zinc, fastened to and above No. 1; then No. 4. The holes in the zinc sieves should be just large enough to let the beans through easily lengthwise. Four men should clean three tons a day. As soon as the beans are popped, and not before, remove the husks with a hay-rake, follow with a fine iron rake, and finish by passing a broom over the surface of the beans. By observing the above particulars, only one fanning is necessary. Beans should be fanned and sacked as soon as possible. Exposure to the sun causes great loss in weight.

#### General Remarks.

The castor bean of commerce is an annual, but becomes perennial in districts where there are no frosts. It is not attacked by the grasshopper after it has attained the second leaf. A single person will take care of from 10 to 15 acres; three neighbors unitedly can as easily manage 100 acres, and save time and expense by using the same popping-ground and fanning-mill, and nearly double the profits.

Many object to castor beans because they are so difficult to eradicate. They will not trouble if followed with small grain. The bean will retain its vitality in the ground for years, and if the grain which followed the castor bean be followed with potatoes or corn, castor bean plants will appear, but they are easily eradicated if taken in season.

Some say that if the old stath be cut two or three inches above the ground, shoots will spring up, and produce spikes and picks, as from the planted crop. An old producer's experiments show that if after the final pick the stalks be cut on to the popping-ground, they will sell a hundred pounds or more to the acre.

Parties should not begin this industry on a large scale, but moderately, and calculate to remain in it. Experience will bring economy and ease in management. A beginner will be apt to fail at any business unless he will do it the justice to study the details of its culture and management in advance. Castor-bean raising is a business of details, and is no exception to this rule. I know many castor-bean

producers. Failures have been very exceptional, and those that occurred, so far as I could see, were due to defective management.

Farmers who have a taste for details generally like the business. Any beginner who will follow the above instructions must, in my opinion, succeed. They are based on years of experience.

Concerning the market for castor beans, we are assured that there is a ready market for all that are likely to be grown. The price for last year's crop was 2½¢ per lb. for clean, well-matured beans delivered at the mill of the Pacific Oil and Lead Works in S. F. It is not at all likely that the price will go below that figure, and is by no means improbable that it may bring a trifle more. The Pacific Oil and Lead Works do not contract. They will furnish seed at 3½¢ per lb. net cash.

## FLORIST AND GARDENER.

### The Toyon.

Heteromeles Arbutifolia.

EDITORS PRESS:—I was much amused last week by the description given me of the above plant by my pupils, as well as by the names the plant was called. It was known to them as Pigeon Berry, Red Berry, Christmas Berry, Holly, Red Holly, Thorn Apple, and sundry others more or less applicable. The berry-laden branches figure quite conspicuously in Christmas festivities in many parts of our State, so the name "Christmas Berry" would be appropriate enough but for the native name, known generally among old Californians, Toyon. We have too many plants bearing red berries to accept "Red Berry," and we have a plant (*Berberis aquifolium*) too closely resembling some of the hollies, though bearing bluish berries instead of red, to call it a "Holly."

The descriptions given of the plant were far more faulty than the naming, showing a great lack of observation, and reminded me very forcibly of one given me by a teacher some years ago of a wonderful lily with flowers larger than one's head, and which turned out to be an Aralia. Just think of it! A teacher mistaking a rank-smelling, loosely clustered mass of small flowers such as those of the Aralia for a lily! Is it a wonder that President Eliott says that our teachers as a class are only cultivating their pupils' memories?

I wonder if any one has tried to cultivate our Toyon? I know it loves dry places, but it might do well in many garden locations, just as our Zauschneria does. With the exception of having less glossy leaves, it seems to me more desirable in many localities than the Lantana.

Gonzales.

A. L. LIANCE.

### Early Blossoms From Monterey County.

EDITORS PRESS:—Near the coast the Eschscholtzia blossoms always, and many of the beach plants are never without a blossom in the almost changeless temperature of the seaside. It is only when you leave the coast and wander among the hills that local causes show their climatic effects.

On Jan. 15th, while speaking to a child about some shooting stars (*Dodecatheon media*) that were just sending up their stems, she said her sister had gathered whole handfuls of the blossoms a week before, on a much higher ridge near the Cholone peaks; she then stooped and plucked a white forget-me-not (one of the Lithospermums).

Feb. 8th, I saw the first alfalfa blossom in the same vicinity, and on the 13th, the first yellow violets in the Salinas valley near Chualar. On the 8th, I also found a shrubby "Painted Cup" (*Castilleja*) and some black sage in blossom near Soledad.

Along the Salinas river willows were in full blossom on Feb. 14th, and in the hills, near the Pajaro valley, I noticed a garden with oachen-alia, hyacinthe, a native erythronium, several varieties of narcissus, crocus, and, of course, violets in blossom. A single plum tree was also in full blossom.

The first Eschscholtzias met with away from the coast section, had set seed by the 14th, and had dropped their petals.

By the way, how many names is our "Shooting Star" known by? It is known from the Ohio west by the above name, though I note that many Eastern seed dealers are advertising it to the public as the California Giant Cyclamen. Cowslip, rooster, Johnny-jump-up, are other names for the same plant. The plant is closely related to the European cowslip, but the latter two names are often applied to various violets.

UNO.

ENGLAND'S BEEF SUPPLY.—England is more dependent every year on imports of beef from the United States. More than three-fifths of the 500,000 cattle imported annually come from this country, the remainder from Canada.

A COMPANY will start to bore for natural gas near the Union stock-yards, Salt Lake City. They had previously found natural gas at the depth of 600 feet.

AN INCH OF RAIN means a gallon of water spread over a surface of nearly two square feet, or a fall of about 200 tons to an acre of ground.

## PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

### The Master's Desk.

R. W. DAVIS, W. M. S. G. OF CALIFORNIA.

It is estimated that in 1895 the State of California will produce 7,600,000 boxes—20 pounds each—of raisins. While it is unsafe to count chickens before they are hatched, it is not without reason to expect a very large product of raisins in California right away. It is also well for those engaged in raisin culture to "look a little out," and see what is to be done with this vast product.

You are not strong enough to use to the very best advantage every opportunity, but utilize as many of these advantages as possible.

How many friends has Agriculture in the present session of the California Legislature? Let him who knows, answer, and be sure to give us the names of the Senators and Assemblymen who are true friends to Agriculture. We may want to vote for our friends some time, but there are some men now engaged in State work at Sacramento that the farmers will surely allow an "indefinite leave of absence."

Who is the best parliamentarian in your Grange? Don't you know it is a grand accomplishment and useful all through your life, to be well versed in parliamentary law? The Grange affords especial advantages in that line of study. Every son of a farmer ought to be able to preside over a public meeting, a legislative body, or a fraternal organization. The day may be near at hand when we will want a farmer's son to do such service for us at Sacramento and even at Washington, D. C.

Flora is strewing our path with flowers just at this season. Pomona follows quick in her wake and will soon give us the earlier fruits; while Ceres, with more measured step, comes with her golden harvest of ripened grain.

Look well to the "Little District School" about now. The spring term will soon open; then keep an eye and an ear open and catch what is going on at the country school. You must remember the country feeds the cities, both with food and with population. The Grange believes in pure food both for the body and for the mind. Hence, look well to the school by the lane.

Picnic promises are being made already. Not less than five Grangers' picnics are being put under the care of committees up to this date, and no doubt the half are not heard of yet.

"Onions, and how to raise them," would be a subject for profitable discussion at your subordinate Grange meeting. Mr. Greiner, near Buffalo, N. Y., says he has raised 2000 bushels of onions from one acre of land in one year. That is a paying, a highly flavored, business. Count me as one very much interested in the onion business.

People oppose oppression. Hence it is, the people want free coinage of silver; United States Senators elected by the people; the railroads to pay indebtedness; telegraphs to be operated by Uncle Sam; more money per capita; Government land for American citizens; American ships built by American labor, sailing under the stars and stripes, and loaded with American products; lower salaries for public officers, and fewer officers; more schools, libraries, parks, and greater opportunities to enjoy them. The Grange is working to relieve the oppressed and to bring comfort and happiness to all homes, but especially to the homes of the farmers.

The next meeting of the California State Grange will be held at Hayward, Alameda county, beginning on the first Tuesday in October, 1891.

The National Grange will hold the next session at Springfield, Ohio, beginning the third Wednesday in November, 1891.

The latest is a proposed trust in the nursery business of the United States. Will wonders never cease?

Plant a few raspberries, a few currants, a few blackberries, a few strawberries, and have a couple of good ows, two dozen thrifty chickens, one or two fat pigs, a vegetable garden, a flower garden, and a good home, and you will have a big share of the comforts of life. Of course you will want books, horses and huggy, friends, etc., but these will surely come if you first begin in the right way.

The question has been frequently asked, "How many members of the present Legislature are seeking some office other than the one now held?" Ask somebody else; for my part, I give it up.

Saint Valentine's Day brought the most valuable token this year that our farmers have

had in many a day. It was a rich, refreshing rain. The State is many millions richer for it, but the assessor can't put it on his list of available assets. Dame Nature is a friend indeed.

The liberty-loving people of this nation will shed a tear of sadness when they hear of the death of General Wm. T. Sherman. Loyal, large-hearted, sincere, brave, modest, true, he has finally been conquered by the King of Shadows. Honor to his memory. Peace to his ashes.

Now is the time to plant a vine and a fig tree. The day will soon come when you, and your children, and your children's children, and the stranger, may sit beneath them and eat the fruit thereof.

Several very pleasant and profitable bours have been spent during this rainy spell, reading the lectures, reports, addresses, poems and statistics to be found in the annual report of the Wisconsin Farmers' Institutes. We hope, before another winter, that the Farmers' Institute of California may be one of the successful features of the year's work.

The Committee on Woman's Work, in California, has a broad field before it. Won't it tell us how, and when, to plant the standard of the Grange, so that every farmer's family may help the Grange and be helped by it?

Sisters, the flower garden will soon demand your care. Won't the Worby Flora of each Grange tell her sister Patrons what to plant, how to plant, when to plant? Tell us of the Grange what is the prettiest white rose, what the handsomest red rose. Try to post us about violets, lilies, daisies, poppies, geraniums, marigolds, fuchsias, mignonette, lilacs, and the thousand and one fragrant and beautiful flowers which are for our comfort, instruction and joy. Tell us all about the flowers, Floras!

Unity of action among the farmers means abundant success. Success is what the tillers of the soil now most need. The Grange offers the best means for intelligent unity of action. Conservative, thoughtful, progressive people have stood with the Grange for 25 years. They see no reason to desert it now. They invite all farmers to join in the fight against trusts.

### Why the Conger Lard Bill Should Pass.

We have received from Alex. J. Wedderburn, Chairman Legislative Committee Virginia State Grange, a circular with the above caption, issued by that committee, which is too lengthy for insertion in full, but from which we excerpt the following reasons adduced for the prompt passage of the bill. The circular is dated Washington, D. C., Feb. 5, 1891.

1. It is a just and equitable measure.
2. Its provisions are the only ones that can secure the end in view, of preventing the adulteration and misbranding of one of the most important and largest agricultural products.
3. It is not class or sectional legislation.
4. It benefits the consumer.
5. It benefits the producer of hogs and cotton-seed oil.
6. It prevents fraud.
7. It is perfectly constitutional.
8. The Conger bill is not directed against the cotton seed grower and it will not injure him at all.

9. Adulteration and misbranding strikes 80 cents off the price of every hog, which means over \$15,000,000 loss to the people of the West.

#### The Grange Claims:

1. That fraud should be stopped and this robbery cease.
2. That the expense of supervising the vice should be borne by the men who make these immense profits, and whose actions make supervision necessary, and not by the people.
3. That supervision can only be obtained through the revenue system, because when a pail, bucket, barrel or tierce of lard compound goes from one State to another and the head is knocked out, then the power of the Government ceases, unless this law is passed, as the Government cannot police the States.
4. The Interstate commerce provision will not cover this fraud.
5. State laws cannot prevent the importation of original packages.
6. The cry that the law is unconstitutional is disproved, as its provisions are mainly the same as the Oleomargarine law.
7. The idea that the use of the taxing power to regulate this kind of fraud is unconstitutional and wrong, is disproved by Mr. Justice Story, one of the ablest expounders of constitutional law.

Finally, petitions and resolutions have been presented to Congress from farmers, butchers and consumers aggregating between 6,000,000 and 8,000,000.

TEMESCAL GRANGE.—The following Committee on Conference was appointed at the last meeting with a resolution that Temescal Grange co-operate as a committee of the whole, in supporting Eden Grange, as may be desired, in entertaining the next session of the State Grange at Hayward: A. T. Dewey, W. Renwick, E. M. Gibson, and Sisters Nellie G. Bahcock and S. A. Whidden. Sister Dewey read an article on house furnishing, which, with others, will probably be published later.

## National Grange on Legislation.

Petition of the Legislative Committee of National Grange—Oleomargarine.

OFFICE OF LEGISLATIVE COMMITTEE OF NATIONAL GRANGE, P. OF H.  
WASHINGTON, D. C., Jan. 12, 1891.  
To the Honorable Senators and Representatives in the Congress of the United States.

GENTLEMEN: We respectfully represent that the people of several of the States have, at great labor, secured the passage of laws to prohibit the manufacture and sale of oleomargarine made in the semblance of genuine butter, or laws to regulate and control such manufacture and sale, which legislation is rendered partially inoperative because of what is known as the original-package decision; and now, in order to enable the people of the several States to secure protection from the manufacture and sale of such imitation or counterfeit product, we respectfully urge the prompt passage of Senate Bill 3911, subjecting oleomargarine to the provisions of the laws of the several States.

J. H. BRIGHAM,  
LEONARD RHONE,  
JOHN TRIMBLE,  
Legislative Committee.

### Adulteration of Food Protest.

WASHINGTON, D. C., Jan. 12, 1891.

To the Senators and Representatives in the Congress of the United States of America:

GENTLEMEN: The undersigned, Legislative Committee of the National Grange of the Patrons of Husbandry, would respectfully urge upon your Honorable Bodies that prompt action be taken upon the measures now before Congress regarding the adulteration of lard and food products generally.

We trust you will pass the Conger Lard bill, which is upon the Senate calendar and has already passed the House of Representatives.

Below we hand you the action of the National Grange of the Patrons of Husbandry on this important subject.

Extract from report of the Legislative Committee adopted by the National Grange in its 24th annual session at Atlanta, Ga., November, 1890:

NOT POLITICAL BUT PRACTICAL LEGISLATION WANTED.

We do not, as a committee, discuss partisan politics. The present necessities of the farmers of our country are of far greater importance than the political success of any man or party. The farmers ask for practical legislation in the interest of a depressed agriculture and ask it now.

#### ADULTERATION OF FOOD.

We want the pending bills to prohibit the adulteration of food and other commodities, from which every honest industry suffers, promptly enacted into laws.

All compounds of articles to be used as food should be carefully regulated by law, and the expense attending such regulation charged to those who are making fortunes out of a business the profits of which are not shared by the farmer producer.

The claim that this is a tax upon one commodity for the benefit of another is not true, because the tax is imposed upon the compound and not upon the pure articles which enter into it. The tax must be borne by each ingredient in proportion to the amount entering into the compound.

The members of our organization, representing every State and every agricultural interest, have repeatedly indorsed the above, and those who oppose such legislation do not fairly represent the honest farmers who have carefully considered the matter before giving it their hearty indorsement. We therefore urge the passage of the Conger bill for the regulation of the manufacture and sale of lard compound, as amended and favorably reported by the Committee on Agriculture, and the early report and passage of the Pure Food bills now before the committees.

#### PURE FOOD AND DEALING IN FUTURES.

The committee earnestly urged the passage of the Conger Lard bill, Pure Food bill, and the Butterworth bill to prevent gambling in grain. The Conger bill was fiercely assailed by the manufacturers of lard compounds, and earnestly defended by your committee. It was finally reported to the House and passed by a decisive majority. The bill is now pending in the Senate, and all our influence should be exerted to secure its passage through that body. We cannot afford to be defeated upon a measure which has been so unanimously indorsed by our Order. The Pure Food bill is still pending, also the Butterworth bill. The first is not seriously opposed by "food-mixers," which should lead us to scan its provisions closely, or we may find when too late that it will not be effective.

Resolutions adopted by the National Grange at the twenty-fourth annual session, held at Atlanta, Ga., November, 1890.

On motion of Milton Trusler, Master of the State Grange of Indiana, the following was adopted:

WHEREAS, The adulteration of food, drugs and liquors exists to such an alarming extent as to invade every article of diet, drug and drink; and

WHEREAS, These adulterations are often harmful to health and always injurious, and are frauds when sold under a deceptive title; and

WHEREAS, One of the products of the hog, one of the largest agricultural interests on which depend in a great measure the markets for our Western

corn, is adulterated to such an alarming extent as to be excluded from several of the European markets, thereby greatly injuring one of our principal agricultural industries; and

Whereas, This body did, at former sessions, indorse certain bills before Congress looking to the remedy of this evil; therefore

Resolved, That the National Grange, in annual session here assembled, do reaffirm its former resolutions in regard to the adulteration of food, and that we urge upon Congress the importance of promptly enacting such laws as will effectually prevent such adulterations.

All of which is respectfully submitted.

J. H. BRIGHAM,  
LEONARD RHONE,  
JOHN TRIMBLE,  
Legislative Committee.

### From Sacramento Grange.

EDITORS PRESS:—Believing as I do that you are always glad to hear from Sacramento county, and especially from a Granger, I drop you a few lines according to promise.

We have had a glorious rain and the farmers of this section are feeling happy. All kinds of crops are looking well. The acreage is much greater this year than last, and I think we can safely say that the farmer will be able to feed them all. The prospects for the fruit crop were never better, and we predict for this county a rich and bountiful harvest, as well as good, fair prices.

The Grange work in this county is progressing rapidly. The majority of the farmers and their families are safely within our borders, and we will strive to get the others in before the year closes. We will battle in the good and noble work until we have gained the victory. We can see plainly that the Grange organization is growing daily in favor and popularity, and the good work will still go on until we have encircled within our Order every farmer and his wife and family.

#### Sacramento Grange

Is in a healthy condition. We have a good average attendance and much interest is taken in the work. The Grange is wide awake and in good shape financially. We have savings accumulated to a considerable amount, and are in a position to help a worthy brother when in want or need.

Bro. Hayes, Master of the Oregon State Grange, paid us a visit on the 14th inst., and on invitation, delivered a fine address, which was not only instructive but was an able and masterly effort. After his address, several of our eloquent brothers were called on to give expression in regard to some of the thoughts and ideas suggested by Bro. Hayes. Bro. Daniel Flint, who is always ready, gave us one of his good, humorous and encouraging speeches, which he so well knows how to do. Other brothers took part and we had an enthusiastic meeting, although the weather was stormy and prevented a large turnout.

At our next meeting, 28th inst., we have a question for discussion on "the proper time and manner of preparing the ground for sowing wheat, the best variety or kind to sow, and the most economical way of harvesting." Bro. Hull and Homes will take the lead in the discussion, and an interesting time is expected. [Let the RURAL have a full report, please.—EDS.]

Our committees are getting down to work in earnest, and much good and thorough work is looked for this year.

#### The Farmers' Alliance

Is organizing quite rapidly in this county. I think that about ten Alliances have already been formed, and I am informed that in a few days a County Alliance will be organized. The farmers are waking up, are beginning to think for themselves, and are going to the front. They have been in the rear ranks long enough, and I predict that in 1892 a great change will be wrought in political circles which will redound to the interest of the farmer, mechanic and laboring class.

Bro. Charles Mack, our worthy Secretary, has been quite sick for the past week. Look out for him when he gets well and able to swing a quill. He is an able writer and will no doubt contribute to your valuable RURAL PRESS in good style. Yours fraternally,  
E. GREEK, M. Sec. Grange.

#### Fruit Ridge, Sacto Co.

[Thanks for your very acceptable letter, W. M. Bro. Mack has our sincere sympathy, with hopes for his speedy recovery.—EDS.]

IMPORTANT NOTICE.—Patrons should not forget the meeting to be held at Davisville on Feb. 28th, postponed from the 20th. Bro. Flint and other good Patrons will speak.

### Take Your Fraternal Edition.

In my intercourse with the members of the P. A. & I. U. of California I have found that but few of them are getting the Grange and Alliance edition of the PACIFIC RURAL PRESS. Many of the members seem to think that these editions are extra and that there is an extra charge for them. Such, however, is not the case (see note at the head of our columns). These editions are the official organs of the two organizations, and contain interesting and useful information for the industrial classes, and are free to all regular subscribers for the RURAL PRESS. If you want them and are not getting them, please write to the editors of the PRESS and they will be sent with the regular issue without cost to you.

J. L. GILBERT,  
State Lecturer.

VIEW IN A LOS ANGELES GARDEN AND ORANGE GROVE.—See page 183.

## FARMERS' ALLIANCE.

SUBSCRIBERS wishing fuller information of the Alliance can have their names changed to the Grange Edition of the RURAL PRESS free, much to their advantage, this department being continued in the same.

### Elisnore Alliance.

EDITORS PRESS:—We had a good Alliance lecture here last night from Mrs. Anna F. Smith, who was on her way to San Bernardino county to organize in that county. The lecture was not as well attended as it would have been had there not been a revival meeting and a citrus fair, which, by the way, was very good. The audience seemed much interested in the subject. After the audience was dismissed the new work was exemplified to the local Alliance members.

Sister Anna F. Smith deserves much credit for the very efficient manner in which she has conducted and pushed the work of organizing and lecturing in this part of the country. She came into this county Dec. 13th last and has been ill for two weeks. She attended the Orange County Convention, thereby losing much valuable time, yet she has organized 13 Alliances and the County Alliance. All of those formed are in the northern and central part of the county. She will now go to work in the southern part, where there are some ready to be initiated.

L. Y.

San Diego Co.

THE BIGGEST TRUST, the richest syndicate, the most gigantic combination and the most dangerous conspiracy in this country, is the National Bankers' Association. It is a cold-blooded money trust that bleeds every laborer and tolls all production, reaping where it has not sown and gathering where it has not strewn. It is an illegal trust founded on a violation of the United States Constitution, but too rich to be controlled by law. It is the outgrowth of foul treason at Washington during the war.—*Farmers' Advocate, Hamilton, Mo.*

CHEERING NEWS.—Bro. Silas M. Puyear writes from Escondido, San Diego Co., Feb. 16: "Several sub-Alliances are being organized weekly in this county." An account of the

organization of the County Alliance will be found under the head of "The Work in San Diego County," in Grange edition.

### Enterprise Alliance.

The following resolutions have been passed by Enterprise Alliance:

*Resolved*, That Enterprise Alliance No. 1, of Sacramento county, tenders to State Organizer J. W. Hines our sincere thanks for the faithful and efficient work done in commencing the work of organization in our county; and as the exigencies of the work seem to demand his presence in other parts of the field, we hereby cheerfully commend him to the confidence and fellowship of all who are truly in favor of genuine reform throughout the State.

*Resolved*, That in view of the complicated state of the secret work of the Order in this county, and other disturbing causes, we hereby extend to Bro. J. S. Barbee, National Organizer, an invitation to visit us and organize our county, feeling that his age and experience in the work of the Alliance would materially aid us in the present condition of the work in Sacramento county.

If ever there was a set of people in any State or any country that should rise in their majesty and crush a lot of political vampires that have so long sucked the lifeblood of honest toil, it is the farmers of California. The average California politician has no respect for the farmer. On the contrary, he entertains a supercilious contempt for what he calls the "old hayseed." The Legislature of this State, always dominated by political vagabonds from San Francisco and Sacramento, has persistently spat upon the farmers and taxpayers generally, and those same vagabonds grow fat on the fruits of their thieving jobbery. The rejection of the Mutual Insurance bill is simply an illustration of what we have said. Let the farmers take a hand in the Government.—*Oroville Mercury, Feb. 20th.*

IN YOLO COUNTY.—Winters Alliance has been formed by County Organizer Roth, with the following officers: Pres., S. B. Danton; V. P., G. W. Hinolay; Sec., V. Morris; T. J. A. Johnson; D. K., F. E. Wilson; Ass't D. K., A. Baxter; C. G. W. Thissell Jr.; S., J. H. Wilgus. The Secretary issues in the *Express* an earnest appeal to all farmers, mechanics and laborers, with their wives and daughters, to join the Order.

## The Transportation Question.

Views of a National Alliance Officer.

As pertinent to the much-discussed question of railroad freights and fares, we are pleased to receive the following communication from Bro. D. H. Talbot of Sioux City, Iowa, a member of the National Alliance Board of Education. Mr. Talbot writes as follows:

EDITORS PRESS:—For the information of the readers of your paper who are interested in the discussion between Kate L. Squire and Mr. J. V. Webster, permit me to copy from an address delivered by me outlining general work for our local Alliances at our recent meeting of the National Farmers' Alliance at Omaha, Neb.:

"Railroads should have the water taken from their bonds and stocks by simply appraising the roads at given intervals at the actual cost to build and operate at that time, and freight rates should be based upon the value of the thus kiln-dried material, rather than as at present in its wet goods condition. If this were to be done, I think passenger and freight rates would be lowered at once about 75 per cent. Of course, the money kings will say this is robbery, but they do not say so when they put a price on our cattle and hogs."

Our convention adopted the suggestion by resolution and made the time of appraisal annually. Why not apply the same rule to telegraph and telephone systems?

The address from which this is taken will be forwarded to any one sending me his post-office address, and as one of our National Alliance education board, will forward articles upon other lines seeking relief for the farmer, if asked for.

D. H. TALBOT.

THE FARMERS' ALLIANCE meets every two weeks at Washington school-house, Tulare county. They start out under flattering circumstances and have selected the best local talent for their officers.

GOOD WORK IN FRESNO COUNTY.—J. G. Gilstrap has organized an Alliance at Pulvadero, and one has also been started at Coalinga, with a good prospect for more. So writes Bro. J. W. Weh of Hanford.

## List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

FOR WEEK ENDING FEB. 17, 1891.

- 446,702.—MAILING MACHINE—G. B. Baer, Cloverdale, Cal.
- 446,421.—SKATE—S. S. Black, Pasadena, Cal.
- 446,660.—CARBON FOR ELECTRIC LAMPS—W. H. Burns, Los Angeles, Cal.
- 446,630.—WINDMILL—W. M. Craig, Santa Ynez, Cal.
- 446,585.—VENEER-CUTTING MACHINE—E. Densmore, Coronado, Cal.
- 446,439.—CARD EXHIBITING DEVICE—J. W. Fawker, Sr. and Jr., Burbank, Cal.
- 446,445.—FLOOR-WASHING MACHINE—Lizzie Graham, Portland, Or.
- 446,559.—VEHICLE WHEEL—R. E. Jeffrey, Grass Valley, Cal.
- 446,755.—FISH-NET—L. A. Johnson, S. F.
- 446,756.—INDEX—W. A. Judge, Santa Barbara, Cal.
- 446,524.—PANORAMIC DEVICE—E. W. Keeler, S. F.
- 446,600.—WIRING ATTACHMENT FOR BALING PRESSES—J. H. Kruse, Portland, Or.
- 446,530.—APPARATUS FOR DELIVERING CLAY TO PRESSES—E. T. Mapel, Alameda, Cal.
- 446,603.—SOFA BED—A. G. Phillips, S. F.
- 446,745.—HOSE REEL—W. T. Y. Schenck, S. F.
- 446,763.—RAILWAY RAIL JOINT—J. B. Walker, Corvallis, Or.
- 446,495.—MAILING MACHINE—S. B. Whiteside, S. F.
- 446,654.—COMPOUND FOR PAVING, ETC.—H. F. Williams, S. F.

The following brief list by telegraph, for Feb. 24, will appear more complete on receipt of mail advices: California.—Josiah Bibcock, San Jose, positive shuttle motion for looms; Otto A. Drewer, San Francisco, set trigger; Edgar W. Burnham, San Diego, music-leaf turner; I. L. Murell, San Francisco, fire-proof paint; John C. Miller, San Francisco, annunciator and indicator system; John F. Millerich, San Francisco, gate; James W. Perkins, San Jose, machine for making compound paper and jute twine; John F. Sweeney, San Francisco, perch for birdcage; H. Sweet, Los Angeles, metallic railway tie and chair, and metallic roadbed draw and safety tie; Edgar Thompson, San Francisco, assignor to Pacific Engine Company of California, engine governor; George C. Watriss and C. J. Knighin, San Francisco, cable railway; John Weichhart, San Francisco, machine for forming sheet metal lathing.

## One a Day.

[Compiled for the RURAL PRESS by A. L.]

- "He who fills his heart with the truths of the poets may work them out in heroic deeds."

Work like a man, but don't be worked to death."  
—O. W. Holmes.
- March 11.—"If there is a virtue in the world at which we should always aim, it is cheerfulness."  
—Bulwer Lytton.
- March 12.—"It is better to wear out than to rust out."  
—Bishop Cumberland.
- March 13.—"Slumber not in the tents of your fathers!  
The world is advancing! Advance with it."  
—Mazzini.
- March 14.—"Good deeds ring through heaven like a bell."  
—Richter.
- March 15.—"Ignorance is the curse of God,  
Knowledge the wing wherewith we fly to Heaven."  
—Shakespeare.
- March 16.—"If a man empties his purse into his head, no man can take it from him. An investment in knowledge always pays the best interest."  
—Franklin.
- March 17.—"Next to the virtue, the fun in this world is what we can least spare."  
—Strickland.
- March 18.—"Kind words are the music of the world."  
—Faber.
- March 19.—"Pin thy faith to no man's sleeve.  
Hast thou not two eyes of thine own?"  
—Carlyle.
- March 20.—"Defeat may be victory in disguise,  
The lowest ebb is the turn of the tide."  
—Longfellow.
- March 21.—"Man in society is like a flower  
Blown in his native bed; 'tis there alone  
His faculties, expanded in full bloom,  
Shine out; there only reach their proper use."  
—Couper.
- March 22.—"The Sabbath is the golden clasp which binds together the volume of the week."  
—Longfellow.
- March 23.—"Sloth makes all things difficult,  
but industry is easy. He that riseth late must trot all day and scarcely overtake his business at night; while laziness travels so slowly that poverty soon overtakes him."  
—Franklin.
- March 24.—"Wine invents nothing, it only tattles."  
—Schiller.
- March 25.—"There's never a leaf or blade too mean  
To be some happy creature's palace."  
—Lowell.
- March 26.—"What a desolate place would be a world without a flower. It would be a face without a smile, a feast without a welcome. Are not flowers the stars of the earth, and our stars the flowers of heaven?"  
—Mrs. Balfour.
- March 27.—"Care will kill a cat."  
—Wither.
- March 28.—"Our greatest glory consists not in never failing, but in rising every time we fall."  
—Goldsmith.
- March 29.—"Great God! we thank Thee for this home  
This bounteous birth-land of the free;  
Where wanderers from afar may come  
And breathe the air of liberty."  
—W. J. Partridge.
- March 30.—"Your voiceless lips, O flowers, are  
living preachers,  
Each cup a pulpit and each leaf a book,  
Supplying to my fancy numerous teachers  
From loveliest nook."  
—Horace Smith.
- March 31.—"Fair seem these wintry days, and  
soon  
Shall blow the warm west wind of spring,  
To set the unbound rills in tune,  
And hither urge the bluebird's wing."  
—Whittier.

## The Green Burglar.

(Founded on Fact.)

[Written for the RURAL PRESS by L. F. BOURNE.]

"There! there! child—if you're goin' to let your nerves run away with ye, and shiver and quake at bein' left one night, I'll just off bonnet and stay home. Nothin' to fear—come, cheer up! Your pa won't be back 'till mornin' I

know (and I shall be home on the early train to breakfast), but Mr. Max—he'll be here for the night—and old Simon will be in bed by nine, and take care of the whole household, sleepin' with one eye open, as he allers does. Next to the Lord, I'd trust myself in old Simon's care 'fore any oreetur on the arth, he's so faithful and pious."

"I know there is no occasion for my timidity, Aunt Molly, but since my sickness I can't seem to get my nerves straightened; and that burglarly down to the Point, the other night, has just set me all in a quiver. I shall soon get quieted. Here is the carriage at the gate. Don't keep it waiting."

"Well! if 'twasn't a case of sickness, I wouldn't leave ye, Belle, but sister Prue, she's ailin' and somethin' tells me she halnt long for this world."

A long sigh and—  
"Now if you hear a kind of a tap, tap, tap on the wall arter it gets dark, like spirit rappings, mind ye, 'taint spirits; it's that confounded rat we can't catch, and if you hear a kind of slow treadin' over the coal heap in the cellar, and the coal rollin' down sorter moderate, as though somebody was a walkin' over it, 'taint a bugler, you know; 'tis Pete Smith's old white cat that comes in the winder where the pane of glass is out; and if you hear what you call somebody pickin' the keepin'-room blind open, it haint nothin' in the world but the wind, 'cause in a 'souwester' it allers does that; and if you hear a kind of groanin' noise in your pa's bedroom—"

"There! Aunt Molly, stop! stop! or I go! I mean, for the carriage is at the door, I tell you."

This started her comforter for the hall, but the green silk bonnet was seen protruding itself into the door of the parlor as she opened the outer one, and the wearer piping out in a high tone of voice: "The groanin' is only the clothes-line rubbin' s'gin' the house."

Belle was alone at last.

Faithful Simon, an old negro who had been in the family as a servant ever since Belle remembered anything, showed now a pretty thorough whitening of his wool, but he was still vigorous and strong.

Belle's mother had died when she was but a wee child, and excepting the first few years after her mother left them, "Aunt Molly," the devoted housekeeper (and who had always answered to that name) had been like a grandmother to the child.

Mr. Fay, the father of Belle, was an indulgent one, so nothing seemed to come between Belle Fay and the utmost freedom of enjoyment in the easy pleasure life she led.

In the freshness of her youth, havin' just entered her eighteenth year, she was the possessor of a nature capable of enjoying life to its utmost, keeping always the right in view, as far as she understood herself and those about her.

At the present time she was recovering from the effects of a fever and was in that stage of convalescence when the system hardly had regained its normal condition because of a little nervous affection, which, whenever a slight cause presented, resulted in undue excitement; hence her timidity in anticipating a lone evening, reaching perhaps into late hours.

But the door opens and in bounds "Max"—her father's clerk, sprightly, jolly Max.

Belle hailed him with a hearty welcome.

"I am so glad you've come, Max. Aunt Molly has gone to her sister and left me all alone in this dismal house—and what time will you get through at the office to-night, for Aunt Molly says you are to sleep in papa's room—because I'm a little nervous you know. She thinks Simon is equal to a whole regiment in time of danger, but I know one could not rouse him from one of his stolid sleeps without pulling a good share of the wool out of his head, and while this performance was being enacted the burglars could blow up the safe, you know."

"Hal! hal! We call old Simon faithful, I know, but I think I could pick any of your locks with far better results than I could his wool—so far as rousing him is concerned."

"Simon is faithful, but his combativeness is on the wane as his hair whitens. We shall probably have no occasion to call it out, however."

"I cannot get in until ten, Belle. I have extra writing in the office this evening." Belle's countenance fell perceptibly and a little shiver shook her frame.

"Say, Max, have you heard anything more about that dreadful burglary at the Point?"

"Burglary! pshaw! What right have you filling your little brain with such horrors?" at the same time rubbing briskly the curly head. "Eat your supper and invite the ghosts and all their cousins, but let the newspaper burglars alone." glancing at an open sheet upon the sofa. "You don't believe everything you read, do you?"

"But this is so near us, Max, only twenty miles. How long would it take a burglar—a fast walker, you know—to come from the Point over here?"

"Well," dropping his roguish eyes and putting on a serio-comic air of calculation, "that would depend largely upon the kind of boots he wore. Let me see—the giant of our childhood story wore 'seven-league boots' and stepped in proportion. A league is three miles and seven leagues is twenty-one miles; said giant, then, took in twenty-one miles at a step. If this burglar, whom you seem to have ordered, steps accordingly, and starts from the Point

about dusk, he will be here about eight this evening. Possibly not before five minutes past. You had better not retire until he has made his call."

"O Max, you horrid fellow! Now I know I am going to be frightened. Aunt Molly got me all stirred up before she went away."

"Brace up, Belle, for I must be off; but what can I do for you? How is that dominant stomach of yours to-day, and what is the bill of fare it calls for?"

"Oh, my favorite dish. Ever since I commenced the eating process I have so craved a lobster. This enormous appetite that follows a fever is enslaving."

"No sooner ordered than procured," was the reply. "Here is old Pat's fish-cart standing at the market right from the shore. I'll wager lobsters are the staple commodity just at this pressing hour," and with a brisk run across the street he drew from the heap of treasures that Neptune had lavished on "Pat" a great green monster working his hinges in an emphatic manner and "looking a bit homesick for his native element." Max inquired, as he came in holding the green dangle close to Belle's ear, "What kind of earrings would they make, Belle—these huge claws? they would clinch well."

A scream of horror greeted him.

"Why, you dreadful Max! That isn't the kind papa buys. We always eat the red ones. This is green—a dreadful green, too; a real marsh-mud color. I'm afraid it won't agree with my stomach."

"Indeed it will. It is the finest variety of lobster. Didn't you know there were two kinds—the red and the green?" with a suppressed twinkle in his eye. "The green are for invalids or convalescents, I should say, who have a special affection of the spleen—melancholia and the like; while the red are for more general eating. I understand they promote flushing when eaten with a relish" (at the same time pinching the cheeks that were already pink with excitement and merriment), "and the thoughts of it are already beginning to bring the hue of health to your cheeks, so I think we will try a red one," walking out and placing it upon the kitchen table.

"Now, Max, do tell me truly. What am I to do with this monster?"

"Boil it, boil it! Are you under the necessity of being told that a living green lobster is soon converted into a red one by cooking?"

Belle was obliged to own her ignorance on the subject.

"Now, Belle, I am sorry to be unable to start this old fellow on the appetizing road for your breakfast, but I cannot even stop to get your kettle on, and as Aunt Molly is absent, we cannot even utilize the song quotation, 'Molly put the kettle on.' I see no other way but for you to do it yourself. It will be delicious for your breakfast. It is a telegram I had forgotten to send, the cause of my haste. I must attend to it at once. Excuse!" and with an "au revoir" Max was gone.

Belle started at once for the kitchen, where upon the cooking table laid the subject of her experiment. Placing the kettle under the faucet, she partly filled it with cold water, and then grasping the tongs she seized the monster by one of his claws and dropping him in, she covered the kettle and placed it over the glowing fire. Closing the kitchen door, she stepped into the dining-room, took a hasty supper and back to the parlor for the evening.

As a shortening process for the long evening, she concluded to take a nap, so fastening the door securely she soliloquized, "Now I will try to rest," and curling herself on the sofa, composed herself to sleep.

Max ran down the street on his errand and then returned to his office, which was directly opposite the residence of Mr. Fay. It was getting dusky, and yet hardly dark enough for lighting. Somehow the mood of reverie came over him, and almost unconsciously his head dropped upon his hand and he fell into a twilight soliloquy.

"Yes! I can say it, and say it reverently too, this fever of Belle's has been a real 'God-send' to me. It has kept her at home two months, and the latter part of the time her convalescence has been to me a choice time, as I know better than any one else. I wonder that Mr. Fay has taken that odd fancy for our carrying our office work, much of it, over to the house to do. I know that he says it is company for Belle, that she is lonely in her seclusion, etc., and that he likes to be where he can speak with her often, and he near her. I'll congratulate myself, at least, that he's no objection to the company she keeps in her own home, and I shan't be obliged to ask him to grant me the pleasure of such visits, so long as access is made so easy and agreeable."

"Heretofore she has been the gayest bird of the season, but this winter we have had her caged."

"Humph! Capt. Burr, Tom Long and such shallow-brained fellows! 'Tis a marvel to me that so sensible a girl as Belle can talk with them five minutes, but girls will flirt, and they've got money, these fellows, I know. It is no use for me, a poor clerk, to compete with them, and doubtless long before I shall stand where I can support a wife, Belle will have made a society match and be 'abroad,' and yet she has a happier look in those brown eyes, and a sweeter manner seems to shape her life when at home with us, than when she plays the gayest in the festal hall. Pshaw! yes, pshaw! Heaven grant it prove such; I believe Belle finds it only play. I hope she does not try to find anything

true or earnest in the whole thing. That sort of gay life is a farce. 'Society'—'society' so called—such as I see is a rotten nut and as soon as we really get the inner taste of it, it stings, and even the worms eat at its life, however fair the outside appears."

"Belle shall not be sacrificed—I hope; but if I only knew!"

We left Belle just preparing for an evening doze. The light being adjusted gave the room a more cheery aspect and she dismissed her nervousness and fell off into quite an easy slumber, but for a little while; all at once she threw her arms over her head and suddenly awoke. But a short time had elapsed, but she felt that she was waking from a long night's sleep. Something had startled her. Almost paralyzed with fright, she sprang to her feet but could not move further for some moments. Such a rattle and clattering sound as came from the kitchen was indeed frightful. Somebody was there. "A burglar, and oh! what a bold one," thought Belle; for now in the silence of the house came the dull thud, thud, as of some one walking across the floor. If he had thrown down the cooking tins in making his way in why didn't he leave in his own startling noise? but no! the thud, thud, kept on, and the burglar was evidently making the entire circuit of the back part of the house, pantry and all. At this very instant the clock struck eight. Thoughts of the "even league boots" and the hour of the burglar's arrival all appeared to her in a realistic view, and the joke was lost sight of in the fright. What a moment! what should she do? Welcome sound! Simon had arrived! she heard his step as he went upstairs, and his wheezy cough she could not mistake.

It was but the work of an instant to reach the top of the front stairs and glide along the upper hall to his room in the rear of the house. Simon had just entered and was somewhat amazed at the white face of his young mistress. "O Simon!" she exclaimed; "come down quickly! There is a burglar in the kitchen!"

"Bress my soul! Missis, 'tis dem bng-lers at de Pint."

"Yes, Simon, come down quick!"

"Lor' bress me! Lor' bress me! Missus, you wouldn't send ole Simon in his 'vanced years a-pickin' a fuss wud buglers. I thought I've prepared for suddling dislution, but I've feared de time has come when I've weighed in de Lord's balances and found 'nuf right too light. Oh! Lor' bress! Lor' bress!" (striking the palm of his great ebony hand on his breast at each ejaculation).

"Stop your preaching, Simon, and come along," and Belle went tremblingly toward the door. At this point she turned with the expectation of Simon's following her; but judge of her surprise at the exhibition of his devotion.

He was on all fours, making his exit from the scene of confusion, crawling under the bed, and pointed for the most remote corner; his woolly head dropped low, his eyes rolling frantically, the whites glistening strongly in contrast to the dark face, and looking back into the room through the crook of his left elbow.

Under other circumstances Belle would have been laughingly convulsed at the tableau and the situation; but seeing it was useless to get help from this source, she ran down the stairs again, utterly exhausted, and almost fainting as she reached the last landing.

She still heard the steady tread round the kitchen, and springing to the front window, she threw up the sash and gave one terrifying scream that penetrated into the room where Max was deep in figures.

He started, leaped down the stairway, and crossed the road with one bound, it seemed. Belle threw back the outer door and stood before him, in appearance an alabaster statue.

"Bur—bur—burglars," was the only word that escaped her lips, and, with her finger pointing toward the kitchen door, she fell almost fainting into his arms.

He panted and listened, then stepped to the door; but Belle, roused from her lethargy, sprang forward, removed the key from the door and dropped it into her pocket.

"Give me the key, Belle, and I'll investigate," but she shrank back. "Give me the key, Belle," and at the same time he slipped his hand into her pocket, took the key and advanced toward the door. She threw her arms about his neck, and trying to draw him back, fairly shrieked: "Don't Max, don't! Your precious life! Your precious life! Get papa's revolver, in his room. Here, quick! O Max! he's armed—I know he's armed."

"I don't know about his being armed, but I'm quite sure he's armed," said Max coolly as he turned the key in the door, and throwing it wide open, drew Belle within the lighted room, all trembling with fright, and pointed to the innocent green burglar who was traveling around the room with as much unconcern as though he was traveling his native sands or reposing on a couch of seaweed.

Max stepped coolly to the kettle, and dipping the tips of his fingers in the water, asked with a comical expression:

"Did you introduce him to cold water or hot?"

"Why, hot water would have been cruel, wouldn't it?" replied Belle with a foolish look.

"You are very like the man who carried his old family horse (when too old for service) into the woods, and tied him to a tree to 'die a natural death' instead of knocking him on the head, starvation being considered by the deluded humanitarian as preferable. I am glad this briny fellow was not so green but that he knew enough to bounce the pot-lid to the floor

and climb out when he felt the water heating." Again trying the water, Max found it was at the boiling-point and exclaimed, "All ready! One, two, three, and here he goes," and without even the help of a policeman arrested the burglar in his last promenade around the room, and splash he went into the pot.

Then replacing the pot-lid, he drew Belle gently away from so "cruel" a sight and repaired with her to the parlor.

As he went, he was thinking of that spasmodic hug with which she drew him back from danger, or the trial she made at it.

Then he grew more tender as those frantic words, "Your precious life!" "your precious life!" re-echoed in his heart.

Belle had long ere this laughed herself into hysterics and calmed off again.

"Answer me one question to-night, Belle," said Max. "To whom was my life so precious? Have I the same 'precious life' now that I possessed in that frantic moment?"

Belle blushed and hung her head, but the answer was evident.

Morning found them all gathered at the breakfast-table. Papa and Aunt Molly came on the early train and the adventure was duly rehearsed for their benefit. This was the most jovial breakfast-table, we will admit, that ever circled, the "Green Burglar" being the center dish of attraction.

The farce of the preceding night was freely discussed with some extravagant embellishments from Max, it must be confessed; but Belle was relieved to find that the "precious life" was left out of the recital when rehearsed to her father.

"Well!" said Aunt Molly, "I allers said that gals should larn cookery, and it would saved a big scare to this house last night if Belle had known whether a lobster ought to be biled in hot or cold water. I wish, Belle, you could go to school a spell to Miss Parlor. I expect she's a master cook, and I've heard she's even writ cook-books. I should rather my larnin' should run that way than to be runnin' over wth French, or to play on music, or any of them kind of oranks."

Then turning to Belle with a solemn and decided shake of the head:

"Don't never think of gettin' married, Belle, without havin' that part of your education complete, unless you are willin' to make some man's life miserable."

"Yes, Belle," said Max, "Aunt Molly is right; see well to your training if you don't want to make a wreck of any 'precious life.'"

At the word "precious," Belle colored something the hue of the lobster, only a little more on the cardinal, feeling at the same time how provokingly tantalizing Max was.

"Papa" seemed to enjoy the whole joke thoroughly, only, as he expressed it, he didn't like for Belle to have many such shocks until she was better established in health.

Lastly Simon, poor simple Simon, stood in the background, ejaculating at intervals, "Bress de Lord! yes, bress de Lord! We've delivered, yes, we've all delivered, and able to pertake, this were bressed morning, of what came nigh to killin' us last night; bress de Lord for His bounties."

RETAILERS generally find February a short month.

SECOND SIGHT.—"Theirs was a case of love at first sight." "Why didn't they marry?" "They changed their minds at second sight."

THERE are many who still uphold the theory that "the world owes every man a living," but the only practical way to collect the debt is to work.—*Boston Post.*

APPLICANT: I see you advertise a vacancy in your establishment. I should like to have a position where there would be a chance to rise. Merchant: Well, I want a man to open up and sweep out. You will have a chance to rise every morning at 5 o'clock.

LITTLE SON: I let two poor little boys ride with me on my sled all the afternoon. We beat every one on the hill. Fond mother—I am delighted to learn that my little son is so generous. Little son: The more there is on a sled the faster it goes.

SURPRISE AT THE PARTY.—Little Mose—Fader! you and mudder must come home right away! Miss Brown has come for her plaid dress, and Mr. Snooty wants to take out his check suit, and you have both got dose clo's on!

SCIENTIFIC NOTE.—How wonderfully are the inventions of man anticipated in the animal kingdom! The cuttle-fish has the power of covering itself with a sudden effusion of inky fluid; and what more can man do with the most ingenious fountain pen?

"WHAT is the trouble between you and your husband?" "He makes me jealous of certain ladies." "In what way?" "He mentioned having met them when I wasn't with him." "Pooh! they are not the ones to be afraid of." "Who then?" "Those whom he doesn't mention."

MISS SANBORN of Laconia, N. H., has been appointed a notary public by Gov. Tuttle and his council. She is the first woman to hold such a position in New Hampshire.

A BILL to give women municipal suffrage has been introduced in the Michigan Senate by Senator Miles.

## YOUNG FOLKS' COLUMN.

### Dixie and Da'.

[Written for the RURAL PRESS by MARY E. BAMFORD.]

"And do be careful, Dan dear, and don't shoot yourself or Dixie, and do come home as early as you can. I'll have griddle-cakes for supper, and you know you like them hot, and pa's got some honey on purpose to eat with them."

The boy Mrs. Pollard spoke to laughed as he sprang down the steps of the little old house.

"Of course I'll be careful," he said. "Dixie and I'll come home with lots of birds, won't we, old fellow?"

The big brown dog that had for a number of years been a most beloved member of the Pollard family lifted up his voice in joyful assent as he capered on beside Dan.

"Wait a minute," squealed little Net from the doorway. "Dixie hain't had his blue ribbon on."

"Oh, never mind," called Dan. "Dixie isn't such a dandy that he needs to wear a necktie every day. Don't you know that Captain Smith says that wearing a necktie is a sort of crazy custom anyway, even for men?"

But Net came running after with the "blue ribbon" in her hand, and Dan had to tie the big blue bow on Dixie's collar before Nettie would let the two travelers go their way in peace.

"You're a beautiful doggie," said Net, as she gave Dixie a rapturous parting embrace. "You're just a beautiful doggie, and we all love you."

Dixie jumped up and kissed Nettie, dog fashion, and the interrupted journey began once more.

Dan had started for a day's shooting on "the marsh." This was two or three miles away, being the low-lying land bordering on a bay. Dan and Dixie soon had passed the few farm-houses that were scattered here and there on the road and struck out into the country where the land began its gradual slope down toward the water.

A whiff of salt air came now and then to the boy's nostrils and set him thinking of the broad ocean into which the bay opened, and of the ships that sailed that ocean, and he wondered if he should ever see the lands those ships went to. Musing on such things, looking far into the future as lads will, Dan tramped on till the water and reedy bottoms were in sight.

"Now we'll have fun, won't we, Dix?" said the boy, and the dog rushed on as though going bird-shooting was the most delightful thing he ever heard of. Dan, as full of excitement as he, ran after him, and the two made rather a breathless entrance into the marsh. But after awhile Dan's zeal abated.

The shooting was not very good after all. Dan got one bird, tried to shoot several others, and failed. Dixie was full of frolic and rushed on through the reeds and grass till Dan could not keep track of him, and hardly tried to do so. The marsh was quite deserted. No one else seemed to be out gunning that day.

Sitting down at last on a little mound, the boy drew a couple of apples out of his pocket and proceeded to eat them. He was just finishing his second one, when a long-drawn howl from somewhere in front of him came to his ear.

"Why, that's Dixie!" the boy said, jumping up. "That sounds as if he were in trouble. Guess I must look after him."

Picking up his gun and bird, Dan made his way through the reeds till he came to the edge of the more marshy portion that extended down to the water. Away farther on he saw a big brown dog with a blue bow on his neck.

Dan walked to the edge of the hit of land he was on.

"Why, Dixie," he called, "what ails you?" Dixie gave a lugubrious howl and Dan saw the trouble.

"Why, you're stuck in the mud, ain't you?" he said. "Just wait till I get over there, old fellow, and I'll have you out all right. You must have been chasing a bird."

Dan sprang over the marshy land. Dixie saw him coming and waited with satisfaction for his deliverer.

Suddenly, when Dan was about half-way across the marshy portion, he felt his own footing beginning to fail him. He struggled, jumped for a safer spot, stuck again, stumbled on, dropped his gun and bird, staggered a little, and suddenly sank in the mud up above his knees. There he stuck. Try as he might, he could not pull himself free. In alarm he put forth all his strength, but it was in vain. The more he struggled the deeper he sank. Dixie looked on from his spot and whined with apprehension as he saw the stopping of his friend.

"O Dixie, Dixie!" gasped Dan, as at length in sheer despair he stopped struggling. "What a dreadful fix you and I are in!"

Dixie wagged his tail in appreciation of this remark, and broke out into a most dismal howl.

"And the worst of it is the tide!" groaned Dan. "O Dixie!"

The boy looked apprehensively at the long line of brown water that skirted the marsh a little way off. The dog still howled, and Dan, thinking the animal's example a good one, add-

ed his voice and called for help till the marsh rang again, but no help came.

Dan waited and watched. He knew the tide was rising. Wasn't it creeping up that little place now? Surely that puddle was not there ten minutes ago! Nor that one, either.

"There isn't anything for us to do but just to yell for help, old fellow!" said Dan to the dog, and, opening his mouth, Dan "yelled" in terrific style. His shouts and halloo for help only made a few marsh-hens hurry away from the reeds a little distance off. Dixie, inspired by his master's example, lifted up his voice and alternately barked and howled. Dan panted at last, hoarse and exhausted.

"It doesn't do the least bit of good," he said anxiously, after he had looked around in vain for any coming help. "If I had my gun I could fire, but I don't suppose that would do any good either. Folks often hear firing over toward the marshes. Folks wouldn't know I wanted help, even if they heard the gun."

Dan looked over where his gun lay, six feet or so away. It might as well have been sixty for all the prospect there was that he could reach it.

Warned by his former sinking, he dared not struggle lest he should sink lower still. So he stood and waited. What was he waiting for? The water was rising gently but surely. It rose more and more. Dixie, nearer to the water's edge than Dan, understood in almost human fashion what was coming. The water rose around the dog's feet. Dixie struggled and only sank lower and lower till his beautiful, glossy brown body fairly touched the water.

"He will drown! He surely will unless I can help him some way," thought Dan, anxiously. "Oh, what can I do? He's stuck too fast to get away."

Dixie cast pitiful, appealing glances at Dan. Was his master not coming to help him? The dog's reproachful eyes almost broke the boy's heart.

"O Dixie, dear old fellow," he cried, "how I wish I could help you!"

The water rose higher. Gentle little waves began to quietly lap Dixie's sides, and Dan could see the dog shiver. Pitiful whines broke from him as he looked over at Dan. The boy felt the tears coming. It was too dreadful to have Dixie drown before his eyes, down thinking his master might help him and did not. The time went on, and still the water gently rose.

With troubled eyes, Dan watched the dog's struggles.

"If you were only near enough so I could do something for you, Dixie," he cried.

"Perhaps if I were, Dixie'd help sink me, too," he thought, as he glanced at the water that was near him now.

How slow and how sure the tide was! If it would only engulf Dixie all at once and drown him and he done with it instead of climbing up him and frightening the poor fellow in that heartless fashion! Dan felt as if he had almost rather bear it himself than see his dear old playmate in such trouble.

The water was almost over Dixie's back. The poor creature held his head up and howled dimly, as if he knew what was coming. Grown lad as he was, Dan could not keep the tears from running down his cheeks.

"O Dixie," cried the boy. "Dear old fellow, it was all my fault. I ought not to have taken you gunning out here on the marsh. Poor old fellow! Poor old fellow! Oh, how I wish I could help you!"

Dixie gave a howl of terror and dismay.

"What'll mother say?" groaned Dan, "and Ned and Net and the twins? Oh, if he's drowned and we don't ever have him any more, and he isn't there to bring in the paper nights and to sit by the stove—oh dear! and to run races—"

Short, choking howls came from Dixie's direction. The water was almost over him.

"Oh, good-by, good-by, old fellow, dear old fellow!" sobbed Dan, losing all control over himself and adding his own tears to the water that was already climbing up him. "It's all my fault! Good-by, good-by, dear old fellow, good-by!"

Then Dan shut his eyes and resolutely stopped his ears that he might see no more struggles and hear no more of those pitiful, heart-breaking howls.

After what seemed to him a long, long time, Dan opened his eyes again and looked fearfully over toward the spot where Dixie was. Nothing could be seen except the brown water rising higher and higher. Once, indeed, Dan thought he saw a bit of the blue ribbon, but then he thought he was mistaken. Time went on.

The water had risen above his own waist. It was very cold and uncomfortable standing there. Dan shivered. Desperate, he tried with all his might to pull himself loose, but there was no use trying. Then he called again and again.

"I'm going to drown like Dixie," said the boy to himself. "I wonder if we'll both be found here dead some time when the tide is out? What will mother say? I thought she'd feel had enough over Dixie, but just supposing she has to feel bad over me, too!"

"I wish I'd brought her in that stovewood," he said to himself a moment after, "I forgot it this morning, I was in such a hurry. I wonder if Ned remembered it? Poor mother! I don't believe I've been as good to her as I ought. I wonder if I am going to drown? It must feel awfully. And I—oh, I don't want to die!"

The slow, long minutes crept by, and still

that brown water rose. Dan shuddered as he looked around him. The lowest part of the marsh ground was quite covered. Things were quite still save for that soft lapping of the water. What a detestable sound that was, anyway! Dan listened to it till it seemed to him that the noise would drive him crazy. Would it sound so dreadfully by the time the water had risen high enough to be in his ears? That would not be so very long now. Well, perhaps he might be drowning then, and might not notice the sound. The water was almost up to his shoulders. It could not be so very long now. Hadn't he better pray? What if—

"Hlp! Here's another one, Mike! Shure, it's a dozen we have!"

Dan turned his head and saw a little way off a rowboat. Two boys were in it, not very big boys. Dan recognized them at once. They were Jimmy O'Toole and his younger brother, the red-haired infant that always went on all manner of perilous adventures, and yet nothing ever happened to him.

The older boy was flounder-catching, and it was evident that neither of the youngsters had seen Dan.

"Hallo there! Help me! Help me!" screamed Dan.

Jimmy O'Toole started and dropped his fish in the boat. Where did that voice come from? He stared over the muddy water. Then he screamed. Did ever a boy out flounder-catching see such a sight! A head and two arms sticking up out of the water!

Jimmy O'Toole stared in amazement at the prodigy. The red-headed youngster beside him was excessively interested at the prospect of a new adventure.

"Hurry, I tell you!" screamed Dan. "You dunces, don't you see that I'll drown if you don't get some one to help me pretty quick? Where's your father, Jimmy O'Toole?"

"In—in the t'other boat," answered the amazed Jimmy, who by this time had partially recovered his senses and realized that Dan was a real human being and not a ghost, or a new kind of flounder.

"Well, go get him just as quick as you can, if you don't want me to drown," commanded Dan.

Jim's oars soon took him out of sight.

"He'd better be quick about it," muttered Dan anxiously.

It was doubly dreary to be left alone again. Was the water really going to drown him? Would help come just too late? How the water did feel just splashing up about his throat! And that dreadful rippling sound, so gentle and so hideous! Would Jim find his father? Wouldn't the boy stop to catch a flounder or two by the way?

"If he shouldn't hurry now!" thought Dan, trembling all over.

Oh, how long, how long it was waiting! Why hadn't he drowned long ago? Surely it was time.

"I won't drown," said Dan determinedly at last, as he lifted up his head and looked at the sky. How would it look to him when he saw it for the last time through a film of water?

What was that coming? Dan rubbed the water from his eyes with his wet hand. It was a black thing coming, a longer thing than he had thought. It was, yes, it was a boat, and a smaller boat was following it, and a man's voice came over the water.

"Arrah thin! bould on a bit longer, me bye! I'm a comin'."

Long as the time seemed, it was not two minutes from then when Mr. O'Toole had his boat alongside the head that rose above the water.

"Hould on there!" Mr. O'Toole commanded, as he reached Dan an oar.

A few minutes of vigorous pulling, a wrench that seemed almost to jerk Dan's bones from their sockets, and the boy lay wet and gasping in the bottom of the boat, his head pillowed on a pile of flounders.

"It's me helafe that ye'll never see ayther of yer hoots again," announced Mr. O'Toole as he rapidly plied the oars and took a careful survey of Dan's stockinged feet at the same time, "An' what yer mother'll say to yer pants looking loike that I don't know. The marsh's an awful sticky place in some parts."

"You'll catch it!" snuggled Jimmy O'Toole, who, of course, with his red-headed brother occupied the smaller boat, and who had given up the glories and delights of flounder-catching for the privilege of joining in bringing Dan home. Jimmy had arisen in his own boat, and had taken a particular survey of the state of Dan's garments.

"You'll catch it!" Jimmy reiterated, as having satisfied himself with looking at Dan, he once more resumed his seat and took to his oars. And the expression of Master Jim's countenance bore witness that he would not in the least object if he could be present and witness the scene of Dan's "oatohing it."

But Dan, completely exhausted by his experience, in spite of Jimmy's threat, lay still with his head on the pile of flounders, undisturbed by any worries over what was to come, so thankful was he to have escaped what might have been.

And when, a few hours later, on Farmer Willett's milk-wagon Dan rode safely into the home yard, the mother that came to the door and heard the story of the day in the marsh, never said anything about the state of her boy's clothes, but took him in her arms, all muddy as he was, and said with trembling voice, "O Dan, my hoy, my dear hoy! If it had been you instead of Dixie!"

Citrus Fair Postponed.

LOS ANGELES, February 25.—The opening of the Citrus Fair has been postponed until March 10th, owing to the washouts on the railroads and the impossibility of the exhibits arriving on time. The proposed bankers' convention, which was to have met on March 4th, has also been postponed until March 11th, so as to be held at the same time as the fair.

The Week.

The RURAL PRESS this week pays its compliments to its many old and new friends in Southern California and congratulates them upon their glorious achievements in building up and developing their portion of our great and glorious State. The holding of the Southern Citrus Fair seemed a fit occasion for specially recognizing results in which the whole State of California has a sincere patriotic regard, and we trust that our efforts with pen, pencil and camera may contribute, in some slight degree at least, toward the suppression of sectional feeling and the strengthening of mutual regard and appreciation throughout our whole State. We have had a meeting of the Legislature without a proposition for the division of the State, and may we never again have one with it.

The rains north and south have been grand in the general volume and effects. Unfortunately, they have brought some loss of life and property, and rejoicing must be mingled with sorrow, sympathy and sincere regret. The results, however, in the general wealth, prosperity and progress of our State will be beyond calculation.

The Orange in Southern California.

We have two handsome engravings on preceding pages of this issue illustrating the growth of the orange, the king of semi-tropical fruits, in Southern California. The thrifty, heavily laden tree on our first page needs but the glorious green and gold of nature to be a realistic representation, and even as the camera shows it, it is fit to call forth exclamations of admiration. The verdure of the foliage, the gold of the fruit, the fragrant snow of the bloom—all are among the gems of vegetable growth.

The other engraving, which presents a view of an orange grove with the garden plants and a fragment of the dwelling in the foreground, displays well the charm which may environ the life of the dweller in the orange regions of California. This picture gives a truer idea of the size and symmetry of well-trained trees when they attain the age of many of the Southern California groves.

Both of the engravings to which we refer are fairly illustrative of the region which will next week bring together its best horticultural works at the Southern Citrus Fair to be held in Hazzard's Pavilion in Los Angeles. An article on another page of this issue goes more into detail concerning the preparations for this exhibition, and the premiums which await the victors in the honorable contest, which will then be held. We hope many of our readers from both near and distant parts will be there to feast their senses upon the enchantments of the occasion.

But the orange interest is, of course, not beauty and fragrance alone. It has a most firm commercial basis, and is now being advanced upon more intelligent and energetic lines than ever before. It is triumphing over its besetments and its difficulties, it is being developed with the greatest earnestness and discrimination, and great as it is to-day, it never had a better outlook, nor ever seemed so well endowed to enter upon it. Statistics are usually satisfactory means when used toward an honorable end, and none can be more pertinent to the occasion which calls forth this special edition of the RURAL PRESS than the following summary of the orange product of Southern California for the year 1890, as compiled by the Redlands Citrograph from authentic sources:

County.	Boxes.	Carloads.
San Bernardino.....	487,000	1,705
Los Angeles.....	198,695	781
Orange.....	112,190	307
Ventura.....	9,460	33
San Diego.....	6,600	23
Totals.....	813,945	2,840

These figures include only those oranges which were loaded upon cars for shipment by railroad freight or express. The vast numbers more which were consumed by an orange-loving population of nearly 200,000 people in the above counties must be calculated, if one desires to estimate the aggregate product. And these were the figures for last year's crop; it is believed that the crop of the present year, now being harvested, will exceed by nearly one-half that of last year as summarized above.

Friends of the Orange Grower.

[By ALEXANDER CRAW, Entomologist of the State Board of Horticulture.]

In the year 1872 an extensive orange-grower in the San Gabriel valley purchased several small orange trees at a San Francisco tree depot, and planted them in his grove with the intention of budding from them, if the varieties proved desirable, as previous to that most of the citrus trees in California were grown from seed and allowed to bear fruit as seedlings. The trees were found to be infested with a scale insect of a species of *Aspidiotus*, which spread to the adjoining orange trees, and their presence was detected by the mottled, sickly appearance of the leaves and fruit. A determined effort was made to check its spread, and, if possible, stamp it out, and the trees in the infested portion of the grove were cut back, the branches burned, and the trunks and limbs scrubbed; but after all this heroic treatment, enough scales escaped to infest the district.

To distinguish it from the "brown scale," *Lecanium hesperidum*, and the "black scale," *L. oleae* (the only scales that were then attracting attention in the State), it was named the "red scale," from its reddish-yellow shell, and was considered identical with the red scale of Australia, *Aspidiotus aurantii*, Maskell; but quite recently specific differences have been observed that prove it distinct, and it is now known as the "yellow scale," *Aspidiotus citrinus*, Coquillett. Various solutions were sprayed on the trees; sulphur and other substances were inserted under the bark, and the small roots were severed, and to the ends leading to the trunk vials were placed containing chemicals of various kinds, in the hope that the roots would take the chemicals up and destroy the scales; but in a great many instances the trees were destroyed instead, and others injured and made unproductive by reason of the caustic or greasy properties of the washes then used. In the meantime the scale was slowly but surely spreading, until now it is found in nearly all the orange-growing sections of the valley and adjoining foothills.

In the spring of 1889, Mr. Cogswell, of the Sierra Madre Villa, informed me that the scales

pedicel and funicle are two very small ring-joints that form the elbow; joints three and four are the shortest, five and six each increase in length and diameter; seven is twice the length of six, and eight is the same length as seven, but narrower and tapering. Head is yellow; eyes black, ocelli bright red; posterior portion of head and pronotum are very dark brown. Thorax, golden yellow; abdominal segments are dark brown, almost black; wings are furnished with long marginal hairs; the surface of the fore wings are covered with short hairs, with the exception of a strip commencing near the stigma and extending around the wing to nearly the opposite edge. Legs light yellow.

Recommendations.

We will undoubtedly always have the yellow scale, but no doubt the trees and fruit can be kept in a healthy and clean condition by this parasite. I would therefore recommend the colonization of it wherever the "yellow scale" is found. In two former articles I have recommended that an effort be made to colonize this parasite upon the true red scale, *Aspidiotus aurantii*, but in a recent visit to the Villa grove I had conclusive proof that this will be impossible, or at least of no practical benefit. Mr. Cogswell called my attention to a different scale he had noticed upon a lime tree near the hotel. This proved to be *A. aurantii*, and I advised the destruction of the infested trees, as this scale would be a more serious pest to contend with, for nothing but fumigation with hydrocyanic acid gas has been of any avail against it. I cannot account for its appearance there unless it has been taken upon an orange by a visitor to the hotel and the infested peel thrown under or on to the lime tree.

How to Colonize the Parasite.

The colonization of this parasite will not be as satisfactory to the orange-growers as was that of the *Vedalia cardinalis*, because we cannot see the larva pick up the scale and devour it; however, if they are introduced in an orange grove infested with yellow scale, the beneficial results will be certain, even if not immediately observable, as was the case with the *Vedalia*. Branches should be obtained with scale-infested

YELLOW SCALE PARASITE (*Coccophagus Citrinus*), NEW SPECIES.

were not as numerous in his grove as they had been, but he could not account for their disappearance. He brought me branches infested with yellow scales, from which I hatched a number of very small chalcid flies; this parasite, however, had been discovered by Prof. D. W. Coquillett two years previous, in the extensive groves of A. B. & A. S. Chapman; but as the improvement in the condition of the trees was more noticeable in the Cogswell grove, I am of the opinion that they spread from the latter to the Chapman and other orchards.

Various theories have been advanced for the disappearance of the yellow scale in that section; the principal one is, the excessive rainfall of the winter of 1889-90. But this theory can easily be exploded by the fact that we have had very heavy rains in previous winters, and again, the improvement was noticeable and commented upon previous to the winter of 1889-90. If the rains had caused the destruction of the scales, why is it that the decrease is not all over the infested section? I find that where the parasite has only recently been found, or where I have been unable to find them at all, the yellow scales are as numerous as before. I have recently hatched them by the hundred from scale-infested leaves taken from an orchard wherein a little over a year ago the parasite was not known to exist. The presence of such numbers of parasitic insects—even if they are so minute as hardly to be detected with the naked eye—should be sufficient to convince even the most skeptical that the scales are succumbing to "nature's remedy."

The fact that the scales appeared to be on the increase last fall can be accounted for. That is the time when our scale pests have every season shown the most increase, and that this was noticeable in the orchards where the parasite has been at work the longest, is not very remarkable, as we have had another identical case. When the cottony cushion scale was supposed to be cleaned out of some groves, and consequently there was no food for the *Vedalia cardinalis*, the latter disappeared, and a few of the former that escaped increased and caused considerable alarm; but they were soon destroyed when the growers placed a fresh colony of the ladybirds on their trees.

**Description.**—Length, one-fortieth of an inch; wing expanse, one twenty-fourth of an inch; antennae, as long as head and thorax; color yellowish and covered with short dark hairs, eight-jointed, scape slender and slightly curved, stout pedicel one-third length of scape; between

leaves from an orchard known to contain parasites in numbers. This can be ascertained by placing a few infested leaves in a white paper box, closing them up tightly with a cover; and after a few days the box and leaves should be examined with a magnifying glass—this is really necessary; for even with good eyesight they will be overlooked, as they are so very minute. If numbers are found, branches should be taken, and the ends placed in boxes containing wet sand or soil; this will keep the leaves fresh and allow the parasites to develop and hatch. As the branches dry up, others can be procured and the operation repeated. The boxes should be placed under the trees in the shade, or be secured in the branches, and so located in the orchard that the prevailing summer winds may aid materially in their distribution.

Golden Chalcid—New Species—(Unnamed).

This new parasite is also working on the yellow scale, and is indeed very promising. It was first observed in Duarte; but recently I received numerous specimens from an orchard near the Stoneman tract, San Gabriel, and also from an orchard in Alhambra. It is very interesting to know that from the infested branches received from these orchards none of the *Coccophagus citrinus* were hatched, showing that this newer species is working by itself upon the scale in those districts.

The parasite is much larger than the other, and of a bright golden-yellow color.

Notes.

Some of the internal parasites have, like the scales they attack, but one generation each year. This is the case with the one upon the black scale, *Lecanium oleae*. Seventy-five per cent of these scales are annually destroyed by a parasite, *Dilophogaster Californica*, Howard. This is a great check to what would otherwise prove a very destructive scale; but the parasite only deposits eggs in the mature scales and just about the time the latter contain eggs, so that the 25 per cent that escape the parasites are sufficient to again infest the tree, from the fact that each scale contains from 700 to 1000 eggs. But it will be fully ten months before the scales are developed enough to be attacked by the *Dilophogaster*. This is not the case with the parasite of the yellow scale. They are breeding all the time. I have found them every month in the year; and a half-grown yellow scale is ample food to develop and mature a parasite.

## The Tuna.

[Written for the RURAL PRESS by C. R. ORCUTT.]

Probably no class of plants is more greatly admired or more thoroughly detested than the *Cactaceæ*—admired for their oddity, for their beauty of form, for their lovely flowers and for their insidious fruit, the cacti are detested to almost an equal extent by the average cattleman or rancher as a useless cumber of the ground.

The flattened oval or elliptical stems of the *tuna*, abundantly armed with a formidable array of spines, is the type of one of the most familiar forms of cactus, and perhaps better known to English-speaking races as Indian figs or prickly pears.

Among the numerous known forms of *Opuntia* there are several species which are very generally known to the Mexicans by the name of *tuna*. *O. tuna* and *O. ficus-indica* are the two species to which this name is more frequently applied, but the common wild varieties or species of flat-stemmed *Opuntias* are very generally included without distinction.

These cacti are very widely utilized in Mexico and in portions of the United States along the Mexican border in a countless number of ways. The cattleman, after burning the spines from the tender, succulent joints, will feed them to his stock with profitable results; or, in a treeless region, he will plant them as hedges around his corrals or cultivated fields, thus utilizing what in the previous case he destroys—the plant's natural defense against total extermination.

Growing in dry, sandy or rocky soil, they thrive where scarce any other vegetation can exist. Planted around the Californian Missions in the most fertile spots, they attain a most luxuriant growth. Thus, they are naturally adapted not only to thrive in sterile districts and to prepare the barren soil for other classes of vegetation, but they are equally at home under the most advanced stages of cultivation.

The *Cactaceæ* are without exception, I be-

*tuna*. This famous species, so well known as a hedge plant in Mexico and the West Indies, abounds on every high, sandy beach from Tampa bay around to Miami, and, perhaps, still farther north on the east coast. It quite often grows in impenetrable masses, four or five feet high, and is characterized by large oval joints, six or eight inches long. It is covered with two sets of spines, some small and chaff-like, but whose close acquaintance is not to be courted, and others an inch or more long, as sharp and strong as needles, and quite as formidable as any cactus we have seen. The yellow flowers almost invariably have a rosy tinge, and the plant is beautiful, both when in bloom and when covered with the large, rich, purple berries or prickly pears.

"Besides its use in tropical America as a hedge plant, it is used as one of the principal cochineal plants. It is quite hardy and will stand several degrees of frost unharmed. The fruits,

known as 'Indian figs' in the West Indies, and stray specimens occasionally find their way into the New York markets from some West Indian vessel."

In *Garden and Forest* I have called attention in a note to the possibility that the manufacture of syrup from the fruit of the *opuntia* may at no far distant day become an important industry in Southern California. The juice of the fruit which these plants produce in great abundance, may be extracted in a cider press like the juice from apples, and boiled down to a fruity syrup indistinguishable in flavor from that manufactured from the watermelon. Excellent vinegar or wine may also be made from the juice. Three varieties or more are found naturalized around the California Missions, called the *tuna*, *tuna colorado* (red tuna), and *tuna manse* (tame tuna) respectively by the inhabitants of Mexico. They are extensively cultivated in Mexico for their fruits, and a great variety of forms occur in that, their native country. Dr. Edward Palmer, a noted botanical explorer, has contributed an interesting article on *opuntia* fruit as an article of food to the *West American Scientist* (VI 67), which has been widely quoted and is reprinted in the

broad-spreading plant, with a cylindrical, woody, thick stem when old (up to 45 cm. long and 30 cm. broad in size), green, thick (2½ cm.), thinner on the edge, elliptical, with small reddish leaves; areolæ regularly distributed, sunken, thornless or rarely covered with a few single, small, bristly, white spines. Flowers large, brimstone yellow. Fruit very large and edible. Grown in large quantities in Sicily for its delicious fruit. Four varieties, with yellowish, blood-red, whitish and seedless fruit respectively, the two latter considered the best."

The *tuna colorado* naturalized at the old Mission of San Diego, which I take to be a type of *O. ficus indica*, produces a rather insipid fruit, not very sweet, mealy, closely resembling in taste and flavor a frozen apple. The color is a crimson lake inside and out, the epidermis slightly dalled by a glaucous bluish. Seeds numerous, over 200, easily separated from the pulp. The fruit is ovate, 3½ inches long, 2½ inches in diameter, smooth, with over 60 areolæ of fine spines distributed over its surface, a fourth bordering the deep-brownish umbilicus which is an inch across. Spines usually few, short and weak; whitish, often entirely absent.

OPUNTIA TUNA—Linn.

"A native of Mexico and Columbia. Tall, broad-spreading plant, large, rather long (10 to 20 cm.) ovate or elliptical stems, the edges curving, with pointed green leaves seven mm. long. Covered with hunches of spines growing close together at base of stems, and wider apart at top, like gray felt in color, the upper spines brownish-yellow, underneath four to six stiff, bodkin-like, light yellow spines of unequal length (9 to 21 cm.) Petals the shape of rose leaves, mucronate; stamens yellow; stigma five-lobed; green."—Forster's Cacteen.

The *tuna* which I take to be this species bears a very juicy, sweet, delicious fruit, yellowish-green when mature, nearly three inches long and two inches in diameter, with fewer seeds (about 150). The greenish white, firm pulp is very cool and refreshing, from which the seeds do not readily separate as in the *tuna colorado*. The slightly glaucous epidermis of the fruit is similarly armed with an equal number of areolæ of fine, short spines, very disagreeable, but easily disposed of by an expert—though dangerous to a novice if he should stand to windward while brushing them off the fruit, when they are liable to blow into the eyes with disastrous results. The average Mexican or In-

TUNA MANSE AS GROWING IN SAN DIEGO.

WILD TUNA.

TUNA MANSE.

TUNA COLORADO.

lieve, indigenous to the American continent and the adjacent islands, but the tunas in numerous varieties have become extensively naturalized and are also cultivated with considerable profit in the south of Europe. In Sicily, *Opuntia vulgaris* is said to thrive in volcanic districts, which would otherwise be barren of vegetation.

The Mexican names *nopal* and *tuna* refer to the same species of plants, but *nopal* refers to the leaf-like stem, while *tuna* refers to the fruit. From being used to indicate a part only of the plant they had come to be generally applied to the whole.

The *tunas*, naturalized around the Missions of Southern California, were brought from Mexico by the Spanish padres, who trained them into hedges around the Mission gardens and buildings. They grow from 10 to 15 feet high, producing an abundance of a large, well-flavored, edible fruit.

P. W. Reasoner, in the *American Garden* (xi.532), in writing of "native Florida cactuses," gives the following interesting account of the occurrence of two species of *tunas* in that State:

"Next, and of more importance, is *Opuntia*

covered with occasional tufts of small chaff-like prickles, are two or three inches long, somewhat pear-shaped and pumpkin-colored. They are produced in the greatest profusion. We know of an array of glasses of marmalade, and jars of the richest wine-colored sweet-pickles, made from the fruit, and as tempting as an epicure could wish.

"Equally famous is *O. ficus-indica*, the 'Indian fig' cactus. This species has escaped from cultivation and has become naturalized in a few places in south Florida, especially on Key West. It, also, is very hardy, and would doubtless prove so in north Florida. It is a most striking and picturesque plant, attaining, in a few years from the cutting, a height of 10 or 12 feet, with immense flat joints a foot or even 14 inches in length. The scale-like spines often drop off and leave the surface perfectly smooth, so it is not very prickly nor difficult to handle. The fruits are larger than those of *Opuntia tuna*, and are yellow in color. The pulp is sweet and has very few seeds. It is very much liked by most people who are familiar with it, and we have seen those who preferred it to such popular and delicious fruits as the orange and banana. The fruits are

annual report of the California State Board of Horticulture for 1890, page 133, and elsewhere. In the same report is given a plate illustrating the fruit of the *tuna colorado* and the *tuna manse*, and also of the wild *tuna* (*opuntia engelmannii*). See engravings used herewith.

Gerald Hastings (*American Garden*, XI, 475) says: "Several species of *opuntia*, particularly *O. tuna*, yield the red, green or yellow fruits known as prickly pears. These are sweet and juicy and extensively used as dessert by the Mexicans and inhabitants of Southern Europe. Their juice is used as a water-color at Naples, and for coloring confectionery in the West Indies."

OPUNTIA FICUS INDICA—Haworth.

"During the eighteenth century Mr. Philip Miller of Chelsea Gardens, England, brought several cacti into notice, at least eight being credited to him and described in his *Gardeners' Dictionary* in addition to those already known. Martyn's edition of Miller's *Gardeners' Dictionary* enumerates, among others, *Cactus ficus indica* and *C. tuna*. Not having access to the above works, I am unable to learn with any degree of certainty as to the characteristics of the types of these species. Apparently the most reliable description accessible to me is in Forster's 'Cacteen,' of which the following is a free translation:

"Native of South America, cultivated south of the Rio Grande under the name *Nopal castillano*; naturalized in Italy and Sicily; tall,

dian learns to handle these fruits with utter indifference to the spines.

The spines are abundant and rather formidable in appearance on this beautiful plant, but are really one of the most useful characteristics of the plant, making it very useful for hedges and fences.

OPUNTIA "TUNA-MANSE."

The color of the fruit of this *tuna* outside is of a deep ochraceous-buff, slightly glaucous, irregularly mottled and blotched with crimson, giving it a bloodshot appearance; inside the outer coating is of the same coloring, but the pulp inclosing the seeds is of a light greenish-yellow.

This is the most abundant of the three forms of *tunas* naturalized at the San Diego Mission, and like the others is credited with a Mexican nativity. The fruit is nearly globose, with a yellowish umbilicus, pitted in the center, an inch in diameter and smaller proportionally than in *tuna* or *tuna colorado*. Seeds more numerous than (about 250). Areolæ and spines on fruit and stems differ but slightly if any from *O. tuna*, from which the plants may not be readily distinguished except when in fruit.

[The manner of growth of this species is shown in the engraving, showing a clump with the figure of a man central, thus indicating the size the plant attains. The cuts of the three species of fruit are from B. M. Lelong's report for 1890, as noted above.—EDS. PRESS.]

## Southern California,

As Described by "Solid Men."

During the last ten years Southern California has attracted the attention of people in all the civilized parts of the world. Much has been printed for and against it. Opinions and purported statements of facts have been scattered broadcast over the land, and but comparatively few are correctly and safely informed as to the real facts, or what they forecast as to the future.

Incorrect information on these subjects is of no permanent value to us or to any one else, while correct information will enable all parties to successfully and safely conduct business connected with this country.

The undersigned banking institutions in Southern California have prepared the following pages to answer the vast number of questions constantly propounded by mail, and to correctly inform others desiring reliable information relating to our social, financial, productive, commercial and other interests.

Having carefully considered the matters herein set out, we deem them reliable and accurate in the light of all observation up to the present time.

Recently this country experienced one of those remarkable excitements correctly described as a boom. That has passed away, and now at the expiration of three years that which remains may be regarded as resting on substantial merit, that will stand the wear and test of time.

The information herein given is not based upon "boom conditions," but upon conditions existing after the boom has passed away, and such as may safely be regarded as permanent.

The prosperity of Southern California rests on no one thing, but on a combination of favorable facts found in no other place in the world. It is this combination and no one fact that insures the rapid and permanent growth; and out of this combination has arisen this wonderful prosperity.

## Main Facts.

The main facts are the unrivaled climate, the fertility of the soil, its prolific productive capacity, the variety and semi-tropical character of its productions, and the local and transcontinental railroad systems connecting it with every depot and station in the United States; a frontage on the Pacific ocean—some 300 miles—connecting thereby with every port and harbor, and connecting with the commerce of the world, and its telegraph system reaching all business cities and nations. It is in the hands of the Anglo-American, the most clear-headed, inventive, forecasting man yet produced in the history of the human race. It is in and a part of the most advanced civilization of the nineteenth century. It is under the best and most liberal form of government. It is exempt from most epidemics and probably the most healthful land known. Its educational and social interests are on broad and secure foundations. It is this combination that has drawn and will continue to draw and keep here the wealth and intelligence of the race.

It may be safely concluded that the prosperity of this southern country rests on the safest foundation, and that as time passes there will be a safe and permanent growth in all departments of business.

## Business Principles.

However, must be the foundation of success in business in all places, and this is no exception to the rule. Industry, thought, economy, energy and good judgment must be applied here as elsewhere. In rare cases should people incur debt, especially in the purchase of lands, unless the party has safe reserve resources with which to meet deferred payments. The violation of this rule is the cause of nearly all financial disasters that have occurred to individuals.

## The Climate.

Much has been said and written on this subject. It must not be expected that every human being would find here just what he calls perfection; at the same time it can safely be said that our climate furnishes more desirable conditions and fewer objectionable ones than probably any other part of the globe. The extreme of cold in the valley portions is a light frost before daylight a few nights each year, with a somewhat heavier frost three or four nights each decade. This temperature shades off into heavier frost on a few or more nights on low damp land. As higher mountain altitudes are reached the cold of altitude appears in frost and snow. The summers are tempered by a refreshing movement of dry air from the ocean inland, which expands and becomes an absorbent of moisture. This absorbing power of the dry moving air evaporates and dries the moisture of perspiration from the body, producing a cooling and refreshing effect. No sultriness ever occurs. The seasons can be quite accurately divided into two—spring and summer, the former extending from the first rains in November or December until May or June, and the latter from June to November. The unpleasant characteristics of fall and winter do not appear. Occasional winds reaching a velocity of 30 miles an hour are the rare extremes of atmospheric violence. The yearly climate will average much pleasanter than May in any of the snow States.

The climate varies but little from the above, and only in minor details. Tornadoes, hurri-

cans, cyclones, sunstrokes and mad dogs are wholly unknown here.

## Soil.

The soil is a deep, rich, sandy loam, almost free from clay, having a depth of from several to 20 and 50 feet. It is constantly replenished and fertilized by the ingredients in the irrigating waters. Under the influence of the mild, warm sunshine, vegetable growth progresses every day in the year. The productive capacity is proportionately great.

## Variety.

It would be easier to name the products that will not flourish here than those that do. Generally all products from oranges to apples, vegetables to wheat and corn, berries and nuts of nearly every variety are grown in prolific yield.

The report of the State Viticulturist shows that the average net profits from all the raisin vineyards in the State for 1889 was \$257 per acre.

A leading merchant from Chicago, Mr. A. A. Sprague, said in March, 1890: "The raisin product of California has become famous in the East. We prefer them to the raisins of Spain, and in years to come the supply will necessarily be greatly increased, or it will not equal half the demand. Dried fruits of all kinds and the citrus crop find ready purchasers. We look to the fruit-producers of the Pacific to supply the wants of the people. Great as has been the development here, there is a vast acreage that should be turned to account and made to produce its share of the gross amount. Encourage the fruit-raisers in every way to improve the land."

## Transcontinental and Local Railroads.

Time was when all commerce followed the lines of rivers and oceans as the cheapest method of transportation; but in this era of progress, railroads are the arteries of commerce and travel. The scent of the railroad companies for business is very keen and a certain index of local development.

Two transcontinental lines are in full operation into Southern California, while another from Salt Lake City is in process of construction. It may safely be said that every transcontinental railroad south of Salt Lake will enter this part of the State, giving unsurpassed facilities to travel and commerce. Local roads are already gridironing every producing district. The ocean opens out to the commerce of the world on the whole frontage of Southern California, in bays and roadsteads, where the quiet waters of the Pacific deal kindly with all vessels the year around.

This system of transportation radiating to all points of consumption and all markets can hardly be overestimated in measuring the future. With this is the telegraph system almost co-extensive with transportation, which will report the supply and demand and prices for our products daily or hourly from all points of commerce.

## Anglo-Americans.

The growth and development of a country depends largely upon the race possessing it and handling its resources. Here the Anglo-American, with all of his inherited and developed energy, clear conception and enthusiastic executive ability, predominates and is the controlling element. With him side by side pull and push the choice brain and muscle of nearly every civilized race. The scientific and practical knowledge of these people in all departments of producing and business are developing unusually able executive men, from whom great and safe results may be expected.

All of the best results of the civilization of the nineteenth century are or will be applied here in the great work of development. The form of our government—liberal, safe, strong, just and encouraging—is such as to co-operate in producing the greatest activity and encouragement. That a people may enjoy in peace and safety the results of their labor is the great inducement to labor.

Society is here forming its most desirable conditions. Educational institutions are being established very generally, and give promise of growing and meeting the social wants in this respect.

## Cost of Lands.

The price of land depends largely upon the uses to which it is adapted. Lands for semi-tropic fruit culture, with water under a good system (say one miner's inch for ten acres) is worth from \$250 per acre up to \$1000, and will eventually reach a much higher figure. Lands for raisin-grapes sell at from \$100 per acre up to \$300. Lands for other purposes are worth from \$100 per acre down to \$50 per acre.

Orange culture up to the present yields a net profit of from \$250 per acre up to \$500. Raisin vineyards yield a profit of about \$200 to \$250 per acre. Figs properly handled will yield a profit of about the same per acre. English walnuts, olives and many other fruits and nuts will yield fully as great a profit.

The cost of setting out ten acres of land in oranges and five years cultivation of the same, not counting the price of the land, estimating eighty trees per acre, is about \$2000, or \$200 per acre. The cost would be about the same for raisin-vineyard, figs, olives or nuts. When in full bearing, at present prices, the income will pay ten per cent interest on from \$3000 to \$5000 per acre. As prices of the products decrease the rate of interest will decrease, and the yield or income will still represent the interest on nearly the same amount. It may be safely estimated that every ten-acre tract of

good land with water for irrigating will support and educate a family, with a margin to spare.

## Co-operative Associations.

Producers in each community should organize into co-operative associations, the object of which should be to so direct the kinds of fruits and nuts planted, and to so prepare the crops for market as to attain the best results possible. Such associations, having their common hall and reading-room, could, at a very little cost to each member, furnish all the best literature in horticulture, arboriculture, agriculture, markets and such other subjects as would enable the community to have the maximum benefit at a minimum cost. Out of this would grow co-operative canning, drying and packing establishments where the labor of the community could put the products into the best marketable condition. Safe market brands and reputation would thus become known throughout the commercial world, giving higher and better markets. Money could be advanced as loans by banks, or those who have it, on storage receipts, to neighbors who need it, the fruit being in storage in the hands of the co-operative association in the care of skilled and competent men. Crops of a whole community can thus be harvested from small orchards as well as from large, and marketed in large quantities, by wholesale, from such associations.

## Manufacturing.

Accompanying the growth and development of the country will be the establishment of such manufacturing enterprises as will be needed to produce the particular products needed in that development. It would be difficult to designate such enterprises at present with certainty. Those having experience and ability in such departments should come and study the wants of the country and then open such works as will meet a present demand. In this way a safe and healthy growth will occur. It is safe to say that several millions of capital could be to-day safely and profitably utilized in this development with every assurance of a good business profit.

## Secure a Home.

The great mistake of the laboring classes is their neglect to secure a home when land is cheap. The laboring man should at once buy the best lot he can afford to pay for, either in cash or by installments. A lot costing \$50 or \$100 or \$300 in any suburban town will make a home place where, free from rent, his family can live, and on such a home a few fruit trees and a vegetable garden will produce a large supply of healthy food. A lot at any price is better than the same money wasted in expenses or paying rent.

## Cost of Living.

The cost of comfortable living in Southern California is probably a little below the cost of the same in the Eastern and Western States. The mild character of the climate makes a material reduction in such cost. The productive character of the soil is such that a space of 50 feet square will, if fully cultivated and replanted, furnish fresh vegetables the year through for a family of seven persons.

In conclusion, we would say to all who contemplate a change of residence or business, to come and see for themselves. In all cases, use your own judgment, and enter into no enterprise unless you can safely see your way through to success.

There is room here for a population of several millions of contented, happy and prosperous people. Those who come with bona fide intention to aid in upbuilding this coming empire, who expect to apply thrift, sobriety, intelligence and honesty, may rest assured that they will receive not only the encouragement but the direct and legitimate assistance that the bankers of Southern California can give.

## METEOROLOGICAL.

## What Is an Anti-Cyclone?

Lieutenant Finley has issued a bulletin explaining the use of the term "anti-cyclone" in meteorology. A former bulletin dealt with the cyclone. The later bulletin reads:

The employment of the term anti-cyclone for meteorological purposes naturally follows the use of the word cyclone. The prefix anti indicates the existence of a contrary system in the air directly contrary to that which prevails in the cyclone. As the circulation of the air currents differ widely from those of the cyclone, so also are the accessory phenomena of an opposite nature. The anti-cyclone is an area of high barometer in which the atmospheric pressure is decidedly above the normal. The highest pressure is at the center and diminishes thence outward to the circumference. The circulation of the air is spirally outward from the center. The air does not attain a circular motion anywhere within the area, and the tendency to a spiral movement is only disclosed when the whole disturbance is charted and observations from every quarter are available. The circulation of the air in an anti-cyclone gives rise to westerly winds on the north side of the center, northerly winds on the east side, easterly winds on the south side, and southerly winds on the west side. The four quadrants of an anti-cyclone are distinguished as follows: In the N. E. quadrant, clear, cold, dry weather, with winds of moderate force; in the S. E. quadrant, a cold wave, with the lowest temperatures, clear, dry air and high winds; in the S. W. quadrant, fair, cool, pleasant weather, with gentle winds and haze; in the N. W. quadrant, increasing temperature, increasing humidity, cloud formation and threatening weather.

The front of an anti-cyclone is the extreme rear of a cyclone, and the extreme rear of an anti-cyclone is the front of a cyclone. The air moves downward and outward in an anti-cyclone and inward and upward in a cyclone. The air which flows outward from the top of a cyclone is cold and dry because deprived of its heat and moisture in the development of rain or snow. This air descends toward the earth's surface and gives rise to the formation of the anti-cyclone. There is always an anti-cyclone between two cyclones, both of which are feeding the former and maintaining its identity. The cold weather of an anti-cyclone is partly due to the descent of cold air from above, the horizontal flow of cold air from the northern regions and the effect of radiation, which is greatly augmented by the absence of vapor and clouds. The area of the anti-cyclone is frequently greater than that of the cyclone and its form less regular. Anti-cyclone is synonymous with clear, cool weather, moderate winds and a cold wave; and cyclones with cloudy weather, rain or snow, high winds and warm wave. The word "high" on the weather map indicates the area of an anti-cyclone, and the word "low" the area of a cyclone. Both disturbances are beneficial and necessary to the prosperity of mankind.

## The Artificial Production of Rain.

The question as to whether rain can be produced by artificial means is to be tested by the United States Government. On the motion of Senator C. B. Farwell, of Illinois, a clause was added to the Appropriation Bill, which provides that, under direction of the Forestry Division of the Department of Agriculture, \$2000 shall be expended in experiments having for their object the artificial production of rainfall by the explosion of dynamite. But Senator Farwell does not intend to limit himself to this small sum, and will, if necessary, contribute from his own pocket such sum as may be necessary to complete the trial to his satisfaction.

In a communication from Senator Farwell the following theories are advanced: "My theory in regard to producing rain by explosives is based partly upon the fact that after all the great battles fought during the century, heavy rainfalls have occurred. This is historical and undisputed. Senator Stanford, one of the builders of the Central Pacific Railway, informed me lately that he was compelled to do a great deal of blasting through a part of the country where rain had never been known to fall in any useful quantities, and where it has never rained since, and that during the period of the blasting, which was nearly a year, it rained every day. I feel almost convinced that rain can be produced in this way. The dynamite could be exploded on the ground or up in the air, and I think I would prefer the latter. The experiment should be made in eastern Iowa, Colorado, or in western Kansas, somewhere along the railway, and my own idea would be to commence early in the morning and explode continuously for seven or eight hours."

While this scheme does not give a very great promise of success, it would be interesting to see the experiment tried and even partial success would be of great value. If the farmers

of Colorado and western Kansas could get a shower once a week by sending up torpedoes every day, the result would be well worth the trouble, and there is plenty of reason to suppose that such artificial showers, by fostering the growth of vegetation, would in time produce the conditions which lead to regular natural showers, and the consequent permanent establishment of fertility throughout the region to which the process is to be applied.

## AGRICULTURAL NOTES.

### CALIFORNIA.

#### Butte.

**PALERMO'S OLIVE ACREAGE.**—Palermo *Progress*, Feb. 21: The acreage of olives at Palermo and vicinity will be very largely increased this year and still more so next year. The present acreage aggregates about 325 acres, and fully 350 acres will be planted this year.

**PLOWING BY STEAM.**—Gridley *Herald*, Feb. 19: On the Traynor ranch, west of town, a Best traction engine is being used for summer-fallowing. The engine is a 50-horse power one and is working successfully. It hauls three Bonanza gang-plows, 12 in all, at about two miles per hour. It averages nearly 25 acres a day. To do this work requires a little over two cords of wood, an engineer, fireman, plowman and water-banler. Thus equipped it costs about 75 cents an acre for plowing. As Mr. Traynor has a great deal of plowing to do yet this season, he will run the engine and plows night and day in a short time. He used it for harrowing last fall, hauling 44 feet of harrows at the rate of about three miles an hour. The days of the horse and plow are evidently drawing to a close in the Sacramento valley.

**FAMILY ORCHARDS.**—Herald, Feb. 19: The number of small orchards that are being set out in the vicinity of Gridley this season is very gratifying to those who have the future welfare of the country at heart. It shows that many of our people are at last awakening to the importance and necessity of at least a family orchard—the question of selling the surplus fruit being a consideration not generally thought of at present. Just why every farmer in this section has not on his place a well-selected, bearing orchard is simply the outgrowth of the peculiar conditions that surrounded him in the past, when all his energies were centered in wheat raising.

**FINE ORANGE GROVE.**—Oroville *Register*, Feb. 19: George Smith of Sacramento has one of the finest young orange groves yet planted in this part of the State. He has 30 acres set to different varieties of the orange on Wyman's Ravine, in one of the most sheltered and best protected spots in the whole region. His trees are planted too thickly, and he will this spring take enough from the 30-acre tract to plant out ten additional acres. He has the following varieties: 735 seedling trees, 980 Washington Navels, 290 Parson Browns, 280 Majorcas, 230 Nonpareils, 167 Beach No. 2 and 61 other trees, besides lemon trees. The trees are looking fine this winter and are doing as well as any in this section of the State.

**FINE HORSES FOR THE EAST.**—Chico *Enterprise*, Feb. 21: D. M. Keavis, the famous breeder of fine stock in this section, has some 60 or 70 head for the Eastern market. Last night the cars arrived for the horses, and next week they will be loaded up with the finest animals that ever left the northern portion of the State. The cars are of the finest description, made for the transportation of fine stock. We have seen it stated that it costs \$85 a head to ship horses in these cars to New York, and that does not include feed or attendance.

#### Fresno.

**PROFIT IN NECTARINES.**—Fresno *Expositor*, Feb. 18: James Conn, in Fresno colony, has received from \$200 to \$300 an acre from his trees; F. R. Storie, of Washington colony, has trees that netted him \$100 per acre; A. O. Bryan, of Oleander, and others have profited largely from this crop. The sudden popularity of this fruit in the East has stimulated the demand, which in turn will stimulate the supply. George Roeding of Fancher Creek says that the best varieties of nectarines are the new white nectarine, the Hardwicke, the Stenwicks and the Boston. The new white is a very fine variety and looks very handsome when dried. The nectarine comes into bearing three years from planting, and yields a good crop the fourth year. The fruit matures in July, a little earlier than the Early Crawford peach. They are very profitable, and the demand for them is excellent. They compare favorably with the peach for cooking purposes, and are very palatable when eaten dry. There is no local demand to amount to anything; nearly all the fruit goes East. It doesn't pay, either, to ship it green from localities where it can be dried. In the matter of drying fruit, Fresno county has the advantage of the northern counties. Up there they need to ship their fruit green or let it rot, as the dews prevent it from drying properly. Here we have climate and everything else in our favor. There is no locality in the State better adapted to growing the nectarine, and in fact most fruits, than Fresno county. A vineyardist will do well to put from five to ten acres, according to the size of his tract, in some paying variety of fruit.

#### Humboldt.

**INCREASED PLOWING.**—Eureka *Standard*, Feb. 19: A great deal of plowing has been done on Aroa bottom which will allow farmers

to take early advantage of planting and sowing in the spring. I have observed several acres of grain on different ranches on the bottom which was sown last fall and which is now in a very thrifty condition.

#### Inyo.

**NO MARKET FOR BEEVES.**—Independence *Independent*, Feb. 20: Farmers in different parts of the valley complain that they cannot find market for beef cattle. After feeding steers with alfalfa till they are in the finest condition for beef, they are forced to turn the animals out on the range, and thus lose all the fruits of the labor and expense of feeding. In many instances the same animals have been fed and turned out two years in succession.

#### Lake.

**LAKE COUNTY CROPS.**—Lower Lake *Bulletin*, Feb. 21: The recent rain has settled doubts that might have been entertained in regard to crops in this county. Our farmers are jubilant, and bappy indeed, we may say, for Lake county, that it never yet has suffered from a drought.

#### Napa.

**PLANTING IMPORTED VINES.**—St. Helena *Star*, Feb. 20: From the *Calistogian* we learn that during the present season 25,000 resistant vines will be planted on the Tubbs place above town. Next year 25,000 foreign vines will be planted there. These cuttings have been collected and purchased in Germany, France and Italy, by A. L. Tubbs.

#### San Bernardino.

**ALFALFA IN DEATH VALLEY.**—Chloride *Belt*: "Death Valley is a desert, but it is not as desolate a place as it is represented to be," remarked C. B. Zabrieke, Superintendent of the Pacific Borax Company, yesterday. "Our company has a rancho in the Valley, and about 100 acres in alfalfa. It is called the Furnace Creek Rancho, after the creek from which the water is taken. The water is conveyed a distance of seven miles in pipes, and the supply is just sufficient to irrigate the alfalfa. Last year eight crops were raised upon this land, good heavy ones, too. Do you know of any section where they can beat that?" The scribe admitted that he did not.

#### San Diego.

**CAJON FRUIT STATISTICS.**—S. D. *Union*, Feb. 19: President J. P. Jones of the new County Board of Horticultural Commissioners and F. H. Brooks, his deputy, have begun a thorough canvass of this district to see how much land is under cultivation and by whom. District No. 1 extends from the frontier to Encinitas, No. 2 from thereon to Vallecitos, and No. 3 from that place to the northern boundary. They have begun with Cajon valley, which includes Lakeside. The footings show that there are about 9000 acres in vines and fruits. In addition one man reports 50 acres in bay and another has 25,000 head of cabbage under cultivation. There are being 1271 acres more set out this season, as follows: Prunes 308, walnuts 150, oranges 725, lemons 15, vines 123 and olives 50. The total from 62 property-owners is: Vines—2717½ acres, with 2500 additional vines; oranges and lemons—5119 acres, and 5974 additional trees; mixed fruits—(apricot, peach, apple, pear, prune, walnut, orange and lemon) 341 acres, and 528 trees additional; pears—137½ acres, and 566 trees besides; prunes—125 acres, and 600 trees extra; olives—60 acres, and 450 more trees; peach—68½ acres, and 1115 trees extra; English walnut—10 acres; apricots—9½ acres; figs—9½ acres; guavae—six acres, and 600 more trees; plums—5½ acres; apples—four acres; Japanese persimmons—two acres; nectarines—one acre.

#### San Joaquin.

**FOX-HOUNDS TO PROTECT SHEEP.**—Stockton *Mail*, Feb. 19: R. R. Jenkins, a prominent sheep-raiser of Calaveras county, is in Stockton to-day on his way home with a brace of fox-hounds, which he obtained from a breeder in Santa Clara county to protect his sheep. He says the fox-hound will not herd sheep, but in his section coyotes are very troublesome and fox-hounds are death on coyotes. The latter pest killed 60 of his sheep last season. Some years ago he had a pack of fox-hounds, and they cleaned out the coyotes completely, and when everything was all right he neglected the dogs, and the enemies of the flock increased again. He thinks coyotes kill sheep sometimes just for the fun of the thing, or through pure devilment, as they will destroy in one night more than they could consume as food in three months. They invariably catch the sheep behind one of its ears and gnaw a hole into its neck so that it bleeds to death.

#### Santa Cruz.

**BEING CONVERTED INTO ORCHARDS.**—Watsonville *Pajaronian*, Feb. 19: The nurserymen of this valley estimate that fully one thousand acres have been planted in fruit trees this season in the Pajaro valley and neighboring hills. Higher estimates have been given, but the figures carefully compiled from nursery sales do not safely permit of a larger acreage than the above estimate. Apple have the call, and fully three-fourths of the new orchards are in apple, with the balance mainly in prunes. In the Corralitos district—including the Calabasas rancho, Hungry Hollow, and along the county road to Aptos—it is estimated that over 30,000 trees have been planted this season. On the Carlton and Casserly ranches fully 200 acres have been planted in orchard this season. The orchard bloom is on in Pajaro valley, and the cultivation of fruit promises more to the palus-

taking and intelligent farmer than any other branch of his calling. Apples and prunes are a staple fruit, and are always in demand. In no part of California do they attain a finer state of growth than in the Pajaro valley. This section is being rapidly converted into orchards, and before many years it will be the most noted part of the State for the excellence of its deciduous fruits.

**LARGE HOGS.**—Watsonville, Feb. 19: Three large hogs have been among the sights at the Moro Cojo ranch that have attracted the attention of every visitor. They were mammoths, and got so fat that it was impossible to add more to their weight. Last week they were killed, and they weighed 961, 842 and 810 pounds. Those weights are hard to beat.

#### Solano.

**GRAIN CROP ASSURED.**—Davisville *Cor. Dixon Tribune*, Feb. 18: The storm has reached us at last, and grain crops are now assured. Something over four inches have fallen, making a total for the season of about 13 inches. This in the olden times would have been insufficient to produce a crop, but now, thanks to improved methods of cultivation, it is ample. The acreage here is unusually large and grain is all looking well, with the exception of the late sown, which in some instances has failed to start, owing to dryness of the surface. Farmers predict a heavy yield this season.

**THE ALMOND.**—Tribune, Feb. 18: The farming community hereabout seem at last thoroughly awakened to the fact that fruit-culture is destined to be the industry of the future. This is evidenced by the large and rapidly increasing sales of fruit trees, many of them being made to men who have formerly openly expressed their opposition to the fruit business. Several varieties, such as the peach, pear, prune and apricot, are in brisk demand, but the almond is the favorite in this locality. W. R. Ferguson alone selling 30,000 during the present season. It has been found by careful experiment that no locality in the State has been more favored for the production of this nut than Northern Solano. In its rich soil, the trees mature earlier and live longer than anywhere else. The returns from this crop are found also to be larger than from any other, with the possible exception of the prune. A partial crop often nets the orchardist from \$300 to \$400 an acre. Little care needs to be exercised in getting the crop and very little work is necessary to prepare the nuts for market. They are not perishable and can be held for a rising market. On the creek lands the trees mature at from two to three years, and on the Silveyville ridge a little later.

#### Sonoma.

**A BRIGHT OUTLOOK.**—Healdsburg *Enterprise*, Feb. 21: The winter, which so far has been the most favorable one for years, insures an abundant grain crop, and if the cold weather of March is no more severe than in former years, all will be well for the fruit and grape men. Both of the Healdsburg canneries will run to their fullest capacity this year, and from present indications the price of fruit will be as good as it was last season. The wine market is not so favorable, but as the drying of wine grapes has proved reasonably successful, it is safe to say that the price of grapes will be as high as last year. It would be well if there had been no vines planted on our fine, fertile valley lands—land which will grow anything; and the day is not far distant when these vines will be taken up. The wheat crop will be large, and our flouring-mill will, no doubt, be reopened.

**TREE PRUNING.**—John Markley in Santa Rosa *Democrat*, Feb. 21: "The fruitmen are not pruning as savagely in my part of the county this season as formerly. In my opinion, successful pruning, or, in fact, any other department of horticulture, depends upon the intelligence of those in the business. A man would not break a draught colt and a trotting animal in the same way. Discrimination must be exercised in handling trees. This matter of labor is a great thing on the farm. Cherries sell for more than peaches in San Francisco, and it is all a matter of working the fingers and arms. A thousand more movements of the hand and arm are required in gathering the crop of a cherry tree than that of a peach or prune tree; and that is what makes the difference in the price. Prunes may be gathered by shaking the tree, and five feet difference any way makes no difference. But you can't shake the peaches, and therefore a few feet in height or width makes a difference in dollars and cents to the grower. All these things have to be taken into consideration. Judgment is the invariable rule to follow in cutting your trees. I think the time is coming when the growers will trim their fig trees. There is much complaint about the white figs not developing, and I think it is principally due to the fact that the soil in some parts of the county is not adapted to the cultivation of the fruit. But one thing should be learned. The most valuable product of the Adriatic fig tree is the second crop, and that is only borne on the wood of the same year's growth. The first crop amounts to little, and the fruit-growers must prune so as to encourage the annual growth of wood."

**POULTRY SHOW.**—Santa Rosa *Leaf*, Feb. 22: The management of the Sonoma County Poultry and Petaluma Stock Association announces that their first annual exhibition will be held in this city March 11th to 14th inclusive. The exhibition will be held in Willard's Pavilion. A competent judge of the poultry department and one of the pigeon show have been secured. We observe in our exobangas from the southern

part of the State that they design being well represented here. Every assistance possible should be extended to make this exhibition a shining success.

#### Tulare.

**A VALUABLE BUY FOR ORCHARDISTS.**—Hanford *Sentinel*, Feb. 19: The Tulare County Horticultural Board held a meeting last week. In view of the fact that the twice-stabbed lady-hug (*Chilocorus Bivulvnerus*) is cleaning up the trees of Lucerne township, the board decided that the orchardists in that territory who are known to have this bug at work on their trees need not spray this year. The bug may be identified by its jet black color and the blood-red spots, one on each shoulder. This benefactor to fruit-growers was brought to Tulare county from near the Mexican line about five years ago, and by the importation of the bug this county has saved many thousands of dollars. Other localities have been to great expense to cleanse their orchards from scale, while our lady-hug is doing the work here. The board appointed Mr. Motheral inspector for the county, and he will undertake to ascertain the needs of the orchardists and provide means for eradicating all pests that may be discovered.

**FARM AND ORCHARD NOTES.**—Porterville *Enterprise*, Feb. 20: Don Weber is in town on Saturday last from Daunt. He is setting out 500 Muscat grapevines and 300 deciduous fruit trees. J. M. Ferguson of Poplar is preparing to plant 12,000 Muscat raisin-grape vines. On Sunday last H. B. McDonald and O. O. Henry received 30,300 rooted Muscat raisin-grape vines from Fresno, which they will set out on their properties. Henry Hunsaker of Woodville and Deer Creek has just completed the sowing of 3400 acres of grain. John Heard of Lewis Creek is planting 400 eucalyptus trees on the outskirts of his property for shade purposes. On Monday last Jacob Renz of Frazier Valley sold 100 tons of hay to a Fresno dealer at \$12 per ton delivered. Murray Milmine has purchased 520 Bartlett pear and 520 French prune trees, which he will plant on his west side ranch. W. J. Prettyman is preparing ground for the reception of 1000 orange trees of the budded Malta blood variety. A. E. Redstone is preparing the ground for the reception of 15,000 Muscat raisin-grape vines and 1500 apple trees on his Poso Creek ranch. He will erect a patent evaporator for the purpose of curing his raisins. Otis Jerrald and Jim Bartley are setting out 40,000 raisin-grape cuttings for themselves and 60,000 for Will Putnam.

**TRANSFORMING THE COUNTRY.**—Porterville *Farm View*, Feb. 20: So many parties are putting in vines and trees all over the county that we could fill our columns with bare mention of them. Tracts varying from 2½ to 1000 acres are being planted to every kind of fruit trees, and new crops. The county is alive with new vineyard men, ditches, buildings and various improvements. In some portions of the county, old settlers who go off to attend to business a few weeks, get lost near home on returning, so bewildering are the changes in roads, fields and old landmarks.

**GOOD PRICE FOR A BLOODED COLT.**—Porterville, Feb. 20: On Wednesday last, Dr. W. S. Henrhan sold to John Cowing of Woodville his two-year-old bay colt Red Rose for \$1250. Red Rose is by the famous Bay Rose, dam Kit Douglas out of Lady Douglas, and is the finest colt ever brought to this county.

**GRAIN CROP PROSPECTS.**—Visalia *Times*, Feb. 20: The present season has been a peculiar one. The rainfall has been lighter than at any other time for years, yet the soil has been in good condition for plowing, and the surface soil wet enough to fall in the hands. Grain has made slow growth, owing to the cold weather, but has taken good root in the ground. Really the desire of the farmer has been more for warm weather than rain. The rain of Sunday, however, will do much good, and with a week or two of warm days and nights the grain will shoot up rapidly. The present prospects for a full crop are better to-day than they were at this time last year.

**PROFIT IN SHEEP.**—Porterville *Enterprise*, Feb. 20: From 2800 ewes, Henry Zimmerman has just raised 3900 lambs, or nearly 140 per cent. He sold the lambs for \$2 50 each.

**GOOD FLOW OF WATER FROM AN ARTESIAN WELL.**—Tipton, Feb. 18: F. W. Laughlin has just completed an artesian well on his place south of here. The well is 800 feet deep and flows an abundance of water to drown 160 acres. The land will be put in order for next year, when vineyards, orchard and alfalfa will be set out in good shape. Thus, one by one, our small farms are to be brought under a high state of cultivation, and when we consider the countless acres of fine land now lying idle soon to be made to blossom like the rose, we are led to form some conception of the mighty possibilities of this beautiful valley.

#### Yolo.

**CROPS IN YOLO COUNTY.**—Woodland *Mail*, Feb. 21: Our farmers and orchardists say that without a single exception, the grain all over the county is looking exceedingly well. All the winter-sown wheat is up and growing fine, and the summer-fallow has never looked better. The stand is excellent, the color good, and the acreage is much larger than it has been for several years. The orchardists are also happy, especially those who have been setting out young orchards and vineyards. They say that the rain could not have come at a more opportune time, and that with but a few showers interspersed along at intervals, all the trees will live and have an excellent stand.

SCENES IN THE NORTHERN PORTION OF THE SIXTH CONGRESSIONAL DISTRICT.

## San Joaquin Valley Oranges.

The Sixth Congressional District, the whole area of which is included in the territory covered by the Southern Citrus Fair to be held next week in Los Angeles, comprises that part of the State south of the northerly boundary of Fresno county. This makes the elevated valleys and foothills on the east side of Fresno,

Kern and Tulare counties a part of the district, and we trust, although it is late in the season, that there will be a showing of citrus fruits from that region at the Los Angeles Fair. There has been much planting of citrus fruit trees and older plantings are now bearing well. The engraving on this page shows a group of views in Porterville valley, on the east side of Tulare county, where much enterprise is now being manifested by the Pioneer Land Company and other land-owners. Among the evergreen

leaves and golden globes of the orange branch in the picture we see a cluster of various views. Above is a general view of Porterville valley, the level plain being divided in squares alternately planted with orange trees and vines, or yet showing open fields. In the background is seen the town of Porterville with its oaks and fig tree groves. Another view represents a street scene in Porterville with the schoolhouse in the background. The cottage in the vineyard belongs to one of the raisin growers; in

the foreground there are rows of raisin vines. To the right we see the flowing water, an irrigation canal shaded by groves of native oaks in the background.

Scenes like these are to be seen in many parts of the State, where the enterprising land developer is bringing in water and dividing lands on which colonies and individual settlers are planting and building and contributing to the progress of the State and their own prosperity and comfort.

# BAKER & HAMILTON

San Francisco and Sacramento, Cal.

MANUFACTORY: BENICIA AGRICULTURAL WORKS,

BENICIA, CAL.

THE "ACME," AN A 1 ORCHARD AND VINEYARD HARROW.

Two Sizes, Cutting 6 and 7 1/4 Feet.

THE BEST LIGHT VINEYARD AND ORCHARD HARROW MADE

50-TOOTH IRON AGE CULTIVATOR, WITH DETACHABLE HORSE HOE ATTACHMENT.

CLIMAX DISC HARROW.— SMALL SIZES FOR ORCHARD USE.

# WALTER A. WOOD ENCLOSED GEAR MOWERS AND RAKES.

The Best in the World and so Adjudged at All the Great World's Fairs and by Competitive Field Tests in Every Land.

FOUR WIDTHS  
OF CUT.

4 Feet 3 Inches,  
4 Feet 6 Inches,  
5 Feet  
and 6 Feet.

THE LIGHTEST RUNNING, BEST WORKING,  
FINEST CONSTRUCTED, EASIEST HANDLED,  
AND MOST DURABLE MOWERS MANUFACTURED.

THE NEW WALTER A. WOOD MOWER FRAME IS UNBREAKABLE

And the roughest usage cannot damage it. All bearings are of best COMPOSITION BRASS, exactly lined; their straining from position is impossible. Tilting Cutter Bar. Adjustable Pitman for taking up wear.

IT IS THE LIGHTEST DRAFT!

Because: The Draft is DIRECT from the Hames to the Cutting Line; the Bar, therefore, is drawn, not pushed; the Wheels are HIGH and of wide tread, obviating side draft and loss of power; the Gearing is the best piece of mechanism of its kind in use. It has been largely copied by other manufacturers and still leads them all. There are more reasons than these. Drop us a postal card and we will mail you circulars of the WOOD MACHINES, Handsomely Illustrated.

WALTER A. WOOD MOWER WITH TILTING BAR  
AND CUTLERY STEEL CUTTING APPARATUS.

"Beats Them All."

"SANTA YNEZ, CAL., Dec. 13, 1889.  
FRANK BROTHERS, San Francisco, Cal.—DEAR SIR: I have used most every kind of mowing machine and I think the Walter A. Wood BEATS THEM ALL. It runs lighter and has less side draft. I have run one Wood machine every season for the past four years, cutting in all about 1000 acres, and in the whole time it has not cost me 25 cents for repairs. I would gladly recommend the Walter A. Wood Machine to every one who wishes to get the worth of his money. Yours, WILLIAM EDDY."

"The Lightest Running."

"LIVERMORE, CAL., Dec. 6, 1889.  
"After trying to cut my crop last year with a good ——— and could not, on account of the squirrel grass and clover, I purchased a Walter A. Wood Mower of J. H. Dutcher and cut all my crops with it, also very difficult pieces of hay for others, and will say it is the lightest running Mower and least liable to get out of repair of any Mower I ever used or saw in use. [Signed] HENRY R. CRANE."

WALTER A. WOOD SULKY HAY RAKE.

8, 10 or 12 Feet Head.

Can be operated by any one who can drive. Is either Hand or Self-Dump and one or two horses may be used. The same careful construction has been applied in designing and building this Rake as in all the Wood Machines. SEND FOR CIRCULARS. ADDRESS

## The Citrus Fair Next Week.

## Prospects and Premiums.

The Southern Citrus Fair will open in Los Angeles on March 3d—next Tuesday. The Los Angeles Chamber of Commerce has just issued a bulletin of information about the coming citrus fair, from which the following extracts are taken:

San Bernardino county took the first premium for a county display last year, and enters the lists confident of the superior merit of its fruit. Over 1000 boxes of citrus product will be displayed by this county from four or five localities. Riverside, which took the first premium as a locality in 1890, has applied for plenty of space in which to present a fine general display and a number of personal exhibits. It has two different designs, each elaborate and beautiful, under discussion. Redlands, which last year secured the second locality premium, is at work with characteristic energy, and proposes to make it exciting for some of its competitors who have promised themselves the honor of crowding it out of line. Ontario took the third locality premium last year, and has reserved some of its finest fruit with which to make a display. Highland has a committee at work and will send a beautiful display. The last two sections have not yet decided upon any form of design. There are in San Bernardino county three other localities from which individual exhibits will come and where general displays may yet be arranged.

The second county premium was taken last year by Los Angeles. Fifteen different localities from this county will make a display this year, many of them with very handsome designs. For the county exhibit an enormous arch of oranges will be constructed across and over the entire front of the stage. The sum of \$400 has been appropriated by the Board of Supervisors for that purpose, and as much more will be obtained from other sources. This arch will not be entered in competition with other designs for the "artistic-merit" premium, but will be constructed for the sole purpose of contributing to the beauty of the display. The ladies of the annex to the Chamber of Commerce will build a miniature of the county courthouse at the back of the stage.

In Pomona the work has started with a cash subscription of \$1300. Duarte will send 300 boxes of choice fruit, and will occupy considerable space with a design symbolizing the name. This locality carried off several prizes last year. Pasadena will build a magnificent pyramid 30 feet high, using 150 boxes of oranges for its decoration. Glendora, Azusa and Covina join together in making a display for the upper San Gabriel valley. This district will send in about 300 boxes. Its design is Egyptian. Sierra Madre will construct a bas-relief of Wilson's peak and the observatory. Rivera will erect a tower of citrus fruit and walnuts. San Gabriel proposes to work out a design of the Old Mission building in oranges. Alhambra will build a Moorish castle on plans taken from the Alhambra of Granada. Whittier promises a unique display. Monrovia and Vernon each have ladies' committees hard at work upon a design. Santa Monica and Long Beach will send in exhibits to show how citrus fruit prospers near the coast. Artesia, Norwalk, Downey and San Fernando all expect to make displays.

San Diego county secured the third county premium last year, and claims both the fruit and workers to take it again at the coming fair.

National City will send also a fine display of olives and other semi-tropic products.

In Orange county the work is now well under way. An active committee of ladies has been appointed. Subscriptions have been obtained to cover contingent expenses, and at least 200 boxes of superior fruit will be sent in to make a display at the fair. A fine exhibit of walnuts and other Southern California products is expected from this section.

Fresno county will make an exhibit of raisins and dried fruits.

Santa Barbara county will send an exhibit of citrus fruit and orange wine, and in addition will make a beautiful display of plants, flowers and peculiar semi-tropic products. One-half of one side of the gallery will be occupied by this county with a carefully planned display.

In Ventura county committees have been appointed. A display of citrus and miscellaneous products is expected, as the county has plenty to show.

Special days for localities have been arranged as follows: Wednesday, March 4th, Ontario, Pomona, Spadra, Monte, Savanna, San Gabriel and Alhambra; Thursday, March 5th, Santa Barbara, Ventura, Newhall, San Fernando, Burbank, Glendale, Tropic and Redondo; Friday, March 6th, San Diego, Santa Monica, San Pedro and Long Beach; Saturday, March 7th, Riverside, Redlands, San Bernardino, Highlands, Beaumont and Banning; Monday, March 9th, Santa Ana, Orange, Tustin, Westminster and Anaheim; Tuesday, March 10th, Lodi, San Dimas, Glendora, Azusa, Covina, Pasadena, South Pasadena, Sierra Madre and Lamanda; Wednesday, March 11th, Downey, Whittier, Norwalk, Artesia, Park and Rivera. The railroad companies have made special reduced rates to Los Angeles from all points.

The fair will be formally opened Tuesday night by Governor Markham, who will be present with his staff, accompanied by several

State officers and a number of members of the Legislature. Word has been received from the Sacramento Board of Trade that a delegation from that body will visit the fair. Premiums at Southern California Citrus Fair.

Exhibit of citrus fruits from any county, first premium, \$400; second, \$200; third, \$100. In order to compete for the county premium, authority must be given some person or persons at a regular called meeting of fruit-growers to enter the exhibit and receive any premium awarded.

Exhibit of citrus fruits from any locality, first premium, \$150; second, \$100; third, \$50. Any city, township, school district or well-known town will be recognized as a locality. Organization to be formed as for county exhibit.

Exhibit of Washington navel oranges by an individual, first premium, \$75; second, \$50; third, \$25.

Exhibit of budded oranges other than Washington navel, by an individual, first premium, \$75; second, \$50; third, \$25.

Exhibit of seedling oranges by an individual, first premium, \$75; second, \$50; third, \$25.

Exhibit of budded lemons by an individual, first premium, \$80; second, \$60; third, \$40.

Specimens of Washington navel oranges, not less than one box (quality), first premium, \$20; second, \$10.

Variety of budded oranges, other than navels, not less than one box (quality), first premium, \$20; second, \$10.

Specimens of seedling oranges, not less than one box (quality), first premium, \$20; second, \$10.

Specimens of budded lemons, not less than one box (quality), first premium, \$20; second, \$10.

Variety of late-budded oranges, not less than one box, \$15.

Exhibit of Japanese variety oranges, not less than one box, first premium, \$10; second, \$5.

Exhibit of limes, \$10.

Exhibit of citrons, \$5.

Exhibit of shaddockes and pumelo, \$5.

Exhibit of raisins from any county, first premium, \$150; second, \$100.

Exhibit of raisins from any locality, first premium, \$75; second, \$50.

Exhibit of raisins by an individual, first premium, \$50; second, \$25.

Exhibit of five-pound box of raisins, first premium, \$10; second, \$5.

Exhibit of two and one-half-pound box of raisins, \$5.

Exhibit of dried figs, first premium, \$25; second, \$10.

Exhibit of pickled olives, first premium, \$20; second, \$10.

Exhibit of olive oil, first premium, \$20; second, \$10.

Exhibit of walnuts, first premium, \$40; second, \$20.

Exhibit of dates, \$5.

Exhibit of pomegranates, \$5.

Most artistic display of plants and flowers, first premium, \$30; second, \$20; third, \$15.

## NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & CO., Publishers,  
No. 220 Market St., S. F.

THE ATTENTION of our readers is called to the small Sharples Improved Separator. It is an exact counterpart of the larger machine, and does fully as good work, which is another word for saying it is perfection itself. The small machine is newly introduced to this coast, but has had trial enough to demonstrate its capacity. It will be useful in dairies of from 10 to 75 cows, and as it can be run with a small engine and is proportionately cheaper than its larger brother, the first outlay in putting in a plant is reduced about one-half. The machine is finely proportioned, well built and is very handsome. E. D. Sharples of 203 Fremont St., S. F., has the separator on exhibition.

## Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos, \$1; 10 mos., \$2; 15 mos., \$3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

## Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

ENGRAVING—SUPERIOR WOOD AND Metal Engraving, Electrotyping and Stereotyping one at the office of this paper.

## THE VERY BEST AND CHEAPEST FLOUR.

Guaranteed to all Customers to be Always Good.

THIS UNEQUALED FLOUR WAS AWARDED FOR HIGH QUALITY IN THE YEAR 1890

PRIZE MEDAL of California State Fair,  
DIPLOMA Napa and Solano Co. Fairs,  
PRIZE at Sonoma County Fair.

## The De Laval "Baby" Cream Separator

FOR HAND POWER

A Grand Machine for Small Dairies.

TURNS EASY, SIMPLE.

PRACTICAL FOR ALL WHO MILK.

Will extract all the Cream from 250 pounds of Sweet Milk per hour. Dairying no longer an uncertain drudgery, but PROFITABLE, EASY AND CERTAIN. The Baby De Laval is as perfect throughout as our Large Machines and proves a source of great profit to purchasers. Send for further information.

## 'Planet Jr.' Improved Farm and Garden Tools for 1891.

BETTER, Both Horse & Hand, THAN EVER; better and more money saving. We cannot describe them here, but our new and handsome catalogue is free and interesting. A goodly number of new tools will meet your eye there. Among these, Gardener's Harrow, Cultivator & Pulverizer, combined, adjustable teeth; Market Gardener's & Beet Grower's Special Horse Hoe with Pulverizer; Special Furrower, Marker and Ridger, adjustable wings; Sweet Potatoe Horse Hoe, four-tooth with vine turner; Heavy Grass Edger and Path Cleaner; new Nine Tooth Cultivator and Horse Hoe combined; Special Steel Leveler and Pulverizer combined; all interesting, nothing we have ever made so practical or perfect. Some improved things too are grafted upon our older favorites. A capital LEVER WHEEL, instantly adjustable for depth, is a great feature; put on all 94 goods unless ordered otherwise. Not have our Hand Seed Drills been forgotten in the march of improvement, nor our Double and Single Wheel Hoes, Gardener's Plows, Grass Edgers, Etc. Some of them are greatly altered for the better; yet do not forget that no novelties are adopted by us without actual and exhaustive tests in the field. We therefore guarantee everything exactly as represented. Send for Catalogues now. S. L. ALLEN & CO., 1107 Market St., Philadelphia, Pa.

KANSAS SEEDS Our Novelties: Jerusalem and Kansas King Corn, Denver Lettuce and Kansas Stock Melon. Our Specialties: Alfalfa, Espersette, Kaffir Corn Cane, Millet, Seed Corn, Tree Seeds for timber claims and nurseries. Everything in the seed line. Catalogues mailed FREE on application. KANSAS SEED HOUSE, F. Barteldes & Co., Lawrence, Kan.

FOR SALE!

PINOLITO OLIVE RANCH!!!

FORTY-SIX ACRES OF HILL LAND

In the Town of Auburn, Placer Co.

Red soil, superimposed upon upturned, friable, decomposing slate, yielding iron and alumina, thus furnishing a soil which, as Prof. Hilgard said after his analysis, will retain moisture, will not require irrigation, and will not allow the vegetable mold to leech away; thus suited to the growth of fruit trees, especially the olive, as has been demonstrated both by the remarkable growth of the tree and the yield and the quality of oil.

It is situated only 15 minutes walk from Auburn Station—the C. P. R. R. passes along one side—and is a less distance from the Court House. Thirty acres improved and planted to olives, set at long distances for permanent growth, and other fruits planted between the rows for temporary profits, mostly peaches of three best varieties, ripening in succession; pears, mostly Petite; plums of several varieties, as Kelsey, Japan, Shropshire Damson, etc.; figs of several best varieties; a few apples, nectarines, blackberries, etc. Two acres of table and raisin grapes, never irrigated, the vines remarkably vigorous and in full bearing. The trees, especially the 1500 olive, have all been planted with regard to permanency. About one-half of them have an orchard growth of seven years; fruited last year 300 pounds, this year nearly one ton. They are mostly Mission and Picholine, with a few trees of other choice varieties. Two crops of the olives have been pressed. The yield has been, for the first press, 14 per cent of very clear delicious table oil, and four per cent from the second press—the Picholine yielding this, of a peculiarly clear, nutty oil.

There is on the ranch a few acres of grain sown for hay; two acres of well-set alfalfa, below the Auburn ditch, which crosses one corner of the property; also a small house of four rooms and a kitchen; a well of good water; a small barn; a strong, permanent spring of soft, cold water, which wells up through the slate; a two-inch iron pipe connects the spring with an iron-bound 20,000 gallon tank, situated on a beautiful pine clad hill, 40 feet above the spring, a point which overlooks the town and gives very charming distant views, and is one of the most lovely sites for a residence to be found. The water is pumped to the tank by a duplex pump; the power, a four-horse steam engine, which furnishes power sufficient to pump, saw wood, run an olive crusher and do all needed shop work.

The land is all suited to fruit, excepting along a rocky ridge, which furnishes three very desirable residence sites, and the olive, set promiscuously, thrives finely among the rocks. The property can be conveniently divided along a sag which separates two of the high knobs, and water from the spring can be pumped to each of them.

This desirable property is now offered for sale for less than the improvements cost. The land is fenced, the title good and unencumbered. It is connected by a roadway, which is one of the improvements made, with one of the principal streets of Auburn.

The sale will convey the entire plant, furniture in the house, all utensils, etc. If sold before April 1st the sale will include the coming crop. If later, the crop will be reserved, unless otherwise by special agreement. If desired, one-half the purchase money can remain five years, secured by mortgage at eight per cent. For price and any further information desired, address

A. H. AGARD,

## THE IRRIGATOR.

## Flowing Water in Southern California.

In spite of the grand achievements in irrigation in Southern California, the impression pre-

practical account. We have thought the same lesson might be enforced by views taken, not in the cultivated regions, but in the wild places where the water is not restrained in dams nor developed by human artifice, but the streams gush and flow fresh from the natural fountains. Southern California has vast valleys and mesas which are arid until the enterprise of man

the colonies at the head of the San Bernardino valley, to Riverside and to other prosperous settlements farther along on its course to the sea. The views were taken in time of low water, for only at such times are these picturesque nooks accessible; but there are seasons in which the boulders which add so much to the picturequeness of the pictures are sub-

## The New Bear Valley Dam.

In our issue of Feb. 7th we gave views of the existing Bear Valley dam in San Bernardino county, and an account of the inception of the Bear Valley enterprise and the manner of its operation. Such has been the success

SCENE ON BEAR CREEK—THE LOWER FALLS.

VIEW ON THE UPPER SANTA ANA RIVER.

valls in some quarters that it is an arid region. Reports of the vast production of fruits and other crops, and the pictures like those we present elsewhere in this issue, of orchards and gardens which could thrive only with adequate soil moisture, should enforce the idea that the rich country has vast water supplies and that human enterprise and ingenuity are constantly bringing them to light and turning them to

brings floods of vivifying water upon them, but she has also lofty mountains and deep canyons in which rainfall is large and consequently water supplies abundant. Such places as these are shown in the pretty views which we present herewith, and there are thousands like them in the southern counties. The views are all on the Santa Ana river and its tributaries, the priceless stream which has given the wealth to

merged in the raging torrents. The storage and utilization of such vast water supplies is one of the directions in which Southern California enterprise is rapidly proceeding, and this it is which insures a vast increase in irrigable area during the immediate future and a consequent development of the country of which present achievements, great as they are, are only a beginning.

of the existing arranging and distributing the stored waters in Bear Valley that it is now proposed to erect a new dam, which will impound a much vaster volume of water and render it possible to make fruitful a new and exceedingly well-situated tract of land known as the Alessandro tract, located in the north-western portion of the San Jacinto valley, and extending some twelve miles east and west, by three or four north and south. The west end of this tract is located five miles east of Riverside, and the east end of the tract is some seven miles north of Redlands. The entire tract comprises some 21,300 acres of the choicest fruit land in Southern California. Out of this entire acreage there is not to exceed 300 acres of land that is not arable. The greatest portion of this tract is on the slope of the foothills, sloping mostly to the south, and a portion of it sloping to the east, while a few hundred acres in the extreme west end of the tract is rolling. The average elevation is something like 1500 feet above the sea level, which is the same elevation to be found at Redlands, Crafton, Highlands and the upper portion of Ontario. Settlement and improvement has been in progress on this tract for some months, and a large amount of the land has been sold in anticipation of the bringing in of adequate water supplies imprisoned by the new Bear Valley dam.

An engraving is also given herewith showing the proposed new Bear Valley dam, to be built about 100 yards below that we have described in order to enlarge the capacity of the original reservoir. The new dam is called a 120-foot one because it will raise the level of the water to 120 feet above the old datum plane, from which all the levels in the valley were taken. As the new dam will be built lower down the canyon, about 150 feet from the old one, it will start eight feet below the datum. This will make it 128 feet from bedrock to the water-line. Above the water-line will be a wave parapet 3 feet thick and 5 feet high; therefore the total height of the dam, exclusive of the foundations below the natural surface of the ground, will be 133 feet.

The old dam is 60 feet high from the bedrock, and was located on the best site available for a dam of that height, but above that level the sides of the canyon are not so steep at the

VIEW ON THE SANTA ANA RIVER, SAN BERNARDINO COUNTY.

THE PROPOSED NEW BEAR VALLEY DAM IN SAN BERNARDINO COUNTY.

site of the old dam as they are a little farther down stream. Hence, it so happens that the new 120-foot dam can be built on a new site a little lower down and entirely independent of the old one, and still cost probably \$75,000 less than it would if an attempt were made to ntil-

lize the old dam by making it a part of the new one on the old site. The new dam will be 15 feet thick on top at the water-line, and will carry a heavy wall acting as a wave parapet on the upper edge, and a heavy iron railing on the lower edge, and be-

tween these there will be a wagon-road. The back of the dam, or the side next the water, will be vertical from top to bottom, and the face, or lower side, will be built in the form of steps or terraces. These steps will have a uniform raise of ten feet, and each one will have

# THE PELTON WATER MOTOR

Affords the cheapest and most convenient power for ranch, vineyard and dairy purposes, as well as for running dynamos for electric lights, pumps and every other variety of machinery.

It possesses in the same degree the wonderful energy that has made the Pelton Wheel famous in all parts of the world.

These motors are made of varying sizes, with capacities ranging from the fraction of one up to 15 and 20 H. P., inclosed in iron cases, all ready for pipe connections, and are warranted to develop a given amount of power with one-half the amount of water required by any other wheel.

The cost, considering capacity and efficiency, is fully 50 per cent less.

- Circular, giving full information, sent on application.

Parties writing for information should give full particulars as to power wanted, source of water supply, with head of pressure. Address,

**WOODIN & LITTLE.**  
312 and 314 Market Street, Junction of Bush, SAN FRANCISCO, CAL.

an offset proportioned to the depth of the water above it, and just sufficient to prevent any tensile strains in the masonry when the reservoir is full of water.

The engineer's computations show the maximum strain in the whole structure when the reservoir is level full of water to be less than 12 tons per square foot. They also show that the average pressure on the whole base will be less than six tons per square foot, and that there will be no tensile strains in any part of the dam.

The dam will be 80 feet through at the bottom, and built of solid granite masonry laid in Portland cement mortar. It will be built on the solid rock; and the foundations will be on in steps, as shown in the engraving, so as to give the masonry the best possible hold on the rock and avoid any long continued seams in any direction.

The dam will be built in the form of a curve or horizontal arch, with the convex side upstream, as shown in the picture. It has been shown that the dam can be built on this site, with the curvature shown, with less material than it could if it were built straight or with any other curvature. The curved form will add greatly to the resisting power of the dam, especially during an earthquake. It is believed that when the dam is constructed as proposed, and the reservoir is full of water, it will be in a much better condition to safely resist a heavy earthquake shock than will any large building in California, and that it will be fully equal in security to any similar structure in the world.

## A Move for Better Roads.

## HORTICULTURE.

## Raspberries at Santa Ana.

A. B. Ellis gives the *Blade* the following essay on raspberry-growing:

First, as to pruning. It is the season now when that ought to be done, although any time before the leaves appear will do.

I believe most writers recommend cutting back during the summer, and if properly done, it is, I suppose, a good plan. The results which I myself have obtained in this way do not warrant me to recommend the plan to the

As to varieties, the Souhegan or Taylor's Early is the only one I have fruited here. It is a sprawling grower, and I expect it to be superseded by some of the other varieties. It was the only Blackcap I could obtain at the nurseries here, two years ago. I sent East for the Gregg and Shaffer's Colossal. The Gregg is an upright grower, a large berry, covered with a bloom. It is of the best quality for table, and I believe it is conceded to be the best shipping raspberry yet introduced. I have great hopes for this berry here. My plants now look the finest of any I have ever seen anywhere, of their age. I will be glad to show them to visitors at any time, and I shall report occasionally how they are doing, through this

is, however, a rather soft berry, and hence not a good shipper.

As to setting, I prefer to set them in rows, five to eight feet apart, and three to four feet apart in the row, and give good, shallow cultivation.

## Two New Small Fruits.

We give herewith engravings of two small fruits of this year's introduction at the East, and now being distributed by J. T. Lovett of Little Silver, N. J.

Lovett's Early strawberry is a chance seedling (believed to have descended from the Crescent crossed with the Wilson) that was discov-

fect health and vigor until all berries have ripened. The berries color all over at once, never with a green tip; seldom ill-shaped and never cockscombed.

Lovett's Black Cap raspberry is a chance seedling originating in Jefferson Co., Indiana, where it has been fruited for several years by the side of Doolittle Improved, Gregg and other popular sorts, proving each season as early as Doolittle, as large as the Gregg, perfectly hardy, very firm and a good keeper, very sweet and of the finest flavor; the Gregg being winter-killed to a greater or less extent in adjacent rows each season. In the spring of 1889, the discoverer sent Mr. Lovett some plants for testing, and he was so favorably impressed with it from

new beginner. The trouble with this method with me has been that I checked the growth for a time and then induced a late growth that was not to be desired.

If the plants are cultivated sufficiently to keep down weeds and make a good growth of plants, there need be but little fear about canes upon which to grow the fruit. I prune according to the size of the cane, remembering that a cane of ordinarily good growth may be expected to hold a weight of four to six pounds of fruit and foliage, and also that fruit buds thrown out near the ground will produce double the fruit that they will over two feet from the ground, and that of a much better quality; and also that it is the buds near the ground that are most likely to remain dormant if long canes are left to be tied up to supports.

paper, not only the successes but the failures as well, for we can often learn as much by knowing what to avoid doing as by reading how some successful grower succeeds. A case in point to illustrate: When I was raising berries in Kansas I read that salt was a preventive measure for some insects; and when I set out plants the next time, I remembered this and applied salt quite freely to the plants. A word to the wise is sufficient—never apply salt directly to any weak plant. Salt is an excellent insecticide, but it is death to most plant life as well.

The Shaffer's Colossal is a rampant grower of brown-black color, and the largest berry I know of. It has a peculiar, sprightly acid flavor that made it sell for from two to five cents a box more than other varieties in the market where I have generally sold them. It

ered in Kentucky in 1885, near the place of origin of Chas. Downing, Kentucky and Downer's Prolific. Both in Kentucky and New Jersey the variety has been tested by the side of all the best varieties in cultivation, upon poor soil, and without fertilizers, and in every instance it has given results surpassing by far all others, responding to good soil and culture as generously as any variety we know. In earliness it is second only to Crystal City (that little extra early sort being but two or three days in advance of it) and in productiveness it exceeds all other varieties we have ever fruited; and succeeds everywhere, even upon poor, light land. Mr. Lovett does not claim for it mammoth size, but that it is above medium, averaging large and very uniform, holding its size to the close of the season better than other varieties—by reason of its foliage maintaining per-

their growth and what he had heard of it that he visited the plantation of the originator on June 16th of that year. Finding the canes covered with ripe fruit and so wonderfully fine in every way, he purchased the entire stock of plants and control of it. He has since tested the variety upon his own grounds, where it has proved even stronger growth than in Indiana, and fully as fine as at the place of its origin in all other respects. The Black Cap raspberry cuts no figure in the San Francisco market, but the canes fruit well in some parts of the State and delight the growers' tables if the market does not at present do much with them.

## ORANGE PLANTERS

Should read the advertisement of the Aloha Nurseries. The best varieties are offered at rates so low that no one need hesitate about planting for experiment, or for investment in places where the orange is known to thrive.

## Cheaper Than Windmills for Farmers!

Our Perfected "Safety" Engines Cost to Run only 1-8 Gallon of Gasoline per Horsepower per Hour.

No Boiler, Fire, Smoke, Steam, Ache or Heat. No Engineer, No License, No Danger. Single and Double Acting. 1/2 H.P. to 20-H.P.

GENTLEMEN—The 2-H. P. Engine received and set up yesterday. We attached it to part of the machinery in my shop, and it ran my Drill Press, a small Lathe, a large 24-inch by 14-foot Lathe, and a set of Emery Wheels, all of which it handled easily, to our great surprise.

Yours very respectfully,

SAN BERNARDINO, CAL., January 10, 1891.

J. B. HENDERSON.

GENTLEMEN—I am satisfied, after running for over a month my Bean Cleaner, etc., with the 4-H. P. Engine you sent me, that it is much the best Gas Engine I have seen. The electrodes are certainly superior to all others, also your safety rotary slide-valve, which is the personification of simplicity, positiveness and durability; I am satisfied it will develop much more power than we have need for. I also want a 3 or 1-H. P. for my wife and daughters to use about the house; we have a rotary clothes washer, can also do the churning, etc. I do not know of any better recommendation than to order a second engine.

Respectfully yours,

P. C. HIGGINS.

NOTE.—Both of these Engines were shipped to the parties named, and were set up by them solely by the diagram and printed directions we sent them.

## BILZ GANG AND SINGLE PLOWS.

The Gang Plow cuts 18 inches, and two horses will pull it as easily as a 12-inch Single Plow, and does better work. The Single Plow has no standard, and so is not liable to catch the vines or choke up in weeds; the beam fastens in a socket behind the moldboard and can be thrown to or from the land in a straight line.

By throwing the beam from the land, the plow can be put under the vine a foot and the beam will not touch the branches, and the singletree will not interfere.

The handles can be changed from one side to the other and raised and lowered to suit.

First Premium awarded both Plows at Mechanics' Fair, 1889, and at Fresno Fair, 1890. Address

## THE ONLY TRUE FERTILIZER

Is the GENUINE Compound of the MEXICAN PHOSPHATE & SULPHUR COMPANY prepared from GUANO and rendered soluble by the application of acids.

This manure is an ENRICHER of the soil and not, like others, a STIMULANT only; It will do for the land what no other can in rendering it PRODUCTIVE without IMPOVERISHMENT.

Its analysis is reliable; its work is immediate and effective, and for results we point with confidence to the ORCHARDS of RIVERSIDE, where it has been liberally used for the past three years.

It can be prepared to suit any land, with or without potash, as occasion may require. It is rich in PHOSPHORIC ACID, and can be made as rich in NITROGEN as the most deficient soil may exact.

WE GUARANTEE ALL WE CLAIM FOR IT,

Viz.: TO BE THE MOST COMPLETE FERTILIZER ON THIS COAST.

For Sale In Lots to Suit by

H. M. NEWHALL & CO.,

AGENTS.

309 & 311 SANSOME STREET, SAN FRANCISCO, CAL.

IN ORDER TO CLOSE OUT OUR RETAIL CARRIAGE BUSINESS in San Francisco, we will sell our large stock on hand of first-class Carriages, Top Buggies, Phaetons, Four Spring Wagons, Carts and Harness at Cost. Now is the time if you want to buy a good carriage cheap. Salesrooms, 220 and 222 Mission St., San Francisco, Cal.

BRIGGS CARRIAGE CO., C. Crego Agent.

## THE VETERINARIAN.

## Effects of Food on Wool.

EDITORS PRESS:—I don't know if Dr. Buzard has had any experience with sheep; if he has, I would be pleased to have his opinion as to whether food affects the quality of wool.—O. W., *San Ardo*.

EDITORS PRESS:—The feeding of sheep has a marked influence on the quality and quantity of the wool. In this connection, the rules to be observed are:

1. To obtain wool of good quality and proper quantity, the sheep should be well fed. The increase of the wool in length and resistance comes to a stop if the animal be deprived of the amount of food necessary for it. Well-fed sheep pay for the increased expense by the weight of the fleece and the better quality of the wool. There is, however, an essential difference to be noted in long-wooled sheep. Too much and too rich food soon makes the wool of short-wooled sheep too long, an inconvenience which is not to be feared in long-wooled varieties.

2. When the sheep receives too little food, or when that food given in sufficient quantities is not sufficiently nutritive, the wool preserves its fineness and acquires a certain length, but its resistance falls; it is deprived of grease, which makes it weak, harsh to the touch and dry as flax.

3. Regularity in distribution of the food is of the highest importance, the wool soon showing the effects of this. That is what is seen when, in winter, the sheep are well fed with hay, grain, beans and oilcake (as is the case in England), and when these supplementary foods are too quickly taken away in the spring, the wool undergoes a time of stoppage. Later, continuing to grow under more favorable circumstances, the woolly hair is less resistant, and in a part of its extent covers a dead spot, a real scar, indicating the irregularity of growth.

4. Opinions differ as to the action of different foods on the wool. All, however, agree in attributing a marked effect to fertile pastures. The fleece is more abundant, the hair is longer and noticeable by its softness, whiteness, brightness and strength. Sturm lays down the rule that all foods which promote perspiration produce a finer wool; that is, those which include the most nutritive matters in the smallest compass. Two sheep of the same breed covered with the same wool, but differently treated, one being fed for fattening and the other in the usual way, show quite a different variety of wool from the first shearing. In the first place it will be longer, coarser, and will have lost its elasticity. This is more noticeable at the second and third shearing. The other sheep will have preserved all the original qualities of its fleece. The difference in the diet being continued up to the third generation, the offspring could not be recognized as coming from the same stock.

## Bovine Leucorrhœa.

EDITORS PRESS:—I have a very valuable cow that has the whites. Kindly advise me what to do through the medium of the Veterinary column.—SUBSCRIBER, *Livermore, Cal.*

EDITORS PRESS:—Leucorrhœa sometimes results from injury, but generally subsides rapidly and is represented by a chronic form of inflammation of the lining membrane of the vulva and vagina, which in some cases is ulcerated, in others simply thickened, and sometimes is the seat of scrofulous deposit. It may be more or less extremely diseased. The discharge varies in amount and in consistence, also in constancy of flow. It may be quite white and profuse or purulent or sanguineous; also the constitution is variably affected. There may be considerable fever or scarcely any. Generally the patient exhibits constant sexual desire but seldom becomes pregnant, and if she does is liable to abort. There usually are the general signs of nutritiveness.

The causes are gonorrhœa of the bull, debility and scrofulous diathesis. Treatment consists of tonics, nutritious diet, avoidance of sexual intercourse and stimulant astringent applications after thoroughly cleansing. In cases of ulceration, the application of nitrate of silver. These cases sometimes prove very obstinate. A crupous form of vaginitis has been described.

A. E. BUZARD,  
11 Seventh St., S. F. Veterinary Surgeon.

Women who suffer from nervous and physical debility find great help in the use of Ayer's Sarsaparilla. It produces the rapid effect of a stimulant, without reaction—the result being a permanent increase of strength and vigor, both of mind and body.

### FOR DYSPEPSIA, Ayer's Sarsaparilla

Is an effective remedy, as numerous testimonials conclusively prove. "For two years I was a constant sufferer from dyspepsia and liver complaint. I doctored a long time and the medicines prescribed, in nearly every case, only aggravated the disease. An apothecary advised me to use Ayer's Sarsaparilla. I did so, and was cured at a cost of \$5. Since that time it has been my family medicine, and sickness has become a stranger to our household. I believe it to be the best medicine on earth."—P. F. McNulty, Hackman, 23 Summer St., Lowell, Mass.

### FOR DEBILITY, Ayer's Sarsaparilla

Is a certain cure, when the complaint originates in impoverished blood. "I was a great sufferer from a low condition of the blood and general debility, becoming finally, so reduced that I was unfit for work. Nothing that I did for the complaint helped me so much as Ayer's Sarsaparilla, a few bottles of which restored me to health and strength. I take every opportunity to recommend this medicine in similar cases."—C. Evick, 14 E. Main St., Chillicothe, Ohio.

### FOR ERUPTIONS

And all disorders originating in impurity of the blood, such as boils, carbuncles, pimples, blotches, salt-rheum, scald-head, scrofulous sores, and the like, take only

# THE "TRIUMPH."

## The Best Pulverizer in the World.

### ALL METAL SPADING HARROW.

HORTICULTURISTS AND FARMERS, TRY IT.

JUST THE THING  
— FOR WORKING —  
Summer Fallow Land.

FOR TWO HORSES. Works the soil about six feet wide. Angle of teeth adjustable to work the soil at desired depth. THIS HARROW is something entirely new. IT IS THE GRAND-EST ACHIEVEMENT of its inventor, C. LA DOW, who is the recognized authority on Harrows, there being but few leading harrows at the present time not built under his patents. We have made exclusive arrangements for its sale and it can be obtained only through us or our agents.

Considering the immense amount of labor done, the draft is very light, as the pulverized soil passes through the gangs of revolving cutters, being left smooth. THE GANGS are so arranged that the most uneven ground is thoroughly harrowed and left level. IT LEAVES NO FURROW or ridge; when the field is harrowed it is all left smooth. 10, 12 and 14-ft. sizes in stock. Send for circular.

Specially Adapted  
— FOR —  
ORCHARDS AND VINEYARDS.

THE NAME "SPADING" refers to its action on the soil. The action of each cutter is like that of a small spade, lifting and turning the soil from a depth of four to six inches, doing more perfect work than is possible with any other Harrow in the world.

THE BLADES are made from spring steel, in operation vibrating and shaking off sticky soil. IT NEEDS NO SCRAPERS to clean the revolving cutters.

#### TESTIMONIALS.

H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: Your Triumph Spading Harrow is all that is claimed for it. It is the most perfect pulverizer I ever used in my orchard and is not wearying or exhausting on the team. Yours truly,  
WILLIAM C. BLACKWOOD.

H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: The gentleman using the Triumph Spading Harrow has bought from you for him writes us as follows:

"That the Triumph Spading Harrow is in fact a triumph over all the harrows I have ever used. The first trial I made was on a 30-acre field sowed with barley; 15 acres were harrowed with the Triumph in one day as perfect as it is possible to be. The other 15 acres I harrowed with a common harrow and it took me three days, and then it was not in as good condition as that harrowed with the Triumph. The Triumph does splendid work and as a harrow I consider it worth three times as much as the ordinary harrow, as well in the field as in the orchard and vineyard. It is a perfect pulverizer and weeder.—C. STROEBEL, Eagle Home Farm, Searsville, Cal." Yours Truly,

H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: After using your Spading Harrow in all kinds of work, I will say it is the best pulverizer that I have ever seen. I used it to cultivate my orchard and vineyard, and it does not only cut up all weeds, but leaves the roots up to the sun, which is sure death to them. You may praise it as high as you like, as you cannot say anything it does not deserve. Yours respectfully,  
C. A. HAUL.

H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: Regarding the Triumph Spading Harrow would state that we are satisfied it is as light draft as any, and lighter than the average cultivator of its kind, and, as to its work, we think it cannot be beat. Yours truly,  
PIXLEY COMMERCIAL CO.,  
By L. E. SMITH, Secretary.

COLMENA ORANGE GROVE; Capital Stock, \$100,000; A. F. ABBOTT, Pres.; G. W. PEACOCK, Treas.; E. P. McDANIEL, Sec. MARYSVILLE, Yuba Co., Cal., Jan 20, 1891

MESSRS. H. C. SHAW PLOW WORKS, Stockton, Cal.—GENTLEMEN: Enclosed find check for payment of your bill for Spading Harrow sold to me by Mr. Hill. I shall take pleasure in recommending it to my friends, and think the Triumph will have a large sale in this locality. I am pleased to say to you that the machine is a most excellent one for cultivating the ground and pulverizing it in good shape. For an all-round useful machine, I feel sure any one buying it will appreciate its value. Yours truly,  
A. F. ABBOTT.

CHAMBERS OF THE JUDGE OF THE SUPERIOR COURT, JOHN C. GRAY, JUDGE. }  
OROVILLE, BUTTE Co., CAL., Jan 17, 1891. }

H. C. SHAW, Esq., Stockton, Cal.—DEAR SIR: I purchased from your Agent, Mr. Hill, one six-foot Triumph Spading Harrow, and sent the same out to my olive farm to try. My foreman declares that it will do the work of four plow teams, and requests me to get another to put into the field by the first of March. He is highly delighted with it and calls it the greatest improvement in farm machinery he has yet seen. Instead of putting a number of teams into the field to plow and then harrow the ground, I shall go over it with the Spading Harrow twice and the work will be more thoroughly done, and at one-third of the expense. This is one of the most complete pieces of farming machinery that I have yet seen, and I cheerfully recommend it to those, who, like me, want the most and best work done for the money. It gives entire satisfaction. Yours truly,  
JOHN C. GRAY.

SANTA ANA, CAL., Jan. 16, 1891.  
H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: The man using the Triumph Spading Harrow we bought of you, writes us as follows: "The Spading Harrow is all that could be wished. In orchard work it can be run nearer to the trees than any other kind, and does away with hand hoeing to finish with. I have also used it to harrow new soil, and it is first-class for that. It takes nine days only with one span of horses to harrow my orchard of over 100 acres, and does it better than with any other cultivator I have ever seen.—DWIGHT WHITING, El Toro, Cal." Yours truly,  
NICHOLS & ULM, Santa Ana, Cal.

H. C. SHAW PLOW WORKS, Stockton, Cal.

# CALIFORNIA'S TRIUMPH!

A COMBINED HARVESTER  
— FOR —  
Horse Power or Traction Engine.

AWARDED FIRST PREMIUM  
— AT —  
California State Fair, 1890.

# Daniel Best's New Steam Harvester.

SHOWN AS AT WORK IN THE FIELD.

Improved for season of 1891 with all latest improvements, including Best's Peerless Grain Cleaner.

All sizes made to order, from 14 to 40 feet.

As a Steam Traction Harvester, Straw, Wood or Coal can be used for fuel.

These Steam and Horse Power Combined Harvesters were run successfully all last harvest, giving entire satisfaction in all ways in grain in every condition.

SEND FOR NEW CIRCULAR. For further information, prices, etc., address

DANIEL BEST, San Leandro, Cal.

## DOMESTIC ECONOMY

**FLANNEL CAKES.**—Two eggs beaten light, one pint of milk, salt to taste, two teaspoonfuls of yeast powder and flour enough for a batter. Serve hot in round cakes with maple syrup.

**SNOW ICE-CREAM.**—Beat well together one cup clear sweet cream, one cup sugar and one fresh egg; set in snow until cold, then stir in light snow until thick. Put in the flavoring before the snow is added.

**APPLE CUSTARD.**—Pare and grate two large, tart apples; add four tablespoonfuls melted butter, eight of sugar, juice and grated rind of one lemon, yolks and whites of six eggs, separately beaten. Line dish with puff paste and bake like custard.

**LYONNAISE POTATOES.**—Cut some cold boiled potatoes into small square blocks; shred half an onion finely; drop potatoes and onion into hollering lard and fry a light brown; drain on paper in a very hot dish. Dust with powdered parsley before serving.

**GINGER APPLES.**—Boil in 1½ pints of water one-half ounce nicely cleaned ginger root, then add two pounds of sugar and let boil five minutes more. Add two pounds of apples, pared, cored and quartered. Cook until clear, skim out, boil down the syrup and pour it over.

**CREAMED PARSNIPS.**—Boil and peel parsnips; cut them in slices, and after spreading each slice with butter, lay in a vegetable dish and pour over them a white sauce made of a cup of boiling milk cooked until thick with two spoonfuls of flour and one of butter; pepper and salt to taste.

**CRANBERRY SAUCE.**—Put one quart of cranberries and one pint of boiling water into a granite kettle. Boil the berries rapidly for five minutes. Press them through a colander and return them to the kettle. Add to them one pound of sugar, bring to boiling point, and turn out to cool.

**LEMON JELLY.**—Soak one hour, in a pint of cold water, one box of gelatine; take the juice of five lemons, the rind of one and one pound of sugar; mix these together, turn on a quart of boiling water; strain through a cloth, set in a mold to congeal. Put it in a cold place, let it stand over night.

**APPLE AND TAPIOCA PUDDING.**—To a teacupful of tapioca use a quart of boiling water; let stand awhile and soften; sweeten a little, add a lump of butter the size of a walnut, then slice in tart apples, sufficient to make a layer over the top. Bake until the apples are tender. Eat with sweetened cream.

**FRUIT CAKE.**—Raisins and spices to taste, one cup molasses, one cup brown sugar, one cup shortening, two eggs, two teaspoonfuls soda, three cups flour, two cups dried apples (not soaked). Beat all together and stir in raisins and spices to suit. Soak the apples over night. In the morning, put in the molasses and sugar, boiling down quite thick.

**ROLY POLY PUDDING.**—Make a rich suet crust, roll rather thin, spread jam (or any kind of fruit), leaving a margin of paste where the pudding joins, roll it round, tie in a cloth that has been sprinkled with flour, drop in boiling water, keep cooking two hours, take off the cloth, lay on a flat dish, and serve while hot with lemon sauce.

**SWEET POTATO CROQUETTES.**—Boil six large sweet potatoes until they are just tender, then remove the skins and mash the potatoes through a colander or a vegetable press, add a tablespoonful of butter, a teaspoonful of salt, a dash of pepper and a tablespoonful of sugar. Mix thoroughly, form into croquettes, dip first in egg and then in breadcrumbs and fry in smoking-hot fat.

**CHEESE SANDWICHES.**—One-fourth pound of crumbled cheese, the yolk of a hard-boiled egg, a tablespoonful of melted butter, half teaspoonful of salt, a dash of pepper, half teaspoonful of made mustard, a tablespoonful of milk, and thin slices of bread or biscuits, lightly but evenly buttered. Put the hard yolk in a small bowl, make smooth with a spoon, add the butter, cheese and seasoning, mixing well, and eatly the milk.

**CELERY ON TOAST.**—If not used in soup, celery may be creamed and served on toast. The following recipe is well worth trying: Cut the stalks of celery into inch pieces, cover them with milk and let them boil until tender. Season to taste with salt and pepper, and liberally with butter, pour over squares of hot toast and serve at once. The milk may be omitted and the vegetable stewed in water till tender, seasoned to taste with salt, pepper and butter. In this recipe it is not to be served on toast. A pinch of soda should be added while it is cooking.

**SALT FISH CHOWDER.**—Shred up a pint bowl full of salt fish and let it soak in cold water about two hours. Fry a few slices of fat salt pork the same as for clam chowder and put in the bottom of your kettle, then about three pints of sliced potatoes, three sliced onions and one pint of breadcrumbs, sprinkle with half teaspoonful of black pepper and add hot water enough to cover; boil until the potatoes are soft, then add one pint of milk and let it boil up once, and it is ready to serve. If the fish and pork do not make it salt enough, season to your taste.

## Stockton Notes.

The various manufacturing plants in the city of Stockton are crowded with various lines of work, principally on combined harvesters, traction engines and street railway cars. A Rural representative made a flying visit to and personal inspection last week of the principal manufacturing plants.

The Stockton Combined Harvester and Agricultural Works had 20 street railway cars on the way, four or five of which had the finishing touch of the painter's brush. Those that were completed presented a very fine appearance, and were destined to run in various cities from Puget Sound to San Diego. Several of the celebrated Miller's Lightning Hay Presses were ready for use, while the combined harvesters engaged the attention of a large force of men. Mr. M. Laufenburg was engaged on traction engines, and making improvements for the harvesters.

The Matteson & Williamson Mfg Co. had a very fine-looking traction engine nearly completed, and a large force of men at work on their harvester "Harvest Queen." Mr. Williamson had just completed a cultivator that cuts eight feet wide, and on a practical test has proven very satisfactory.

At the Haines, Houser & Knight works, the Haines Houser Combined Harvester was being pushed ahead, while Mr. Sherwood, better known as Budd Sherwood, had just completed a very large traction engine for Guaymas, Mexico. In the front yard there was an engine weighing eighteen tons, built in England, which had been materially changed, and as Mr. Sherwood expressed it, "he thought he would make it work."

The Stockton Wheel Co., owned by Holt Bros., are building street railway cars by the score, and their linked Combined Harvester will be ready in large numbers for the coming harvest.

The H. C. Shaw Plow Works have just finished a large shop and equipped it with a Regan gas engine, for the purpose of carrying on their immense plow business and adjuncts belonging to their manufacturing department. This firm has had phenomenal success with their spading harrow. In less than a year they have sold over 600, and during the time your reporter was in Stockton a carload, which consisted of 90, had just arrived, and immediately thereafter a dispatch was forwarded for an additional carload.

The new grist mill near the railroad was completed and running, and the immense gristmill that was being built upon the banks of the slough was up two stories high.

Mr. R. F. Wilson, manufacturer of the Improved Davis windmill, has built a large factory near where his old one stood and is preparing to put in a gas engine for power.

One noticeable feature of Stockton is the large and artistic business houses and dwellings that are being erected. During the last year Mr. W. R. Richards laid out an addition to Stockton known as the Fair Oaks tract. He charged very moderate prices for his lots and the trend of settlement is in that direction. Being an extension of Main street, and having a new car line running through the entire tract, it is fast outstripping in growth any other residence portion of the city of Stockton. It seems to be a settled fact that the city of Stockton is destined to be the greatest manufacturing center of our State.

About one-third of the dwelling-houses are furnished fuel from natural gas, and as Capt. J. W. Smith informed our reporter, he had not used any fuel other than natural gas for heating or culinary purposes during the last 15 months.

It is food for thought, and something of a matter for State pride, when we can safely assert that there is no place in the world to-day that manufactures as high a class of labor-saving machinery for agricultural purposes as in the city of Stockton.

Mr. D. C. Clowes was busy sending out lots of fruit trees, and was feeling disappointed to a considerable extent from the fact that he could not get fruit trees enough to supply the demand.

DEWEY & CO., PATENT AGENTS, 220 Market St., San Francisco. Elevator, 12 Front St.

## Sacramento Notes.

Our reporter was at Sacramento last week, and while there visited the great manufacturing establishment of J. F. Hill. He had a full force of men at work, and orders for the Lightning Miller Hay Press, of which he had already sold four this season, were coming in at a satisfactory rate; also, for the heavy truck wagons that would carry ten tons, for hauling with traction engines. On that day he received an order for four to be shipped to Guaymas, Mexico.

Mr. T. F. Lauder has a splendid stock of carriages, wagons, hay rakes, etc., and is doing a fine business, although his repository has only been open about eight months.

The great agricultural firm of Stanton, Thompson & Co. have had a fine season in supplying agricultural implements. The Haines Gang Plows, which he introduced last season, have become very popular, and the only trouble he has had was in getting stock enough to supply the demand.

Mr. E. W. Melvin, importer of and dealer in the Becker Washers, has opened up a fine trade this spring in this line of goods. Mr. Melvin's art rooms on K street have been well patronized with orders for enlarged pictures from photos, tints, etc.

Altogether, the dealers and manufacturers of the Capital City are feeling the impetus given by our bountiful rains, and are all looking forward very hopefully for an unusually prosperous year.

ORNAMENTAL and SHADE TREES, Roses, Standard Roses, Clematis, Trailing Vines, Plants, Etc., Etc., in Great Variety.

Packing Grounds at Niles, Cal., Unsurpassed Facilities for Shipping. Correspondence solicited.

W. P. HAMMON,

Business Office, 960 Broadway,

OAKLAND, CAL.

1891.

Home Grown, Honest, Reliable.

1891.

I offer you my Vegetable and Flower Seed Catalogue for 1891 FREE. Note the immense variety of seed it contains, and that all the best varieties are there. Not much more show about it (you don't plant pictures) but fine engravings from photographs of scores of the choice vegetables I have introduced. Would it not be well to get the seed of these from first hands? To be the oldest firm in the United States making mail and express business a specialty proves reliability. Honest and honorable dealing is the only foundation this can rest on. My Catalogue is FREE as usual. A matter on second page of cover will interest my customers. J. J. H. GREGORY & SON, Marblehead, Mass.

## ORANGE AND LEMON TREES.

NORTHERN GROWN.

WASH. NAVEL and MED. SWEET ORANGE. EUREKA and LISBON LEMON. Free from Scale. We NEVER have had any pests at our nurseries. Prices from 60 cents up.

CALIFORNIA FAN PALM.—All sizes and prices from five cents up.

Seeds, Plants, Etc., Continued on Pages 210-211.

### An Effective Stump-Puller.

A stump-puller recently patented in Canada and brought by the patentee to this coast, where it is manufactured, is doing wonderful work on Mr. McKerron's ranch in the Redwood district. Mr. Dent, the foreman of the ranch, tells us that he has been able, by the use of this machine, to pull trees two feet in diameter forcibly by the roots, without any cutting of lateral roots or the digging of ground. The machine is worked by horse-power, and is capable of doing great service in the clearing of land. It excels all stump-pullers we have seen before in this valley.—*Gilroy Advocate.*

From inquiry we learn that the machine referred to is the California stump-puller, but the editor of the *Advocate*, or his informant, has been mistaken as to its origin, as the machine is a California invention. The universal opinion, however, seems to be wherever this machine has been tried that it is the champion of all stump-pullers.

### A Leading Real Estate Firm.

Messrs McAfee, Baldwin & Hammond, No. 10 Montgomery street, San Francisco, real estate brokers, have taken a prominent position in establishing citrus colonies and extending in various ways the enlargement of the citrus orchards of this State. They are a highly reputed and enterprising firm, attend closely to their business and keep abreast of the times in procuring important enterprises in the large acreage properties, town lots and desirable fruit lands.

Any business intrusted to their care will be attended to promptly and in the most efficient manner. They act strictly as the broker between buyer and seller.

### A New Agricultural Firm.

We take pleasure in calling attention to a new and enterprising firm of Importers and jobbers of vehicles, farming implements and hardware specialties. Messrs. Allison, Neff & Co., well known in business circles, have opened a large repository at 55 and 57 First street, San Francisco, where will be found a full stock of goods in their line.

MR. T. J. ALEXANDER, veterinary surgeon, and graduate of the Ontario Veterinary College of Toronto, Canada, has settled in Stockton, and has an office at Wolf's stables on Sutter street. He is a highly respected and genial gentleman, and has chosen a good location.

### COMPLIMENTARY REPORTS.

#### Experiences of Value to Others.

[Copy.]

CONCORD, CAL., Dec. 23d, 1890.

MESSRS. G. G. WICKSON & Co.—Gentlemen: In response to your inquiry, I will say that I consider the Rochester Gang Plow the best that I have ever used or seen.

[Signed] H. H. BANCROFT.

ARTOS, CAL., Dec. 23d, 1890.

MESSRS. G. G. WICKSON & Co.—Gentlemen: Having used the Rochester Orchard Plow in my Orchard, I am pleased to state that it does its work very well, and is much lighter on my team than I expected.

[Signed] E. C. WILLEKE'S McDONALD.

SARATOGA, CAL., Jan. 3d, 1891

MESSRS. G. G. WICKSON & Co.—Gentlemen: The "Cyclone Pulverizer" I purchased from you last year I have thoroughly tested, and am well pleased with it. For the last workings of an orchard it is especially valuable, leaving the ground well pulverized and level, and I think it deserves a trial by horticulturists.

[Signed] GEO. W. HANDY.

SANTA ROSA, CAL., July 14, 1890.

MESSRS. G. G. WICKSON & Co.—Gentlemen: We have used a set of your Steel Harness in plowing vineyard, and find it the most complete arrangement we ever saw. We have used them also for two-horse work on wagon, and they work equally as well as in our vineyard or orchard work. [Signed] W. E. & H. BENJAMIN.

EVERGREEN, CALIFORNIA, Aug. 1st, 1890.

MESSRS. G. G. WICKSON & Co.—Gentlemen: I take pleasure in stating that your Double Steel Harness has been given a thorough trial in my vineyard and found to work well, preventing injury to vines and trees to a great extent. It is a decided advantage to be able to hitch up the horses separately in the Harness and attach them afterward. [Signed] WILLIAM WEHNER.

Send for Circulars. Address

### Louden Haying Tools.

The above is an illustration of a hay-stacker manufactured by the Louden Machinery Co. of Fairfield, Iowa, whose haying tools are advertised in our columns.

It is simply a pole provided with fittings, which the company furnish, and supported by guys in such a manner that a sling load may be lifted at one end of a large rick and dropped anywhere along its center in a broad thin flake which makes it quick and easy work to build a splendid stack.

### A Perfect Fruit-Grader.

The Cylinder Grader manufactured by D. D. Wass, Nos. 141 and 143 First St., San Francisco, has proved the most rapid working machine for grading prunes, olives, oranges, lemons, etc., that has yet been introduced. Wherever it was used last season it gave satisfaction, and it promises to come into general use. See advertisement on another page.

## CLOSING-OUT SALE

—OF—

WELL-BRED TROTTER STALLIONS,

BROOD MARES, COLTS AND FILLIES,

Being the Entire Stud of

**SAN MIGUEL BREEDING FARM, PROPERTY OF IRVIN AYRES, ESQ.**

Among them is the well-known Stallion, MAMBRINO WILKES, son of GEO. WILKES, the sire of five in the 2:30 list, and three others which all horsemen know could have been put there last season, as well as many others that can trot in 2:30. The great race horse BALKAN, can trot in 2:20 with as good a chance of lowering that mark as any horse of his age ever presented. The great brood mare FANNY FERN, with 12 of her immediate progeny—the phenomenal colt FREEDOM, yearling record 2:29, descends from Fanny Fern through Mollie Drew. A string of highly bred producing dams, among whose progeny are GUS WILKES, BALKAN, MYLITTA, CLARA P., CHALDEAN, ALPHIEUS, FRED ARNOLD, MOLLY DREW, and numerous others. For description of which and extended pedigree send to undersigned for catalogue. Sale to take place

ON SATURDAY, MARCH 7, 1891, AT 1 P. M.,

AT OAKLAND TROTTER PARK.

Mr. Ayres having decided to retire permanently from the breeding of trotting horses, will dispose of every animal upon the farm, with the exception of two work horses, without limit or reserve.

Catalogues will be ready February 9.

WIDTHS.  
1/2 & 3/4 in.  
We carry a great variety of Razors, but have selected  
this one as the most desirable we or any one can offer.  
This is a ROYAL RAZOR, believe us.  
Sent by mail, Postage paid.  
**ALLING & LODGE, MADISON, IND.**

## S. H. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Feb. 25, 1891.  
A general rainstorm set in last Saturday and continued, with varying force, well into Monday. The heaviest rainfall was in the southern part of the State, where more or less damage is reported by high water—the highest for years. So far, the indications are favorable for bountiful crops. In farm products, trading has been fairly active, particularly in cereals. While the prices for barley fell off, those for wheat advanced. The English markets for wheat exhibited more strength. The following is to-day's cablegram:

LIVERPOOL, Feb. 25.—Wheat—Upward tendency. California spot lots, 7s 10d; off coast, 39s 3d@39s 6d; just shipped, 38s 3d; nearly due, 39s 3d; cargoes off coast, nothing offered; on passage, firm and held higher; Mark Lane wheat, held higher; wheat in Paris, firm; flour, turn dearer.

## Foreign Grain Review.

LONDON, Feb. 23.—The *Mark Lane Express*, in its review of the British grain trade during the week past, says: English wheats are active and prices advanced 8d; foreign wheats, increased demand, 6d higher. At to-day's market English and foreign wheats are 3d higher. Oats held for 3d more; round corn, 3d dearer; flour, barley and beans firm.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	Feb.	Mar.	April.	May.	June.	July.
Thursday....	7s9½d	7s9½d	7s9½d	7s9½d	7s9½d	7s9½d
Friday.....	7s9½d	7s9½d	7s9½d	7s9½d	7s9½d	7s9½d
Saturday....	7s9½d	7s9½d	7s9½d	7s9½d	7s9½d	7s9½d
Monday.....	7s9½d	7s9½d	7s9½d	7s9½d	7s9½d	7s9½d
Tuesday....	7s9½d	7s9½d	7s9½d	7s9½d	7s9½d	7s9½d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market
Thursday....	38s0d	38s0d	38s0d	Very firm.
Friday.....	38s0d	38s0d	38s0d	Firm
Saturday....	38s0d	38s0d	38s0d	Strong
Monday.....	38s0d	38s0d	38s0d	No offers.
Tuesday....	38s0d	38s0d	38s0d	Strong.

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

Day.	Feb.	Mar.	April.	May.	June.	July.
Thursday....	109½	109½	109½	109½	109½	99½
Friday.....	109½	109½	109½	109½	109½	99½
Saturday....	110½	110½	110½	106½	104	100½
Monday.....	109½	109½	109½	109½	109½	99½
Tuesday....	109½	109½	109½	109½	109½	99½

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

Day.	Feb.	Mar.	April.	May.	June.	July.
Thursday....	97	97	97	97	97	97
Friday.....	97	97	97	97	97	97
Saturday....	97	97	97	97	97	97
Monday.....	97	97	97	97	97	97
Tuesday....	97	97	97	97	97	97

NEW YORK, Feb. 25.—Wheat—\$1.05½ for May, \$1.03½ for June, \$1.00½ for July, and 98½¢ for December.

CHICAGO, Feb. 25.—Wheat—97c for May and 92½c for July.

## Eastern Wool Markets.

NEW YORK, Feb. 20.—*Bradstreet's* will say: The aggregate of business in the several markets has been below the average. This is due almost entirely to the scarcity of large lots of choice wools. Values are practically unchanged, though in some instances dealers have been able to secure a slight advantage on some extra choice lots of domestics, particularly in Ohio and Michigan X wools. An active movement still prevails in Australia wools. Arrivals during the week have been large. London cables have strengthened values in these wools, and dealers find buyers to take them at full quotations. Worsteds are taking wools very freely. In Texas and Territories the transactions are confined to small lots on account of light stocks of these wools. The demand for fleeces is reported stronger. Carpet wools are in much better request than a week ago. A large quantity of Donkols, Allepos and Angoras has changed hands during the week.

NEW YORK, Feb. 24.—Wool sustains all the late bright conditions, and manufacturers pay full prices without rebate. Sellers comprehend the bearing of a moderate demand for goods at unvaried line value and cannot consistently mark up the material, especially as the rating quality is in their favor in overbeated and depleted stock.

All seaboard points mention a lack of assortment evidence and a strong opening for the new clip. The sale of foreign shows up well considering the free arrivals on former contracts.

Boston repeats the activity again with liberal sales. An Australian sale of 780,000 pounds, another of 2,000,000 foreign, 351,000 pounds of domestic, including 218,000 pounds of California, largely at 17@18c for grades, with 140,000 pounds of choice northern at private terms.

Philadelphia shows liberal movements in the upper classes, with the wool worsted makers as the best customers. All supplies are light and prices extremely firm.

## Dried Fruits.

NEW YORK, Feb. 24.—The raisin trade is rated with an enlarged movement in bag raisins. The attraction now in prices has put numerous carloads in distribution hands here and in other cities, and welcome orders are being filled for country consumers. Of course 5@5½c are not cheerful prices for shippers and owners, but are better, however, than dead storage, shrinkage and other in direct deterioration. Layers, boxes, sell for \$1.75@2.25; good faced Three Crowns, \$1; selected, \$1.60; poor marks unfaced, \$1.40; sack prunes low at 9c, boxes 11c, and represent a very light trade of moment. Evaporated apples, 12½@14c. Unpeeled peaches dull at 13@15c. Apricots and pitted plums are quiet and without new prices.

NEW YORK, Feb. 24.—The *Commercial Bulletin* says: The prices of raisins are now down to a point at which Pacific Coast fruit holds its own in competition with foreign goods, and there is reason to believe with a further slight modification in cost, Valencias will meet a more formidable competitor in the product of the Golden State. In some quarters the opinion is expressed that California is in a position to supply nearly all the raisins that will be

wanted in this country. Wide-awake packers, we are informed, are alive to the situation and are preparing to turn out a better article the coming season, recognizing that their interests lie in the putting out of a higher grade of raisins to compete against Valencias. Malagas have already been crowded out by Californians. The Valencias will undoubtedly suffer if the Californians recognize their opportunity and act judiciously.

## Miscellaneous.

NEW YORK, Feb. 24.—Mustard seed and honey unchanged; the latter firm at 7@7½c.  
Dry hides are steady and moderate. Sales of selected California were made at 13@13½c; Central American, 11c; range, common to best, and foreign, 9@14c.

Hops are again inactive and toneless. Brewers obtained some interior bargains even for small wants, and the remarkably light call warrants the suspicion of substitutes being used; common to best range from 28@35c, although good State and Coast have sold at 32c.

Lima beans are plenty at \$2.80, extremely careless harvesting being detrimental to sales this season.

## Local Markets.

	Buyer Season.	Seller 1891.	Buyer 1891.
Thursday....	136	131	165
Friday.....	132	129	164
Saturday....	125	124	161

	Buyer Season.	Seller 1891.	Buyer 1891.
Thursday....	146	142	142
Friday.....	146	142	142
Saturday....	146	142	142
Monday.....	146	142	142
Tuesday....	146	142	142

BAGS—The market for Calcuttas is higher, owing to favorable crop weather. For June-July delivery, new importations are quoted at 6½@6¾c, and old stock 6½@6¾c.

BARLEY—The bears on Call, by systematic cross orders, succeeded in hammering season options down from 20c to 25c per cental. This naturally caused many holders of actual barley to let go. The sharp decline was followed by a reaction. The following are the reported sales made on to-day's Call:

Morning Session: Seller 1891—100 tons, \$1.05; 100, \$1.04½; 100, \$1.04½. Buyer season—1300 tons, \$1.35; 400, \$1.35½; 100, \$1.34½; 200, \$1.34½; 100, \$1.34½. Buyer 1891, after August 1st—200 tons, \$1.09; 200, \$1.08½; 100, \$1.08½. Afternoon Session: Buyer 1891—100 tons, \$1.34½; 100, \$1.34. Buyer season—100 tons, \$1.33½; 100, \$1.34. Seller 1891—100 tons, \$1.03½; 100, \$1.03½.

BUTTER—The market has shaded off under more liberal receipts and prospective freer supplies. Dealers and large consumers restrict their buying unless offered inducements by what they call fair concessions. The outlets for supplies are narrowing.

CHEESE—The market begins to give way, under accumulating stocks and larger available supplies.

EGGS—The market, after settling to lower prices, appears to be steadier. The better tone is due to rains interrupting receipts, but with freer receipts, prices, it is claimed, will settle slightly lower.

FLOUR—The market exhibits more strength, with a slight advance reported.

WHEAT—The sample market has made another upward move, due to a large supply of tonnage and also to better prices abroad. On Call there have been freer dealings in futures. The following are to-day's reported sales:

Morning Session: Buyer 1891—800 tons, \$1.48½; 300, \$1.48½; 500, \$1.48½. Buyer Season—100 tons \$1.44½; 400, \$1.44½; 300, \$1.44½; 100, \$1.44½; 100, \$1.45½; 300, \$1.45½. Afternoon Session: Buyer 1891—100 tons, \$1.48½; 800, \$1.48; 100, \$1.48½; 300, \$1.48½; 200, \$1.48½. Buyer season—500 tons, \$1.44½; 700, \$1.45½; 100, \$1.45; 100, \$1.45½; 1400, \$1.45½.

## Market Information.

## Produce Receipts.

Receipts of produce at this port for the week ending Feb. 24th, were as follows:

## Cereals.

The local wheat market has held strong at slightly advancing prices. The strength of the market is due to the strong statistical position abroad and in this country. The surplus the world over has been steadily decreasing for five years past, until it is now so very low that any decided falling off in the world's crop output makes itself felt in the demand markets, particularly with the range of values far below the average range preceding the demonetizing of silver by the United States. The revolution in Chili will stop exporting from that country. The crop in the Argentine Republic and also in Australasia is below that of the preceding season's output. Indian crop advices do not indicate more than an average crop, while the weather in Europe is said to have been against an average acreage being seeded. In the United States it now looks as if there will be an

increased acreage seeded. In this State there has been a decided increase in the acreage, fully 50 per cent over last year's, while in Oregon and Washington the acreage will barely equal that of 1890. In California the weather has been of the most favorable character for growing crops. The plant has made an excellent growth of roots, while there is everything to warrant the assertion that it will stool out better than for several years past. The large deposits of snow on the mountain ranges and the transforming of many districts from cereal or pasture to vineyards and orchards, justify the growing belief that the hot north winds will not come until well into summer or after harvest. With the absence of north winds, the grain will be harvested without serious loss.

The way in which barley options, through cross orders on Call, were hammered down illustrates but too well how operators can and do use the Call Board to further their purposes against the farmers' interests. The strong statistical position of barley on this coast did not warrant any decline in prices, but on the contrary, even with rains, it justified good prices up to next harvest. By hammering options down on Call, a large quantity of actual grain on which money was borrowed had to be sacrificed, and of course the ring took it in. A drop in a few days of about \$5 a ton in 1890-91 season options has never before been done in this market. Yesterday (Tuesday) the market rallied some under strong buying by some outsiders.

Oats are lower and placed with difficulty except at lower prices. The advance in barley toward the close, combined with smaller available supplies, is calculated to create a stronger market. The crop outlook is of the most favorable character, but new-crop oats will not be available much, if any, before July.

Corn shaded off slightly under free receipts and a falling off in the demand. The market closes with a fairly firm tone.

Rye and huckwheat are unchanged.

*Mark Lane Express*, Feb. 9: Russian wheat is now being held very firmly, and the inferior quality of new English wheat deliveries strengthens bidders' hands. Australian wheat is also well held, and as the quality is good, the attempt to purchase under 37s. does not at present seem likely to be attended with success. The cheaper sorts of wheat are not abundant, and the new Indian crop will not be troubling the Mark Lane standholders much before June. There appears to be a strong probability of firm trade during February, March and April. Later months will be under the influence of crops and seasons at home and abroad. The spring corn trade shows 20 markets out of 33 firm or dearer for barley, 18 out of 20 firm for oats, 20 out of 21 firm for maize, and 23 out of 25 firm for pulse. Thus the thaw has by no means reduced demand; on the contrary the protracted frost has left us with damaged and diminished stocks of roots. The value of ensilage as a feeding stuff is found to be greatly enhanced by a judicious combination with dry goods. Hence at most markets since February came in the inquiry has been rather above the average, and sales at fully previous prices have been easy. Barley has advanced 6d per qr. at Bristol.

## Canadian Wheat Notes.

*Mark Lane Express*, Feb. 9th: We are always glad to chronicle advance in the Canadian Northwest, and the following news from Saskatchewan is not lacking in encouragement: A few years ago, the Dominion Government, acting under the advice of experts, imported a certain amount of Russian seed wheat with a view to crossing the hardy Russian varieties with the wheat of Manitoba and the Northwest, which had suffered severely from frosts. It is now reported that the experiment has proved a success, and Mr. James Steen of Winnipeg gives some remarkable details respecting the cultivation of Ladoga wheat in the territory of Saskatchewan, 350 miles north of the boundary of Manitoba and Dakota. The samples to which he refers have been examined on Mark Lane market, and were there held to be as fine specimens of hard spring wheat as could be well desired, weighing 66½ lbs. to the bushel, and in all respects looking a "miller's wheat." Mr. Steen thinks the projected Hudson's Bay railway likely, if ever carried out, to largely stimulate the culture of grain, because in such a case a rail transit of 500 miles would take the wheat to Port Churchill, whence a direct sea voyage would lay it down in Liverpool or London. The great advantage of such a route would be the likelihood that wheat so conveyed would reach our shores in pure condition, inasmuch as the cost of bringing inferior grain from the East and Southwest would almost prohibit any tampering with the genuine "hard grade."

## Live-Stock.

Improved pastures cause stockmen to hold back supplies. This, together with floods in the southern part of the State and also in Arizona, causes lessened receipts, which naturally creates better prices for bullocks. Mutton sheep are firmer. Hogs are barely steady. Fresh milk cows can be placed to better advantage. In horses there is nothing new to report.

The market for dressed cattle is quoted as follows (to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent):

HOGS—On foot, light grain fed, 4½@4¾c; lb.; dressed, 7@8½c; lb.; heavy, 4¾@4½c; lb.

BEEF—Stall fed, 7@7½c; lb.; grass fed, extra, 6½@—c; lb.; first quality, 6@—c; lb.; second quality 5@—c; lb.; third quality, 4@—c; lb.

VEAL—Small, 8@9c; lb.; large, 6@7c.

MUTTON—Wethers, 8@9c; lb.; ewes, 7½@8½c; lb.; spring lamb, 15@—c; lb.

## Feedstuff.

The market for all kinds of feedstuff suffered severely by the week's rainstorms. The rains were generally warm, which caused vegetation to make rapid growth, but frosts last night, unless followed by warmer nights, will check the growth. Feeders and dealers confine their buying as much as possible.

The market for bran fell about \$4 a ton, middlings \$3 and ground barley \$5. The latter has rallied somewhat since.

Feeders and dealers are fighting for lower prices on hay, and to get it are not disposed to buy to arrive except at concessions. The brighter prospects

for the hay crop and improved pasture are against sellers.

## Fruits.

Apples are firm at a slight advance. The demand is good for good keepers of the better varieties.

Rains and floods in the southern part of the State will probably lessen the receipts of oranges; and as the stock here is not large, prices may temporarily advance. The consumption with us shows a steady increase. Shipments up north have been quite free.

An invoice of Mexican limes has come to hand. Both limes and lemons are firm.

The market for dried fruits continues to work more in sellers' favor. The spring demand, it is claimed, will be quite free.

The raisin market has a stronger tone, due to Eastern buyers cleaning up all cheap consignment parcels. A systematic movement was made by them to bear the markets at the East in order to buy up all outside parcels. This, it appears, has been fairly successful. The supply in this State is light, while the demand is expected in the spring months to be fairly heavy.

Oranges closed to-day very strong under a good demand. Choice Riverside Navels, 150's to 170's, sold up to \$4.50 per box, and choice seedlings fetch as high as \$2.25.

## Vegetables.

Rains the past week interrupted deliveries of seasonable garden truck, but with clear skies supplies will increase. A very heavy frost last night (Tuesday) has probably nipped some of the more tender plants. It is claimed that more attention is being given to vegetable gardening.

Onions come in more freely, which caused a slight shading in prices, but toward the close, receipts being lighter, the market has a firmer tone.

As indicated in our last week's report (this department is written up on Wednesday) the potato market broke under heavy receipts. The supply in this State and Oregon is too heavy to look for better prices; for with each improvement in the market supplies are rushed in, which sends prices down again. New, as yet, do not cut much of a figure, but they will soon begin to put in an appearance in increasing quantities.

Beans are steady. Buyers are trying to bear the market. The weather is favorable for crop purposes.

## Miscellaneous.

Poultry is firm for the better conditioned hens, roosters and young fowls. Dressed turkeys which came in on Friday and Saturday last had to be sold at the best obtainable prices, the holiday and the weather being against holding them over.

J. M. Moore, Alliance agent, received, last Friday, a consignment of fine, large, dressed turkeys. The flesh was hard and juicy. The smallest in the consignment weighed about 15 pounds and the largest about 23 pounds. Had they come to hand just before Christmas, they would readily have brought from 2½ to 5 cents above the market range, owing to their superior quality.

Honey is reported unchanged, as is beeswax.

Some selling pressure is reported of a few straggling parcels of hops. The stock on this coast is quite small—not enough to meet requirements up to new-crop season.

Wool is dull and unchanged. Only scourers are buying.

Owing to the new city ordinance prohibiting selling wild ducks and snipe after this month, we withdraw quotations for wild ducks, geese, quail and snipe.

Exports by sea the past week aggregate as follows: Wheat, cts., Antwerp, 52,993; Havre 69,584; Liverpool, 138,485. Flour, bbls., Central America, 3678; Panama, 150; Havre, 687. Corn, cts., Central America, 420. Barley, cts., Honolulu, 3141. Rolled barley, cts., Honolulu, 247. Beans, lbs., Victoria, 9926; Central America, 11,622; Panama, 4721; Honolulu, 12,622. Wine, gals., Victoria 375; Honolulu, 2950; New York, 63,556; Newark, 1249; Baltimore, 100; Philadelphia, 2638; Central America, 1745. Brandy, gals., New York, 3618. Bran, sks., Honolulu, 1362. Raisins, bxs., 115.

From the *Commercial News* of Feb. 25th the following summary of tonnage movement is compiled:

NEW CALIFORNIA FRUIT GRADER.

Grades All Kinds of Fruit --- Oranges, Lemons, Limes, Apples,  
Pears, Peaches, Plums, Prunes, Apricots and Grapes.  
Also Potatoes, Onions and Walnuts.

Our **ORANGE GRADER** is made especially for that business and grades the  
fruit into the following absolute sizes and with uniform accuracy, viz: 300.  
250, 220, 200, 176, 150, 128, 112, 96, 80 and less oranges per box, and  
runs with the same ease and regularity as the other fruit graders.

These graders took the First Premium at the State Fair of 1890 over all competitors, and the Silver Medal at  
the Mechanics' Fair at San Francisco the last two years. They are home manufacture and lower priced than any  
other grader in the market. Send for illustrated circular giving prices, capacity, and testimonials.

**MOSHER, CHANDLER & CO., MANUFACTURERS,**

**W. R. STRONG CO., SACRAMENTO, CAL.****WE WANT A NAME FOR THIS NEW TOMATO**

UNTIL a suitable name is suggested  
if we shall call this To-  
mato No. 400.  
Read terms of  
competi-  
tion be-  
low.

The No. "400" is the largest and  
heaviest Tomato known.  
In fact it is so solid as  
to be almost seed-  
less. Color,  
rich, dark,  
crim-  
son.

AND WILL PAY  
**\$ 250.00**  
FOR IT

The cut shows fruit one third natural size. The average weight of this Tomato is nearly 2 lbs. each.

**WE WILL PAY \$250.00 IN CASH**

For the best name suggested for this New Tomato.  
Purchasers are entitled to send in a name for each and every packet they buy. The  
names can be sent in any time before October 1st, 1891, and will be considered by a  
disinterested committee of three, who shall award the prize. Full directions for  
entering the names for competition given on every packet of seed.  
Price of New Tomato No. "400," 25 cts. per packet, free by mail.  
With every order for a packet or more, we will also send free our magnificent New Cata-  
logue of "EVERYTHING FOR THE GARDEN" for 1891. (the value alone  
of which is 25 cts.), on condition that you will state where you saw this advertisement.

A Trophy Won For California.

Now that the onward course of California bred horses is becoming more and more definitely determined, and each year's experience gives new proof of the wisdom of our breeders and the exceptional adaptations of our climate for the development of equine excellence, it is interesting to make more widely known a triumph of a California horse which is unique and significant. It is true that the event to which we shall allude has been previously given a certain amount of celebrity in other journals following special lines, but it has not before been adequately set forth for the entertainment of the general reader. For this reason we take it up at this time and by the aid of a new engraving in the highest style of the wood engraver's art, bring to the attention of our readers the notable triumph of a California horse.

Such achievements as that we shall describe do not redound alone to the profit or renown of the individual who produces a winning animal. They reflect credit upon the resources of the State and are of advantage to all engaged in developing them. All the famous winnings and the long prices commanded by California horses during the last few years declare indirectly the fitness of the State for the production of notable excellence in the domestic animals. Speed is only one measure of excellence, and by some rated as not the highest measure, and yet it is a popular standard and may be taken as the sign of other points of superiority and induce people to persevere in developing them. The fact that a California-bred horse, Anteeo, sold recently for \$55,000 at the East reflects credit upon Mr. Simpson as his breeder and declares again the wisdom of the Santa Rosa syndicate which paid \$10,000 for him a few years ago, but the fact has a wider significance which does not end with the breeder, the purchasers nor even with the racing interest. For this reason, though we do not profess to be identified with the turf nor experts in turf matters, we do not underestimate the importance which certain phases, at least, of turf affairs hold to the general producing interests of the State.

The handsome trophy of which we give a fine representation on this page was won in 1889 by Margaret S., a filly bred and owned by M. Salisbury of the Pleasanton Stock Farm Co. Margaret S. (2:12½) is daughter of the famous sire Director (2:17), dam May Day (2:30), by Ballard's Cassius M. Clay Jr.; 2d dam Kate by Hiram Drew. Margaret S. is now five years old and has a national reputation in trotting circles as the only winner of two rich classical stakes, by which she brought to her owner a trophy and purses of an aggregate value of \$14,238. These two stakes were: first, the "N. Y. Spirit's Futurity Stake," the cup valued at \$1000, which the engraving shows, and a purse of \$3738; and, second, the "Chicago Horseman's Great Expectation Stake" of \$9500. In the first stake there were 300 colts nominated and in the second 565 colts, the contestants in both classes being among the very best and fastest in the world. Entries to both of these stakes closed in the spring of 1886, and as Margaret S. was not foaled until August, 1886, she was nominated seven months before her birth. The great expectations of her breeder in thus "counting his chickens before they were hatched" were grandly realized, as events proved.

SILVER CUP WON BY MARGARET S, BRED BY M. SALISBURY OF CALIFORNIA.

As the races to determine the award of the stakes were to be held when the nominated colts were three and four years old, the events were not held until the years 1889 and 1890; but Margaret S. was not idle during the period she was awaiting the supreme effort to which she was destined before her birth. She showed quality as a two-year-old on California tracks, and in the early California races of 1889, she won the comment of "the gamest filly that ever appeared upon the turf." In August, 1889, she was taken East to appear in the first

of the two events already alluded to and was successful. The following year, 1890, she appeared again at the East for the second effort for which she was destined, and here, too, was successful. The detailed account of these two great races may be found on page 217 of this issue. Her achievements are of national as well as State importance, as it is stated that no horse on record ever won so much value in purses up to four years of age as has Margaret S. Would that the figure upon the beautiful one she won had been her portrait instead of

the conventional mare and colt of the silversmith, and yet the trophy is as beautiful as artistic skill could well make it, and will, no doubt, be long cherished by Mr. Salisbury as proof of his wisdom in indulging in "great expectations" with Margaret S. as the basis of his hopes.

**BET SUGAR.**—The annual meeting of the Western Beet Sugar Co., which is the name of the firm operating at Watsonville, was held on Monday of this week. The old directors and officers were re-elected, and these include Claus Spreckels as president, and W. C. Waters, superintendent, at Watsonville. An evening paper states that the reports of the operations for 1890 show that year to have been a very profitable one. The product of the factory at Watsonville was 2128 tons of sugar, which netted the company \$102 per ton. The profits of the year amounted to \$40,000. Dividends could have been declared, but it was decided to spend the surplus in improvements. The company owns a ranch of 1200 acres at Watsonville, all of which have been sublet to beet cultivators. A very large crop of beets is expected for this year. A railroad is being continued from the ranch to Salinas City, which will go through a beet-raising country.

**GRAPE DISEASES.**—For three years or more the U. S. Department of Agriculture has been engaged in the investigation of grape diseases, the object being to discover, if possible, cheap, practicable, and efficient remedies for such troubles as downy and powdery mildew, black rot, anthracnose, etc. A means of preventing all of these diseases has been discovered, and now thousands of grape-growers all over the country are saving crops which a few years ago were totally lost. Farmers' Bulletin No. 4, which will soon be issued by the Department of Agriculture at Washington, gives full directions for treating these diseases. It also describes the diseases in such a way that any grape-grower will be able to recognize them, and closes with full directions for manufacturing the remedies, and an estimate of the cost of the entire work.

**THE BIG-TREE RESERVATION TO BE CLEARED OF SETTLERS.**—Commissioner Groff's report and suggestions on the Kaweah Colony, in which it is proposed to permit the settlers to remain where they are, under specified conditions, on the ground that they would protect the big trees instead of destroying them, does not seem to please Secretary Noble. He will, it is said, prepare a statement claiming that the settlers cannot be tolerated on the reservation, and that if the law cannot reach them, he would recommend that their land be condemned and appraised and the colonists paid for their claims and improvements.

**THE LAW'S DELAYS TO BE REDUCED.**—A recent rule made by the United States Supreme Court will do much to prevent delays that have been vexatious and costly. It provides that all cases must be docketed within 30 days of the taking of the appeal from the decision of the lower court. Before this, litigants whose main motive for appealing a case was to gain time allowed months to go by after notice of appeal before they filed their papers. The rule will be a godsend to the court as well as to honest litigants, for it will reduce the calendar.

## FRUIT MARKETING.

### Fraudulent Trade in California Fruit at the East.

The following report upon facts previously set forth in the RURAL was submitted at the meeting of the Horticultural Society in this city Feb. 27:

To the California Horticultural Society:—Your committee to whom you referred the communication from B. M. Lelong, Secretary of the State Fruit-Growers' Convention, wherein he presented the remarks made at that convention by Prof. Chas. H. Allen, late superintendent of "California on Wheels," to the effect that very inferior and almost worthless dried fruit is being sold in the Eastern market under the fraudulent representation that it is California dried fruit, beg leave to report as follows:

The specific frauds injurious to the California dried-fruit industry which have been brought to our attention are the following: (1) The sale of dried Egg plums as Silver prunes, or "Egg prunes." (2) The sale of some undescribed sort of inferior dried plums as "California Spanish prunes."

It is unnecessary to say that there are no legitimate commercial figs known as "Egg prunes" or "California Spanish prunes." Any product sold under either of those names is fraudulent.

There are certainly other frauds practiced in connection with the prune trade, but in the absence of direct information in regard to specific instances your committee do not care to allude to them at this time.

In this connection it is proper to say that Messrs. Porter Bros., whose brand was seen by Prof. Allen upon the boxes in which the above-named fraudulent products were exposed for sale, indignantly deny any knowledge thereof, and have requested names and dates to enable them to ferret out and expose the perpetrators of a fraud not less injurious to them than to the fruit-growers of California.

It is of the utmost interest to every resident of California that its products shall bear a high reputation and bring a corresponding price in the markets of the world. The producers of our various commodities, each in his own department, are especially interested in the good reputation of the particular product by which he lives. In matters affecting the prosperity of any form of the fruit industry it is appropriate and desirable that this association, representing the fruit-growers of the whole State, should be prompt and active in practical well-matured suggestions for the general good.

As the quantity, variety and excellence of our fruit products increase, the temptation to and danger from fraudulent practices will increase also. These may be combated in various ways:

1st. By publicity. A sufficient sum spent yearly in advertisements in papers reaching both the dealers and consumers would doubtless destroy the sale of any specific products which could be denounced as spurious, but no funds being available for such purposes, your committee can make no recommendation in regard to it.

2d. By legislation; it should be made and punished as a misdemeanor in this State to sell any food product under a false name, or by any form of misrepresentation; but as articles of interstate commerce, the most efficient protection must come from national legislation. Your committee recommend that the secretary of this association be requested to unite with the secretary of the State Board of Horticulture in preparing a bill for preventing and punishing all forms of fraudulent practices in connection with the sale of dried fruits, and in connection with the secretary of the State Board of Horticulture to enter into and maintain correspondence both with members of the Legislature and with our senators and representatives in Congress, and to keep it up from year to year, if necessary, until the same is enacted into law, either as an original Act or as an amendment to some general Act for the suppression of fraud in connection with the sale of food products.

3d. By co-operation; the fruit-growers of this State, by intelligent co-operation, can do more than can be accomplished by all other agencies combined toward improving the quality of our products, increasing their reputation and protecting them from the fraudulent practices of unscrupulous men. If this co-operation is not secured it ought not to be the fault of this association, which can give no more effective evidence of its usefulness than by originating, and directing until self-sustaining, well-considered plans of this nature for the general good. Your committee believes that there is already in existence an incorporated institution, the California Dried Fruit Association, now dormant, but capable of being revived, and utilized, not necessarily as an agent for the sale of products, but at least for their inspection, grading and branding. Your committee believe this subject of sufficient importance to warrant the appointment of a special committee to consider upon and report to this association a plan by which such fruit-growers as desire to do so, may obtain the benefit of a uniform trademark, whose use shall be so guarded as to ordinarily insure honest and uniform description of the product sold under it, and detection, exposure and punishment of all who make fraudulent use of it, and we recommend the appointment of such a committee at this meeting.

We recommend that a copy of this report be transmitted by the secretary to the State Board of Horticulture, with the request that they co-operate with us in securing the State and National legislation above referred to, and that they direct their secretary to enter into correspondence in their name, with the persons and for the purposes above set forth.

We also recommend that the secretary of this society be requested to secure the publication of this report in as many newspapers as possible, and that the directors of the society be requested to have 1000 copies of this report printed and mailed to daily, horticultural and trade newspapers, and to our Senators and Representatives in Congress. All of which is respectfully submitted.

A. L. BANCROFT,  
EDWIN F. ADAMS,  
J. L. MOSHER,  
Committee.

S. F., Feb. 27, 1891.

The report was favorably received by the society, and the following committee appointed in accordance with its recommendations: Edwin F. Adams, J. L. Mosher and S. J. Stahler.

### The West Side Santa Clara Fruit-Growers Organize.

The West Side Fruit-Growers' mass meeting was called to order on Tuesday afternoon at 2 o'clock, at Cupertino hall, by E. T. Pettit, who was elected president of the meeting. C. A. Braun was secretary.

S. P. Saunders stated the objects for which the meeting was called. He referred to the action of the canners and packers, and to the contract they have prepared and under which they propose to do business. He said that contract is objectionable to the growers, and they proposed to formulate a plan which will make it unnecessary to sign such a contract. He declared that heretofore the canners and driers have been acting as individuals, but now they are acting as a body; that the every-one-for-himself period has passed for the growers, and they must now combine to protect their own interests, and, if possible, do business independently of the canners' and packers' combination; that heretofore they have had business tact enough to enable them to buy and improve their orchards and raise a good quality of fruit, and now they should unite and dispose of it to their best advantage.

A committee of seven was appointed to formulate a plan of action as follows: S. P. Saunders, S. Lydiard, A. R. Wood, Daniel Solvely, D. W. Miller, E. G. Hall and D. H. Blake. They retired for consultation.

L. J. Lathwesen, representing the Canners' Combination, then addressed the meeting, saying that not one of the canners was compelled to abide by the contract, and that no combination could be made strong enough to fix the price of fruit; that the combination only wanted to fix the grade so as to know what could be called first, second and third quality of fruit; that the buyers this year will buy graded and ungraded fruit, and have not combined to fix the price.

J. R. Johns asked why they had adopted a contract if they did not propose to use it.

J. B. Kerwin asked when the Committee on Contract Distribution, of which Mr. Lathwesen was chairman—was created, was it not after the fruit-growers had began discussing the contract? These and several other questions were answered in an unsatisfactory and evasive manner.

Wm. Holburn said that the viticulturists had been crushed by a similar combination, and if the fruit-growers did not protect themselves, they would soon be in the same fix. J. R. Johns sarcastically asked if it was necessary that the combine should manage the growers' business, and if it was organized only in the growers' interests it seemed strange they should want \$5 per ton for grading fruit.

The Committee on Plan of Action being ready, offered the following report:

"We, your committee, recommend the formation of a joint stock company to be called the West Side Fruit-Growers' Association of Santa Clara valley; its object being to buy and sell green, dried, canned, evaporated or otherwise preserved fruit, or other orchard products; also, to can, evaporate, or otherwise preserve fruit or other orchard products; that the place of business shall be Santa Clara and its existence 50 years, to be governed by a board of seven directors, and have a capital stock of \$100,000, divided into 4000 shares of \$25 each."

The report was taken up section by section, and after considerable discussion was adopted except as to the place of business, which was left open, some preferring Lawrence station.

J. R. Johns wanted the shares placed at \$1 each, so that all the growers in the county could get in.

A. R. Woodhams wanted it confined to the growers on the west side of the valley, as they produce a choice article of fruit.

Wm. Holburn said that he understood other and similar organizations were being talked of at Campbell and Berryessa, and they could combine with them if necessary, but he wanted this organization for the growers of the west side of the valley.

A committee of five, as follows, Geo. Glendenning, W. A. Brownlee, William Holburn, S. Lydiard and Geo. Daggett, was appointed to solicit subscription to the stock.

Five thousand dollars was subscribed in a few minutes by the following persons: E. A. Wheeler, D. H. Blake, S. Lydiard, Geo. Daggett, Mrs. E. McLeod, Morgan & King, Chas. J. Gibson, Edwin G. Hall, J. R. Johns, W. K. Bennett, D. W. Miller, A. W. Crow, J. E. Abbott, J. W. Stewart, J. C. Murphy, A. L. Harrison, J. W. Beach, Wm. Parsons, Nancy Lillock, J. S. Frost, H. A. Lillock, J. G. Glendenning, J. W. Fowler, Geo. M. Crittenden, A. R. Woodhams, A. M. McGlinchy, Milton L. Hersey, Theo. Hersey, S. P. Saunders, G. W. Glendenning, S. S. Hayner, E. T. Pettit, L. A. Brann, J. D. Brownlee, F. L. Saunders, Fred W. Tantan, Morton Bros., H. B. Schutte, W. W. McKee, Geo. A. Daggett, John G. Gasmann, Wm. Holburn, Philo Hersey.

A committee, consisting of S. P. Saunders, J. R. Johns, E. G. Hall, J. C. Murphy and D. W. Miller, was appointed to prepare a code of by-laws.

The meeting was large and very enthusiastic, and it adjourned to meet at the same place Tuesday afternoon, March 10th.

It is expected that the association will buy a lot at Santa Clara and erect a warehouse for handling the fruit of the stockholders.—San Jose Herald.

## HORTICULTURE.

### The Apple in California.

[An essay read at the February meeting of the State Horticultural Society by LEONARD COATES of Napa.]

Although the apple has never received the same attention that has been bestowed on many other fruits, it still remains in many respects the most popular, or we might almost say, utilitarian of fruits. It has been a sorely abused fruit, crowded to the wall by its more aristocratic neighbors, the peach and the apricot. The oft-repeated assertion that the California apple will not hold a candle to the Eastern article, might well have smothered what little life was left to the industry, yet, like Banquo's ghost, "it will not down."

But is the California apple so inferior to that of New England after all? The mere affirmative assertion is much too broad. It must not be supposed that the apple will be a perfect success grown alongside the apricot, the raisin-grape, or the orange. The Baldwins and Spitzenbergs, planted many years ago in the warm valleys, are said to be a failure, because they are in no way identical with the same varieties grown in New York State. We are gradually finding out the adaptability of the varied soils and locations to the very varied fruits that are grown here, and while the talk has for years been of prunes, of peaches, of apricots and grapes, a steady, though not very extensive, planting of apples has been going on, near the coast, from Humboldt to San Diego, in secluded spots in the Coast Range, and in the foothills of the Sierra Nevada mountains.

The product of orchards thus planted, with proper care, is unexcelled in both quality and appearance, and is very remunerative. An instance in point will show what a deep-rooted prejudice and a strong imagination will do. Mr. Hunter, of Santa Barbara, has upon his ranch in the Montecito, a large apple orchard. A gentleman from the East called at his country home, and, in discussing the fruit interests of Southern California, he admitted the excellence of our citrus fruits, "but," said he, "California can't grow apples. I've not found an apple fit to eat since I came into the State. It takes the East to grow an apple worthy of the name." "That's so," responded Mr. Hunter, with apparent heartiness; "let me bring you in some Eastern apples." Accordingly, he went out, and soon returned with a dish of great, rosy-cheeked apples, which he set before his guest. The gentleman was not slow to help himself to the tempting-looking fruit, and, after eating a few mouthfuls, he exclaimed, delightedly, "A real, genuine New York apple. I should know it anywhere. Must cost you something to bring such fruit here. What variety did you say it was?" "It's a seedling," replied Mr. Hunter, "grown right here in my own orchard, and I challenge New England to produce anything better in any of her apple orchards."

In 10 or 15 years from now the State of California will produce in great quantities for export what are now in but very limited supply, apples that will command the admiration of any market. And they need not all be of what are known as the old standard sorts, for many newer varieties better suited to a mild climate are being introduced from the Southern and Southwestern States, and we are originating a number of seedlings, which are peculiarly suited to our climatic conditions. The best of these are fully described in Wickson's "California Fruits." These seedlings and the many others yet to come may eventually supersede all others.

Passing by any particular mention of soils and locations for an apple orchard, as the beginner's only safe plan is to follow the footsteps of an already successful grower, a few words might be said regarding the stock on which the apple is grafted or budded.

Ordinarily, the seedlings are raised from miscellaneous seed taken from the pomace of the cider-mill. In this case, as a means of prevention of the woolly aphis, it is strongly recommended that the whole seedling, at time of transplanting, be immersed in a strong an-in-

secticide as the plant will stand without injury. Nurserymen frequently have to destroy whole blocks of apple trees, apparently healthy, but which are found to be infested with this pest on digging them. It is one of the most difficult of pests to eradicate, owing to the marvellous rapidity with which it spreads both below and above ground.

It is pretty generally known that several varieties of apples are "aphis-proof," among others, the Northern Spy, Rawley's Janet and Golden Russet. Seedlings should be raised from such varieties exclusively, and so used as a stock on which to bud the desired kinds; if grafted, care should be taken that no roots are allowed to grow above the graft or from it. It may be asked, why are not these seedlings used? To which the answer is that the planting public offers no encouragement to the nurserymen to go to the much greater expense of procuring seed from individual varieties of apples. The cheapest tree is that which is invariably purchased.

Seedlings raised from the crabapple possess a peculiar hardness, and apples produced on them, from the bud or graft, are said to keep longer.

An apple orchard on robust, healthy stocks, should be planted 35 or 40 feet apart each way. When the apples are planted to correspond with stone fruits, it would be better to have them on the Dwarf or Paradise stock. For small plantings this stock should be used in preference to the other, producing fruit sooner, and not making so large a tree.

The most profitable apples to plant that are most widely known are Red Astrakan, Gravenstein, Maiden's Blush, Alexander, Hoover, Bellflower, Spitzenberg, Winesap, Smith's Elder, Jonathan and Newtown Pippin. Of course there are many others of more or less local reputation, equally as good or better, but one cannot go far wrong in planting any of these. The Red Astrakan and any other large, red, early apple, is an extremely profitable crop in the warm interior valleys, as the Sacramento valley. In this case, the fruit is shipped to points east of the Sierras.

The diseases of the apple are rather serious, but not, perhaps, more so than with many other fruit trees. The most formidable which attacks the life of the tree is that already mentioned, woolly aphis. If the roots are not perfectly clean at the start, and kept so while the tree is young, it is almost impossible to eradicate it when the trees become grown. Starting right, the subsequent treatment should be wood ashes dug about the roots, or, in less quantity, lime or gaslime. This is supposing trees grafted or budded on "prool" stocks are not obtainable. To rid the trees of the branch form of this pest, an insecticide as strong as the trees will stand should be used in the spring and repeated through the summer. To be the more effectual, it should be sprayed on the trees with as much force as possible.

The codlin moth is the great enemy to the fruit of the apple tree, the apple itself, and is successfully combated with Paris green, one pound to 200 gallons of water, kept well stirred while using, and applied as soon as the blossoms are fallen. As aids, the various forms of traps are indispensable, and the trees, boxes, packing-houses, etc., must all be kept scrupulously clean, that there be no hiding-places for the pupae.

The market for early apples is especially good for summer and early fall, only limited in a fresh state, while the late-keeping varieties of first class and of high color are greatly in demand for the local markets and for export trade to Australia, New Zealand, Japan, besides good markets nearer home. The summer apples are dried in large quantities, for which the market is very fluctuating at present, being governed by the Eastern output. If, however, the same care were taken with "evaporated" apples as is bestowed upon first class peaches, the demand would increase and prices would be better. The public in time will appreciate the good article. At present, however, the "dried apple" is the desiccated product of that noble fruit used in every stage from that of half-grown to over-ripe and wind-falls and wormy fruit. Then let the larger slices for facing be well bleached and the box filled with the cheap boarding-house horror, and the fraud is complete. No, not quite. It requires a label, "Alden's Extra Evaporated, Packed Expressly for Grah and Grind."

This is not a fancy picture; the facts are as glaringly true as those reported recently by Prof. Chas. Allen concerning plums and prunes falsely labeled.

The law should use its strong hand in these matters. Moral snasion, with the State's reputation as a text, is love's labor lost. In Canada it has recently been enacted that every package of canned fruit offered for sale shall have plainly affixed a label stating the name and address of packers or dealers thereof. Every person who does not so label his fruit, or who otherwise labels it wrongly in any way, is liable to a penalty of \$2 for each package so labeled. Some such law, rigorously carried out, would have some effect.

As to the profits of an apple orchard, the last season a number of contracts were made in the Pajaro valley by which the grower would net some \$200 per acre for a period of eight years. It must not be expected, however, that a mixed apple orchard, of varieties good, bad and indifferent, will do so well. Still, there are many instances of apple orchards doing better yet when the varieties were right and the fruit prime.

# THE STOCK YARD.

## Regulations Concerning Cattle Transportation.

In accordance with Section 7 of the Act of Congress approved May 29, 1884, entitled "An Act for the establishment of a Bureau of Animal Industry, to prevent the exportation of diseased cattle, and to provide means for the suppression and extirpation of pleuro-pneumonia and other contagious diseases among domestic animals," and the Act of Congress approved July 14, 1890, making appropriation for the Department of Agriculture for the fiscal year ending June 30, 1891, you are hereby notified that a contagious and infectious disease known as Splenic or Southern fever exists among cattle in the following described area of the United States:

All that country lying east and south of a line commencing at the southeast corner of the Territory of New Mexico, thence running northerly along the eastern boundary of New Mexico to the southwestern corner of the county of Cochran, State of Texas, thence easterly along the southern boundary of the counties of Cochran, Hockley, Lohbock, Crosby, Dickens and King to the one hundredth meridian of longitude; thence northerly along said one hundredth meridian to the southern boundary of the State of Kansas; thence easterly along the southern boundary of the State of Kansas to the northeast corner of the Indian Territory; thence southerly along the eastern boundary of the Indian Territory to the southwestern corner of the State of Missouri; thence easterly along the southern boundaries of the State of Missouri and the State of Kentucky and the State of Virginia to a point where said boundary is intersected by the Blue Ridge mountains; thence in a northeasterly direction, following said Blue Ridge mountains to the southwestern corner of the county of Madison, State of Virginia; thence easterly along the southern boundaries of the counties of Madison, Culpeper and Stafford; thence northerly along the eastern boundary of Stafford county to the Potomac river; thence following the Potomac river, southerly to the Chesapeake bay; thence easterly along the southern boundary of Maryland to the Atlantic ocean.

From the 15th day of February to the first day of December, 1891, no cattle are to be transported from said area to any portion of the United States north or west of the above described line, except in accordance with the following regulations:

1st. When any cattle in course of transportation from said area are unloaded north or west of this line to be fed or watered, the places where said cattle are to be so fed or watered shall be set apart and no other cattle shall be admitted thereto.

2d. On unloading said cattle at their points of destination, pens shall be set apart to receive them and no other cattle shall be admitted to said pens; and the regulations relating to the movement of Texas cattle, prescribed by the Cattle Sanitary officers of the State where unloaded, shall be carefully observed. The cars that have carried said stock shall be cleansed and disinfected before they are again used to transport, store or shelter animals or merchandise.

3d. Whenever any cattle that have come from said area shall be reshipped from any of the points at which they have been unloaded to other points of destination, the car carrying said animals shall bear a placard stating that said car contains southern cattle, and each of the way-bills of said shipment shall have a note upon its face with a similar statement. At whatever point these cattle are unloaded they shall be placed in separate pens, to which no other cattle shall be admitted.

4th. The cars used to transport such animals and the pens in which they are fed and watered, and the pens set apart for their reception at points of destination, shall be disinfected in the following manner:

(a.) Remove all litter and manure. This litter and manure may be disinfected by mixing it with lime, diluted sulphuric acid, or if not disinfected it may be stored where no cattle can come in contact with it until after December 1st.

(b.) Wash the cars and the feeding and watering troughs with water until clean.

(c.) Saturate the walls and floors of the cars and the fencing, troughs and shutters of the pens with a solution made by dissolving four ounces of chloride of lime to each gallon of water, or disinfect the cars with a jet of steam under a pressure of not less than 50 pounds to the square inch.

The losses resulting yearly to the owners of susceptible cattle, both in the interstate and export trade by the contraction of this disease from exposure in unclean and infected cars and pens, and by means of the manure carried in unclean cars from place to place, and the threatened prohibition of our export trade by foreign Governments because of the occurrence of this disease, have become a matter of grave and serious concern to the cattle industry of the United States. It is absolutely essential, therefore, that this cattle industry should be protected as far as possible by separating the dangerous cattle and by the adoption of efficient methods of disinfection.

A rigid compliance with the above regula-

tions will insure comparative safety to northern cattle and render it unnecessary to adopt a more stringent regulation, such as the absolute prohibition of the movement of southern cattle except for slaughter during the time of year that this disease is fatal.

Inspectors will be instructed to see that disinfection is properly done, and it is hoped that transportation companies will promptly put in operation the above methods. J. M. RUSK, Secretary of Agriculture.

Washington, D. C. Feb 5, 1891.

## ENTOMOLOGICAL.

### Spraying for Scale Insects.

[An essay read at the February meeting of the State Horticultural Society by HOWARD OVERACKER, Jr., of Alameda county.]

At our last meeting I brought a few branches that had been sprayed with different compounds, in order to show their effect on the scale which infests the orchards in our vicinity.

I am not an expert on bugs, and should not like to be judged a professor in that direction for a good deal; neither am I an expert on washes.

The scales we are troubled with are the Brown Apricot and Black. There is little difference in the two, and they are frequently found on the same branches.

Probably spraying is one of the most vexatious occupations that falls to the lot of an orchardist. As season after season passes and he finds his luscious fruit becoming more smutty and dingy, and sees his trees becoming stunted and full of dead twigs, he feels it is high time for preventive steps to be taken.

Several of his fellow-orchardists who have been spraying come before his mind, and he starts off to consult them.

On his way he meets a county commissioner, who informs him Greenbank insecticide is the only thing. As he is paid for being so smart, the orchardist feels confident his troubles are nearly over.

His next chat is with an orchardist who condemns insecticide in the strongest terms, and points to his ruined trees as the result. He is now using IXL, but it is a faith test and may take six months to determine results. His neighbor ridicules this, and is using caustic soda and potash, with occasional dainty touches of whale-oil soap, kerosene, metallic paint and cayenne pepper. Another wants him to try sulphur, salt and lime, while the next need it two or three years ago and pronounces it a failure. Next man says nothing in the world will kill them, and the orchards are gone up, and as he gets home he is informed the bugs have run their course and will soon be gone.

After allowing these mixtures to settle in his agitated brain, he skims off a coating of prejudice and ignorance, boils out a good share of conceit and bigotry, pours in some common sense, allows a good fraction for carelessness, and bravely concludes to experiment for himself.

We begin the season by saying, what shall we use? We try a dozen different mixtures, each time crying I have found it, and at the end of the season we still have the same cry, what shall it be? I at first intended to bring samples of all the results I had attained with the different washes, but afterward concluded to only bring the most important and tell how the rest worked.

The most highly praised and hardest pushed wash was the "I. X. L." We all thought well of it at first, and a great many bought it on faith. It was to kill in ten days or two weeks, so we started in, but at the end of that time no scale were dead, so many began to drop it. The agent then said it would take a month, perhaps, and then every scale would be dried up. So a few concluded to use up what they had purchased any way, but the scales are not dead yet, as you can see by the branch which I have; and they tell us we have to wait six months.

I have sprayed some trees two or three times, so the bugs have had the full strength of the wash, but as this is a "faith cure," we had better wait a time with patience before deciding whether it is a faith killer or bug killer. At present nearly every one in my section of Alameda county condemns it as worthless.

Next came a man with some black stuff, he would warrant to kill every scale, if I required him to warrant it. It was "Whale Oil and Iron Compound," and cost about five cents per gallon. "When ready to apply, send along a barrel," says I, but I did not get him to warrant it, and probably that was the reason it did not kill. It was very disappointing to buy such an expensive wash and obtain no benefit whatever; but I had the experience, which was worth something, and it taught me to let all such things alone until I had tried them in limited quantities and knew they were good.

Greenbank Insecticide.—The wash which has made sad havoc in our orchards this year is the Greenbank insecticide. It was tried last year, and though it burned the trees some, there were still enough buds left for plenty of fruit, and the scales were quite thoroughly killed. Many supposed it was used too late, and by beginning earlier, it would prove a good wash. Somehow this year it took hold stronger than last, especially on peach trees, and the crop of fruit is ruined and the trees badly burned. Apricot trees, we have found, are not so tender, though the limbs often die back when they are pruned, before spraying,

and the trees at present are running a great deal of gum. It is claimed this wash is simply caustic soda and potash, with a little arsenic added to make them mix. One lb. to 4 gals. is the strength it has been generally applied, while caustic soda and potash, applied 1 lb. to 3 gals., does not seem to kill any of the wood. Of the recommended washes, a mixture of caustic soda and potash was used last year and also this with fairly good success. Two-thirds lb. caustic soda,  $\frac{1}{2}$  lb. potash to 3 gals. of water, is strong enough. Probably no wash cuts the moss and cleans the old trees better than this. Old trees require stronger washes than young ones the first time.

As the wash does not kill quite all the bugs, a plentiful supply will appear each season at spraying-time, and require a repetition of the dose. For this season we are on the experiment to find a wash that will at least spread better than caustic soda and potash and if possible kill all the scale. When a tree is once clean we must then find a simple wash to keep it so, and we are all right. Many have an idea that yearly burning a tree with caustic soda and potash will cause it to be hidebound, and otherwise injure, but I have had no experience in that direction. The receipt given in *California Fruits*, page 545, I find better than simply caustic soda and potash. It is:

4-5 lb caustic soda (98) G. B.;  
 $\frac{1}{2}$  lb potash (commercial);  
 $\frac{1}{2}$  lbs. whale-oil soap to 6 gals of water.

I prefer to use:

1 lb. caustic soda (98);  
 $\frac{1}{2}$  lb. potash (Greenbank).  
 $\frac{1}{2}$  lbs. the best whale-oil soap to 6 gals. water.

Whale-oil soap is one of the earliest mixtures recommended for application on this scale, and yet in looking over all the books I have, I could not find a single definite receipt for its use. "A strong solution of whale-oil soap," is the way they usually would read, and one receipt called for a strong solution of whale-oil soap, with a little caustic soda added. Finding nothing definite and wishing to experiment, I applied whale-oil soap 1 lb. to 1 gal. to some peach trees. The result was marvelous in the way of killing scale; big and little alike seemed to yield to its powers, but fully one-half of the buds were killed also, as you may see by the sample branch.

Forty lbs. of whale-oil soap to 60 gals. of water has proved very beneficial and injured very few buds with a neighbor of mine, and yet his brother has badly burned some trees with about the same strength of wash, and the same whale-oil soap.

I next tried:

3 lbs. caustic soda;  
2 lbs. potash;  
24 lbs. whale-oil soap to 48 gals. of water.

This did not injure peach buds, but was not so successful on the scale either. Its work was very successful on apricots, and were it not for the trouble of dissolving the soap, and also for the great diversity of strength in which it is found on the market, I should feel quite safe with this mixture. However, the apricot trees have not blossomed yet, and serious injury may still show itself.

Sulphur, salt and lime was tried three years ago, and found of very little use. For some reason it was again tried by a number of small orchardists this year who were very careful about its preparation, but there are still a great many live scale on the trees and it is not considered a success.

Another experiment of which I to-day have a branch is, *Chloride of Lime*. One lb to six gals. This makes a cheap wash, and although there are still some scales on the tree, the owner claims a great many have been killed and have disappeared.

Insecticide W. O. soap was tried, but killed the buds.

This is about the end of the list, and although fully \$5000 worth of damage has been done with the different spray materials in the Niles district alone, we find ourselves without a complete solution of the scalebug problem.

As though orchardists were not doing enough, the State is considering a law by which an orchard may be quarantined if the owner does not spray. If the State would spend enough money to find a satisfactory wash, I guarantee there would be little use for a quarantine law. Besides the selection of a wash, I would say, if strong solutions are used, spray before you prune. Should the trees not be injured, I recommend close pruning, to be followed by any good methods which would keep the trees constantly growing.

As trees on irrigating ditches seem to have less scale than those on higher ground, plenty of water is suggested.

So long as trees are infested with the black or brown scale, some injury will appear to the fruit, but an observance of these rules will reduce the damage to a minimum.

It has been said that the most tangible results of the winter's spraying is dead trees, skinned noses, burned fingers, bad tempers and ruined clothes, while it is feared should the bugs form a "Scalebug Alliance," we could not kill them, no matter to what political party we belong.

ELECTRIC VS. CABLE.—It is stated that there are now in operation in the United States 260 miles of electric street railroads, which is five miles more than is operated by cables. There are five different systems of electric roads now in operation—the Thomson-Houston, the Sprague or Edison, the Short, the Westinghouse and the Roe.

# FLORIST AND GARDENER.

## Experiments With Sand in My Garden.

EDITORS PRESS:—I have just read the article in your last week's issue, written by J. B. Carr, on "Starting Tree Seedlings" in prepared sand.

He closes said article as follows: "Now, as eucalyptus seed most certainly germinates better in sand and manure than in soil, why will not all tree and vegetable seed that require transplanting start best that way?"

I was very much interested in what he wrote, as I have been experimenting for some years past with pure sand, as well as sand prepared in various ways, in order to satisfy my Yankee curiosity as to its value for potted plants, cuttings, etc., and intended in the near future, if success crowned my efforts, to give the readers of the *RURAL* the benefit of my experience. I know that there are a great many people, especially ladies, who find it very difficult to prepare suitable soil for potted flowers, and after taking a great deal of pains to make a compost that they suppose is suitable for their lovely flowers, soon find to their great surprise and sorrow that the soil hakes after being watered, and that their cherished plants do not flourish as they should, but make a puny and sickly growth. I am not at present fully prepared to write on this subject as I would like to, but owing to the article above referred to, just appearing, I thought perhaps it might be the most favorable opportunity for me to state a few of the experiments I have already tried, and the success that followed, as well as to speak of some experiments now under way which I may in some future article write about.

It is a well-known fact that the most successful florists use a great deal of sand, and if one will examine carefully the roots of plants sent to them by such persons, he will almost invariably find that the little compost that is still clinging to the fibrous roots is very fine, sandy, light and porous. Noticing this some years ago, it set me to thinking, and being a great lover of flowers and not having suitable soil for them, I determined to experiment and persevere until I secured it in some way. My first attempt with sand was with English walnuts. In the summer of 1888, having a few barrels of sand left after plastering my house, I planted them in a long box about ten inches deep filled with this sand, which came from Vallejo, and I suppose from the ocean beach. I took great care to always keep it moist and sprinkled it a number of times with weak liquid hen manure. Early in the spring they commenced to come up nicely and made a rapid growth. I found on transplanting them to my nursery rows that but very few nuts had failed to germinate, while some of the same kind of nuts, planted at the same date as the others in good garden soil, mostly rotted.

Last spring I obtained a lot of fine sand from the creek and mixed it with one part of very fine and thoroughly rotten cow manure to three parts of sand. I then took coal-oil cans, cut out the top and planed some pine or redwood slats as wide as a lath and three-fourths of an inch thick. These I cut exactly the width of the can and nailed two of them on the outside, opposite each other, with inch wire nails driven from the inside of the can. By this method they projected nearly one-fourth of an inch through the wood, just enough to clinch nicely. I then nailed, on the other two sides, planed laths of suitable length to come flush with the ends of the other pieces and secured them there with two-inch wire nails and half-inch wire nails in the middle, clinching them in the same manner as the others. This made a stiff, strong can. I painted them both inside and out and made holes one-fourth of an inch in diameter at each corner and in the middle, on all sides and just at the bottom of the can inside. In this way I find the drainage is much better than where they set on the ground. I then put in an inch or two of rather coarse burnt bones, with the addition of charcoal I sift out of my ashes. I then filled up the cans with my prepared sand, well settled down to within two inches of the top, and planted several kinds of lilies. I never had lilies do as well before, and they were admired by all who saw them.

In July last, I took a cutting of geranium and put it into the Vallejo sand without manure. I kept the can in the shade for two or three weeks, taking great care to keep the sand a little moist. I also watered it four or five times with liquid manure sams as I applied to the English walnuts. It made a better growth than any other geranium cutting I planted, and I had prepared soil of several different kinds for them.

This season I expect to have at least 20 different kinds of chrysanthemums which I shall plant in coal-oil cans in sand prepared as for the lilies before referred to. I have already succeeded in raising a fine lot of chrysanthemum rootlets in this prepared sand, as well as having started a fine lot of outtings of different kinds—daisies, pansies, etc. I have also at the present writing growing in this sand a nice lot of cabbage and lettuce plants, also onions raised this year from seed, which I shall transplant as soon as the weather permits. I am not yet done experimenting. I like it, and I am continually at it and have been amply repaid for all my pains.

IRA W. ADAMS.

Bay State Garden, Calistoga, Cal., Feb. 23.

## PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

### The Master's Desk.

R. W. DAVIS, W. M. S. G. OF CALIFORNIA.

Do you notice the effort to cut down the appropriation for public schools in California? Keep an eye on the man who wants to cripple the free schools of the land! The Grange is for education. It is one of the cardinal virtues of Patrons of Husbandry. Look well to the school!

What is there to hinder a Grange in beautiful Napa? The first session of the California State Grange was held at Napa City, beginning July 15, 1873. It seems more than appropriate that Napa Grange, No. 2, P. of H., should reclaim its charter. Won't some of its former members make an effort? The State Grange will furnish help at any time.

More men with pure manhood, more women with perfect womanhood, and the Grange will be more powerful and more useful. The present membership is of excellent material, but we want more members. Call on your members to bring in applications for membership. Worthy Master! Swell the list of your Grange; let the harvest in the Grange, during 1891, be the largest for many years!

Study your ritual! It has beautiful thoughts that may have escaped notice. Every degree teaches more than you think. No one but can be benefited by knowing and practicing the lessons of our ritual and the precepts of the Order.

For our business interests, we desire to bring producers and consumers, farmers and manufacturers, into the most direct and friendly relations possible. And this is what the Executive Committee of the California State Grange has been doing lately. Subordinate Granges will be fully advised at the earliest possible moment. If you are a member of the Grange, attend your Grange meetings and find what has been done. If you are eligible to the Grange, better join, and then you can find what has been done. It will pay you to investigate before doing anything. See what the Grange in California has done for the farmers who are members of the Order.

The Oregon State Grange meets the fourth Tuesday in May. An effort is making to get up an excursion of Patrons to attend that session. Do you want to go? Already quite a number have said "yes." It will be a nice time of the year, and a splendid place and hospitable people to visit. More anon on this subject.

And now for the Juvenile Granges. The rituals have been ordered. Who gets the first Juvenile in California?

The Grange work is for the present and for the future. Judging from the way the present Congress and the present Legislature have thus far legislated, as against the industrial interests of this State, it seems we will have considerable work to do in the immediate future. The days are not far distant when the halls of legislation (county, State and Nation,) will be honored and ornamented by men who will be willing to pass a few laws, at least, in behalf of those, who by the sweat of their brows, and the use of their hands, are developing the resources and enhancing the values of this nation. The handwriting is on the wall, and those who have wantonly ignored the petitions, letters and requests of the industrial interests of this land, may well seek shelter from the political storm-cloud that is now to be seen in several sections of this fair land. Already, rumblings of this concentrated cyclone, this desire to be free from the tyranny of political sharps, bosses and falsifiers, is plainly audible. Let him who wants to see this Nation and this State prosperous, keep a list of the votes cast in Congress and at Sacramento. These same men will soon want your votes again. If they have been faithful in these places, we can afford to make them rulers over many interests. Otherwise, let's give them the "grand bounce."

Bro. Milton Trusler, Worthy Master of Indiana State Grange, has thanks for a neatly bound copy of the interesting proceedings of the 20th annual session of the Indiana Patrons. There is much to interest, and many things to increase a Patron's love for the Order, to be found by a careful perusal of the essays, reports and addresses delivered at the session.

Every Patron in California will be pained to hear of the illness of Bro. C. J. Cressey, the Worthy Treasurer of the California State Grange. There are thousands of sturdy farmers whose hearts throb for the good brother. We all sincerely hope and earnestly pray that he will soon be restored to his former health. We need him so much right now. Let the prayers of the members be for the brother who is the noblest type of man, and may we soon see his earnest, honest face, hear his instructive

word, and feel his hearty handshake, as in the days agone.

New York State Grange has gained 8000 members during the past year, so we learn from the able address of Worthy Master W. C. Gifford, of that Grange.

Bro. J. E. Blackford, Master of the State Grange of Iowa, has placed us under obligations for a copy of his annual address, and for the bound copy of the Journal of Proceedings of the late session of the Iowa State Grange. Thanks, Bro. B. Keep the Grange sails well spread in our native State and oh! give!

Let your subordinate Grange be a lamp to the community in which it is located. Then remember, too, that the lamp will give no light unless it is filled with oil. It must be trimmed now and then; it must be lighted and must not be put under a bushel. These things require effort. You, reader, have a part to do; a work to render; a responsibility to meet. Do you furnish any of the oil? Do you trim the wick now and occasionally? Do you light the lamp, or place it in position where your neighboring farmers can see its rays or feel its heat? Do you speak a good word for the Grange, or ask some one (eligible) to join in the work of helping the farmer in his fight? Do you? If not, please "fall to" and help increase your Grange in strength, in numbers, and in influence.

Prudence is everywhere a valuable article. Keep some of it in your "stock on hand." The assessor will not ask you to put it on his list. The doctor will not censure you for being possessed of prudence. The lawyer admires the prudent man. The preacher knows the prudent person is not far from the straight and narrow way. Even the politician respects the prudent citizen; and for the woman, what is more to be admired than her prudence? Let's be prudent at all times, in all things and with all persons.

### The Legislature.

At our writing on Wednesday, it would seem that the present session of the Legislature was likely to be ended with very little legislation of benefit to farmers or any other industrious people in the State. The bill for paying taxes semi-annually has been secured, but most of the other bills recommended by the Grange and Alliance have been effectually killed by some of the most unscrupulous leaders and followers in both branches. A second Mutual Fire Insurance bill is still pending action, also the Australian Ballot law. The dastardly political leaders in the Assembly are having a harder time than they expected, no doubt, in slaying the Ballot Reform bill, or it would have met its fate before this. The action of some of its notorious opponents should assign them to political oblivion, whether they succeed in thwarting the will of the people this time or not.

We are glad to learn that Bro. J. D. Huffman, who is doubtless working with the Legislative Committees of the State Grange and Federated Traders, is evidently having some salutary influence against the high-handed schemes and preposterous maneuvering and lying of San Francisco's shameless leader and his associates in the Assembly.

### Kibesillah Grange.

EDITORS PRESS:—We had a very pleasant meeting on Feb. 7th. We had five applications come in, which were given over to the Committee on Candidates to report at the next meeting, but it was so stormy that we could not meet.

Our next meeting will be March 7th. We have good officers this time for our leaders, and with the harmonious action of all other members this will undoubtedly be a good year for Kibesillah Grange. It is a lamentable fact that in our Grange there are members who have ideas, but through disinclination to speak or some other cause they will not express themselves. This is not right. Each should do his or her part for the Grange.

We would like to know about co-operation in buying and selling, as the farmers want to know what benefit there is in the Grange.

We are very thankful to the Worthy Secretary S. G. for the Journal of Proceedings of the State and National Grange. They are the only proceedings we have had since last summer. We have had no other communications whatever to work on.

We had a very heavy storm last Saturday. The farmers have finished seeding in this section. The grain which is up is looking well.

Yours fraternally, WM. TAYLOR,  
M. Kibesillah Grange.

### Land Laws Repealed.

WASHINGTON, March 4.—Commissioner Groff of the General Land Office to-day sent to all the Registers and Receivers of Land Offices the following telegram: "The Timber Culture and Pre-emption laws are this day repealed. Allow no further entries thereunder of claims hereafter initiated."

NOTICE will probably be given next week calling for a meeting of Grange and Alliance representatives, concerning a Farmers' Institute organization in Alameda county.

### Free Coinage of Silver.

EDITORS PRESS:—This question is now much discussed both in Congress and by the people through the medium of the public press. The proper settlement of the question is one of vast importance to the prosperity of the people. The monometallists contend that the effect of the free coinage of silver will be to force gold out of circulation, raise the cost of the necessities of life and consequently depress the wages of the laboring class, will paralyze the industries of the country and work destitution generally.

If such would be the effect of the free coinage of silver, then let us adhere to monometallism by all means. But would the free coinage of silver have the effect on the country predicted by the monometallists? Would gold be withdrawn from circulation? It is easy to make assertions, but unless they are supported by valid arguments, assertions ought to count for naught. How can gold be retired? Only by

#### Its Withdrawal from the Country.

And this can only take place through the commercial exchanges. When the exports of the country equal or exceed the imports, all foreign debts are settled by produce bills of exchange, and no gold is exported to settle balances. It is only when the imports of the country exceed its exports that gold will be required to settle balances, and this condition of our foreign commerce now seldom occurs. The balance of trade has almost constantly for a long period of years been in favor of the United States, and when, as has sometimes happened, the balance of trade has been sometimes against the country, such a balance has to be settled by gold. But gold is a product of the earth in the United States, just the same as wheat or corn, and enough of this metal is produced annually in the United States to much more than settle occasional deficits in the commercial exchanges of the country. There is

#### More Gold in Our Country

At the present time than ever before. It cannot be retired except by returning it to the earth from whence it was mined, free coinage of silver notwithstanding.

But it is asserted that the free coinage of silver will invite and draw to our country all the silver of the world to be coined and exchanged for our gold. What nonsense! Silver as a commodity or bullion will seek, as it always has, the best market, whether that be London, Paris or New York. Foreign silver coin is, and always has been, treated in the United States as bullion, and it is not contemplated by the friends of free coinage to open the Mints of the United States to the free coinage of foreign silver bullion. So much for the claim of our gold reserves being absorbed by the free coinage of silver. For the purposes of domestic exchange, silver of United States coinage is just as valuable to the people as gold, and a silver certificate based on silver coin is just as valuable as the coin itself, hence just as valuable as gold.

In 1873, silver dollars, by the Bland law, which provided for their coinage to a limited amount, were made a

#### Legal Tender for All Debts.

Public and private. It was contended and predicted, just as it is to-day, that the legal-tender silver dollar would supplant gold coin. But it did not. Gold, as every intelligent man knows, continued just as plentiful and more so than before the enactment of the Bland law. Grocers' bills, hardware bills and hardware bills ceased to be made out payable in gold coin only. Instead of gold being retired from circulation by the Bland bill, the gold broker was retired. No longer could he buy a silver dollar for 90 cents in gold. The laboring man, when paid in silver on a Saturday night, as he usually was, no longer had to seek the broker and submit to a discount of eight or ten per cent on his silver before he could make it available for his purposes.

The free coinage of silver would stimulate to increased activity the silver mines, and improve and promote domestic trade and industries, without detriment to our foreign trade or commerce. Gold would not be retired any more than it is to-day. The quantity of our circulating medium would be increased and the general welfare of the country promoted.

WM. C. BLACKWOOD.

Haywards Feb. 27, 1891

### Rhode Island State Grange.

The fourth annual session of this Grange was held at Providence, Jan. 20 and 21. Worthy Master Peckham delivered an able address which commanded close attention.

The following officers were elected for two years: M., Andrew M. Belcher; O., Arthur W. Brown; L., A. A. Smith; S., A. A. Sherman; A. S., A. Hoyle; C., Mrs. G. M. Carpenter; T., Benj. Martin; Sec., N. T. Reynolds; G. K., D. J. Mantion; Ceres, Mrs. M. D. Burdick; P., Mrs. A. T. Hoxie; F., Minnie Fenner; L. A. S., Mrs. A. W. Tefft.

We are indebted to the Providence Pomona Progress for the above.

EDEN GRANGE last Saturday, we learn, appointed a Committee of Conference on State Grange meeting. Also requested Judge Blackwood to meet with the Presidents of the sub-Farmers' Alliances of the county, in consultation for organizing a Farmers' Institute.

### Railroad Lands Are Taxable.

Several weeks ago, the Attorney-General was asked by the District Attorney of Siskiyou to decide whether railroad lands and lands sold by the railroad are assessable, the railroads and the purchasers holding that these lands could not be assessed because no patents were issued for them by the Government. The Attorney-General's decision is against the railroad and the purchasers, and unless overthrown will compel the company to pay tax on 10,000,000 acres of land, much of which is worth \$5 per acre, and to compel all persons who have bought lands from the railroad to pay for them.

The taxes to be thus gathered by the State and counties will amount to more than \$500,000 per annum in the aggregate. According to the Attorney-General, the railroad will be compelled to pay two-thirds of Siskiyou's taxes. Following is a synopsis of the opinion, which covers 60 pages:

First—That all property in the State not exempt under the laws of the United States shall be taxed in proportion to its value, to be ascertained as provided by law.

Second—That the State of California has no power to tax the property of the United States within its limits.

Third—Where the right to a patent has once become vested in a purchaser of public lands, it is equivalent, so far as the Government is concerned, to a patent actually issued. The execution and delivery of the patent after the right to it has become completed are the mere ministerial acts of the officers charged with that duty.

Fourth—The grant made to the Central Pacific Railroad Company by the Act of July 1, 1862, United States Statutes, Volume 12, page 489, and amendments thereto, and the grant made to the California & Oregon Railroad, by the Act of July 25, 1866 United States Statutes, Volume 146, page 239, were to aid in the construction of the roads, and when the routes of the respective roads became definitely fixed the sections granted by the respective Acts thereupon became susceptible of identification and the title attached to them took effect on the date of the respective grants so as to cut off all intervening claims. Thereby the lands became the property of the railroad companies and there was nothing to hinder their use and enjoyment, and it was immaterial whether the respective companies then had the legal and indefeasible title to the lands or merely the equitable title to them, to be subsequently perfected by patents from the Government, and from that time the same were subject to taxation.

Fifth—A legislative grant of public lands is the highest monument of title, and is not strengthened by a subsequent patent on the same land.

Sixth—That so far as said Acts of Congress relate to indemnity lands to be given to the railroad companies, no title to such lands became vested in the companies until the selections were made and approved, as provided by the statutes, and upon the making of such selections the lands thereupon became the property of the railroad companies and subject to taxation, whether or not the United States patents had been issued.

Seventh—That where Congress has prescribed the conditions upon which portions of the public domain may be alienated, and all such conditions have been complied with and the tract to be alienated is distinctly defined, and nothing remains but to issue the patent, then the donee or purchaser is to be treated as the beneficial owner of the land, holding it as his own property subject to State and local taxation.

Eighth—Whenever the title to Government land becomes vested in a person or corporation, the United States only holds the legal title in trust for that person or corporation, and such property ceases to be the property of the United States and is subject to State and local taxation; that an equitable title determines the ownership without respect to the legal title within the meaning of the Constitution of the State of California; that lands shall be assessed to the owner.

Ninth—Whenever a purchaser of Government land has paid for the same, and a certificate of purchase has been issued thereon, the land is subject to State and local taxation before the issuance of patent.

NOW HOPELESSLY ILL.—We are extremely sorry to learn by letter of March 3d that Bro. C. J. Cressey has been growing still more feeble. His recovery is hopeless, and the delicate thread of his earthly life seems likely to be severed at any moment. Thoughts of our dear brother's sick bed and afflicted family are indeed painful to all who have intimately known him in his kindness and sincerity of heart and mind.

FARMERS' INSTITUTE.—It is quite possible that a Farmers' Institute of two or three days' session may be held in Fresno City the first of April, under the auspices of the Fresno County Farmers' Alliance. The regents of the State University are expected to provide from the agricultural department of the university one or more professors to lead in the work of the Institute.—Fresno Californian.

THANKS to Henry E. Loomis, Secretary, Glastonbury, for copy of the Proceedings of the Sixth Annual Session of the Connecticut State Grange, P. of H., held at Bristol, Jan. 13 to 16, 1891.

# FARMERS' ALLIANCE.

SUBSCRIBERS wishing fuller information of the Alliance can have their names changed to the Grange Edition of the RURAL PRESS free, much to their advantage, this department being continued in the same.

From National Organizer Barbee.

A Lecturer on the Wing.

SELMA, Feb. 26, 1891.

EDITORS PRESS:—Notwithstanding the rain, snow and mud, I had a good full meeting at Soledad, Monday last. Equity Alliance No. 8, at Soledad, has completed plans for its two-story building in Soledad. It will be a good and substantial building. Hall upstairs and business room below.

Monterey and San Luis Obispo counties are alive and pushing things right along. These two counties will soon have a splendid

Joint Co-operative Roller-Mill.

The enterprising little city of San Miguel has outbid her competitors and secures the mill at that point. This is a step in the right direction. Let other wheat-growing counties in the State see their interest as these counties do, and go and do likewise.

I left on the 1 P. M. train for Gilroy, where I staid Monday night. The thunder, lightning, rain and wind prevented a big turnout, but much good was done in the name of the Lord (Alliance).

A telegram from Frank P. Cook informed me that the Sacramento County Alliance could not convene at Enterprise on the 26th and was set for March 3d at Elk Grove; so I went directly to Modesto, where I found

Another Live Working Hive of Alliance Bees.

I was taken out to Bro. Bangs' by Bro. Caldwell, where I staid till yesterday afternoon. Bro. B. is a noble specimen of manhood, with a heart as big as a cart-wheel. His excellent wife and two lovely and intelligent daughters, with their delightful music, made my visit a most pleasant one indeed.

Last night I met with the Modesto Alliance, with Bro. Beard in the chair. After he opened the meeting in due form, he introduced me to his members (a good big attendance), and I proceeded to give them the new work. Giving this county the advantage of the last day at Sacramento. makes them the best posted county in the State. Miss Susie Bangs had the work perfect with one rehearsal of ten minutes, which in a work of six years has never been done before.

My meeting from 10 to 1:45 in Modesto today was the best and most enthusiastic of any I have yet seen, and the material of Stanislaus County Alliance is a credit to any county. The more I see of the brain that composes the Alliances of California, the prouder I am to know I inaugurated the little insignificant beginning of this noble work with only eight members less than 10 months ago, and find in so short a time, in a night as it were,

Thirteen Thousand Full-Grown Jonah's Gourds,

All chock full of well-watered seeds that are spread all over the State, and which are destined and bid fair with the glorious season we are having (it's raining again) to produce the biggest crop by '92 ever harvested by hayseeders.

Please find the cash and names of nine new subscribers for the RURAL. Let every gourd in Jonah's vine subscribe for the RURAL PRESS. It will help increase the crop wonderfully. More as I go along. J. S. BARBEE.

## Who Owns the Legislature?

Some time ago the Times stated broadly that the sitting Legislature was a thoroughly corporation body, which more particularly meant that it is completely subservient to the Southern Pacific Co. Last week both houses of the Legislature furnished unmistakable proof of the truth of the Times' assertion.—*Sacramento Bee*.

The Humboldt Times, a leading Republican paper, is the party that plaintively asks, who owns the Legislature? This one is said to be so cheap that almost anybody might afford the luxury.—*Colusa Sun*.

We make the prediction that the Farmers' Alliance will own the next legislative session in this State, and that its action will not be controlled by corporations.—*Marysville Democrat*.

A SUB-ALLIANCE has been established at Table Bluff, Humboldt county, with the following officers: T. J. Knight, Pres.; A. Fitzsimmons, Vice-Pres.; A. A. Linton, Sec.; E. Clark, Treas.; Mrs. T. J. Knight, Chap.; Thos. M. Naughton, Lect.; A. Knight, Steward; W. Tierney, Doorkeeper; Frank Knight, Assistant Doorkeeper.

FARMERSVILLE ALLIANCE, Tulare county, gave a hall on the evening of Feb. 27th, to raise funds for the purpose of buying an organ. The hall will be entirely remodeled, making it one of the most comfortable and attractive meeting-places in the county.

JOHN R. SMITH of Humboldt county has been elected Alliance Lecturer and Organizer by the County Alliance of that county. Those within that jurisdiction desiring to organize should communicate with him. Address, Bay-side, Humboldt county.

## A Suggestion to the Farmers' Alliance.

A farmer called the attention of the Times this week to the fact that the Southern Pacific railroad had charged him \$125 to bring a harvester from Stockton to Visalia. He said it required but one car for the service, and that on many other classes of freight the rates were much less. He thought the Railroad Commission should look into the matter and prevent the company from robbing the farmers.

Another farmer, who does not believe in sitting quietly down and submitting to extortionate charges, even from the railroad company, said that last year he had some freight that he wished hauled by the railroad, and upon ascertaining the rate, concluded that it would be more than he could afford to pay. He hitched up his own team and hauled it himself, making on the trip, at the rate the company wanted to charge him, \$10 a day while engaged in the work.

"Why," said he, "if the Farmers' Alliance object to the high freight rate charged by the Southern Pacific, they can easily get a reduction. Let them have their goods shipped by boat from San Francisco to Stockton. They can get that done for \$1 per ton. Then they can take six horses and two wagons and make the trip to Stockton and return in 14 days at the outside. They could easily transport five tons, which, at the rate charged by the railroad, would amount to \$125. This would make \$8 a day for them, counting freight but one way. If they had a load both ways, they would make \$16 a day. If the Farmers' Alliance would resolve as a body that they would pursue the course I have indicated, we would soon hear no complaints about high rates. The railroad people are only human, and having a monopoly, squeeze all they can out of the people whom they imagine are at their mercy. As soon as they meet organized resistance, they will reduce their rate so low that it will not pay a farmer to use his teams in opposition to them. When they do this, complaints will cease."

It is currently thought that the Lord helps the man who helps himself. If this is a fact, the farmers can get lower freight rates by starting an opposition to the Southern Pacific and hauling their own freight.—*Visalia Times*.

[Through a level country like that from Stockton to Kern county, we presume steam road-wagons could be employed to far better advantage than horses, burning wood or coal for steam. By utilizing the asphalt bed and oil springs along the western slope of the hills between Huron and Bakersfield, an exhaustless and cheaper fuel might also be secured.—Eds.]

## The "Call" on Farmers' Alliance.

In the formation of new parties (says the S. F. Morning Call recently) there are likely to be some mistakes at first in platforms, for men of different minds assemble and discuss their opinions as to principles which they believe ought to be embodied in their efforts for reforms. The Farmers' Alliance is a case in point. All realize that corporations and politicians have made common cause in plundering the people in most of the States of the Union. Corporations have had in their pay men who ran conventions, and the public have had to take the candidates who were nominated for them.

California, as we know, has had to suffer from the anomalous condition of affairs until our citizens have become restive under the load they have had to carry. They have seen taxes increase with little or no prospect of a change for the better. Under such circumstances Farmers' Alliances have been formed, with a view to the nomination of candidates for office, instead of leaving this important duty to corporations. The Call is in favor of reforms in several respects. It does not wish to see all of the important offices in the State filled by men who sell nominations.

As political affairs have been managed in San Francisco and the State of California recently, scarcely an important position has been filled which was not accomplished through moneyed influences. Bosses in the conventions sold the nominations, and the people quietly voted for their candidates. Our recent elections have been a fraud upon the people. We have been plundered, yes, robbed. At the last election the Republican party was able to secure the nomination of some good men, and they were elected in preference to Buckley's candidates; but now that the Republican party has got into power, bosses are hovering about the Legislature, with a view to the abasement of that party. The Call is in hopes they will not succeed, but there is danger. Farmers believe there is danger.

If the farmers organize their Alliances, as they are likely to do, and go into elections, in every probability they will soon control the State, for where is there an honest citizen who will not vote for their candidates in preference to such men as have been nominated by partisan conventions? One mistake, however, is made by the Alliances in asking the Legislature to endorse Mr. Stanford's wild financial scheme, but we look for that orduity to be lopped off, for it is a crude, unconstitutional and impracticable.

At a recent meeting of the Orange County Alliance, over 300 members were in attendance. A fine repeat was provided at noon, and the session, though extended late at night, was heartily enjoyed by all.

## Inspection of Coal Oil.

Danger of Damaging Legislation.

A legislative bill has been favorably reported by a committee which makes provision for official inspection of coal oil sold in this State, and forbids the sale of any that does not come up to the fire test of 150 degrees. At first sight it appears to be in the direction of preventing adulteration of oils, but there are certain provisions which will add to the cost of the oil to the consumer, and will also be pretty certain to shut up the local refineries and prevent the use of the California product.

The bill provides for the appointment of inspectors, who are to receive 25 cents for each barrel of oil inspected and 10 cents for each smaller package. As the packages usually contain two cans of five gallons of oil each, this adds ten cents to the cost of the oil or one cent per gallon, which is about the ordinary profit to the importer or dealer.

It is estimated that the amount imported and produced, and refined here, aggregates about 12,000,000 gallons per year, all of which is sold in cases. Hence the inspection alone will cost the people who use the oil \$120,000 per year. The imports to this city are over 9,000,000 gallons by the Standard Oil Co. alone, as stated by them to the Interstate Commission. Their proportion of this tax would then be \$90,000, but the people themselves would have to pay this.

The oils now sold are under the tests of 110, 120, 130 and 150 degrees. The dealers consider that about one-quarter of this amount is of 150 test, and one-half is from 120 to 130. The range of prices is from one to four cents a gallon on oils of lower test than 150 degrees. Now to raise the test to 150 on all the oil will cost nearly two cents a gallon on the whole consumption more than the people are now paying for their oil. This added to the former figures referred to will make \$240,000, or about \$360,000 a year more tax on the coal oil used in this State, which expense will fall mostly on farmers, miners and others in the interior and on the poor people of the cities. There will also be another extra cost in the danger of importing oil to this place which does not come up to the standard.

It would really require the dealers to buy oil of a test of 160 degs., as inspectors often vary in their tests from five to ten degrees. The dealers and importers will make an extra charge for this extra risk. As an instance of this the fact may be cited that they have in Honolulu a law requiring the oils used there to stand a flash test of 115. The Standard Oil Co. sent over a cargo that had been tested here at 117, but the inspectors at Honolulu said it was only 107, so the whole cargo had to be returned here. It was then re-inspected and stood 117 as before, but the errors or differences in the inspection tests caused great expense. If a cargo is brought here from the East and does not meet the test, it cannot be sold, and there would be more loss on this than could be made on a dozen cargoes.

Coal oil, like many other staples, is sold very close, and the profit is only from one to two cents per gallon. If all the oil brought here has to go to a warehouse for inspection, this makes an extra expense so only large dealers like the Standard Oil Company could conduct a business at a profit.

The operation of this law would also close up the refineries in this State, because it has been found impossible to make oil from California crude above the 120 fire test. Hence the refineries would have nothing to do, and the California product would be sold for fuel purposes only.

The plea for this bill is that the dealers cannot be trusted to import oils up to the standard required by existing laws, which provide that no oil can be sold under the fire test of 110 degrees. The universal standard for export is 110 fire test. Local laws have raised the test to 150 in other places, but have not prohibited the sale of that of lower test provided it is inspected. The fees for inspection in Eastern States are from one and a half to two and a half cents per case of two cans, and from five to twelve and a half cents per barrel.

As to safe oils, the universal standard established by the United States is 110 fire test; the flash test of such an oil is about 90 to 95. The flash test is the first evolution of vapor from the oil; the fire test means the point of temperature at which the volume will burn when the match is applied.

As the market stands now, these tests are recognized throughout the world, and any sold less than 110 would be a fraudulent practice on the part of the dealer. Moreover, the cost of freight from the East is so great that the dealers would scarcely import impure oil, since the price of that below 110 is very slight in difference at the Eastern market. The morale of the trade now requires 130-test oil and the major part of this is of actual fire test. The freight from the East is about 10 cents per gallon. The first cost of the oil in barrels is slightly less than that and in cases a trifle more. It is worth about 22½ cents a gallon here now.

There are very few accidents in this region from impure oil, which is a pretty good indication that dealers are importing a good article. While the proposed legislation would raise the

standard, it would also materially increase the price, and people can buy the higher-priced oils now if they desire. The class of people who use coal oil in their families is one that does not care to have its cost increased. Bills of this kind are often passed because the legislators do not investigate as to the probable results on an industry or the extra expense entailed to the consumers.

## TRACK AND HARM.

The Victories of Margaret S.

The article on the first page of this issue gives the general facts about the achievements of M. Salisbury's California bred filly, Margaret S. The following is an account of her races prepared for the RURAL PRESS by an eyewitness:

In August, 1889, Margaret S. left California for Cleveland, Ohio, where she was to take part in the Spirit's Futurity Stakes in which there were over 300 nominations and nine who made the final payments of which but four faced the starter. While it was known that she was fast enough to win if at herself, it was thought by many that her trip across the continent, change of climate and water, would have a tendency to tie her up. The result, however, proved different, as she won in three straight heats. The track was hard, and the temperature and wind blowing up the homestretch were decidedly against extreme speed, so that everything considered, the performance was wonderful, and the race one of the best three-year-old events that ever took place. In the first heat she drew second position, and after scoring several times, they were sent away. Margaret never made a move to win until well into the homestretch, where she gradually drew away from the others, winning easily by a length in 2:23½. In the 2d heat she repeated her previous performance, winning by two open lengths in 2:22½.

The third heat was started after a long and tedious scoring, Margaret S. again winning in the last quarter very easily in 2:24.

The summary is as follows:

Margaret S.	1	1	1
Palo Alto Belle	2	2	3
Fortuna	3	3	2
San Malo	4	4	4
Time.	1st quarter.	half.	3d quarter.
1st mile	30½	1:11½	1:40½
2d mile	36½	1:10½	1:45½
3d mile	36½	1:10½	1:40½
			2:24

In July, 1890, the four-year-olds were called up at Detroit to trot for the Chicago Horseman's Great Expectation Stakes, in which there had been nominated 565 colts, only five of which responded to trot the race, Allerton, who holds the world's record as the fastest four-year-old stallion, being the principal contestant against Margaret S. Everybody conceding that the race lay between these two great four-year-olds, the sequel shows that this was correct, as all but Allerton were distanced by Margaret in the first heat and many were certain he also was outside of the distance flag when she passed under the score the winner of the first heat in 2:18½. The second heat Allerton won after the hardest contest ever seen in the stretch by a scant length in 2:16½. The race was then postponed until the next day, and just before being called out a very heavy shower put the track in a very bad condition, being at least eight seconds slow in the opinion of the best judges present. After a most determined struggle in the mud, Allerton beat Margaret a head in 2:18½. The next heat was only a repetition of all the former ones, the race being terrific considering the muddy condition of the track. It was nose and nose for the last hundred yards, Margaret lifting her head and poking her nose across the wire first in 2:23½.

The excitement was now at the highest fever heat, the race standing 2 and 2, and the next heat was to decide the race, and when the two colt racers appeared on the track they were greeted with applause after applause and were soon started to finish the most sensational race ever trotted. Just as a tight race seemed probable, Allerton broke, and before fairly settled broke again, going all to pieces. Margaret S. kept on going through the mud like a locomotive, and just as she swept under the wire a winner in 2:20½, the great Allerton, the fastest entire colt of his age, was seen turning into the head of the stretch, being beaten a quarter of a mile, Margaret S. thus distancing her only competitor as she had all the other starters the day before, and winning the entire stake of \$9500. The spectators were thunderstruck, being rendered speechless at the outcome of the race, but it was only for a moment, and as Margaret came back to the score they hurled forth in thunders of applause for the winner of the double event and over double the amount of money ever before won by a four-year-old, the summary of which is as follows:

Margaret S.	1	2	2	1
Allerton	2	1	1	2
Sir Walter Scott				Dist.
Baroness				Dist.
Navidad				Dist.
Time.	1st quarter.	Half.	Three-quarters.	Mile.
1st heat	35	1:09	1:42½	2:18½
2d heat	34	1:08	1:42	2:16½
3d heat	34½	1:07½	1:41½	2:18½
4th heat	36½	1:12½	1:47½	2:23½
5th heat	24½	1:08½	1:43½	2:20½

## In Answer.

[Written for the RURAL PRESS by LUPA.]

"The worst hunger is that of the heart for love, the worst satiety is that of the heart, being obliged, through not finding any one to love, to expend all its love-wealth on itself."

Grieve not that love eludes the grasp,  
And dances like a thistle-down  
Across the bog and treacherous sands,  
And checks pursuit with warning frown.

Nor turn the yearning back on self—  
A mirror held before the face  
Shuts out the sight of other men  
And makes the world a stumbling-place.

"It is not all of life to live,"  
Is written o'er and o'er again;  
"It is not all of life to love,"  
The line drops sometimes from the pen.

The free and cheerful soul may find  
A thousand objects for its care,  
Till Love, left unpossessed, shall turn  
And bring the heart a generous share

Of all it needs: but Needs and Wants  
Pull often at unequal bands.  
Those drive the best who watch the team,  
Who sense the movement of the hands,

Forget themselves, forbear to gaze  
In fear at canyons safely past,  
And leap not shadows-boulders, sure  
That "all roads lead to Rome" at last.

## Helen Kendall's Rosy Wrapper.

"Beautiful, beautiful, but perfectly useless!" exclaimed Helen Austin, as she lifted a cashmere wrapper from a box in which it had been packed, and shook out its soft folds.

It was beautiful, in truth. The ground was a lovely rose-color, over which meandered a delicate vine, with sprays of wild roses and buds of a deeper tint, and faint green leaves. A little, not too much, soft lace finished the neck and sleeves, while one or two bows gave piquancy to the whole. It was a bridal present which had just come to Helen Austin on the day before her marriage.

"It is just like Cousin Mary," continued the bride-elect; "fine, dainty, exquisite; but it would be utterly out of harmony with my blacks and browns and grays. I could never wear it in the world."

"But, my dear, is there any law compelling you to wear only blacks and browns and grays?" asked Mrs. Lindley, the friend to whom she was showing it.

"Certainly there is; the law of fitness, of propriety. An elderly spinster, who marries a doctor of divinity with four boys, keeps his house, and does her share of parish work, ought to be attired with becoming sobriety."

"But the colors would be so becoming to you!" pleaded her friend.

"Yes, I used to wear those colors in my young days, and if I were eighteen, or even twenty-eight, instead of forty-eight, as I am, it would be just the thing. But will you look at the label—'A Rainy-Day Wrapper?' What-ever does Cousin Mary mean?"

"Just what she says, Helen. She wants you to wear it in your new home to brighten the dull, rainy, depressing mornings for your husband and children."

"I thought Cousin Mary had a better sense of correspondence. Now, if I could ever bring myself to put on this dainty thing, it would be upon some cloudless Sunday morning in early June. I should want to sit upon the piazza, with the flowers blossoming and the birds singing, and the blue sky overhead, and everything in harmony. Even then, I'm sure I should feel like a brown sparrow in the feathers of a bird of paradise. A rainy-day wrapper, indeed! No, thank you. My gray one with the Persian trimming will do well enough for rainy days."

"My dear, you are wrong, believe me, and Cousin Mary is right. She has lived in a house full of brothers all her life, and knows, as I do, that the masculine eye delights in soft, pretty colors. Men don't always know what it is that pleases them, but they are pleased with bright, cheerful colors in a woman's dress. You should wear the wrapper for the sake of your husband and boys."

"Oh, as for Dr. Kendall, the dear man—he is so absorbed in his studies that he would never know whether I was robed in sky blue, or grass green, or dandelion yellow or poppy red—bless him! As for Phil and Teddy, they are rampaging boys, too young to know or care what anybody wears, while Max and Howard are young gentlemen of such fastidious tastes, I'm sure they'd laugh to see their new old mother tricked out like a young girl. No, my dear, I know my duty better."

"You are incorrigible."

"Not at all. I have simply thought out this whole question of clothes, as it concerns myself, and reduced it to an exact science. You see, with my complexion, I can't wear blues and greens; reds and yellows are out of the question for one of my mature years and my

profession of 'pastoress'; purple I do not like; so there is nothing left but blacks and browns and grays, and I assure you I am fully equipped with them. I have run through the whole gamut, and can produce almost any shade of them from my wardrobe at a minute's notice."

"But what will you do with your wrapper?"  
"Oh! I'll keep the lovely thing, and remember Cousin Mary, and delight my eyes with looking at it. It is a delight to the eye."

So the wrapper was folded away, and the next day it went with Helen Kendall to her new home. Time passed, and, in the absorption of her new duties and fitting herself into her new place, the box and its contents were almost forgotten. One day, in making some changes, the box happened to be brought to light, and the wrapper was taken out to be put in some other place. Before it was disposed of, Helen was interrupted, and it lay upon a chair in her room all night. The next morning was dark and rainy. She was late, and in hurrying her dressing she remembered that her ordinary gray morning dress was out of repair. Hesitating a moment, her eye caught sight of the card with "A rainy-day wrapper" on it. She smiled at the ridiculousness of wearing such a thing on such a morning; then, as she paused, a sudden inspiration came to her. "What if I should? I declare I'll do it!" she exclaimed, and in a spirit of mischief she hastily threw it on. A glance in the mirror assured her that at forty-eight the color was still becoming to her clear, dark complexion and brown hair and eyes. But she went out and took her place at the breakfast-table a little shamefacedly, it must be confessed.

"O mother, how pretty you look!" was the greeting of Teddy, the youngest and privileged pet of the household, as he came around to give her the good-morning kiss.

"It's her pretty dress," commented outspoken Phil.

"Yes, I guess it is," said Teddy, surveying it critically. "It's so rosy. Where did you get it, mother?"

"I've had it ever since I came here, only I thought it was too gay for the mother of such big boys to wear."

"Oh, it isn't," protested Max, the eldest, a young man of twenty-one. "It's good to see one bright spot in this wretchedly dull morning. I wish you would wear it every time it rains."

"Making sunshine in a shady place," quoted Dr. Kendall mischievously, but looking at his wife meanwhile with admiring eyes.

It was a merry breakfast spite of the pouring rain outside, and after her husband and boys had separated to their several employments, Helen Kendall did some serious thinking. The boys' evident pleasure in the pretty wrapper was a revelation to her. Could it really make any difference to them how she was dressed? Was it not possible that perpetual browns and blacks and grays, even of different shades, might in time become monotonous and depressing? And especially upon a dull morning, when it was so easy to strike a minor key-note for the day? Neat she always was, with immaculate collars and cuffs and frills; but couldn't she add beauty to neatness sometimes? Could she not strengthen her influence over the boys by making herself more pleasing in their eyes? Yes, Cousin Mary and Mrs. Lindley were right. How blind she had been not to see it before. She would henceforth wear that wrapper whenever there should be occasion.

Occasions came in plenty. Once, when Teddy was sick, he asked, hesitatingly, if his mother wouldn't put on that "rosy dress," and when she did he quieted down and went off into a refreshing sleep.

One morning before she left her room there was a tap at the door, and on opening it a crack, Howard whispered through: "Mother, won't you please put on your 'rosy wrapper' this morning?"

Wonderingly she complied, for it was a bright morning, and it had come to be understood that the garment was for dull days.

"I'm all out of sorts, mother," Howard explained; "got a desperate fit of the blues, and I thought a sight of that 'rosy wrapper' would do me good."

Happily, Helen was able to provide a more effectual remedy in her ready counsel and sympathy; still, she had no doubt the wrapper did its part in bringing sunshine back to the clouded face.

One time Dr. Brown was visiting them. He was an old and dear friend, and one whom Dr. Kendall was specially desirous to honor. In the morning her husband said to Helen:

"Don't you think, dear, you had better put on your pretty dress this morning—that one with the roses all over it, I mean—the one you look so beautiful in, you know?"

She put it on, feeling half-vexed and half-amused, but the visitor was wholly charmed, and was never tired of telling his friends afterward what a lovely woman Mrs. Kendall was, and in what exquisite taste she dressed; hearing which in a roundabout way, she was fain to confess that the wrapper probably did all.

"Mother," said Phil, as he came in one day before supper, "George Benson and Harry White are coming over this evening."

"Are they? All right. I shall be glad to see them."

Phil wiggled about and twisted himself into all sorts of shapes on the arms and posts of his mother's chair, until she was convinced he had something on his mind.

"Can I do anything to help entertain them? I can set out a little spread of apples and nuts and cookies, if you like. Will that do?"

"It isn't that!" Phil burst out. "It's—It's—say, mother, won't you wear your rosy dress this evening?"

"Why, Phil, that is only a wrapper for morning. It will hardly do for evening."

"Oh, yes, it will! The boys won't know the difference."

"But why would you like me to wear it?"

"Because I was over to George Benson's yesterday, and his mother's new dress was on the sofa, and it was all bows and lace and fixings, and it was green, or blue, or some color—I don't know which; and George said wasn't it the prettiest dress I ever saw, and I said: 'No; my mother has one ever so much prettier; and he said he didn't believe it, and I said for him to come over and see it himself—so won't you please wear it to-night, mother?"

Here was a situation, but Helen was equal to it. Her boy should not be put to shame and she promised him to wear the wrapper. Attired in it, with an extra bow or two pinned on, she did the honors for the admiring guests, and nobody but herself knew her secret terror lest some of the session, or of the session's wives, should drop in and find her tricked out in such unseemly finery. But she had her reward. George Benson was heard to declare that the rosy dress was "a stunner," and Phil was triumphant.

This incident gave her food for further thought, and resulted in the purchase of a deep ruby wool, which she had made up as tastefully as possible for some afternoons and evenings. The boys often importune her to wear it to church or downtown, but here she draws the line and stands firm. Her husband declares that she has grown ten years younger since her marriage, and she retorts that, if she is made to dress like a girl of twenty, she must be expected to act like one; but that she will keep her gayety and giddiness for the home circle, and not expend it on the parish.

The rosy wrapper, like other mundane things, began to show signs of wear, and Helen was anxiously contriving how she could renovate it, when, upon the first anniversary of her wedding day, a package was put into her hands containing materials for another equally beautiful, and attached to it was a card bearing the inscription: "To mother, from her boys."—M. H. Smith.

## Children's Sayings.

[Written for the RURAL PRESS by J. H.]

When the boys were first trusted with a gun, there was great excitement over every trophy of their skill. One day they brought in two little "cotton-tails," and were eagerly discussing when and how they should be cooked. I assisted them with my advice, but added, laughing: "I don't promise to help you to eat them; the only kind of rabbit I enjoy is a 'Welsb rabbit.'"

"Oh," exclaimed my youngest boy, anxious that I too should enjoy the treat, "then you'll *welsh* it, mamma, won't you?"

Years ago, when Ole Bull was yet at the zenith of his fame, we had tickets to one of his concerts. When the evening came, one of the adult members of the family was unable to go; and we decided to take the little sister, seven years of age, who had never been to a concert before. To her the violin was an unknown instrument and great were her expectations of the delightful mystery to be unfolded; but she said nothing.

In the music hall the vast audience sat and waited. Presently, the door opened and the great maestro appeared on the stage, instrument in hand. As soon as the loud hurst of applause subsided, the dear child turned, and looking up with her beautiful, innocent eyes, full of wonder, whispered softly:

"I think it looks very much like a fiddle."

## Trust in God.

[Written for the RURAL PRESS by MARIE.]

Mothers, mothers, do you know the power you hold? When you send your sons into the world as young men, or even as children sent here and there, why worry and feel uneasy that they are away? The parting is hard, but it is our duty, and do you forget that there is a dear God above Who loves us all? Do you think He will turn away from a mother's prayer for her boy—He who had a human mother such as we? Oh! trust and ask Him, mother dear, and then have no fear. He will guide and guard your son far better than you ever can and He will not forget a mother's prayer. It may not be your way, but our Klug, our God, knows best, as you will know in the end. Our sons must go forth into the world, and we will only hinder their progress in life by tying them to our apron-strings, as many a loving but selfish mother does out of fear that some misfortune may befall them. They will never forget your holy teachings. The little prayer you taught them so reverently at your knee, will be repeated when they are gray-bearded men, and our dear Father in heaven will do the rest if we only ask Him; but our faith must never falter, and we must remember:

"Like silvery echoes run  
The words, Thy will be done, Thy will be done."

## Random Thoughts.

[Written for the RURAL PRESS by Mrs. J. HILTON.]

I was reading the other day, in advice to young folks, that we cannot change our features. I think that is a mistake. Why, take the nose for instance; by wiping it up every time it will soon stay up and alter the face entirely. The same if the nose is pulled down a little every time it is wiped. Just for fun, notice some one who has a cold and see which he does, and then the mouth. You can be always saying "prunes and prisms," and make it very prim looking, or you can be doleful about everything and down goes the corners, and they stay down awfully if they have half a chance, or you can smile at fate and draw up the drooping lips into a merry-looking how, making one's heart sing for joy when your face is seen. But above all beauty is the speaking eyes. It does not matter what the color or shape, if you only cultivate an interested, bright look. The mouth may be large, the nose out of true line, if only the eyes that look into thine are bright with thought and comprehension, the other features are forgotten and you are counted a splendid companion by young and old.

I have been fixing over my old garments and retrimming my hat and making a capote like one of my dresses, but there is not a bit of fun in wearing anything stylish for a farmer's wife, for if you put on that pretty brown dress (made over two or three times maybe) and that dainty little brown bonnet whose three nodding plumes you made out of a shabby black feather nine or ten years old, you will be sure to be asked to sit beside your John, who is dressed in soiled and maybe ragged overalls, old blouse or coat and dilapidated hat, and go to town.

If some one comments on the difference in your appearance, which the some one is sure to do, you will be blamed for the contrast, even if you know that John has plenty of good clothes and that it was slackness or John was "too tired to dress up just to go to town, for I have to change again as soon as I get back, you know." Yet you notice the looks on the faces you meet and wish you had either stayed at home or wore your old calico dress and sun-bonnet. Isn't it horrid? But never mind; the dirty work will all be done some day and the white robes we all shall wear will be all alike, with maybe only a little more brightness on one than on some other, and our John may be one of the bright ones.

That brings my thoughts to another old garment we all have to put aside some day, and that is our bodies. I have always been fearful some of the garments or bodies were put away before the owner was through with them. I wish among the necessary laws that are being made, one could be made that would be a thorough test of death before burial, like opening a vein or something of that kind, for there have been so many cases of suspended animation that it behooves us to be distrustful of opinions of M. D.'s without a sure test. Cannot such a law be made?

Los Alamos.

## Believes in Rewarding Genius.

A farmer, driving a mule-like-looking horse, attached to an old-time "carry-all," came to town. His horse stopped in front of a corner drugstore and refused to go on. The farmer urged the animal, then proceeded to beat him with a rope, but without avail. Of course hundreds of men came up and offered advice. A balked horse is perhaps more fruitful of suggestion than anything else can hope to be. One man told the farmer to twist his tail; and another one said that a handful of fodder held before his eyes would have the desired effect. After awhile the farmer turned to a quiet man standing on the edge of the sidewalk and asked:

"What have you got to say?"

"Nothing."

"Isn't there some mistake about that?"

"None whatever."

"Are you sure?"

"I am certain."

"Is it possible," said the farmer, "that you stand there and see a balked horse, and have no suggestions to make?"

"It is not only possible, but is an absolute fact."

"Where do you live?"

"In this town."

"Are you going home pretty soon?"

"Yes, but why?"

"Well, I have a hushel of fresh eggs that I want to present to you. Here, take this basket, and when you need any farm truck let me know, and it shan't cost you a cent. I admire genius and must say that you are the most remarkable man I ever saw."—Arkansas Traveller.

SPEAK TRUTH SWEETLY.—And never is there such wrong done to truth as when one confuses it with a brutal bluntness. On the other hand, the most unwelcome truth may be told without exciting resentment if told sweetly. There is an Eastern fable of a monarch who had a disturbing dream, and called his two chief soothsayers, separately, to interpret it. The first soothsayer said: "The dream means that all

your relations will die, then you will die yourself." The monarch was furious and had this soothsayer's head cut off. The second soothsayer was summoned, and, having heard the dream, said: "It means that your majesty will outlive all your relatives." The king loaded this soothsayer with gifts, though he had said substantially what the other had said.—*N. Y. Sunday Herald.*

### Chaff.

**JAKE SIMPSON:** What is your favorite tree, Miss Cora? Cora Bellows (at eleven P. M.): The maple. Why is it? Because (yawning) it eaves early.

**BIGGS:** Our forefathers had wives that were of some account. They could do everything, from the family sewing to driving oxen. **Boggs:** Yes they hemmed and hawed, as it were.

**GRANDMA:** Keep quiet, Tommy; children should be silent when older people are talking. Tommy: Then I'll not get a chance to talk for a good while yet, for old people never are silent.

**PADDY's** description of a fiddle is as follows: "It was the shape of a turkey and the size of a goose; he turned it over on its back and rubbed it with a stick, and oh! St. Patrik! how it did equal!"

"WHAT kind of a man is your new minister?" was asked of a resident of Denver. "Just the kind of a man that might be expected to come from the East," was the disgusted reply. "He's a dude—he combs his hair."

**OWNER** of fishpond (to man who is trespassing): Don't you see that sign, "No Fishing Here"? Angler (with an injured air): Yes, and I dispute it. Why, there's good fishing here. Look at this basket.

"WHAT is love?" queried the editor of an American paper. He has since been deluged with answers, mostly from the fair sex. One lady says: "Love is an itching of the heart that we cannot get at to scratch."

ONE of two Scotties, in speaking of a new cemetery, said (in dislike of the new fashion): "I'd rather see than be buried in a place." "Weel," said the other, "it's the verriest wile we'll be buried naewhar else, if I'm spared."

**WAITER** (to cook): George, gent in No. 3 says as his potatoes ain't good—says as they've all got black eyes in 'em. George (real name Patrick): Bedad, thin, it's no fault o' mine. The spalpeens must have been fighting after I put them in the pot.

"JOHN HENRY," exclaimed the angry wife, "you needn't pretend you're asleep. Now you listen to me. I'm going to give you a piece of my mind!" "Wait a minute, Serena," said John Henry, as he got out of bed and groped his way to the boot closet. "What are you doing?" demanded the exasperated Serena. "I am preparing myself," replied John Henry, and a moment later the famous ex-catcher of the world-renowned champion baseball club had lighted a lamp and was standing in his well-known attitude in the middle of the floor with his old mask, breast-pad and leather gloves on. "Go ahead, Serena," he said calmly.

A FARMER in the Nebalem sent the following order through C. F. Curtis to a local merchant. The rancher was evidently in a state of delirious joy over the arrival of a son and heir: "Send me a sack of flour, five pounds of coffee and one pound of tea. My wife gave birth to a big baby boy last night also five pounds of cornstarch, a screw-driver and a mouse-trap. It weighed ten pounds and a straw hat."—*Astorian, Oregon.*

A GIRL of sixteen, thrown on her resources, not long ago, asked Rose Terry Cooke, the authoress, if she could advise her to take up a literary life. Her reply was significant: "I would not advise a girl, even with the strongest taste that way, to attempt literature as a means of living. It is the hardest work for the poorest pay a woman can do, and full of mortification, anxiety and disappointment. For a man it is different—a man gets twice the payment for literary work that is given to a woman, though it be of poorer quality. From a life-long experience, I advise you to let literature alone except as an amusement."—*Boston Journal.*

A THOUGHT.—I stood on the banks of the river this evening and saw the sun hathing himself in the still waters. I saw him sinking in the west to shine on some other part of our globe. I then began to realize that this place is away far from the country that gave me birth—far, far away. It is even farther than the geography reached when I was at school. What induced me to come here? I can't tell. It was destiny. If I, a sailor-boy, had been told I would be a farmer on the far western end of the continent of America, I would have said, it is not possible. J. R. OLSEN.

SHORTHAND WRITING by machinery is as yet a novelty in Great Britain. It is, however, alleged that a new stenographic machine in use by the Italian Parliament is capable of recording 250 words a minute, and can be readily manipulated by a blind person.

THE greatest distance recorded at which the sound of cannon has been heard was on the 4th of December, 1832, when the cannon of Antwerp were heard in the Erz-Gebirge mountains, at a distance of 370 miles.

## YOUNG FOLKS' COLUMN.

### Temptation.

It was a pretty little pocket-knife, and deserved a better fate than to be forgotten by its owner, who had gone home from school and left it alone and unprotected on his desk. It had, however, caught the eye of one little fellow—James Donnelly by name—who, having often horrified it, was keenly alive to its merits.

James was staying after hours, mastering an example in arithmetic which during the day had mastered him; and now, having mastered his work, was gathering his few belongings together before going home, when his eye alighted on the knife. He picked it up, and gave each blade a separate and distinct examination.

How any boy could forget such a treasure he did not see. He fairly longed for such a knife, with a longing that only a boy could feel that was obliged to do the great amount of his inevitable whittling with one that, in its palmist days, had boasted but a single blade, and bore, therefore, but sad comparison to the little heanty that he now held in his hand, and which, the longer he held and more he admired, the harder it seemed for him to replace.

The ever-ready Tempter was at hand with his suggestions; but James hesitated, for, being in the main an upright little fellow, he could not deliberately take it without doing violence to his better self.

"No one will suspect you, and the owner will think he lost it," whispered the evil voice. Still he hesitated, and still the desire to possess the knife was strong within him.

Right and wrong struggled for the mastery, until one more admiring glance, one more feeling of the bright blades, proved fatal. Quickly he slipped it into his pocket, and hurried out of the classroom without his cheery "Good afternoon!" that his teacher was wont to hear.

But she, being intent on the work of some boys, soon forgot the omission.

He walked down the street with a feeling of anything but exhilaration at possession of the coveted knife. He changed it from one pocket to another, but somehow it seemed to be at home in none. Then he took it out again and looked at it; it certainly was pretty, but what pleasure would it bring to him if he must always hide it?

Suddenly his heart beat quicker, for one of his classmates was coming up the street, and James, with his burden of guilty conscience, felt that his comrade would surely penetrate his guilt, and therefore he must avoid him.

Quickly he scrambled to the top of an old wood-pile, and rejoiced to see that he had not been seen by the boy that ordinarily he would have been glad to meet.

While on top of the old boards, his better angel began asserting himself. He had never been tempted to take what was not his, and he wished the little knife was safe in its resting-place in its owner's desk.

The more he thought of it the worse his action seemed, and the inner voice of conscience was whispering: "Return it; the school is not yet closed, and the class-room by this time is empty."

With a heroic effort he made up his mind to do so. Slowly he climbed down from his height, and slowly retraced his steps toward the school.

He opened the class-room door. How lonely and quiet it all seemed! The afternoon sun was coming through the windows, lighting up the walls and desks, and brightening even the old blackboard.

He placed the knife where he had found it, and again hurried out of the class-room, but with what different feelings—with what a light heart!

He ran for very joy, and on his way home, in his own boyish fashion, he did much thinking and made up his mind hereafter to be straightforward and honest in spite of temptation.

Long years have passed since that afternoon, and he feels that he has been the better man for his boyhood's resolution.—*Golden Days.*

### Robbie and the Prairie Fire.

[Written for the RURAL PRESS by LUPA.]

"Robbie-lee!"

But no Robbie answered, and once more the call went rolling over the prairie, sinking into the little hollows to nestle under the long, dry grass, then swelling up and on again till it broke and scattered in the woods beyond.

This time it found him very still among the hazel brush where he had thrown himself, face down and beels up, to watch two squirrels at play. The little creatures dodged and scrambled and whirled so much, and the air was so still and warm, that he grew dizzy, so he shut his eyes, and when they were shut it was easier to let them stay so. After awhile, head and heels settled to one side against the bushes; but Robbie was not asleep, of course not! and when he drowsily answered "Present" at the second call, he was only thinking that he was in school and the teacher was calling the roll.

As he sat up rubbing his eyes, two or three wild plums dropped out of his dirty, chubby little fist, and when he shook his brown curls, dead leaves scattered in all directions, "as if I was a tree," thought Robbie, and laughed.

In a minute he knew where he was and who called, so he scrambled out of his nest, making

believe he was a bear, snapping and striking at the twigs and wild grape vines in his way.

The house was in sight when he stood up, and there was his pretty mamma, so far away that she looked like a little girl, acting as uneasy as Robbie's white hen when her new chickens proved to be ducks. He laughed again, and then wondered what was the matter, so he started for home, saying "ooh!" once in a while as he stubbed his toe or the dry grass scraped his ankles.

The sun was so hot he would have liked to rest again, only there was no shade anywhere, so he went on. It grew hotter and he wondered why, for the sun was not so bright; then he felt afraid and began to run, and the sweat trickled down to his eyes, caught the tears that were waiting, rolled over the round cheeks and dropped, but dried before they could touch the ground. His throat was so full of sobs he could scarcely get breath to answer his mother, who still kept calling; little gray flakes like ashes were falling around him, it was getting darker and he was sure that what had looked like a cloud was really smoke. The prairie was on fire—yes, that must be the reason.

"O mamma, will everything burn up?" he gasped as he finally caught at her outstretched hand.

"I don't know, Robbie; we must save the hay if we can. Get your breath, then help me."

"I'm all right. Tell me—quick."

"Take your little pail and wet the grass along the fence with water from these tubs. I am going to set a back fire."

Robbie had lived in Minnesota long enough to know what that meant, so it did not frighten him to see his mother touch a lighted match to the stubble, for the danger from the coming fire was greater. Carefully they watched and guided this blaze that might save them. If it shot up too high, water or fresh earth settled it, and if it ran too near the house, barn or haystacks, the same means sent it back; but the great flames were coming, O so fast! and the wind seemed glad to help them; hands and eyes smarted and each breath felt like fire. If only the wind would stop!

As the broad, black band they were making, grew longer and the ends nearer together, Robbie said they were "dressing the place in mourning."

"Yes in sackcloth and ashes," she answered, whipping a runaway blaze with a wet sack.

Five minutes more and the black ribbon would be joined, the saving circle finished; but with a sudden swoop the wind that had come with the fire, snatched the blazing tufts of grass, whirled them high in the air, then dropped them directly on the top of one of those precious stacks of hay.

Robbie looked, and knowing that they could do no more, he reached out his little burned and blackened hand, closed his eyes, and saying solemnly, "Mamma, let us pray!" knelt on the still-smoking grass.

The roar of the fire seemed to grow louder, the glare of the flames sharp and irregular, so he could feel it through his closed eyelids; but he didn't care now, he was so tired and sleepy. He whispered "Now I lay me" and didn't think any more till he felt warm drops and cold drops on his face. The warm drops were his mother's tears, for he could touch her cheek if he lifted his hand, but the cold ones. He opened his eyes—yes, they were rain drops, the roar was thunder and the flashes were lightning. Directly the sprinkle was a shower and the shower seemed a deluge, so the fire hissed and went out, while they still knelt there in the scorched grass.

Then Robbie looked up with the light of a great mystery in his eyes, and asked, "Mamma, wasn't our prayer answered?"

## GOOD HEALTH.

**COCOANUT FOR TAPEWORM.**—Prof. Parisi of Athens some time since called attention to the tæniocidal properties of the cocoanut, when freely ingested. His attention was drawn to the subject from an accidental experience in his own case. While traveling in Abyssinia, he one day took a considerable quantity of the nut, sufficient to produce an attack of diarrhea. After awhile, much to his surprise, with one of these diarrheal motions, there came away a complete tænia, head and all, and quite dead. After his return to Athens he made some observations in this line of treatment, and reported an almost invariable success. In only one instance did he fail to secure the head. His method was to order the milk and pulp of one cocoanut, to be taken in the morning, fasting, no purgation or cessation from business being required. In this country Dr. Allison has reported, in the *Medical Age*, a case where the use of *Filix mas*, oil of turpentine, and chloroform had successively failed to effect a complete removal of the parasite, but in which the patient by chance partook of a cocoanut, and soon after was relieved of a dead tapeworm with its head. Since then he has had occasion to prescribe cocoanut in this trouble, and has found it the pleasantest of all the tæniocides, and one that does not require the administration of a cathartic.—*N. Y. Medical Journal.*

**A CURE FOR HANG NAIL.**—A small and almost imperceptible hang-nail often involves the owner of the hand which bears it an endless amount of annoyance and vexation. It is the general rule—manicures to the contrary,

notwithstanding—that the nails least attended are better than those that are continually doctored. The man who cuts a hang-nail in nine cases out of ten lays the way for a much more vigorous successor. Satisfactory results are almost always obtained by pushing the skin back from the nail after washing the hands. The dry end of the towel should be taken and the skin pressed back wherever it overruns the nail. This breaks its adhesiveness to the nail and makes hang-nails impossible. Where the skin is allowed to grow fast to the nail, trouble invariably results, because the nail in growing out pulls the skin with it, and when it breaks from the tension the hang-nail is formed.—*Phila. Inquirer.*

**THE EFFECT OF SUNLIGHT.**—A man who has been annoyed for years by the fact that one side of his mustache grows about twice as fast as the other side claims to have found an explanation in the circumstance that he sits all day at his desk with one side of his face turned to a window, the light from which stimulates the growth of the hair on that side.

**"MIRACULOUS" CURES.**—The invalid girl, in a Pennsylvania town, who arose from her bed and rushed out of the house when the alarm was given that the place was on fire, simply proved the influence of mind over body. Great danger, like extreme religious enthusiasm, frequently works what have the appearance of miraculous cures, but science readily explains them.

**LINSEED OIL FOR CHILBLAINS.**—Mr. A. J. Arnold of Gibsonville, Idaho, in a letter to the PRESS, gives the following from his experience in curing chilblains: Take boiled linseed oil; warm the foot before a fire, then rub in the oil thoroughly. The pains will soon cease and if persevered in the trouble will soon entirely disappear.

## DOMESTIC ECONOMY

**PLAIN RICE PUDDING.**—One-half cup of well-washed rice, one-half cup of sugar, a little salt, one quart of milk; soak half an hour. Bake two hours, slowly at first, until the rice has softened and thickened the milk. Then let it brown slightly. This is creamy and delicious. A half-cup of raisins can be added for variety.

**QUEEN'S PUDDING.**—One pint of bread crumbs, one quart of milk, four eggs (yolks), two tablespoonfuls of sugar, grated rind of one lemon. Bake about one hour, then spread the top with currant jelly. Beat the whites of four eggs to a stiff froth; add one cup of sugar dissolved in the juice of a lemon. Spread over the pudding and brown.

**GERMAN COMPOTE.**—Peel and core apples, leaving them whole. Fill up the cavities with currant jelly, placing them in a pudding dish, adding as much water as the dish will hold without touching the filling of the apples. Add half a pound of sugar and the thin peel of half a lemon. Cover tight and cook slowly until done. Remove the apples to a glass dish, hold down the syrup to a jelly, and pour it over.

**STEWED CABBAGE.**—Cold cabbage left from dinner can be drained from the pot liquor in which it was boiled, and then simmered for half an hour in water, or milk and water; pour off the water when it is tender, and stir in the pot a lump of butter or clarified dripping, let it cook gently, then throw in a cup of milk or cream; thicken it with flour, and season with pepper and salt. Serve with the cream gravy poured over the cabbage.

**MACARONI.**—Boil macaroni in milk and water, half and half, salted to taste. When tender, remove from the water and drain. Put large hits of butter in a baking dish, strew thickly with grated cheese. Put in a layer of macaroni, then more butter and cheese until the pan is full. Cover the top with butter and cheese. Stir a teaspoonful of mixed mustard into a gill of rich cream and pour it over the macaroni. Set the dish in the oven and bake for half an hour. Serve at once.

**WINE SAUCE.**—Pour boiling water into a quart bowl and instantly pour it out again. Put one cupful of butter in the bowl, and beat it until it is light and creamy. Gradually heat into this, two cupfuls of powdered sugar. When the butter and sugar are light and frothy, beat a wineglass of wine, adding only a tablespoonful at a time; then beat in three tablespoonfuls of milk or cream. Place the bowl in a pan of boiling water and stir until the sauce begins to look as if it could be poured. Do not keep the bowl in the water more than three minutes.

**CREAM PUFFS.**—Put half a pint of water and two ounces of butter on to boil; when boiling, throw in quickly four ounces of flour. Stir until well cooked and a smooth dough is formed. Take from the fire, and when cooled or lukewarm, take four eggs, one at a time and unbeaten, that is, simply drop one whole egg into the dough, beat until mixed, then add another, and so on. If the flour you use is winter-wheat flour, three eggs will probably answer, as four would make the batter too liquid. Drop the mixture by spoonfuls on greased pans and bake in a moderately quick oven about thirty minutes. If the puffs should fall when you take them from the oven, they have not been baked until thoroughly done.

## The Week.

The recurrence of storms has been the outdoor event of the week. Rain has fallen in great amounts, and the volume added to the streams, especially in Arizona and some parts of Southern California, has brought great damage both in towns and country. In Southwestern Arizona large districts have been submerged, traffic and travel have been interrupted, and there has been great loss of property and some loss of life. In Southern California injury has also been done along the water-courses, and travel considerably interfered with. The Citrus Fair at Los Angeles was postponed for a week, as stated in our last issue.

In Central and Northern California the rains

have been generous, and thus far the rivers have been able to bear their increased burdens, though there is still danger of overflow. The rain for February was usually about twice as great as for the season up to February. Now the weather is warm, the soil thoroughly soaked and everything propitious for the growth which has been so long retarded.

Senator Hearst died during the week in Washington, and the California Legislature will remain in session to elect his successor. Congress adjourned on Tuesday night.

## The Rivers and the Debris.

The Secretary of War has filed the report of the Commission appointed by the Act of Congress in 1888 to examine hydraulic mining in California and report upon the losses sustained by the deposits of debris in streams. The examination was begun in the spring of 1889 and concluded in the fall of last year. There is a full description of hydraulic mining in the upper and Sierra districts and a review of its progress and results, and the law suppressing the dumping of refuse matter is given. There are also tabulated statements showing the depth of deposits of debris at different points as compiled by the State authorities and others interested in the controversy between the miners and farmers.

The report is signed by Lieutenant-Colonel W. H. Benyuard and Major Thomas H. Hanbury. The board caused an examination to be made of the injured lands bordering on the Feather, Yuba, Sacramento, American and San Joaquin rivers and their tributaries, and surveys were made of the channels of the Sacramento and Feather rivers. Assistants were sent into the field for the purpose of examining the canyons of the different rivers and their tributaries into which debris was dumped, and surveys were made of selected sites for debris dams. The particular sections visited were those which had been the scene of former mining operations on a large scale or which represented typical mining districts.

The concluding remarks of the Commission are as follows:

"The duty devolving upon the board is to ascertain if some plan cannot be devised whereby the present conflict between the miners and farmers can be adjusted in order that the hydraulic-mining industry can again be carried on without injury to the farming interests and the navigation of rivers. It is not apparent that any expression of opinion or recommendation will have any effect in rehabilitating the industry in the present legal status of the question. Without some modification of the existing conditions, hydraulic mining must cease. It cannot be carried on without violating the decrees of the courts.

"If, however, by a reversal of the opinion of the courts, or by other means, hydraulic mining can be permitted in whole or in part, or if without such reversal, an expression of opinion is required as to the feasibility of impounding mining debris, the board will state that the investigations and examinations made indicate that in isolated cases it is possible to impound debris without injury; also that locations exist in the canyons of different mining streams in the Sierra district where permanent stone dams, properly constructed, will retain large quantities of material of a character formerly mined out, and which has caused the destruction of farming lands and injured the navigation of rivers. These dams, however, will not be effective in impounding all the material delivered into the canyons from the mines. Being in streams and in the pathway of freshets, portions of the heavier material will be carried over the crests of the dams, to eventually find a lodgment in the river below. The finer sands and clays cannot be effectually impounded by such barriers, but will be carried off in suspension. With the improved condition which it is desired to give to navigable rivers, it is probable that the greater part of this finer material can be carried off without being productive of harm. The construction of dams called for being entirely in the interests of the miners, the cost thereof should be borne by the individuals interested in mining.

"The navigation of rivers in the Sacramento valley has been injured by the operations of hydraulic mining. The injury has been caused by the deposition of vast quantities of mining debris in beds. In addition, there are vast deposits of material lying in the canyons and in the plains below the foothills, portions of which will be carried down during the floods, and eventually lodge in these streams.

"It is proposed to improve the rivers, first, by restraining debris now lodged in the canyons of the Yuba and Bear, and in the plains below by dams and other restraining works; second, by contracting the widths of rivers by brushing dams in their beds. The system of restraint will be continued until the rivers in their improved condition can carry the material brought down.

"The estimates of these improvements are:

Feather river wing dams, \$300,000; Sacramento river wing dams, \$300,000; dam on Yuba river at Deguerre point from \$300,000 to \$640,000, according to height; dam on the Bear river at Van Yiesens, \$150,000; restriction works on the Yuba below the foothills, \$300,000, besides an annual amount of \$20,000 for maintaining navigation on the Feather river, while the above proposed works are in course of construction."

The Army Board appointed to make a preliminary examination of the Sacramento and Feather rivers has also made a report and commends expenditures for the improvement of the rivers similar to those just mentioned as commended by the Debris Commission. However, Congress has done nothing and will do nothing this year. One of our Representatives has telegraphed that our rivers and harbors will receive nothing at all at the hands of this Congress.

Meantime some of the rivers, freed from congressional control, are doing as they please, and not being able to carry the storm waters comfortably, are carrying away bridges, washing away land, destroying railroad embankments, and doing whatever damage they conveniently can. It seems very difficult for us to get Congress to pay much attention to improving the water-courses in the State of California. Probably the State is not of sufficient political importance to warrant much expenditure in that direction. The Government does not need to heed the advice of its own engineers or the desires of the inhabitants of this section.

## The Revenue Men After Oleomargarine.

We are glad to know that the United States revenue men in this State are being put upon the track of oleomargarine, which it is believed is being worked off in considerable quantities in this State to the detriment of the legitimate product and the disgust of consumers who fear they may be eating the bogus material.

Large shipments of oleomargarine, butterine, and the like, have recently been made to this coast from the East, and it is believed the law regulating the shipment has been infringed. Collector Phelps has received instructions from Commissioner Mason at Washington to exercise greater precautions in regard to the matter. In compliance with these instructions, Collector Phelps has detailed the following special deputy collectors: Lamhart, Kennedy and Bromley in San Francisco, Dunlap in San Jose, Maxwell in Los Angeles, Martin in San Bernardino, Cooper in Fresno, Borland in Martinez.

Their duties will require them to sample all kinds of butter and send them to San Francisco for the examination of Chief Department Collector John E. Youngberg, who is to subject each sample to a microscopic test.

ANOTHER IMPORTATION FROM SMYRNA.—As the result of his correspondence with the American Consul at Smyrna, Mr. B. M. Lelong has received fifty genuine Smyrna fig-trees from their native soil. These trees are two years old and well rooted. They will be distributed in pairs to various parts of the State. Besides these Smyrna trees, Mr. Lelong will distribute 1500 Tracy fig-trees, a very desirable variety.

A RETAILER'S TON OF HAY.—The San Benito Advance says a San Jose citizen recently bought a ton of hay from a local dealer and found that it weighed but 1500 pounds. The gentleman at once brought suit against the dealer for 500 pounds of hay additional. In the trial of the suit the fact was developed that a San Jose ton calls for 1500 pounds and no more; that such has been the custom from time immemorial.

HORTICULTURE AT THE WORLD'S FAIR.—Gen. N. P. Chipman has received commendation from many individuals and societies for horticultural chief at the World's Fair. It is also telegraphed from Chicago that possibly a Californian may be chosen, although it was almost announced a few weeks ago that no Californian need apply. Things are moving and should result in seating Gen. Chipman.

FROSTS AT THE EAST.—A dispatch from Laurel, Indiana, March 3d, says: The heavy snow and intense cold have killed the peach buds throughout the State, and will result in heavy losses to farmers, who last year suffered from a failure of crops. The outlook is gloomy and likely to have a bad effect on business.

## Agriculture at the World's Fair.

The crowning industry of the United States is agriculture, and the World's Fair at Chicago should show this industry in its vast extent and almost infinite variety. It is encouraging to see that the World's Fair managers have a correct idea. Said Mr. Buchanan, Chief of the Agricultural Department:

I know it to be a fact that no one interest in connection with the exposition has been given more thought by directors, commissioners and executive than that of the producers of food products. Its exceptional importance is fully appreciated. The location set apart for the agricultural display is conspicuous and most desirable in every way. I expect to see there a far greater, more complete and more meritorious agricultural exhibit in 1893 than the world has ever witnessed. The utility of it as an educator cannot be overestimated, and the spectacle it will present to visitors will be one of the most instructive, and, I believe, beautiful in the entire exposition. The natural supremacy of the agricultural interests in this country, and a patriotic impulse to bring before the eyes of the world our superiority and progress, insure an exhibit of which every American will be proud.

The agricultural resources of the United States can scarcely be said to have been shown at all at the Paris Exposition, and since the Philadelphia Centennial the progress of these interests has been wonderfully great, so great indeed, that it is only partially comprehended by Americans themselves. No class of exhibitors can hope to make a more important and splendid showing at the exposition than can the agriculturists, and the indications are that they will improve the opportunity to the utmost.

A FLORISTS' CLUB.—The San Francisco florists are organizing a club, and a few meetings have been held for organization. At the last meeting numerous questions of importance to the trade were discussed, and it was decided that the formation of a florists' club would be of great benefit. A constitution and by-laws have been prepared. Eleven new members signed the roll. The following were appointed to draw up a circular for those engaged in the trade in the district of the bay, setting forth the purposes of the club and asking for a full attendance at a meeting to be held two weeks hence, when officers are to be elected: E. E. Smith, M. H. Wilkins, A. Carbone, J. T. Miller and F. Sieverlich.

## THE VETERINARIAN.

## Swellings on Chest and Throat.

EDITORS PRESS:—I have a mare that has a swelling on her breast—a lump as large as a man's two hands. It hangs somewhat movable. I opened it once and a quantity of reddish-yellow water of a light cast escaped and the lump shrunk to almost nothing, but the next morning it was almost as large as ever. The mare has been troubled for three or four years with at times a swelling of the glands in the side of her neck at the angle of the jaw and a foul breath—sometimes discharges from her nose. This trouble does not seem to bother her now. I am totally at a loss to know what to do for the swelling, or rather the mare. She eats well and appears in pretty fair general health. A hint from you as to what is the matter and the remedy for it will be thankfully received.—L. LEIGHTON, Leighton, Shasta Co.

EDITORS PRESS:—There is no connection between the two diseases, the swelling of the chest and the swelling of the glands of the throat and nasal discharge. The swelling of the chest is a serious abscess and is from the effect of pressure, such as a blow, etc. This tumor is formed by an effusion of serum into the connective tissue of the part. The treatment consists of the reduction of the tumor by puncture; afterward inject with a solution of sulphate of zinc and be sure and keep the orifice open until the cavity of the cyst has become obliterated. The swelling of the glands of the neck and discharge from the nose is no doubt a form of epizootic (strangles) and must be treated accordingly.

A. E. BUZARD,

Veterinary Surgeon.

No. 11 Seventh St., S. F.

## Tarweed for Hay Lice.

EDITORS PRESS:—A neighbor of mine, not too well off in this world's goods, had, this January past, a lot of hogs, rather lean and very lousy. He made a shelter for them, and not having straw, he gathered a quantity of tarweed and placed in the shelter for them a bed. After a few days not a louse could be found on them, but myriads of nits. After two or three weeks these all disappeared, and now there is no rubbing nor squealing, but every hog is about his business eating grass in great comfort. Tarweed, he says, did it. Let others try it and report. Try it in hen's nest for fowl vermin.

H. C. CONE,

Thermal, Cal.

The Yosemite National Park.

[Written for the PRESS.]

The accompanying map will indicate to some extent the area and resources of the recently created Yosemite National Park. It will be seen to embrace nearly 42 townships, making about 1500 square miles, or 960,000 acres—less 36,111 acres comprised in the Yosemite grant, which, with all bona fide entries, are exempt from the provisions of the Act. The principal purpose in reserving this magnificent domain was to protect the Yosemite Valley itself and its great watershed from spoliation, and conserve, while increasing, the manifold attractions of that marvelous locality.

It is to the State Geological Survey, under

that not only do the forests and lofty peaks of the Sierras attract moisture, but Nature utilizes the rain and snow-distilling clouds throughout these vast solitudes, by building there her great reservoirs of snow, with which to supply the thirsty earth with life-giving madefaction during our dry and lengthy summers, and to make the springs and streams that run among the hills jubilant with unceasing songs of gladness, throughout the year; and the mighty forests, throwing their protecting arms of shadow over and around them, guard the precious treasures from untimely liquefaction.

This beneficent and timely provision alone should be sufficient to merit the eternal gratitude, not only of our own people, but of the lovers of the beautiful and the admirers of the

has more wildly sublime scenery, within the same area, than can be found in any other section of the Sierra Nevada mountains. I have crossed the great chain, personally, in over 20 different places, from Mt. Shasta to Mt. Whitney (both of which I have climbed) and spent months at a time in searching for scenic treasures among them, therefore, should know whereof I write. Prof. Wm. H. Brewer, first assistant of the State Geological Survey, under Prof. J. D. Whitney, has frequently enunciated similar convictions. No description, even when accompanied with illustrations, can do it even approximate justice. Its beautiful and sublime features must be seen to be feelingly appreciated; and even then, words would be impotent to fittingly define its multitudinous charms.

defiantly among the heetling cliffs above and around him. If those who feel that life's lamp is burning low would forego the crowded city and seek these health-restoring retreats, they would find that a new supply of the oil of life could here be found, and a new lease of health and renewed strength would be made out to them, and possibly add to their years of enjoyment and of usefulness.

As all bona fide entries are excluded from the provisions of each Act creating these National Parks, and as nearly every hotel site within their boundaries is already taken up and covered by private ownership, no revenue, to meet incidental expense, would be possible from that source, as provided by the Acts passed. This should engage the attention of friends to

Prof. J. D. Whitney, that we are indebted for the first outlining of the scenic wonders of this wildly picturesque region. Until then, and long subsequent thereto, it was only indifferently known to the occasional hunter and irrepressible prospector; but, as time rolled on, the abundance and variety of its succulent grasses attracted the sheep-herder and his myriad flocks, who, in ungrateful return for the free pasturage thus accorded him, not only turned those beautiful mountain gardens into dusty deserts, but devastated immense areas of its primeval forests with devouring fire. On the very last occasion that I pulled myself up, by the Anderson rope, to the summit of the "Half Dome" from that central and lofty standpoint, I counted no less than nineteen forest-consuming fires burning in nearly every direction. But now, thank God, the California delegation, and Congress—yes, and the President of the United States for approving the Act, the hands of the despoiler and vandal are from henceforth to be legally paralyzed.

It may be pertinent in this connection to say

sublime and marvelous in every civilized land, that Congress has created the Yosemite National Park and the Sequoian National Parks.

But when it is remembered, in connection with the noble Sequoias, that in Miocene times and the Tertiary period there were, according to Prof. J. G. Lemmon, the gifted and industrious hotanist of the State Board of Forestry, over 20 different species of this remarkable genus, as proven by fossil data from various parts of the world, yet now there are only two living species left, the big tree and the redwood, and those found only in California, is not this fact of itself a sufficient justification for reserving and preserving all of the Sequoias from spoliation and possible extinction? Then, in order more fully to realize how well Congress has deserved in reserving and preserving these unequalled scenic repositories from spoliation and vandalism, let me merely outline some of the principal features of the Yosemite National Park. Beyond question, it

\*See Third Biennial Report of the California State Board of Forestry for 1889-1890, pages 157, 158.

As well "attempt to measure a rainbow with a two-foot rule," as to try to paint any of its majestic and storm-defying crags and peaks; its mountain-crowned domes and rock-ribbed canyons; its isolated spires or jutting needles; its cloud-draped beds of eternal snow; its ancient moraines and living glaciers; its thousands-of-years-ago glacier-polished floors and ridges; its multiform and placid tree-margined lakes; its vast stretches of primeval forests; its granite solitudes dotted with grassy and flower-carpeted meadows; and all of these in storm or in sunshine, in winter as well as in summer, then could we feel but never describe them.

One of the many charms of this magnificent domain is that while feasting both eye and mind, one inhales the pine-laden breath of its fragrant atmosphere, and drinks hearty draughts of its life-giving ozone, so that experience teaches him that, apparently, he has at last found the real fountain of perpetual youth and the elixir of life; while the spirit becomes as buoyant and as free as the eagle he sees circling so unheedingly and so

the measure before Congress adjourns.

ELECTRICITY IN FARMING.—The idea of utilizing electricity for the fertilization of land is not by any means new, but it has been reserved for Spain to inaugurate a new use of the electric motor in plowing land. Such a plant has been set up on the property of the Marquis de la Lagna. A water-wheel of about twenty-horse power will be used for the generation of the current, and the plow will be worked at a distance of three miles from the generating dynamo.

# AGRICULTURAL NOTES.

## CALIFORNIA.

### Amador.

**A LESSON FOR ORCHARDISTS.**—Jackson *Ledger*, Feb. 28: The foothills agricultural experiment station has demonstrated one fact, which should prove of considerable practical value to farmers and fruit-growers. The trees which have been planted at the station were obtained from a number of nurseries representing a wide diversity as regards soil and climate. Coast, interior valley and foothill nurseries were all patronized. There was a design in thus gathering the young trees from diversified conditions. Care was taken that the stock should be in every case thrifty and strong. While at the outset all seemed to start under the same favorable conditions, there is now a marked difference in favor of the trees from nurseries where the conditions of climate and soil are similar to those of the foothill station. These trees have far outstripped those from nurseries which involved a sudden change of growing conditions. It is the same with vegetation as with animal life. The different species of mankind thrive only when environed with native surroundings. The further these natural conditions are departed from, the more quickly will the species droop or perish altogether. Analogy, as well as experience, teaches that the same rule holds good in the vegetable kingdom. It is of the highest importance, in order to secure the best possible results in selecting trees for a young orchard, that they should be procured from a nursery where the conditions are not violently out of joint with the locality where the young trees are to find a permanent home.

### Butte.

**BUTTE COUNTY FRUIT NOTES.**—Oroville *Register*, Feb. 26: Col. Yetter will finish putting out his fruit trees to-morrow. He has lately planted 600, making now 2000 that he has out. C. E. Kusel will finish planting this week 591 additional olive trees. He cleared and put in shape this winter several acres of land. The fruit planting at Palermo will this year reach about 400 acres, which will give when completed about 2300 acres in the colony. Geo. Matthews, one of Oroville's enterprising young merchants, received an order this week from San Francisco for 4000 oranges.

**RIO BONITO ORCHARDS.**—Biggs *Argus*, Feb. 26: A. T. Hatch, the "Fruit King," was induced to visit Rio Bonito, and as a result he became so infatuated with the soil and climate that he, in connection with John Rock of Niles, purchased 1200 acres on the lower tract, the terms of the contract making them agree to plant 200 acres the first year and 500 acres the second. The terms of the contract were fulfilled, hence the commencement of tree-planting on Rio Bonito. In connection with their tree-planting they planted an immense nursery, and in the proper season huddled and prepared the young trees for the market as well as finishing their own orchard planting. As a result of this planting, Hatch & Rock sold this year probably \$100,000 worth of nursery stock, besides completing the planting of about 1500 acres to trees, which includes the planting on the Ostroski tract, purchased by them about two years ago. When it was known that Hatch & Rock had become interested in Rio Bonito, such prominent men as Webster Treat, Reed & Johnson, L. L. Evans of Santa Cruz, B. H. Killinger of Niles, and others became interested, and tree-planting boomed right along until most of the Feather-river lands immediately east of Biggs have been and are now being planted. Following the 1500 acre orchards of Hatch & Rock comes Reed & Johnson's fine tract of about 700 acres, Hammond & Alexander of about 500; Webster Treat & Son, 240; L. L. Evans, 60; M. Goldman, 50; Capt. P. G. Brown, 40; and many small orchards with from 10 to 20 acres, making about 3500 acres now growing and to be planted during the season.

### Colusa.

**A GROWING FRUIT SECTION.**—Maxwell *Mercury*: More trees and vines have been planted in the vicinity of Maxwell and throughout Colusa county than ever before, though the area has not been large. This section will be a noted fruit belt some day if properly planted and managed. Parties who wanted to plant trees and vines recently, but did not do so because they were afraid this would be a dry year, are now "kicking themselves" because they did not plant them and get the benefit of the late rain.

### Fresno.

**A BOOM IN FIG PLANTING.**—Fresno *Californian*: Figs are rapidly coming into favor with horticulturists of this section as a sure and profitable crop. Several hundred acres are already planted with young orchards, and the area will be very largely increased this year. Thousands of trees are now being set out, and a few years hence the fig crop of Fresno county will be one of considerable importance. A few old orchards of limited area have demonstrated the fact that figs grow and produce well here, and the general desire to supplement the raisin industry with other branches of fruit-growing accounts in part for the attention bestowed upon the fig.

**HURON FARM NOTES.**—Fresno *Expositor*, Feb. 25: Following are the shipments from Huron during 1890: Wheat, 5292 tons; barley, 617; corn, 212; sheep, 58,873 head; cattle, 318;

horses, 18; honey, 46 590, pounds; wool, 1,301,680; pelts, 8275. The acreage to wheat and barley this year is much larger than last—probably half as much more—but the outlook for a large yield this year is not as good as last. In the season of 1889-90 we had 10½ inches of rain, while this year, to date, 4½ inches have fallen. If we have our usual March rain, the crop will be large. A great many vines and trees have been set out. Those that were set out one and two years ago have done well. In a year or two we expect to be shipping raisins and fruit from here. Many Eastern farmers have settled here during the past year. The best of land can be bought for from \$10 to \$20 an acre.

**EXPECTED INCREASED SHIPMENTS OF GRAPES.**—Fresno *Expositor*, Feb. 27: The *Expositor* a few days ago contained an item to the effect that a certain vineyard company near Fowler had planted 200 acres to different varieties of table grapes. This seems to be a move in the right direction, for the indications are that this branch of viticulture is destined to become profitable. One of the packing-houses here shipped quite a number of grapes for table use to Eastern points last season, and they arrived at their destination in good condition. Fresno and other shipping points in this portion of the valley have been promised increased facilities in the matter of refrigerator cars, and if this promise is kept, the shipments of green grapes the coming season will be largely in excess of last year's shipments. There is still a very important improvement to be brought about in the service between here and points in the East, and that is the making of better time, or to state it more correctly, the doing away with the delays that occur so often at present. The refrigerator cars that have been promised our fruit shippers are of the latest improved patent and will, long delays excepted, deliver the fruit in nearly the same condition it was received here.

### Laesens.

**EDITORS PRESS.**—During the past ten days we have had the storm of the season. So far nearly five inches of water has fallen, not including ten inches of snow now on the ground. This assures the farmers good crops the coming season and the filling of a half-dozen large reservoirs built within the county in the last two years at a cost of from \$15,000 to \$60,000 each. Stock has been doing well on the ranges without hay up to the 14th of this month. Some feeding will now be necessary for a few weeks and there is an abundance of hay in the country. The prospects are indicative of a good fruit crop, especially of apples, for which this Honey Lake valley is already somewhat noted. The N. & C. R. R., now building through the county, will assist us materially in marketing our produce to better advantage the coming season.—H., *Susanville*.

### Los Angeles.

**VINES BECOMING HEALTHY.**—L. A. *Herald*, Feb. 28: In glancing over the outlook of this county, we should not omit to notice the very important fact that our vineyards are once more becoming a formidable factor in our prosperity. The vines are fast recovering from the mysterious malady which affected them, and we shall have a very largely increased output of wines this year.

### Mendocino.

**FIGHTING THE SCALEBUG.**—Carl Purdy in Ukiah *Press*, Feb. 25: There is, I am very happy to say, a general movement around Ukiah to properly wash the trees which are infested with the San Jose scalebug. Several orchards are, without such action, ruined, and the insect spreads so rapidly in an orchard that if there is any at all, the whole orchard should be cleaned. During the last week three new Bean spray pumps have been brought here. One of these is of extra size, fitted for the attachment of four hose lines, and with which fully 500 medium-sized trees can be watered in a day. The other two are fitted for two lines of hose, with three men to operate, and spraying from 200 to 300 medium-sized trees per day. The wash to be used is composed of sulphur, lime and salt. It is the intention of the parties interested, all large fruit-growers, to make a clean sweep in their orchards, spraying everything. Mr. Wagoner has about 30 acres of bearing trees, Judge McGarvey's Ukiah orchard aggregates 50 acres, Mr. Fine's 35, Jos. Luce 20 and Wilcox 12. In addition to his own orchard, Mr. Luce has made arrangements to run the orchard owned by the railroad company, being 26 acres in the town limits, one of the largest old orchards in the county, but terribly infested with scale. By the arrangement between Mr. Luce and the railroad, the orchard is to be thoroughly cleaned and cared for. There are two smaller spray pumps already owned here, and they will likely be used by owners of small orchards in killing the scale.

**A VALUABLE COW.**—Point Arena *Record*: Last Friday morning Charles and Rollin Crawford went out on their farm to look after their stock. They found a cow with a young calf which apparently had just been born. They returned to the house, and at noon went back to get the cow and calf, but observed that the cow had in the meantime become the mother of another calf. They again went to the house to get some assistance, and on returning, found that the cow had done still better, for she had become the mother of a third calf. How long this thing would have gone on it is difficult to say, but the young men prevented further miracles and complications by taking the whole

herd home instantly. The cow's name is Lucy, which probably accounts for the freak.

### San Benito.

**THE SEASON.**—EDITORS PRESS: Rain commenced falling here on the 14th of February and has continued occasionally ever since, until even the most fault-finding farmer is fully satisfied and thinks no more is required for a month at least. Quite a large acreage of grain has been sown in this vicinity this season, and farmers can scarcely fail of reaping a bountiful yield. La Grippe has visited many persons around Hollister and Tres Pinos this winter, but seems to be disappearing since the rain commenced. Feed in the hills is quite good at present, but has not made as good a growth as might have been, had it not been retarded by the cold weather, as well as by the dry weather we have had until the past few weeks.—F.

### San Bernardino.

**BET LAND RENTED.**—Chino *Champion*: Up to Feb. 20 there were rented a little over 1850 acres for beets and over 1000 for corn, barley and alfalfa. The tendency to engage in growing beets is increasing. Reports here are to the effect that beets will be grown at Downey, El Monte, Spadra and Oatario; and if the people of Orange county can be assured of the extension of the Chino valley railway in season to haul their crops to the Chino factory, they will devote from 2000 to 3000 acres to beets.

**TEMECULA VALLEY TO BE IRRIGATED.**—Riverside *Press and Horticulturist*, Feb. 21: The Panba & Temecula Land and Water Co. propose building a dam in order to develop water for the Temecula valley and adjacent sections. The reservoir in contemplation will have water enough for 45,000 acres of land. The engineer's estimate for a dam 260 feet long and 100 feet high. This will enable them to flood 700 acres at an average depth of 60 feet of water. The headquarters of Temecula river are in Warner's ranch, and the stream is now flowing 1000 inches.

### San Diego.

**ELSINORE.**—EDITORS PRESS:—We are having an extra good rain, continuing 24 hours, and yielding 3½ or 4 inches that will help our young grain, which had begun to show that it needed more moisture, but had not died as it has in some localities. The orchardists say the prospect is good for a crop of fruit this year. So may it be, and prices also, that we may reap another harvest of "the much needed" as we did last year. If we can, Elsinore will continue to "come to the front" just as she has in the past. Owing to our coal, clay, fruit and many other industries, she has kept "marching on."—L. Y.

### San Luis Obispo.

**CRESTON WINE INDUSTRY.**—Creston, Feb. 27: In regard to the wine-making industry of this section, it is now thought by many that the wines that are made in this vicinity will be hard to beat for quality even now, and there is no doubt that as the vineyards around here attain greater age their products will be enhanced both in quality and value. The last year's vintage of Mr. Webster is far ahead of the first wine made at his winery, and with age will be a far superior article. The wines that Ernst brothers have made are excellent. This goes fully to prove the adaptability of both soil and climate for the production of an extra quality.

**GRAIN CROP PROSPECTS.**—Creston, Feb. 27: The grain crop is looking fair and healthy for the season, which is somewhat cold, owing to frosts and winds. The late-sown grain is coming up finely.

**GRAIN PROSPECTS IN SAN LUIS OBISPO COUNTY.**—San Miguel *Courier*, Feb. 26: This season so far has been one of the most favorable in the history of this part of the country. The rains came early enough last fall to wet the ground sufficiently to plow well, and thousands of acres were put into grain. A large amount was plowed for the first time. After the grain was sown, the rain continued falling at such intervals as to be most beneficial in starting the grain. The last storm gives the ground a thorough soaking, and a few light showers will be the means of producing the largest crop of excellent wheat ever produced in the Upper Salinas valley. The present capacity of the warehouses along the railroad will in many cases have to be doubled to accommodate the enormous quantities of grain. It is very doubtful if merely doubling the capacity of the warehouses at this place will be sufficient to store the grain that will come to San Miguel for shipment. In addition to the extra amount of grain that will come to this place on account of increased acreage, there is still another thing that will bring large quantities of grain here which has heretofore gone to other places, and that is the advantage offered by the new bridge and roads leading to it.

### Santa Clara.

**GRAIN NOT KILLED.**—Mountain View *Cor.* San Jose *Mercury*, Feb. 26: The seeded wheat and barley that seemed to have been lost has sprouted and is growing nicely, and farmers are happy.

### Sonoma.

**BENEFICIAL EFFECTS OF THE RAINS.**—Sonoma *Index-Tribune*, Feb. 28: The rain the past two weeks has had a wonderful influence on growing grain and grazing grasses. The wheat and barley fields in this valley never looked so thrifty at this season of the year and an astonishing yield is looked for. Grazing grasses are making a wonderful growth also, and all complaints of shortness of pasture

age have ceased and stockmen are jubilant. The weather has also been extremely favorable to the fruit and vineyard industry, and the present season promises to be one of the best, from the farmers' standpoint, known in this valley for years.

**PROSPEROUS DRY CREEK VALLEY.**—Healdsburg *Enterprise*, Feb. 28: Many improvements may be noticed in a drive through the Dry Creek valley. A great deal of new land has been planted this year, especially on the Lambert place. La Proctor has also planted a young orchard on the hill land near his house. A half-dozen young orange trees have also been planted by him. A fine fence is being built in front of the Galloway residence, and a considerable amount of new fencing has been done on the Lambert and Miller farms. Everything in the Dry Creek valley is in a prosperous condition, and the grain crop never looked better.

### Stanislaus.

**STANISLAUS' LARGEST VINEYARD.**—Oakdale *Cor. Modesto Herald*, Feb. 26: In our last week's letter we stated that the vineyard of A. V. Stuart was, perhaps, the largest in the county. Since that time Mr. Stuart informs us that it is probable Ora McHenry's is larger than his. The Stuart vineyards and orchards include 300 acres, all in a high state of cultivation, while the trees and vines are in a flourishing condition.

### Sutter.

**DISTRICT NO. 70—LEVEES AND HIGH WATER.**—Yuba City *Farmer*, Feb. 27: We are informed by parties from District No. 70 that the new levees across the breaks made by last winter's flood have stood the high water very well, with the exception of slight seepage. Along the back levee bordering on the river, some of the low ground is covered with surface and seepage water, which is thought will not injure the grain before it runs off. The stand of grain was never better throughout the district, it being further advanced in growth than that sown on the high plains. Along the river the levees in several places needs raising to prevent overflow. With few exceptions the entire system is in excellent condition.

**BREAK ALONG THE CHEROKEE CANAL.**—Yuba City, Feb. 27: The farmers along the Cherokee canal north and west of Biggs are experiencing considerable trouble from the waters from that stream. The company, having suspended operations, now refuses to keep the levees in repair and in consequence thereof numerous breaks occur. The owners of land near the canal will have to keep up the levees at their own expense if they wish to keep the water out. In many cases it will work a hardship upon them.

### Tulare.

**THE SOLANO RANCH.**—Hanford *Sentinel*, Feb. 26: Dr. A. P. Peck, of Chicago, arrived at Hanford last Thursday. He comes as a representative of about thirty well-to-do people residing in Chicago, Anrora, Galena, Ill., and Beloit and Milwaukee, Wis., who are interested in and own the property known as the Diss ranch about five miles northeast of Hanford, but which is hereafter to be known as Solano, which is Spanish for sunshine. The ranch embraces 640 acres of first class land, and will be improved and all planted to vines and fruit as soon as possible. Already work has been commenced in putting out 150,000 vines.

**MORE ATTENTION GIVEN TO FRUIT.**—Poplar *Cor. Porterville Farm View*, Feb. 27: The long-continued depression of the wheat market in general, and ours of this coast in particular, that compels us to take \$1.00 per hundred here while it is worth \$1.50 in Chicago, has driven us to take up other industries, and once out of the old groove, new activity ensues. Nearly the usual amount of grain has been sown, but here and there a corner has been left to start an orchard or vineyard, or both; and instead of the rancher settling himself down for an easy time until harvest, he is rustling himself to get his planting done in season. There will be more fruit planted here this season than has been planted all together before. Quite a number of small holdings are being improved and planted. We have demonstrated that it is practicable to pump water to grow trees and vines, and a spirit of confidence is manifested. We look for greater improvements during the next three years than we have had before in twice that time.

### Tulare.

**VINE AND TREE PLANTING.**—West End *Cor. Tulare Register*, Feb. 20: Improvements are still going on and trees and vines are being planted. Geo. Hestrawser is planting an orchard and vineyard in Sun Flower valley. He has the best prepared and most systematically arranged vineyard I have ever seen. L. Lucier of Dudley is also planting trees and vines. He has ordered 10,000 cottonwood trees to plant. R. S. Hinkson is planting a fig orchard. He thinks our hills and valleys the home of the fig. He is also experimenting with the Eastern beech. Should they grow, he will be able to furnish others next year.

**LARGE ORCHARDS AT GRANGEVILLE.**—Visalia *Times*, Feb. 26: The fruit industry is fast pushing the grain-growers to new fields in the vicinity of Grangeville. It is but a short time since grain was grown within a stone's throw of this town, and what little fruit was grown was for family use only. To-day there is not a grain-field within several miles of town large enough to pay a threshing machine to come and thresh the crop. The largest place being set

ont this year is that of J. O. Kimble, who has 480 acres, on which will be planted 6000 pruns trees, the rest of the place to be set out in vines. He has about 100 men employed. The place is surrounded by a woven-wire fence, and new harnes, tool-houses, bunk-houses, etc., are being erected. Just north of Mr. Kimble's place is the tract of 160 acres lately purchased by Nathan Bros. This is to be put out in peaches and vines. Last year, and in fact for a number of years past, this place has failed to produce a good crop of grain, more on account of lack of water than for any other reason. There are now employed in putting out trees on this place from 12 to 15 men. Nathan Bros. have two other places—one of 160 acres, known as the Vrona orchard and vineyard, and the other containing 80 acres, which has been set out in prunes. C. U. Henderson has 460 acres well covered with oaks. Eighty acres of this have been cleared and are now being set to vines. Mrs. V. Craw, the most extensive lady wheat-grower in the State, is having 320 acres set to vines. All the places referred to are within two miles of Grangeville, and every year prior to this were sown to grain.

**GRAPE-CUTTING CONTEST.**—Grangeville Cor. Tulare Register: T. Gaines, an expert at making grape-cuttings, came down from Visalia to make cuttings for N. W. Miller on the T. Richis place. After working a few days he offered to try his skill with our Grangeville experts, so G. D. Lobdale agreed to accommodate him, and the contest took place last Wednesday. By sundown the scores stood 13,000 for Lobdale and 10,500 for Gaines. Then they tried to see who could cut the most in two hours. Lobdale cut 3000 and Gaines cut 2500.

Ventura.

**THE SEASON.**—EDITORS PRESS: It isn't quite so dry as it was. It began a week ago to-day (Sunday), rained until Monday evening, showered again on Wednesday, and yesterday set in for an old-time soaking, and at present writing (5 P. M.) shows no sign of clearing up. The rain was needed badly. The December rain was enough to start the early-sown grain, but the scanty showers that followed were not sufficient to keep it growing, and much of the later-sown grain had not come up at all. Feed on the ranges was getting very short, too. But now the hills are fast putting on their wonted green, and barley and wheat are growing apace. More land than ever before is being farmed in the Simi, and better work has been done. The ground is generally in excellent condition, and with timely rains and showers in March and April, good crops must result. Considerable orchard planting is being done, and fruit trees old enough show fine promise of a crop. I forgot to say that "farmers are jubilant." I suppose it wouldn't do to let this occasion pass without ringing in that venerable chestnut.—S. B. B., Simi.

Yolo.

**WOODLAND FRUIT AND WHEAT SHIPMENT.**—Woodland Mail, Feb. 25: Dr. Thomas R. says there were shipped from Woodland in 1890, 766½ tons of dried fruit, 907 of green fruit, 289 of grape-syrup, 350 of wine and brandy, and in the same time 4472 tons of wheat.

Yuba.

**MARYSVILLE AGRICULTURAL FAIR.**—Chico Chronicle Record, Feb. 27: A canvass among business men of Marysville, fruit and grain raisers, shows that there is a decided opinion that some change should be made in holding agricultural fairs. Many arguments are advanced, the chief of which was that the fair is held too late for a good fruit display, that the live stock exhibit amounts to nothing, and that the horse-racing feature is objectionable on account of the kind of people it brings to town. It is claimed that the fair, as usually held, is no advantage to this county, while the benefit of the recent citrus fair was very great. It is understood, however, that the directors of the Agricultural Society do not favor a change and that they will hold the fair as usual. They have agreed to hold it earlier and to offer large premiums for horticulture exhibits.

**BERKSHIRE SALES.**—Phil M. Springer, Secretary American Berkshire Association, Springfield, Ill., sends the following transfers of recorded Berkshires: Edson Belted Cruiser, 23637, Henry P. Mohr, Mount Eden, Cal., to E. Schween, Pleasanton, Cal.; Eden Model Prince 25638, Henry P. Mohr to D. Lafrenz, Jun., Livermore, Cal.; Stanley 25561, Andrew Smith, Redwood City, Cal., to C. A. Coffman, Rivera, Cal.; Santiago Bale 25662, C. A. Coffman, Rivera, Cal., to J. E. Pleasants, Santa Ana, Cal.; Blackstone 25709, Chas. A. Howe, Stockton, Cal., to D. O. McCarthy, Slempreviva, Cal.; Judy 25710 and Ruth 25711, Peter Saxe, San Francisco, Cal., to D. O. McCarthy; Janal 25712 and Otay 25713, D. O. McCarthy, Slempreviva, Cal., to Wm. H. Yost, San Diego, Cal.; Petaluma 25706 and Long Branch 25707, E. P. Smith, Corning, Iowa, to Theodore Skillman, Petaluma, Cal.

**NINETY-FOUR MILES AN HOUR.**—Charles Watts, superintendent of the Chicago division of the Pittsburgh, Fort Wayne & Chicago road, claims that the fastest time ever made on an American railway was over that road lately. His official report showed that this special train ran 53 miles in 45 minutes, 11 miles of which were covered in seven minutes, or at an average speed of 94 miles an hour. The train sheets show that the above statement is correct.—St. Louis paper, Feb. 9.

## THE VINEYARD.

### Port and Sherry Grapes in California.

University Experiment Station Bulletin No. 91.

Now that the passage by Congress of the "free fortification" provisions of the tariff bill, when rightly interpreted, will render it possible for California sweet wines to compete in the world's market, it becomes of vital importance that the quality of the wines offered, especially to foreign consumers, should be such as to commend them to the existing taste, accustomed to the products of Spain and Portugal. This is the more essential, as we can justly claim that we possess the exact counterpart of the climatic conditions existing in those countries, the home of the olive, fig and orange; and hence there can be no excuse for our falling short of the types esteemed in commerce as the standard ports, sheries and Madeira.

In consequence of the very slight encouragement heretofore existing for the production of wines of this class, they have largely been made as a matter of convenience in disposing of material that, whether from the quality of the grapes or from miscarriage in fermentation, could not readily be made into good dry wines. It is but natural that a good deal of the sweet wine thus thrown upon the market bore but a slight resemblance to the type of which it bore the label, for grapes of the claret type are no more fit for making port than Rhenish grapes are for making sheries, or vice versa.

It has, however, been early recognized that the San Joaquin valley, and later on, that the foothills of the Sierra have a tendency to impart the port and sherry character to the wines from grapes not too far removed from the type of those used for that purpose in the Old World. Excellent samples of such wines have been produced, and a few wine-makers have made a specialty of their manufacture. In general, nevertheless, the plantations of grapes especially adapted to the purpose are few and relatively of small extent. The probability that under the improved prospects of the sweet-wine industry, it will be desired by many to graft over other vines to the best sherry or port grapes, renders it desirable that a succinct discussion of the several varieties suitable to that purpose and now obtainable within the State should be given for the benefit of those concerned.

A highly essential advantage possessed by most of these grapes as compared with those of the claret and Burgundy types is that they resist to an extraordinary degree the influences under which the wines made from grapes of the latter two types become vinegar. Instead, they undergo, under the continued action of warm air, the change to the true sherry and port flavor, which in its more advanced development is known under the name "rancio." Since the least acetic (or vinegar) taint is far more offensive in sweet than in dry wines, this peculiarity of the true port and sherry grapes is most valuable to the maker, and should commend them for exclusive use in all high-grade sweet wines. It is of course true that when grown in unsuitable localities any of these grapes may measurably lose their resistance to acetic taint and will not readily assume the "rancio" flavor when under the influence of the artificial climate of the hot-room. On the other hand, varieties that in the coast climate will ordinarily make wines of the claret or Burgundy types may in the Great valley or foothills make at least fair port wines. The same holds true more or less as regards white grapes in their relation to the sherry type; yet on the whole it is much more difficult to make the product from Rhenish or Sauterne grapes pass muster as sheries or Madeiras. It is certainly much more reasonable to conform as soon as possible to the recognized natural adaptations of climate and soil, and use for the production of the several classes of sweet wines the grapes which the experience of centuries has shown to be the best for that purpose.

Below are given brief descriptions of the port and sherry grapes thus far known to be growing in California, together with such data as I have been able to obtain either from the viticultural stations and the experimental vinifications at the Station laboratory, or from the experience of others.

#### PORT WINE VARIETIES.

**TINTO CAO.**—Tinto cao or Tinta cam is a very old variety of the Douro region; in Portugal it is very highly esteemed for its strong and good wine, but is not a very productive variety. It requires short pruning. Bunches somewhat loose, average size and irregular; berries round, rather small, bluish-black; skin thick and tough; juice sweet and astringent.

This variety matures late. At Cupertino, it has usually given a small or poor crop, much damaged by coulure; the average sugar acquired by the must is about 24 per cent. The wine obtained at the Station cellar is only of fair quality and difficult to keep.

Evidently this variety, like the related varieties from Portugal, requires a warmer climate; in fact the same varieties grown at Fresno always gave a more abundant crop and of better quality.

**TINTA AMARELLA.**—This is one of the best varieties of the Douro region in Portugal; it is there a very large bearer and grows very well in strong soils.

Bunches, of good size, pyramidal or conical, heavily shouldered, close. Grapes, medium size but irregular, varying from very small to rather large, and from nearly round to distinctly oval. Skin, rather thick but not tough. Flesh, firm but juicy, flavor, sweet, not marked. Peduncle thick, strong and woody. Pedicels, rather long and of medium strength.

Generally it ripens about the middle of October at Cupertino, being therefore of rather late maturity.

The observation made in regard to Tinta-cao must be repeated for this variety, viz., a small or average crop at Cupertino and Mission San Jose, while bearing a big crop in Fresno. Much coulure observed at the former localities, very little at the latter. Sugar contents of the must averaging 25 per cent. The wine is of fair quality, but requires blending to make a faultless port wine.

**TINTA DE MADEIRA.**—This is one of the several "Tintas" (black varieties) growing on the Island of Madeira. Bunches, medium size, cylindrical or conico-cylindrical, shouldered, sometimes loose, sometimes rather compact. Berries, medium sized, round; skin, thick but tender, dark colored; flesh, juicy, without marked flavor. Peduncles, green, of medium thickness. Pedicels, slender and rather long. Generally it matures some days before the "Tinta Amarella." At the experiment plot in Cupertino, has given a pretty fair crop, always more than either Tinto-cao or Tinta amarella. It had also very much less coulure than the two latter varieties. Must averaging about 25 per cent of sugar at Cupertino. Wine obtained is only of fair quality.

**MOURISCO PRETO (Mourisco tinto do Douro, Uva rei).**—This is one of the most highly esteemed vines of the Douro region, and must not be confounded with the Mourisco cultivated in the Minho country, which is totally different. It is of vigorous growth and makes hard and strong wood; leaves large, of uniform size, almost round. Bunches numerous and sometimes very large, pyramidal in form; berries large, pale black; flesh quite firm, skin thick, juice sweet and agreeable. It matures late in the second epoch; no observations have been made on it at the station since 1884, when grapes were received from the Natoma vineyard on Sept. 26th and showed only 21.4 per cent of sugar. It was reported as bearing heavily; it doubtless belongs in the warmest parts of the State.

**BASTARDO.**—This variety, extensively planted at the Island of Madeira and in Portugal, is quite widely cultivated in Spain for red, sweet wines. It grows also perfectly in Northern and Central French vineyards as well as in Southern localities. Its bunches generally are small, cylindrical or conico-cylindrical, berries of average size, regular and ovo-conical in form, entirely black, and tough; flesh juicy, sweet and very agreeable. It has strong and regular growth and matures early.

At the experiment plot at Cupertino the Bastardo has given somewhat large crops, suffering but little from coulure and sunburn. Must contains on the average about 27 per cent of sugar. Wine obtained at the experiment cellar from this variety has been only fair; it was of rather delicate quality, but not a good keeper. In Portugal, the Avarelhao (known here as Pied de Perdrix) is usually blended with it for the darker-colored export wines, or "ports."

**ALVARELHÃO (Localia—Pied de Perdrix).**—This variety, known in California as Pied de Perdrix, but only very little cultivated, ought to be propagated more than has been done heretofore, because it is one of the best "port" wine varieties, which remedies the deficiencies of the Bastardo, with which it is usually blended on account of its intense color (shown even in its leaves) and heavy body. Bunches medium size, branched; berries medium size, regular, oval, black, tender; flesh sweet but with considerable acid, very agreeable. Matures early (end of August). It is very liable to attack by the "Oidium," or powdery mildew. At Mission San Jose, matured late for its kind and gave a small crop, while in Fresno it showed a better crop and ripened early, but no samples sufficient for experimental working have been obtained. Whether this is the same grape grown under that name by Mr. Crabb in the Napa valley, we are not certain.

#### SHERRY AND MADEIRA VARIETIES.

**PEDRO JIMENES.**—The Pedro Jimenes is one of the most highly esteemed wine grapes of Spain, and enters largely into the celebrated wines of Malaga, Jerez, San Lucar, etc. It belongs decidedly to the warmer climates only, such as Southern France, Spain and Algeria, and its success in the coast counties of California should, therefore, be at least doubtful. The vine being exceedingly productive, requires short pruning and a fertile soil, since otherwise it would soon be exhausted.

Bunches large, branched, conico-cylindrical, rather close from young and vigorous vines; berries medium size, somewhat ellipsoidal; skin thin but resistant, golden yellowish; flesh very juicy, sweet and agreeable. It matures late in the 3d epoch.

At Cupertino and Mission San Jose it never gave a satisfactory crop and was badly attacked by coulure. The sugar contents of the must averaged only about 20 per cent, while at Fresno we noted heavy and healthy crops of high sugar contents.

**PALOMINO, or LISTAN.**—The Palomino is one of the most important grapes of southwestern Spain, and is also grown in southern France and in Algeria under its second name. The latter form seems to have been early introduced into California and acquired the very inappropriate name of "Golden Chasselas." The later importations of the Spanish Palomino seem to differ slightly from the earlier, in lighter bearing and higher quality of wine. Its vigorous growth and large bunches, close-packed, are too well known to require description. It matures somewhat later than the Verdelho, and at Cupertino and Mission San Jose acquires only from 22 to 24 per cent of sugar, making an excellent dry wine. In the interior valleys and foothills it justifies its high reputation as a sherry grape of the best type.

**MANTUO DE PILAS.**—This grape is little known outside of the sherry districts of southwestern

Spain, where it is locally of considerable importance. While it is related to the Palomino, yet it yields wines of a different character and high grade, and is very distinct both in its habit of growth and the larger size of its berries. The latter are somewhat elongated, very firm-fleshed, and from Spain are reported as maturing very late; at Natoma it was gathered early in October with 19 per cent of sugar from second-year grafts. The bunches are loose, long-conical and of fairly large size; and altogether the variety, with its close relative the Peruno, gives promise of being a desirable table and shipping grape. In Spain it is also used for raisins.

**MANTUO PERUNO.**—According to Rojas, the Spanish ampelographer, this grape is in the plain of Granada the most abundantly cultivated after the Pedro Jimenes; it forms a large ingredient of the "Malaga" sheries. It is a strong grower, with long canes and leaves resembling those of the Palomino, but smaller; bunches short, loose, roundish, sometimes with long pendent branches; berries above medium size, somewhat unequal, globular, flattened at base, greenish-yellow, or sometimes reddish-cheeked, with strong bloom, somewhat translucent; skin rather thick, resisting weather very well; hence this grape is much used for winter keeping by simply hanging up in a dry place. At Natoma it matured early in October, with 23 per cent of sugar, and was reported a fair bearer. The grapes kept readily for four weeks suspended in a garret at Berkeley.

**VERDELHO.**—This grape is largely cultivated in the Island of Madeira, where it enters into the finest qualities of wines. It is also cultivated to some extent in France, but mainly as a table variety. Excellent wine is made of it in the Crimea. The Verdelho is a vigorous stock and requires rather short pruning. Its bunches are small and loose, its berries also small and long-oval, very firm, golden-translucent, and resist wet weather remarkably well, but mature quite early even in coast region, acquiring easily 26 to 28 per cent of sugar. It thus stands foremost among the sherry grapes for the cooler portions of the State. Its bearing at Cupertino and Mission San Jose has been only fair, partly from early coulure; and at Fresno it has yielded a heavy and sound crop. It makes a delicious dry wine and (alone or better blended) the best type of sherry or madeira, with delicate, fruity bouquet.

**MOURISCO BRANCO.**—This variety, cultivated extensively in Portugal, makes long and large bunches having berries very close-packed, as large as a hazel-nut, amber-colored; skin thick and flesh juicy and sweet. It matures early and prefers rich soils and short pruning. Its wine has great value; raisins are made from it.

From Natoma it was reported to be a heavy bearer of good vigor. The must showed about 24 per cent of sugar, but no good sample of wine was obtained from it on account of its incomplete fermentation.

**BEBA.**—The Beba resembles the Peruno and Mantuo de Pilas; is but little known save as an ingredient of sheries in southwestern Spain. Its name seems to indicate that it is supposed to contribute materially to the "drinkableness" of wines.

Its growth is long and heavy, leaves and berries large, the latter white and round. It is used also as a raisin grape. At Natoma, was a fair bearer, and ripened late in October. The sugar contents of the then young vines averaged about 23 per cent. The wine was light-straw colored, of heavy body and bouquet and of agreeable taste. It developed very promisingly, but there was too little of it for definite results.

**BOAL DE MADEIRA.**—A grape of pronounced sherry character, of high quality, and clearly belonging to the warmer climates only. At Mission San Jose it suffers greatly from coulure, and is only of medium strong growth, while from Natoma it was reported as being a heavy bearer of good vigor. Bunches large and rather loose, branching; berries ellipsoidal, below medium size, on long and slender pedicels. Skin thick but quite tender and easily damaged in transportation.

At Mission San Jose and Cupertino this variety gave a small crop and was much damaged by coulure; but from Natoma it was reported to be a heavy bearer of good vigor. It matures at Mission San Jose in September; the sugar content of the must was about 25 per cent. The samples of wine made from this grape at the University cellar have not been very satisfactory on account of the poor or green condition of the grapes received. But we may expect to find a valuable variety for sherry purposes in the Boal, when grown in a suitable climate.

**WEST'S WHITE PROLIFIC.**—Whatever may be the true name and origin of this now well-known vine, it clearly belongs to the sherry group, and deserves great attention, both in this direction and in that of a brandy grape, for which Mr. West's experiments prove it to be admirably adapted.

At the University Plot, Cupertino, as everywhere else, it has maintained its reputation for heavy bearing, the average of 40 vines, long-pruned, being in 1885 57½ pounds each. Its bearing is very regular and it suffers but little from coulure anywhere that it has been observed; sugar contained in must averaging high, viz., about 26 per cent. The wine obtained has doubtless the sherry character, though hardly as pronouncedly as the Palomino when grown under favorable conditions.

E. W. HILGARD.

Berkeley, Feb. 28, 1891.

**HOLSTEIN FRIESIAN ASSOCIATION OF AMERICA.** The sixth annual meeting of the Holstein-Friesian Association of America will be held at the Vanderbilt Hotel, Syracuse, New York, Wednesday, March 18, 1891, at ten o'clock, A. M. THOMAS B. WALES, Secretary. Iowa City, Iowa.

## THE FIELD.

## Ramie Culture.

(Written for the RURAL PRESS by J. R. F.)

Present indications promise that ramie growing is to be one of California's important industries. Experiments made several years ago and continued at the State University's Experimental Station at Berkeley, afford unmistakable evidence that the plant can be successfully grown in many parts of this State, but for the lack of a market for the fiber, its cultivation has been neglected. It is now asserted by parties in position to know that this difficulty will soon be overcome, for the California Ramie Co. has been incorporated, with an authorized capital of \$100,000. This company has secured the requisite machinery for the proper handling of ramie. Persons who are competent to judge say that the machinery secured by the company is a success in every respect, and that a manufacturing establishment in Oakland stands ready to utilize the fiber turned out. But this is not the only buyer for the fiber, as letters have been received from manufacturers and manufacturers' agents at the East and in England, giving assurance of being in the market for the product. With an assured market for the product, it seems as if the principal obstacle against ramie-growing in this State has been removed. The samples of the fiber and also of the manufactured goods, are convincing evidence that for many purposes its products will take high rank in the commercial world. The samples in possession of W. H. Murray of the *Journal of Commerce*, show that the fiber, when prepared for the spinner, is beautifully white, soft and glossy, closely resembling floss silk in appearance. It is much stronger than the best flax and readily receives the most difficult dyes without injury to its strength or luster. Some samples of the manufactured goods were as fine and glossy as the finest makes of silk, while it is far stronger and more durable. Other samples, on the other hand, which were made coarser, were heavier and more durable than the strongest tow. Aside from this, the leaves of the plant, it is now claimed, have been successfully experimented with in manufacturing paper, so that a market is obtained for both the leaves and dry stalk.

In addition to the information given out on ramie cultivation by Prof. E. W. Hilgard of the State University, and published in the RURAL PRESS Feb. 21, 1891, the writer has been furnished the following: For first planting, root cuttings should always be used. For a nursery, sandy or loamy soil is the most suitable, and when it is desirable that the plants shall make rapid growth, the soil should be broken and thoroughly pulverized to a depth of ten inches. The roots should be planted about five to six feet apart, four inches deep, and slantingly, with the top coming to the surface. No further attention, with the exception of weeding, is required until they have attained

THE RAMIE PLANT.

- A.—The pistil or top of the flowers.  
 B.—The flower when in full bloom.  
 C.—The seeds—which are small as the finest flower seeds, and must be germinated under glass, requiring several years to obtain mature roots from the seed suitable to set out plantations of ramie.  
 D.—The flower after the seeds have matured.  
 E.—Capsule which holds the seeds.  
 F.—The roots, showing the "tap" or "water" root, covered with rootlets. These roots shoot out rapidly and, when planted 3x3 feet, will cover the ground with shoots in a few years.

the height of three or four feet, when it will be noticed that they become of a brownish color near the roots. They are then ready for layering. The ground should then be thoroughly moistened and the stem bent gently down and covered with from three to four inches of loose earth, care being taken to avoid detaching

the stem from the parent root. About two inches of the leafy end should be left uncovered. In the course of three or four weeks the layers will have made shoots, and may then be separated from the main root and cut into pieces four or five inches long for planting in the field.

To cultivate in the field, to make crops of fiber, the land must be prepared as in the first instance, with the exception that the plowing is not required to be so deep, although the deeper the plowing the better the crop will be; and this is the hardest of the labor, but it will amply remunerate.

The land being well plowed and cleaned, the cuttings obtained from the mother-plant should be planted in rows about three feet distant from each other each way. Keep plantation clear of weeds by a free use of the cultivator. This labor will be dispensed with when the plant has grown thickly. After five or six crops the field will be as thickly covered as a wheat-field ready for the reaper, and will remain so for years.

The maturity of the stalks and the time for cutting are indicated by a brownish color on the lower part of the stalks. In cutting the stems, an ordinary mowing machine may be used.

In Prof. Hilgard's bulletin, referred to in the forepart of this article, the soil adapted to ramie culture is discussed at considerable length, to which those desiring information on the subject are directed. In their circular on ramie culture, Trumbull & Beebe give the following:

When the land has become moist by rain or irrigation, and in condition for proper working, the plants may be set out, ranging in time from the first day of January to the first day of May. The choice time, however, embraces the first three months of the year. If the object of the planter be to set out a plantation, the roots should be set three feet apart in the rows by four feet between rows, and deep enough to cover the root proper at least one inch. The cultivator should be used freely the first season, in order to destroy all weed life and afford the young plants every encouragement possible to make a vigorous and extended growth. The second year but little cultivation will be necessary, and the third year none at all, for it may be expected by that time that the plants will have full possession and completely cover the plantation. If it be the desire of the grower to produce plants to extend his plantation, the roots should be set out in nursery rows one foot apart and two feet between rows, allowing the free use of the hoe and the application of water, if found necessary. At the end of the season, these plants may be dug up and the roots separated. No plant responds to care more readily; "no plant will grow as rapidly, no root multiply quicker and produce more stalks—in fact, no vegetable fiber is handsomer, richer or more silky than ramie." The first crop or cutting may be expected to be ready in July or August of the first year, and can be cut by hand, using a sickle or a short-bladed scythe. The second, and years following, the first cutting will probably be ready in June, and the second in the latter part of August, when a mowing machine may be used. On land well suited to the growth of the plant, three cuttings may be expected the third and successive years. The stalks should be dried and tied in bundles for convenience in handling.

## BLISTER FOR HORSES.

WHAT TO USE.

For a blister to use on live-stock,

COMBAULT'S  
CAUSTIC BALSAM

Has NO EQUAL. Why?

Because it is a perfectly safe remedy for any one to use. After applying as directed it needs no attention, acts quickly and is effective. Removes all bunches or enlargements and guaranteed not to leave scar or blemish. Supersedes all caustery or firing. Every bottle sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by all druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars. Address LAWRENCE, WILLIAMS & CO., Cleveland, O.

The End of the World.

Of all changes, that change has most interest for us which affects our own planet, the earth. It has reached a later stage than Saturn, though not so late a stage as the moon; but only in long ages and by minute effects will further changes be noted. Ages hence it may be discovered that there is some slight change in the earth's orbit; or Mercury, yet nearer to the sun than we, may be seen to pursue a smaller orbit than now, and the terrible fact may come home to man that we are drawing nearer to the sun. Time goes on, and the tropics become too hot for existence, and colder regions find a welcome change to warmth. Age after age goes by, and the end is, visibly, no nearer; but the figures of astronomers only too surely tell their tale. In time the tropics will become an impassable desert and all the life on the globe will congregate around the poles. Spain has lost her vineyards and the Alps their snow; England is a hurrying desert and Greenland teems with the vegetation of the tropics; in smaller and smaller circles the inhabitants gather round the poles.

"But," to quote the words of Mr. Keightley Miller, "the narrowed limits of the habitable earth can no longer support this vast increase of population, and famine begins to mow down its victims by millions. Now, indeed, the end of all life draws on apace. The heat and drought become more and more insupportable, rain and dew fall no longer. All springs of water fail, and the rivers dwindle down to streamlets and trickle slowly over their stony beds, and now scarcity of water is added to scarcity of food. Those who escape from the famine, perish by the drought, and those who escape the drought are reserved for a fate more awful yet. For a time the few remaining inhabitants are partially screened from the overwhelming power of the sun by a dense canopy of clouds formed by the evaporation of every lake and sea. But soon the sun scorches up these vapor banks and dissipates them into space as fast as they can form. Then the fiery orb shines out in an unutterable splendor without the slightest cloud-wreath to interpose between himself and his victims. Then the last denizens of the world are stricken down and consumed—the last traces of organic life are blotted from its surface."—*Loughman's Magazine*.

But we "won't worry about it."

Remember that Ayer's Cherry Pectoral has no equal as a specific for colds, coughs, and all affections of the throat and lungs. For nearly half a century it has been in greater demand than any other remedy for pulmonary complaints. All druggists have it for sale.

# CHILDREN

Are always liable to sudden and severe colds, to croup, sore throat, lung fever, etc. Remedies, to be effective, must be administered without delay. Nothing is better adapted for such emergencies than Ayer's Cherry Pectoral. It soothes the inflamed membrane, promotes expectoration, relieves coughing, and induces sleep. The prompt use of this medicine has saved innumerable lives, both of young and old.

"One of my children had croup. The case was attended by our physician, and was supposed to be well under control. One night I was startled by the child's hard breathing, and on going to it found it

## Strangling.

It had nearly ceased to breathe. Realizing that the child's alarming condition had become possible in spite of the medicine it had taken, I reasoned that such remedies would be of no avail. Having a part of a bottle of Ayer's Cherry Pectoral in the house, I gave the child three doses, at short intervals, and anxiously waited results. From the moment the Pectoral was given, the child's breathing grew easier, and in a short time it was sleeping quietly and breathing naturally. The child is alive and well to-day, and I do not hesitate to say that Ayer's Cherry Pectoral saved its life."—C. J. Wooldridge, Wortham, Texas.

For colds, coughs, bronchitis, asthma, and the early stages of consumption, take

### ORANGE CULTURE IN CALIFORNIA.

Now that the interest in the culture of the orange is extending so as to embrace nearly all parts of the State, a book giving the results of experience in parts of the State where the growth of the fruit has been longest pursued will be found of wide usefulness.

"Orange Culture in California" was written by Thos. A. Carey of Los Angeles, after many years of practical experience and observation in the growth of the fruit. It is a well-printed hand-book of 227 pages, and treats of nursery practice, planting of orange orchards, cultivation and irrigation, pruning, estimates of cost of plantations, best varieties, etc.

The book is sent post-paid at the reduced price of 75 cents per copy, in cloth binding. Address Dewey & Co., Publishers "Pacific Rural Press," 220 Market St., S. F.

### TO PLANTERS

## FRENCH PRUNES.

## Fashion Notes.

## Ladies' Costume.

FIGURE NO. 1.—This illustrates a ladies' costume. In the present instance the costume is pictured developed in black Marquise lace made over mauve Bengaline. A knife-plaiting of Bengaline forms a pretty foot-trimming for the skirt, which is fashioned in the ordinary four-gored style; and the plaiting is effectively revealed below the full drapery, which is slightly wrinkled at the front. The drapery is gathered at the center of the back and fastened upon the basque, and at each side of the gathers deep, backward turning plaits flare in natural folds into the fulness. A small bustle may be worn or omitted, as preferred.

The full fronts of the shapely basque are disposed over the bust with becoming fulness resulting from gathers at the shoulder edges, and the fulness below is arranged at the lower edge in plaits that flare diagonally upward. The fulness in the seamless back is conformed to the figure below the waist-line by several rows of shirrings, and the edge of the basque, which is pointed at the center of the front and back, is ornamented with a band of ostrich-feather trimming. The full sleeves present the customary high curve over the shoulders; they are each ornamented at the wrist with a narrow band of feather trimming, and a similar band narrowed toward the throat decorates the neck.

While the mode seems best adapted to the various dainty nets, gauzes and filmy laces that are only appropriate for the occasion of

Fig. 2—LITTLE GIRLS' TOILETTE.

Fig. 1—LADIES' COSTUME.

ceremony, it will develop with especially good effect in soft silks and woollens in plain colors or in plaid, striped or checked designs; and combinations of silk or faille with Henrietta cloth or cashmere will also be favored. Costumes of lace or net may be decorated with velvet or satin-edged ribbon applied as lavishly as desired, rosettes of similar ribbon may trim the back of the bodice, and a full ruching of silk or a feather band may be added for a foot trimming upon the skirt. In a costume of wool goods the edge of the drapery may be decorated with a bias band of the material, and braid, pipings, cordings, rows or rosettes of velvet ribbon, fancy gimp or galloon may ornament the basque and skirt.

The round hat is becomingly trimmed at the front and back with ostrich pompons.

## Little Girls' Toilette.

FIG. NO. 2.—This consists of a little girls' dress and guimpe. The dress is here pictured developed in old-rose cashmere and darker velvet, and silk cord and tiny buttons provide the decoration. The full, round skirt is finished at the bottom with a deep band of velvet followed at the top by a row of heavy silk cord. The top of the skirt is gathered and joined to the short body, which is shaped in low, rounding outline at the neck both front and back, and closed at the back with buttons and button holes. Falling in pretty, soft folds; from the rounding upper edge of the back is a frill, which is carried over the shoulders and, narrowing gradually, is arranged on the front to form a V that flares widely from the lower edge. The upper edge of the frill is concealed beneath a silk cord, and at the center of the front between the flaring edges of the frill are placed two rows of tiny buttons, over which a fine silk cord is laced, with charming effect. The short sleeves, which, like the body, are of velvet, are gathered over plain linings to present a full puff effect, and their edges are ornamented with cord.

The guimpe is here pictured made of plain white India silk. It has a full, seamless yoke gathered over the plain front and back portions, and is nicely drawn to the figure at the waist-line by tape or elastic inserted in a casing. The shirt sleeves are gathered at the top and bottom and finished with wrist-bands trimmed with narrow lace edging; and a standing collar.

The dress will develop prettily in Henrietta cloth, serge, challis, flannel and various other seasonable woollens, and any of these fabrics may be associated with velvet, silk or Surah. Rows of velvet or grosgrain ribbon, soutache or metallic braid or feather-stitching may ornament the skirt, and any fanciful garniture preferred may be applied to the quaint little body. The guimpe may be developed in Swiss, mull, nainsook, percale or any sheer fabric, and if a dressy effect be desired.

FOR INFORMATION, OUR readers are referred to H. A. Deming, No. 124 Post St., S. F., a leading and well-established house, for paper patterns of plates illustrated in our present issue.

## REGAN VAPOR ENGINE.

NO BOILER. FIRE. EXPLOSION. STEAM,  
ASHES OR ENGINEER.

Started Instantly Without Even a Match. Will Run on Natural or Manufactured Gas or Gasoline. The Moment Engine Ceases to Run, all Expense Stops.

Upright and Horizontal, Stationary and Marine Engines from 3-4 Horse Power, Upward.

Our Engines are especially adapted for Pumping and Irrigating and Spraying Fruit Trees; in fact, for any use where power is required.

OVER 400 IN USE.

POPE & TALBOT, LUMBER, Office, 204 California Street,  
SAN FRANCISCO, Feb. 25th, 1890.

REGAN VAPOR ENGINE Co.—Gentlemen: The 4 H. P. Vapor Engine I bought of you last May has been in constant use ever since, and has given me entire satisfaction. I have found the engine to be all that you claimed for it, and more too. You can use my name for reference if you so desire. I am, yours truly,  
H. TALBOT.

We Carry Thos. Kane & Co's Famous Racine Launches, fitted with our New Compound Engines.

Send for Circular.

## REGAN VAPOR ENGINE CO.,

221-223 First Street, San Francisco, Cal.

### Cheaper Than Windmills for Farmers!

Our Perfected "Safety" Engines Cost to Run only 1-8 Gallon of Gasoline per Horsepower per Hour. No Boiler, Fire, Smoke, Steam, Ashes or Heat. No Engineer, No License, No Danger. Single and Double Acting. 1/2 H.P. to 20 H.P.

GENTLEMEN—The 2-H. P. Engine received and set up yesterday. We attached it to part of the machinery in my shop, and it ran my Drill Press, a small Lathe, a large 24-inch by 14-foot Lathe, and a set of Emery Wheels, all of which it handled easily, to our great surprise. Yours very respectfully,  
J. B. HENDERSON.

GENTLEMEN—I am satisfied, after running for over a month my Bean Cleaner, etc., with the 4-H. P. Engine you sent me, that it is much the best Gas Engine I have seen. The electrodes are certainly superior to all others; also your safety rotary slide-valve, which is the perfection of simplicity, positiveness and durability; I am satisfied it will develop much more power than we have need for. I also want a 3 or 1-H. P. for my wife and daughters to use about the house; we have a rotary clothes washer, can also do the churning, etc. I do not know of any better recommendation than to order a second engine. Respectfully yours,  
P. C. HIGGINS.

NOTE.—Both of these Engines were shipped to the parties named, and were set up by them solely by the diagram and printed directions we sent them.

Weight, 175 pounds.

FRANK BROTHERS, 33 & 35 MAIN STREET, SAN FRANCISCO.

## San Jose Notes.

A RURAL representative visited San Jose last week. There seems to be an increased prosperity, as shown by extensive building of fine residences and great activity in manufacturing plants.

The San Jose Agricultural Works have recently extended their shops by an addition of two stories to their building, 36x100 feet and 20x50 feet. The San Jose Cultivator, Fruit wagon, and other specialties in agricultural implements have been in large demand, and their business seems to be largely increased from last year.

Mr. Smith McGavin's Fruit-wagon has been well tested and found to be a valuable adjunct to the orchard and vineyard. He had just filled several orders from other portions of the State, and was at work on a line of 15 wagons—about equally divided between the two-horse and four-horse wagons.

The proprietors of the Garden City Ironhatch were shipping two of their machines and had orders for several more.

In anticipation of a good fruit crop, the manufacturers of Hamilton's Prune Grader had made preparations to build extensively so as to be ready for the fruit season.

Messrs. Bute and Stephens are now the proprietors of the Garden City Windmill, and have enlarged their factory on the Alameda to meet the demand for this well-known and popular windmill.

Several new factories and industries have been projected, and will likely be established in San Jose soon, largely due to the facilities and advantages for manufacturing purposes, and the enterprise and liberality of her leading citizens of wealth.

## What the Great Fruit-Dealers Think of the Rural Press.

Messrs. Dewey & Co., San Francisco, Cal.—GENTLEMEN: Inclosed please find our check for \$3, as a renewal for your paper for 15 months commencing Feb. 21, 1891. It affords us much pleasure to renew our subscription with your valuable paper, as we were pioneers in the California fruit trade, having shipped our first car in 1869, and we have continued in the business ever since and have seen your paper, as well as our business, steadily advance in the interests of the California fruit industries. We take great pleasure in receiving your paper and reading the various items of interest that you publish from time to time. We hope you will continue to prosper and develop the great industries of California, as we believe to-day, as we always have, that California is destined to become one of the greatest fruit countries upon the globe; her productions are steadily growing in favor and quality.

Wishing you happiness and success, we are, your very respectfully,

PORTER BROS. COMPANY.  
By WASHINGTON PORTER, President.  
Chicago, Feb. 21, 1891.

THE greatest novelty introduced by seedsmen this season is the "winter pineapple muskmelon." It is a native of one of the Sandwich Islands; has been grown successfully in the United States the last two years and will undoubtedly become one of the most popular kinds in cultivation if it possesses one-half the qualities claimed for it by the introducer. Aside from its remarkably fine eating qualities and pleasant flavor, it is said to keep sound and sweet all winter and late in the spring. It certainly should be given a trial by all lovers of this delicious fruit. Samuel Wilson, of Mechanicsville, Pa., one of the most popular seed-growers in the United States, is the introducer of this valuable melon. His large and handsomely illustrated catalogue can be had free on application. Send for it.

TO VISIT THE CITRUS FAIR.—President Eugene J. Gregory of the State Board of Trade has appointed the following committee to visit the Los Angeles Citrus Fair next Tuesday: Albert Gallatin, A. Rapo, Mark L. McDonald, T. E. B. Rice, H. M. Byington, L. L. Baker, John P. Irish, A. Caminetti, Jesse D. Carr, J. A. Caldwell, Wm. H. Mills, J. S. McCue, J. S. Emery, C. F. Crocker, A. A. Hibbard, Tyler Beach, J. A. Morrissey, N. P. Chipman, M. M. Estee and John Q. Brown. Most of the gentlemen have accepted the appointment.

NEW SEED CATALOGUE.—Sevin Vioent & Co., 607 Sansome street, have just issued a handsome new catalogue. This old and reputable house carries a complete stock of everything in their line, and will supply old and new friends promptly with fresh and reliable goods. Read advertisement on another page and send for the new catalogue.

It is quite probable that you may need the services of a physician some day; but you can postpone the time indefinitely by keeping your blood pure and your system invigorated through the use of Ayer's Sarsaparilla. Prevention is better than cure.

## NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

446,905.—CABLE RAILWAY—Watriss & Kaighin, S. F.  
446,939.—METALLIC LATH MACHINE—J. Weichart, S. F.

The following brief list by telegraph, for March 3d, will appear more complete on receipt of mail advices:

California—Charles H. Benoit and A. Pillot, San Jose, window screen; Luther H. Buchanan, Pasadena, assignor of one-half to J. D. Shorb, San Gabriel, electric arc lamp; John A. Buffer, San Francisco, ice-cream freezer. Washington—George W. Ansley and J. H. Boyd, Medical Lake, said Boyd assignor to said Ansley, clothes drier; Robert McMahon, assignor of one-half to Gaston, Seattle, car coupling.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

## A Clever Fraud.

The Curtis Publishing Company of Philadelphia, Pa., with a branch office in the Chronicle building, San Francisco, have recently been much annoyed by a man who, fraudulently claiming to be their agent, has been collecting money throughout California and Oregon, representing that the same would be forwarded for subscriptions to the Ladies' Home Journal. This man, who travels under the aliases of Watson, Hill and Wood, and who sometimes gives his address as San Francisco, is an impostor, inasmuch as he sometimes offers a reduced rate of subscription. Quite a number of people have been victimized, and the Curtis Publishing Company would be glad to receive information which will lead to a knowledge of the present whereabouts of this person. They also inform the RURAL PRESS that any one offering their paper at any other than the regular subscription price (\$1 per year) may justly be regarded with suspicion.

SCHOOL FOR NURSES.—We take pleasure in calling attention to the good work being done at the Fabiola hospital, corner Broadway and Moss avenue, Oakland, in the instruction of female nurses. It is a thoroughly well-conducted establishment and a great public benefactor in this and other respects. Address, for circulars and information, as above.

W. T. EDDY of San Jose asks several important questions regarding State and school lands, which will receive attention through the columns of the RURAL PRESS as soon as the required data is secured.

## Raisin, Fruit and Grain Lands

## AT EXTREMELY LOW PRICES.

Seven miles S. W. of Tulare city. 164 acres of rich land is offered for sale, with well-improved homestead, large flowing artesian well, reservoir, alfalfa, orchard (seven years old), pasture, one of the healthiest and most comfortable seven-room, two-story residences in Tulare valley. Must be seen to be appreciated. Will be sold soon at a very low price and extraordinary reasonable terms to a good purchaser. Some 320 acres of good and well-cultivated land adjoining is also offered low. Address E. M. Dewey, Publisher, Porterville, Tulare Co.; A. T. Dewey, 220 Market St., S. F.; or call on Capt. Thos. H. Thompson, Tulare City, Cal.

## FABIOLA HOSPITAL, OAKLAND, CALIFORNIA.

THE FABIOLA HOSPITAL is healthfully and pleasantly located on high ground in the suburbs of Oakland, accessible from every part of the city, the street cars passing the door.

THE APPOINTMENTS of the institution are of the best class; the building thoroughly warmed with Harvey's system of hot water heating; rooms large and sunny; neatly furnished with all the comforts of a private home for the sick and the convenience of a first-class general hospital. Sewerage perfect.

WELL TRAINED NURSES are in attendance, and patients will receive all nursing and care required for any ordinary case without extra charge; but patients in private rooms, requiring a special nurse in constant attendance, will be charged extra.

MATERNITY CASES are given special care, and large sunny rooms are set apart exclusively for such use, with most skilled physicians and careful nurses.

Should patients desire to employ a physician other than those on the hospital staff, they are allowed to do so at their own expense.

Address RESIDENT PHYSICIAN, Fabiola Hospital, Oakland, California. Telephone No. 943

## ORCHARDISTS AND VINEYARDISTS

— IF YOU WANT TO —

SAVE TIME AND MONEY AND DO GOOD WORK

— PURCHASE THE —

## BILZ GANG AND SINGLE PLOWS.

The Gang Plow cuts 18 inches, and two horses will pull it as easily as a 12-inch Single Plow, and does better work. The Single Plow has no standard, and so is not liable to catch the vines or choke up in weeds; the beam fastens in a socket behind the moldboard and can be thrown to or from the land in a straight line.

By throwing the beam from the land, the plow can be put under the vine a foot and the beam will not touch the branches, and the singletree will not interfere.

The handles can be changed from one side to the other and raised and lowered to suit.

First Premium awarded both Plows at Mechanics' Fair, 1889, and at Fresno Fair, 1890. Address

**J. A. BILZ, Pleasanton, Cal.**

Manufacturer of the Best Road Cart and the Lightest Speeding Cart in the State.

AGENTS—TRUMAN, HOOKER & CO., SAN FRANCISCO.

## CLOSING-OUT SALE

— OF —

## WELL-BRED TROTTER STALLIONS, BROOD MARES, COLTS AND FILLIES,

Being the Entire Stud of

**SAN MIGUEL BREEDING FARM, PROPERTY OF IRVIN AYRES, ESQ.**

Among them is the well-known Stallion, MAMBRINO WILKES, son of GEO. WILKES, the sire of five in the 2:30 list, and three others which all horsemen know could have been put there last season, as well as many others that can trot in 2:30. The great race horse BALKAN, can trot in 2:20 with as good a chance of lowering that mark as any horse of his age ever presented. The great brood mare FANNY FERN, with 12 of her immediate progeny—the phenomenal colt FREEDOM, yearling record 2:29, descends from Fanny Fern through Mollie Drew. A string of highly bred producing dams, among whose progeny are GUS WILKES, BALKAN, MYLITTA, CLARA P., CHALDEAN, ALPHEUS, FRED ARNOLD, MOLLY DREW, and numerous others. For description of which and extended pedigree send to undersigned for catalogue. Sale to take place

**ON SATURDAY, MARCH 7, 1891, AT 1 P. M., AT OAKLAND TROTTER PARK.**

Mr. Ayres having decided to retire permanently from the breeding of trotting horses, will dispose of every animal upon the farm, with the exception of two work horses, without limit or reserve.

Catalogues will be ready February 9.

**KILLIP & CO., AUCTIONEERS,**  
22 MONTGOMERY STREET, SAN FRANCISCO, CAL.

Publisher of "Niles' Pacific Coast Poultry and Stock Book," a new book on subjects connected with successful poultry and stock raising on the Pacific Coast. Price 50 cents, post-paid. Inclose stamp for information.

BREEDER AND RAISER OF THOROUGHBRED

**Jersey and Holstein Cattle. Also, Poland China and Berkshire Pigs.**

Address, **WILLIAM NILES**, Los Angeles, Cal.

## THE BEST FENCE YET!

Cheap, Durable, Portable and Safe.

**THE SPALDING HUMANE WIRE FENCE** is composed of eight No. 12 galvanized steel wires, woven into four cables of two wires each; interwoven every five feet is a corrugated iron stay or guard, and held in place by the cables, thereby holding the cables firmly in place, preventing them being spread apart and letting stock through. The stays or guards are corrugated and an inch and three-quarters in width, making the fence as visible as a board fence, which is a very essential point. Write for circulars and prices. Address **BIRD-TURNBULL MFG. CO.,** 195 La Salle St., Chicago.

## MANHATTAN STOCK FOOD.

Saves One-Quarter of Grain Feed.

**FRAUDULENT PARTIES** have been selling an article, claiming theirs to be the same, and, in order to mislead, have added a prefix to "Manhattan." Our genuine food is called simple "Manhattan Food," with the Red Ball Brand.

623 Howard St., San Francisco, Cal.

## IMPORTED STALLIONS!

H. H. H.

Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

Messrs. H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (10½ gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisters. Respectfully yours, FRANK H. BURKE, Breeder of Registered Holsteins and Berkshires. Menlo Park, Cal., January 23d, 1889.

## S. F. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, March 4, 1891.

High waters and bad roads are the order of the day, interfering very materially with general trade in farm products. The last rains being warm have caused vegetation to make rapid growth. All grain crops are growing finely, while good pasturage is assured at an early day. Trading in cereals has been quite free, with large movements in wheat. The market shows quite an advance in prices. The Eastern and foreign wheat markets are higher. The following is to-day's cablegram:

LIVERPOOL, March 4.—Wheat—Hardening. California spot lots, 75 11d; off coast, 40s; just shipped, 38s 9d; nearly due, 39s 6d; cargoes off coast, firm; on passage quiet but firm; Mark Lane wheat, quite steady, wheat and flour in Paris, firm; weather in England, seasonable.

## Foreign Grain Review.

LONDON, March 2.—The *Mark Lane Express*, in its review of the British grain trade for the past week, says: English wheat is in good inquiry at an average rise of 6d. Foreign is held for 1s advance on whies and od on reds. Flour is firm; corn is higher; oats are firm. At to-day's market California wheat was dearer.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	Mar	April	May	June	July	Aug.
Thursday....	75 10 1/2	75 10 1/2	75 10 1/2	75 10 1/2	75 10 1/2	75 10 1/2
Friday.....	75 10 1/2	75 10 1/2	75 10 1/2	75 10 1/2	75 10 1/2	75 10 1/2
Saturday.....	75 10 1/2	75 10 1/2	75 10 1/2	75 10 1/2	75 10 1/2	75 10 1/2
Monday.....	75 10 1/2	75 10 1/2	75 10 1/2	75 10 1/2	75 10 1/2	75 10 1/2
Tuesday.....	75 10 1/2	75 10 1/2	75 10 1/2	75 10 1/2	75 10 1/2	75 10 1/2

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market
Thursday....	39s 9d	38s 9d	39s 6d	Strong
Friday.....	40s 0d	38s 9d	39s 6d	Strong.
Saturday.....	40s 0d	38s 9d	39s 6d	Firm
Monday.....	40s 0d	38s 9d	39s 6d	Firmly h'd
Tuesday.....	40s 0d	38s 9d	39s 6d	Held high

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

	Day.	Mar.	April.	May.	June.	July.	Aug.
Thursday.....	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2
Friday.....	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2
Saturday.....	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2
Monday.....	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2
Tuesday.....	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

	Day.	Mar.	April.	May.	June.	July.	Aug.
Thursday.....	96 1/2	96 1/2	96 1/2	96 1/2	96 1/2	96 1/2	96 1/2
Friday.....	97 1/2	97 1/2	97 1/2	97 1/2	97 1/2	97 1/2	97 1/2
Saturday.....	97 1/2	97 1/2	97 1/2	97 1/2	97 1/2	97 1/2	97 1/2
Monday.....	97 1/2	97 1/2	97 1/2	97 1/2	97 1/2	97 1/2	97 1/2
Tuesday.....	97 1/2	97 1/2	97 1/2	97 1/2	97 1/2	97 1/2	97 1/2

NEW YORK, March 4.—Wheat—\$1.09 1/2 @ 1.10 for March, \$1.06 1/2 to \$1.06 3/4 for May, \$1.04 for June, \$1.00 1/2 @ 1.00 3/4 for July, 97 1/2 c for August, and 99 1/2 for December.

CHICAGO, March 4.—Wheat—97 1/2 c for May and 92 1/2 c for July.

## Statistics California Farm Animals.

WASHINGTON, Feb. 27.—The statistician of the Interior Department has issued a report giving the numbers and values of farm animals, railroad transportation rates and other interesting matters. In California the number of cattle has increased one per cent during the year; sheep decreased seven per cent, and horses, mules, milch cows and hogs were stationary in number. Of horses, California is fifteenth in the list, with 360,921, valued at \$24,262,579; in the number of mules, it is sixteenth, with 43,650, valued at \$3,467,093; in the number of sheep, it is third, with 3,712,310, worth \$8,157,801; in the number of hogs, it is twenty-fourth, possessing 517,600, worth \$2,723,611; in milch cows, it is twentieth, having 283,059, valued at \$8,179,711; in oxen and other cattle, it is twenty-second, with 558,244, valued at \$9,895,321.

With reference to horses in California the report says that great progress has been made in the improvement of their quality during the past few years. Broncho horses of 10 years of age have, by being bred to blooded stock, given place to good roadsters and draft horses. Greater speed has been given to the common roadster, together with the durability of the broncho and size and symmetry to the general draft horse. While the number of cattle is only about the same as last year, there has been great improvement in the quality of common stock by the introduction of better blood, such as Holstein, Durham, Devon, Jersey and Polled Angus. There are many choice pure herds of the above breeds in the State. Owing to the reclaiming of the lands over which large herds of sheep roamed formerly by vineyardists and orchardists, there has been very little, if any, progress in sheep husbandry.

## Hops.

NEW YORK, Feb. 27.—A line of about 100 bales of choice Oregon hops was sold yesterday at 31c. This is regarded as a high price, as it is reported choice goods can be had at 30c. A lot of choice State sold for 27c. The exports to Europe since the beginning of the season are 30,294 bales.

NEW YORK, March 1.—Hops feel the effect of the long dullness. No wholesale outlet for many weeks. Light brewing wants have been supplied from the country at cheap rates, 26c @ 27c, to the detriment of spot. Best State and Pacific, 30c @ 31c; common to prime, 23c @ 29c; olds, neglected.

## Dried Fruits.

NEW YORK, Feb. 27.—Moderate quantities of good unpeeled California peaches in bags have been sold at 14c @ 15c. The ruling price for prime goods is 15c.

NEW YORK, March 1.—Pacific evaporated apples that compare well with State in appearance, 13c. Prunes, weak; four sizes offered at close at 10c @ 10 1/2 c, boxes; 9c @ 10c bags. Apricots and peaches, dull and unchanged.

## Visible Supply of Grain.

NEW YORK, March 2.—The visible supply of grain in store and afloat, as compiled by the New York Produce Exchange, is as follows. Wheat, 23,250,000 bushels, a decrease of 75,000 bushels;

corn, 2,807,000 bushels, an increase of 211,000; oats, 2,948,000 bushels, an increase of 65,000; barley, 2,440,000 bushels, a decrease of 230,000.

## Eastern Wool Markets.

NEW YORK, Feb. 27.—*Bradstreet's* will say: A limited supply of all grades of domestic wools has caused a quiet trade in all markets. Transactions are confined mostly to foreign wools. Australian wools continue to sell readily at high values. At the London sales choice wools have advanced steadily since the opening. Sales closed Thursday, 12,000 bales having been secured for the American market. The larger part of these selections are said to be among the finest that were offered. As the mills are sufficiently supplied for the present, a change in quotations is not expected. Among domestic grades, pulled wools are the most active, Ohio and Michigan wools are in strong demand, but stocks are so light that manufacturers have been compelled to take Australian wools instead. Carpet wools are moving more freely, and prices are firmer in consequence. While holders of choice lots could secure an advance, and in some instances have done so, current quotations have not changed from those of a week ago.

NEW YORK, March 1.—Wool holds good. Stocks much reduced. Eastward prices strong. Demand vigorous. Some specials tending higher. All the prominent mills are said to be working close to capacity. No falling off in orders for woolen goods. Australian continues to sell freely. It is timely to note that buyers express much dissatisfaction over lines of domestic fleeces of the season that show careless management of growers, and to this fact may be ascribed much of the attention now turned to reliable foreign.

Boston market quiet, firm, except faulty remnants.

## Local Markets.

	Buyer Season	Seller 1891	Buyer 1891
Thursday....	133 1/2	103 1/2	102 1/2
Friday.....	133 1/2	103 1/2	102 1/2
Saturday.....	134 1/2	103 1/2	102 1/2
Monday.....	137 1/2	106 1/2	103 1/2
Tuesday.....	139 1/2	104 1/2	103 1/2

\*After August.

	Buyer Season	Seller 1891	Buyer 1891
Thursday....	141 1/2	141 1/2	136 1/2
Friday.....	141 1/2	141 1/2	136 1/2
Saturday.....	141 1/2	141 1/2	136 1/2
Monday.....	141 1/2	141 1/2	136 1/2
Tuesday.....	141 1/2	141 1/2	136 1/2

BAGS.—The market shows continued strength, with holders asking from 6 1/2 c to 6 3/4 c for standard size hand sewed May-June delivery.

BARLEY.—The sample market has advanced under a good demand and light stocks. In futures, trading has been active. The following are to-day's Call Board sales:

Morning Session: Seller 1891—200 tons, \$1.03; 300, \$1.03 1/2; 100, \$1.04 1/2. Seller 1891, new—100 tons, \$1.03 1/2. Buyer season—100 tons, \$1.38 1/2; 100, \$1.38 1/2; 400, \$1.39; 400, \$1.38 1/2 c. Afternoon Session: Buyer 1891—100 tons, \$1.39 1/2. Buyer season—100 tons, \$1.39; 100, \$1.38 1/2; 200, \$1.38 1/2. Seller 1891—600 tons, \$1.04; 200, \$1.04 1/2; 100, \$1.04 1/2. Seller 1891, new—200 tons, \$1.04 1/2 c.

BUTTER.—The market has gone from bad to worse, closing to-day considerably demoralized. Receipts are free. Sales for shipments up north show an increase, but to sell, low prices had to be accepted.

CHEESE.—The market is weak at lower prices under freer receipts and heavier supplies to draw from. Buyers are offish, believing that still lower prices must obtain.

EGGS.—The market is firm. The prevailing opinion is that with clear weather and improved roads, receipts will be large and prices shade off.

FLOUR.—The market is firm under a fair demand and lighter receipts from Oregon and Washington.

WHEAT.—The market for sample parcels is strong at a slight advance. Holders were free sellers before tax assessment day, and are now offering only fairly. In futures, trading on Call is light. The following are the reported sales made on to-day's Call:

Morning Session: Buyer season—200 tons, \$1.46; 100, \$1.45 1/2 c. Afternoon Session: Buyer 1891—600 tons, \$1.49; 400, \$1.49 1/2; 400, \$1.49 1/2. Buyer season—700 tons, \$1.47; 100, \$1.46 1/2; 200, \$1.46 1/2. Buyer 1891, after August 1st—100 tons, \$1.44; 700, \$1.44 1/2; 100, \$1.44 1/2 c.

## Market Information.

## Produce Receipts.

Receipts of produce at this port for the week ending March 3d, were as follows:

Flour, qr. sks....	183 188	Middlings, sks....	2,664
Wheat, cts....	448 707	Alfalfa, "....	"
Barley, "....	22 18	Chicory, bbls....	229

## Cereals.

The local wheat market gained strength during the past week in sympathy with higher quoted markets coming through from England, and also more available tonnage at this port. At the advance interior holders have been selling freely, which meeting exporters' immediate requirements, caused them to be less anxious. The surplus in first hands is said

to be light, more being in second and third hands than in first hands. It is claimed that the large bulk of Oregon and Washington's surplus has been marketed.

The vessels on berth at this port for wheat loading have a carrying capacity of about 150,000 short tons. When they are loaded, there will be very little wheat in store in the San Francisco, Port Costa and Stockton warehouses, unless receipts from the interior become larger. The disengaged deep-sea vessels in port have a carrying capacity of about 30,000 short tons.

Previous to the present rain, advices from the agricultural districts reported that the crop outlook was of the most favorable character, which the writer has reason to believe still holds good. The only fear that need now be entertained is loss from flood on the lowlands provided the Sacramento and San Joaquin rivers should break through the levees, which now control their waters. Oregon and Washington advices are confirmatory of good crop prospects. The rains in those States came at the proper time, and with usual favorable spring weather, the yield to the acre will be about the same as it was in last year.

The Call Board gamblers in futures have not succeeded in keeping the market for barley down. While not successful in this, they did succeed at the very low prices in frightening some holders of actual grain, who let go. The supply in this State is very light, as it is also in Oregon and Washington, which causes the better informed to look for still better prices before the spring months pass. A large increased acreage is seeded to barley in this State.

Under lighter receipts, oats have gained in strength. The demand is expected to increase from now on, owing to so many more horses going into training, and also more private teams coming into service. It is claimed that an increased acreage has been seeded this year.

Corn is stronger. The demand appears to be improving, and as the supply is only fair, many look for better prices to obtain before long.

Rye and buckwheat are steady, with the former showing a firmer tone.

## Grain in San Francisco Warehouses.

G. A. Abel, Grain Inspector of the San Francisco Produce Exchange Call Board Association, reports stock of grain in the city warehouses on Feb. 28th as follows:

	Dec. 1.	Dec. 31.	Jan. 31.	Feb. 28.
Wheat, tons....	11,310	9,533	7,796	5,898
Barley.....	9,542	10,880	9,807	8,948
Oats.....	2,597	2,024	1,684	2,394
Corn.....	1,041	2,588	3,033	2,009

The quantity of wheat in the warehouses at Port Costa on the 28th was 103,000 tons and at Stockton 58,830 tons, making a total of 161,734 tons in all Call Board warehouses, a decrease of 24,663 tons during the month of February. A year ago there were 78,467 tons in the same warehouses, not including Stockton.

H. Kains Jackson in *London Farmer*, Feb. 9: Our neighbors, the French, find the look of their growing crops is unsatisfactory. The long frost upon the sugary-light soils of France has done mischief, and the Continent took more wheat direct from America and from India in the past week than did the United Kingdom. The position abroad is less assured than that of these islands, being more dependent than ourselves upon the future season. If the lack of rainfall in California—some 10 inches deficit up to date—is not soon compensated there cannot well be an average crop on the Pacific Coast. In New Zealand recent weather has reduced crop prospects go to 50 per cent according to latest intelligence. Russian prospects are very uncertain, but from India the news forecasts a favorable harvest.

The technical issue of the *London Miller*, Feb. 2, contains the following special note on the new Australian harvests:

The Australian wheat crop has been satisfactorily harvested, and is reckoned to be a good yield per acre in the most important districts. The New Zealand crop is rather below an average, and has not yet been secured; the deficiency, however, was expected to be greater two months ago. Our own advices lead us to expect a yield of—

	Area.	Yield (Bush).
New South Wales....	420,000	4,200,000
Victoria.....	1,200,000	14,400,000
South Australia....	1,850,000	20,350,000
Western Australia....	30,000	360,000
Queensland.....	16,000	128,000
Tasmania.....	45,000	360,000
New Zealand.....	340,000	6,680,000

Totals..... 3,901,000 46,478,000

The average home requirements of the Australasian colonies are now reckoned equal to 30,000,000 bushels, while demand for China and the islands between Australia and China equals 2,000,000 bushels, and the demand for Africa, Mauritius, and Madagascar 4,000,000 bushels; thus from the above harvest 10,478,000 bushels, or 1,309,750 qrs., would appear to be available for the European market. An estimate published a few days since put the new crop at 850,000 qrs. more than last year, when 5,310,000 qrs. were grown. This, of course, would give a total of 6,160,000 qrs., or 49,280,000 bushels, but we shall decline to attach much weight to these figures until it is clearly shown that allowance is made for New Zealand not being so good a crop as last year.

## Feedstuff.

Bran and middlings are a fraction lower, but ground and rolled barley are higher. Feedmeal is steady. Warm weather up to to-day caused a rapid growth of grass, which will give soon an abundance of green pasture.

Hay continues strong, with no prospects of lower prices until about new-crop season. The demand for feeding purposes is quite large, owing to the great amount of outdoor work. It now looks as if the crop this year will be unusually large.

## Live-stock.

Bullocks are steady. There have been free shipments by rail to Oregon. Mutton sheep are easier. A lower range in prices is looked for next month. Hogs suitable for the block are scarce. Grain fed are scarce, but grass fed are in good supply. Milch cows have a fair inquiry.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4 1/2 @ 4 3/4 c @ lb;

dressed, 7 @ 8 1/2 c @ lb.; heavy, 4 1/2 @ 4 3/4 c @ lb.; dressed, 6 1/2 @ 7 c @ lb. Stock hogs, 3 1/2 @ 4 c @ lb. BEEF—Stall fed, 7 @ 7 1/2 c @ lb.; grass fed, extra, 6 1/2 @ 7 c @ lb.; first quality, 6 @ 7 c @ lb.; second quality 5 @ 6 c @ lb.; third quality, 4 @ 5 c @ lb.; bulls and thin cows, 2 @ 3 c @ lb.

VEAL—Small, 7 @ 8 1/2 c @ lb.; large, 5 @ 7 c.

MUTTON—Wethers, 8 @ 8 1/2 c @ lb.; ewes, 7 1/2 @ 8 c @ lb.; spring lamb, 15 @ 16 c @ lb.

## Fruits.

Apples are scarce and higher. The top for Yellow Newtowns is \$2 a box, and choice reds \$2.50 @ 2 75, but it is claimed by some dealers that higher prices are likely to obtain in the near future.

Limes are slightly lower under free imports from Mexican ports. Lemons are barely steady.

High water in the southern part of the State interrupted receipts of oranges, allowing the market to be well cleaned up, with a slight advance toward the close. It is difficult to forecast the future, or rather what prices will be when railway connections are again made and free shipments set this way. That the market will take large supplies is reasonably certain, but with heavy receipts it is likely prices will have to be shaded some.

There is considerable quiet buying of dried fruits. Several firms have cleaned up their holdings at the best figures obtainable. It looks as if slightly higher prices are likely to obtain toward the close of the present month. Stemmed grapes are about all bought up. Raisins are reported dull, but holders do not appear disposed to press the market, believing that a good distributive demand will set in in April or May, and as the stock in this State is not large, that which is held can be worked off to good advantage before the end of the summer months.

## Vegetables.

Garden truck is making rapid growth, but outside of a few of the earliest kinds dealers have to draw on Los Angeles for beans, tomatoes, cucumbers, peas and summer squash. Asparagus is coming in more freely; with continued free receipts, sales will be made soon by the box. Several consignments of tomatoes received the past two days were overripe from being delayed in transit.

The receipts of onions are fair; as the outlet is restricted, the market is easy. The opinion prevails among several dealers that prices will not set off much, if any, owing to the light supply on this coast.

Free receipts of potatoes and poor outlets broke the market. Warm weather causing fears of sprouting, which would in many cases cause rehandling, made some place their consignments at the best figures obtainable. As usual, when such conditions obtain, buyers bid low. There are large quantities of poor, defective potatoes, which are very hard to sell.

## Miscellaneous.

Poultry is higher. The city ordinance forbidding the selling of wild ducks and wild geese on and after March 1st has a good effect on the market for all kinds of poultry, confirming our position at the time of the passing of the ordinance. Broilers, fryers and young roosters are wanted.

The receipts of beans are light. Interrupted railway travel has caused a dull market. With the usual spring trade setting in, the market is expected to show more strength.

Hops are slow. It is said that brewers are using considerable bitter bark from Mexico and other substitutes.

In wool there is nothing doing, and not likely to be until the new clip season sets in.

Exports by sea the past week aggregate as follows: Wheat, cts, London, 6731; Cork, 141,431; Havre, 50,831; Antwerp, 58,264. Flour, bbls, Sligo, 23,700; London, 7000; Honolulu, 860; Central America, 300; Tahiti, 1426; China, 12,212; Japan, 2491. Brandy, gals, London, 8600. Wine gals, London, 2581; Mexico, 1501; Honolulu, 3704; Tahiti, 446; Victoria, 942. Raisins, bxs, 130. Potatoes, sks, Mexico, 200; Tahiti, 112. Bran, sks, Honolulu, 1350. Barley, cts, Honolulu, 200; Tah

## PACIFIC NURSERY,

Established 1871,

OFFERS FOR SALE THIS SEASON

100,000 OLIVE TREES.

Mission Olives, two years old, \$15 to \$18 per 100.  
Nevadillo Blanco Olives, two years, \$15 to \$18 per 100.  
Lawayino (from Genoa) Olives, two years, \$20 per 100.  
Picholine Olives, two years, \$6 to \$10 per 100, \$50 to \$50  
per 1000.

Riparia Grapes, two years, rooted, \$15 per 1000.  
Blackberries, Lawson and Kittatinny, \$10 per 1000.  
Guavas, ready to fruit this season, \$15 per 100.  
French Prunes, a few thousand on hand. Price on  
application.

Monterey Cypress, in boxes, transplanted, \$12.50 per  
1000. Monterey Cypress, balled, from \$10 to \$20 per 100.

Address F. LUDEMANN,

Baker & Lombard Sts., San Francisco, Cal.

## NAPA VALLEY NURSERIES.

ESTABLISHED 1878.

## GENERAL NURSERY STOCK.

Special attention to magnificent stock of

Paper Shell Walnuts.

LEONARD COATES,

NAPA, CAL.

(Proprietor Sausal Fruit Farm.)

## GUM TREES

\$8.00 PER 1000.

Or Red Gums at \$14.00 per 1000, all transplanted, healthy,  
hardy stock. Will send any size required, from 6 to 10  
up to 12 to 18 inches high, at above prices. Any size of  
Monterey Cypress at low rates. Send stamps for sample  
boxes. The best trees, for the least money, in the State.  
GEO. R. BAILEY, Park Nursery, Berkeley, Cal.

## KELLER'S NURSERIES

Oakland California.

FOR SALE, 50,000 CHOICE ROSES

Also Trees, Plants, Shrubs, Etc.

Nurseries, Piedmont. Floral Depot, 510 and 512  
Seventh Street, P. O. Box 73, Oakland, Cal.

### Romneya Coulteri.

[Written for the RURAL PRESS by C. R. ORCUTT.]

One of the most charming of California wild flowers is the large, perennial white-flowered poppy, *Romneya Coulteri*, which has been favorably known abroad for many years, and has in recent times been rediscovered, so to speak, by California.

The genus was named *Romneya*, in honor of the Rev. Dr. T. Romney Robinson, a noted astronomer of Armagh. It is a shrub, usually from 5 to 15 feet in height, half-woody at base and does not die down but needs to be pruned well back in the fall. It is one of the finest of California plants. In early spring vigorous shoots start from the dormant roots and grow from 6 to 10 feet high. The large hairy buds open at daylight; the crimped petals slowly unfolding from over the huge bunch of stamens (the bunch as large as a walnut) until they spread out from 6 to 9 inches. They last several days, the buds opening well in water.

The foliage is very effective, and makes with the flower a very beautiful and artistic study. There is a delightful harmony between the much-divided glaucous foliage and the waxy-white flowers, which makes it much admired as a decorative plant.

The *Romneya* occurs from Santa Barbara county, southward into San Bernardino and San Diego counties, and below the Mexican boundary nearly to San Quintin bay, Lower California. It is seen at its best in San Diego county and in Lower California, where it may be found growing along the borders of streams, in the richest and most fertile portions of our valleys, or on the dry mountain or hillsides and in sheltered canyons on the warmest, driest and most unapproachable slopes. It is mainly confined to the foothills and valleys near the coast. It is easily domesticated as far north as San Francisco, and with us is quite a hardy shrub, requiring only a sheltered position to protect the flowers.

A rich sandy loam soil is most suitable. The species may be increased by seeds, sown in spring, but only the most careful and painstaking are usually successful. The seeds do not germinate for four to eight months or longer. With care the roots may be readily transplanted. Cuttings may also be made to grow. Single plants do not seem to mature seed in cultivation, but when grouped, as in the wild state, the seed mature abundantly. The stems multiply rapidly from the roots, until a single plant will occupy a considerable area.

W. Goldring, writing from London (*Garden and Forest*, i. 291), says of the *Romneya*:

I have just seen this glorious flower in Kew gardens. With us it is one of the rarest and choicest border flowers we have. One need not be an enthusiast to admire its great satiny blossoms of snowy whiteness and adorned in the middle with a tuft of stamens like a golden tassel. It has the reputation of being a "miffy" plant—that is, it wants much attention and then often does not reward us by behaving well.

There is now a considerable home demand for this handsome shrub, and for California homes there is no plant more desirable for the lawn or garden. As a pot plant in the East and Europe, it is eminently a success. It blossomed when small profusely, and while the flowers are not nearly so large as they can be grown with us, yet it well repays all the labor and care bestowed upon it. No picture can do this

OUR GRANDEST WILD FLOWER—*Romneya Coulteri*.

ROMNEYA COULTERI—REDUCED FROM LONDON "GARDEN."

magnificent flower full justice. The waxy, delicate texture of the petals the pencil fails to reproduce as well as the airy grace of the plant itself. We wish we could place the reader before such a field of them as we have seen in the canyons of Lower California, where, climbing far up the mountain-sides, away from the reach of any but the most enthusiastic botanist, their numerous large white flowers show off, with startling beauty in the morning sunlight. It

seems a pity so many should thus waste their sweetness so far from appreciative eyes, but the bright-winged butterfly harbors no kindred thought as he flits from flower to flower.

In the designation of a State flower by our State Floral Society, the choice lay between two so-called "poppies"—the *Romneya Coulteri* and the *Eschscholtzia Californica*—the latter winning not upon beauty but upon its greater elements of popularity.

### On the Track of Bogus Butter.

We stated briefly last week that the revenue officials were on the trail of the dealers in oleomargarine and other abominations, the manufacture and sale of which are now regulated by United States revenue laws. Uncle Sam's efforts in pursuit of his legal income may thus disclose the traffic in these impure products and thus largely prevent it, for it is a business which thrives on this coast only under the cover of darkness and deception. We stated last week that deputy revenue collectors and agents had been specially designated for this work in different parts of the State to which the material is being shipped from Eastern factories. The *Chronicle* reporter who has been following up the subject in this city makes this statement:

The history of oleomargarine in this market is interesting. The Armour Packing Company began a year ago to send it here from Kansas. The firm in 1890 imported probably not less than 30,000 or 40,000 pounds. The enterprise was then given up and a season of honest butter followed. Last month two well-known wholesale firms in this State, Messrs. McCarthy & Harding of this city and Long, Whitney & Co. of Los Angeles, commenced importing it again. Since then many retail dealers have purchased quantities of oleomargarine from both these firms. In fact, during February no less than 16,000 pounds have reached this city, equivalent to 7500 rolls.

These facts were learned by consulting the records in the office of the Internal Revenue Collector. Acting Collector Youngberger stated that he had about 700 samples of alleged butter which he intended to forward for inspection to Commissioner Mason at Washington. In many cases the imitation of the genuine is so subtle that even the acute eye of the Government microscope cannot detect the difference.

It is further stated that the investigations of the revenue men show that not less than 100 retail grocers are selling bogus butter in place of the genuine. It is proposed to increase the number of deputies employed, and during the next 30 days to visit every grocery store in the city. The United States will make an effort to enforce its penalties upon all caught dealing in the stuff without meeting the requirements of the United States law. It would be perfectly feasible to give the offenders a second dose of discipline by proceeding against them under the statute of California, which is, in some respects, more grievous than the United States law. There is, however, no organization to proceed with such work unless the dealers in the legitimate product have one. Producers should, of course, bear due share in such work, but in this State it has proved exceedingly difficult to focus their widely scattered influence and interests. Depressing the value of the pure product by competition with a monthly introduction of 15,000 pounds of bogus products may, however, prove a rallying power even among the dairy producers.

A NEW CREAMERY.—The California Creamery Company has incorporated, to deal in cream, butter and cheese, with \$25,000 capital, all subscribed by the following incorporators and directors: J. H. Hegler, M. M. Johnson, Julius Kaupisch, F. M. Kaupisch and Chas. Mersfelder. The creamery is located in Mendocino county. Separators will be used. The company will buy the cream from 1500 to 2500 cows owned by various farmers within a radius of five to ten miles of the creamery. It will be in operation by April 1st.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## San Diego Notes.

EDITORS PRESS:—This end of the State, and especially this immediate section, is very much awake and very jubilant over our bountiful rains. Large areas will be planted to citrus fruits, guavas, apriots, etc. Another event of greater importance to fruit-growers than the splendid rains is the settlement of the long-contested, vexatious Neale case, with which the public generally is familiar. Last Thursday night the tunnel constructed to draw the water from Mr. Neale's land was closed. Since then (four days) not less than 20 feet of water has been added to the reservoir. Before the rains are over the reservoir will be filled and six billions of gallons of water for summer irrigation means large additional acreage of fruit orchards.

No further anxiety about the water supply in this locality. City people are almost as glad as those who till the soil, for they well know that the soil is the fountain-head of all prosperity.

March will be an interesting month here. On the 9th instant the citrus fair opens at Los Angeles, and San Diego county people are awake to their interests in the matter and have a wide-awake committee at work arranging for a fine display. A beautiful local representation is to be made with fruit, and artists are to go and see that everything is properly done. Hundreds from this county will visit the exhibition.

On the 17th the State Educational Convention will meet in San Diego, an event that is looked forward to with pleasure by teachers and all interested in schools. Our Northern educators will receive a hearty welcome, and if they are not well taken care of our people's reclamation for hospitality ought to suffer. While our schools are excellent, we expect to learn many things from our visitors to increase their efficiency.

Tourists abound in this region. No season has ever brought so many. The hotels are full—some of them overflowing. Hotel del Coronado has 700 or 800 guests. All are extravagant in their praises of that beautiful seaside resort and the careful attention bestowed upon them for their comfort and pleasure. An excursion on land or water is arranged for every day in the week, and a hall is given every Saturday evening in their elegant ballroom.

The National City & Otay Railroad Company have two regular 60-mile excursions each week, of which large numbers of tourists avail themselves. The route is to the Mexican line and Sweetwater dam, and the trips are greatly enjoyed.

Like the rest of the world, this county has an unusual share of sickness this winter, mostly a light form of la grippe. Your contributor, Ira S. Thomson of this city, died on the 15th inst. He was by nature a man of indomitable energy, integrity of character and intellectual vigor. Several years ago, while editor and proprietor of the Vineland, N. J., *Daily and Weekly Advertiser*, he was stricken with paralysis, from which he never recovered. He came to this coast with his family for the benefit of his health, which gradually failed, although his intellectual powers seemed unimpaired. Much of his time was spent in writing for papers and magazines. He was particularly interested in educational matters and was a regular contributor to educational literature. In his early life—he was 70 at the time of his death—he introduced the study of physiology into the schools of New Jersey, against great opposition, which shows that the world not only moves, but moves fast. Mr. T. was an appreciative reader of the *RURAL PRESS*.

National City.

F. M. K.

## The Weather and the Roads.

EDITORS PRESS:—Another heavy rain has just ended and left some snow on the near and higher hills. It came too close after the other one to do any good; better spread it out a little and save some for March, April and May. Who said there was too much fog all winter and there would be no rain? Well, there has been over four inches for the last storm and over ten for the other storm, and somewhat cold, but that will be good to keep the fruit blossoms back and be more propitious for a fruit crop. Feed has been good since early winter and stock generally looks well.

I saw a piece in the last *RURAL* about roads. I think that there is some improvement needed in our road laws, for it is hard to get a good road under our present laws. In the first place, there should be some one who is well qualified for the business to look after all the public roads and to see to it that every roadmaster does his duty. I believe it is the duty of the supervisor to do so, but he or they do not always do it; hence I think there should be a road commissioner appointed or elected for each county, whose imperative duty under bonds would be to go over and see that every road and part of a road is kept in proper order, and have all the turnouts and ditches and causeways open and ready for the first rains in the fall, and then kept so all winter. If this were done, there would not be nearly so much re-

pairing to do every spring, and there would soon be money accumulated for new roads, etc. But no; up here they let the roads wash away so much that it takes all the road money every spring to repair, where it might have been half or more saved just as well as not. "A stitch in time," as the old woman says.

Now about the "direct tax." I believe that if every man under 60 years of age should have to work out his tax, it would go a great deal further toward keeping our roads in good shape than they do by the direct tax after the per cent is taken out for collecting, etc. Again, not all the men are always able to pay in cash, but still there is money needed for repairs all along in summer and more in fall and winter. Some would rather pay cash than work. Let them do so, and *vice versa*. More might be said, but I fear that I am commanding too much space for one article, so I will close and hope to hear from some one that has better ideas and is better qualified to write on such an important subject.

WM. H. MULLEN

Big Bend Butte Co.

## THE FIELD.

## Peanut Growing.

The following essay was prepared by R. M. Hargrave for the Santa Ana Standard, and is so thorough and so concise that we reproduce it for our readers' benefit:

Having been many times requested to write an article on the cultivation of peanuts, and received many letters of inquiry, I have been thus induced to do so, and only give what I have learned by actual experience and not any hearing or guesswork about it.

Planting.—The best time to plant peanuts is about the middle of May, say 10th to 15th, in rows about 3 to 4 feet apart, and 16 to 20 inches the other way, and not over too deep, 3 or 4 inches, and the best results are obtained by irrigating the ground before planting—it kills all the insects and gophers that destroy your seed, and you get a better stand and a better yield. The reason why peanuts should be planted the middle of May is that they ripen evenly and are of a more uniform size, and not so many little nuts. Very early peanuts ripen uneven, and the first nuts that set on get so ripe they turn to a pink color, and if the land is a little sandy the stems get soft, lose their strength, and will not lift the nuts from the ground, and the first nuts are lost, as in many last year's crops that I could mention, and many small nuts with black ends when they are cured.

Seed.—Like all other crops, good seed is required in order to get a good stand. Many made a mistake last year by planting poor seed. It takes about 30 pounds of the California or White Virginia, and 50 pounds of the Tennessee Reds to plant an acre. Tennessee peanuts can be planted much closer in the rows. The California peanut is the best to plant, as it yields three or four times as much as the Tennessee Reds do, and has more ready sale.

The Quality of Land.—Peanuts require a rich, sandy soil loam, that is known as upland. Damp land gives the nuts a straw color, and they are not as good a quality as those raised on higher land. They require no irrigation, except on very sandy land, where some have found it profitable, but as a usual thing when irrigated the ground is liable to get hard, making the nuts crooked, ill-shaped, and many times coloring them.

Cultivation.—Peanuts should be cultivated about the same as corn, not allowing any weeds to grow in them, keeping the ground loose and mellow, and when the spikes begin to form they should not be disturbed. If they are, it causes the nuts to blight or not fill out. The blooms do not require to be covered. Many think peanuts cannot be raised without covering, but the less they are disturbed after blooming the better.

Harvesting.—Peanuts should be harvested when ripe, and not be allowed to stand too long in hopes that the last ones set on will fill out and ripen, as you lose more than you gain. The little ones spoil the sale of the crop, and many are left in the ground that get over-ripe. Peanuts should be cut or plowed out and thrown into windrows, nuts down, and let lay a week or ten days and then sacked, as the best nuts are cured in that way and they do not mold so badly, and cure a better color. They must not be allowed to get wet, and then when it comes to packing, you need not get in a rush, and they can be picked in better shape and saves hiring so much help. The tops are good feed if stored away in a shed for winter use. All kinds of stock like them, and small nuts can be left on the vines. They make the best chicken feed.

Market.—The market was abused this last season, many shipping before the peanuts were cured or fit for market, and many molded and turned black before they reached San Francisco. Others shipped stems, leaves, dirt and all sizes, saying: "I can get as much for poor nuts as good ones if I sort and clean them." What was the result? The market was ruined, and peanuts are dull sale in San Francisco today. Some are shipping in Eastern peanuts and others are sending into the country to buy peanuts that are well cleaned, paying here the best San Francisco quotations. A good quality

of nuts is worth as much at home to-day as they are in San Francisco, because the market is glutted with dirty, black, moldy nuts, and the dealers have found it out. Those who plant peanuts this season with the expectation of rushing them in early for a high price will be badly left unless they are well cured before shipping, as the dealers have got their eyes open this season.

Yield.—An average yield is about 25 to 30 sacks to the acre, 40 pounds to a sack, but many have raised 50 sacks, with extra care and good land well adapted to peanuts. Five cents per pound is a fair price for good nuts, making a revenue of from \$40 to \$100 per acre.

## Directions for Making Sorghum Molasses.

The sorghum canes, properly stripped of leaves and with the seed tops removed, are passed through a mill adjusted to extract as large a per cent as possible of the juice. A first-class, three-roller horse-mill, properly adjusted, will extract from 60 to 65 pounds of juice from each 100 pounds of clean cane. In case the molasses shows a tendency to granulate, the cane should be cut and allowed to lie in the field three or four days before being worked. If the molasses does not show any tendency to granulate, it is best to have the cane worked as soon as possible after harvesting.

As soon as the juice is expressed, it should be treated with cream of lime, which has been thoroughly strained so as to contain no large lumps of undissolved lime. In a tank of convenient size, two-thirds filled with juice, the cream of lime should be added, little by little, with stirring so as to incorporate it thoroughly with the juice. As the point of neutrality is reached, the juice will show a large amount of flocculent matter, and will slightly change in color, passing from green to amber color. Care must be taken not to add an excess of the cream of lime, the result of which would be a darkening of the molasses. The proper point may be soon learned by experience; it can also be determined directly by litmus test paper. The blue litmus paper should be used. When this blue paper is placed in the natural juice, it will turn to light red. As the point of neutrality is reached, the change of color in the litmus paper becomes less and less pronounced, and when it is distinctly purple it shows that the proper amount of lime has been added. If too much lime be added the paper will not change in color at all, or he made more distinctly blue. Litmus paper can be obtained from any well-equipped drug-store.

A very excellent article of molasses is made by adding to the juice, treated as above, some bisulphite of lime. This bisulphite of lime is made by passing the fumes of burning sulphur into cream of lime until it is saturated. The addition of the bisulphite of lime makes the juice again acid, but tends to produce a molasses of a much lighter color than can be made without it. Excellent molasses, however, of a somewhat darker color can be made without the use of the bisulphite of lime. A good article of molasses of light color can also be made without adding lime, and molasses made in this way is exceptionally good for baking purposes.

The juice, after treatment with the lime or with the lime and bisulphite of lime, or with the bisulphite of lime alone, should be placed at once in a tank and rapidly brought to the boiling-point. It should, however, not be allowed to boil; but when the foam, which is formed over the top, begins to show signs of breaking, the heat should be withdrawn and the blanket of foam carefully removed. The heat may then be again applied until all the green acums have been entirely separated. The purified juice should now be reduced, as rapidly as possible, to the consistency of molasses. This is best done in some form of continuous evaporator based on the old-fashioned Cook evaporator, in which the purified juice constantly runs in at one end of the evaporator, passes back and forth across it, and the finished molasses runs out at the other end. The more quickly this evaporation can be accomplished the better for the molasses.

When the molasses runs from the evaporator, it should be cooled as quickly as possible and should never be placed in barrels until it has almost reached the ordinary temperature of the air.

These directions are only of a general nature, and it requires a large experience to be able to produce always a first-class article of molasses.—U. S. Dept. Agriculture.

## Hops in Washington.

E. Meeker & Co., the Puyallup hop dealers, issued, Feb. 19, the following circular: This firm has shipped, during the season of 1890, six solid trainloads of hops to London, which, including other shipments, comprised the equivalent in quantity of one-fifth of the Washington crop for the crop year under review.

From the statistics at hand we estimate that \$2,500,000 has been received for the hop crop of Washington grown in 1890, and nearly \$1,500,000 for the Oregon crop of the same year.

The list obtained from official records shows the shipments of Washington hops, of the crop

of 1890, from September 1 to December 31, 1890, aggregated 42,746 hales.

No statistics are at hand showing the actual shipments from Oregon, but it is fair to judge the crop in that State has likewise been underestimated and that the total yield has been fully 25,000 hales instead of 20,000, as heretofore estimated by us in our last circular, making a total for the two States of 75,000 hales. Almost all of the Oregon crop has gone forward and into the hands of the consumers.

The shipments since December 31, 1890, including the stock yet on hand, will foot up fully 5000 hales, Washington's—a conservative estimate—and may reach the unexpected grand total for the crop year of 1890 of 50,000 hales.

It is with no small amount of local pride we are able to chronicle the fact of Puyallup standing at the head of the list in its hop business and shipments as heretofore, with quite an advance over any former year.

Contracts.—The disastrous results to both growers and dealers who scrupulously fulfilled all contracts, coupled with a threatened loss of a portion of the crop by vermin, thus rendering the quality uncertain for future crops, has put a stop to the practice of contracting for future deliveries, and it is to be hoped never to be revived.

Had the growers not contracted any of the crop of 1890 until in the bale, and then met the market, there would have been more than a million dollars more money in circulation in the two States of Washington and Oregon than now, and a "world" of litigation avoided that now crowds our court dockets. Hereafter this firm will make no contracts for hops until the same have matured and are ready for delivery.

Heavy Baling Condemned.—Notice has been formally served upon this firm that hereafter no hales will be passed the scales that weigh over 210 pounds, so growers will please take notice that no hales weighing more than this will be received by us hereafter, as we do not wish to purchase that which we cannot sell.

There is a good reason for this rigid "iron-clad rule" in that hard-pressed bales never make good summer-use hops, and this desirable quality of the North Pacific growths of Oregon and Washington is that which has given us such prestige on the London market as to enable us to sell freely on that market. An average of 170 pounds is better than 180; in fact, the lighter pressed hops are the better, as they retain their "age" and usefulness to the consumer longer.

Stocks.—Messrs. Rothbarth & Sons, New York, under date of February 9, 1891, estimate the stock of hops on hand in the United States at 69,000 hales, all of which will practically be needed to supply the wants of brewers not already provided for, assuming there will be no further import of export trade.

This leaves the problem of the "world's supply" with German and French factors, the ways of which are past finding out. Hence the future of the market is as usual shrouded in mystery and beyond the knowledge of the most wise.

Markets.—Contrary to all expectation based upon the known shortage in the world's supply, the market has not fully recovered from the great sag of November, caused by the stringency of the money market, at the beginning of which prices were firmly quoted at from 200 to 210 shillings per hundredweight. Now the same qualities will fetch no more than from 165 to 175 shillings per hundredweight, a difference of fully 8 cents per pound.

## Sugar-Beet Growing.

A bulletin will shortly be issued by the U. S. Department of Agriculture of special interest to beet-growers. It will present in a condensed form the data in possession of the Department concerning which the most frequent inquiries are made by persons desiring to grow sugar beets. It will review briefly the climatic conditions favorable to the growth of the sugar beet, the area in the United States favorable to this crop, the varieties, soil, fertilizers, rotation, preparation of the land, planting, and all the details of culture up to and including the harvesting and delivery of the sugar beets at the factory. Estimates are given of the cost of growing sugar beets in various parts of this country and of other countries. The production of seed, to the scientific methods of which pursued in foreign countries is chiefly due the extraordinary increase in the sugar content of the beet which now makes it so profitable a crop, is given a special chapter.

The bulletin contains also some suggestions and information in regard to the manufacture of sugar of a nature to be of interest to all growers of this crop and some statistical information showing the comparative development of the cane and beet sugar industries, together with the consumption of sugar per head in the principal countries during the year 1889, and a special table showing the consumption in the United States. There are several illustrations presenting the various implements best adapted to the culture of the sugar beet. The bulletin will be very brief, thoroughly practical in its character, and will be issued as *Farmers' Bulletin No. 3*, of the United States Department of Agriculture. Applications should be made to the Secretary of Agriculture or to the Chemist of the U. S. Department of Agriculture, Washington, D. C.

# FORESTRY.

## Forests and Floods.

Ten years ago I wrote a pamphlet setting forth the fact that considerable areas of brush and timber in the foothills and mountains were being burned off every year and the brush on some small portions of such burned districts was being dug out by the roots. The result of undue forest or brush destruction was shown to have been in other countries an increased flood flow and torrent action on the one hand, and on the other a diminished supply of permanent perennial water in either wells, springs or rivers. In a mountainous, and especially in a dry mountainous country, these results were shown to be prompter and greater than elsewhere.

The warning was then given that unless some check was put upon the denudation by fire of our watersheds, very serious consequences would be likely to ensue. Ten years have passed and ten fires and waste have gone on. Is it not now possible from our experience to say that in proportion as a mountain watershed is denuded so much the greater will be the flood flow for every inch of rainfall?

As the watersheds are denuded, the water flowing from them carries more and more sand, stones and soil. This detritus is added to the volume of the water. From my own measurement I believe that one-third of the volume of our torrents in floods is often composed of detritus. Of course this adds greatly to their flood power, not only as to volume but as to erosive or cutting capacity. This feature of our torrents owes its great recent increase to mountain fires and the consequent increased detritus delivered by the mesa and mountain streams. Flood water thus charged with sand, stones and boulders has an erosive power similar to air charged with sand and used as a sand blast. It is for this reason that we see barrancos, gullies and washouts where we formerly had none. No farm in a bottom land near any stream is now safe. This is true not only from the increased cutting power of the streams, but also because the capacity of water to carry detritus depends on the gradient of the water flow. After fires or other denudation the streams usually come out of the steep mountain grades charged to their full carrying capacity with detritus. As soon as the lower grades are reached some of the load must be dropped. Such deposits fill up the stream bed and there must be a continuous tendency in such streams to break into new and unexpected courses and to do great ruin.

Our remedy is a forest policy such as necessity has forced upon all civilized countries but ours. Ripe timber should indeed be cut, the forests should indeed supply us with firewood, but the forest can and does in other countries provide man's wants without any necessity of forest destruction. As for the fires that every year heat the hot autumn, superdry the air already overdry and mar and waste our mountains, they are inexorable on any ground. They are sometimes caused by negligence, but the great majority are purposely set. One hundred and fourteen fires started in separate and distinct places in the mountains and foothills of the Santa Monica range last year between the Rodeo ranch and the Malibu. Some of these burned only a little way, others extended over miles of territory. One of them nearly burned up the pavilion at the forestry station, and did burn large quantities of the trees planted on the forestry ground. Fires are the forerunners of floods. Every year our arroyos and torrents widen their beds; every year some stream changes its course; every year the damage by flood of a given rainfall increases. And this is only the commencement. Many countries have been ruined by forest denudation unchecked, and civilized countries have come to an appreciation of the facts, and have after an expensive schooling taken their precautions in a national forest policy. To indicate what the cost of these forest lessons is, we may cite the valley of the river Durance in France. This stream rises in a mountainous country originally forested. The trees were cut and rafted out, sheep were introduced, the brush burned, and the mountains quite denuded. The result was the cutting away by floods or the covering up by torrent detritus of 200,000 acres of fine lands in this single valley.

We must all join together and stop this wasteful and dangerous destruction of the coverings of our mountains, or our bill of damages will far exceed that of the Durance.

Large numbers of trees have been planted in Southern California, but these are all in the valleys, and while helping the climate cannot control the flood-waters coming from the denuded mountains. These must be controlled in the mountains and foothills.

Levee districts are an expensive palliative for the results of forest fires. There never can be a remedy. The difficulty of building an effective levee can be seen on the Los Angeles river, where great expense has been gone to by the railroad companies. Their levees are costly, unreliable, and made of material certain to rot out under ground. Besides the great first expense of any effective levee system to care for mountain streams, there is a still greater expense in the necessity of raising the levee banks from time to time. This necessity grows out of the inability of torrents to carry on the

valley grades what they pick up in the mountain grades. Consequently the torrent beds rise above the general level and no levee can make them scour. So it may be observed that the outlet from the mountains of so many of our torrents is on a talus or deposit of sand, stones, etc., higher than the surrounding country, and this must become more and more the case as mountain denudation increases.

I have seen levees to hold torrents on the Italian side of the Alp valleys, 78 feet high and then only 18 feet above the bottom of the torrent bed. This Telfer torrent is consequently at its bottom 60 feet above the surrounding country. I have stood on this levee and looked down on the top of four-story houses in the city of Boetzen.

I suppose that it is impossible for the people to realize what a mountain torrent in a country like ours will do. I suppose that it is impossible for them to realize that the true and only reliable remedy is in the mountains and not in the plains, in the brush and forests, and not in levees. Presuming that we can only hope for palliation at present, it may be well to suggest that one of the best flood and torrent breaks in this country, where water is permanently near the surface, as in all the river country below Los Angeles, is the willow hedge. The willow brush should be cut four to five feet long, and set about 2½ to three feet below the surface of the stream, and close to and under the bank to be protected. It must then be wired together thoroughly. In case the exposure is great to strong currents, a scantling or good post should be driven in deep, every ten feet, to anchor the wires. The next season this will form a living levee that no flood will move. No insects injurious to fruit trees harbor in willows. I speak from experience, having in a mountain district as road overseer taken this measure of protection, and never lost a culvert, grade, canyon road, or bridge.—Abbot Kinney, in Los Angeles Express.

## THE DAIRY.

### Building and Filling the Silo.

EDITORS PRESS:—I have read with very great interest Capt. Geer's experience with the silo as stated in *Eureka Standard* and copied in PRESS Feb. 21st, and my experience with silos does agree with the captain's so far as the building for the purpose is concerned. We used to go to quite a large outlay in the construction of silos some years ago, using brick or stone and laying it up with cement and finally plastering the same smoothly inside, believing that it was necessary to insure success in the preservation of green crops for winter food. We have learned, however, that any tight building built after the plan spoken of by Mr. Geer will preserve the food equally well, so long as it is made sufficiently strong to stand the pressure in settling, which is very great, as one can readily understand when a ton of it occupies but from 50 to 55 cubic feet.

Among the large milk dairies which go to supply the city of New York with milk, silos have become a very important factor, indeed almost an indispensable necessity to the successful and profitable production of milk in winter; in fact some of the most successful milk-producers stall their cows the year round and feed largely from siloed feed, together with occasional rations of wheat bran, ground barley, cotton-seed meal, by way of variation.

While a number of feeds are successfully preserved in the silo and found useful as a silo feed, there seems none equal to corn. Any good, strong-growing Dent corn will produce on good soil in New York State 20 tons of silage to the acre; 60 pounds per day with the ground feeds is on the average as much as a cow in full milk will consume.

The secret of making good ensilage is to put good material into the silo, cut fine and well tramped. Corn should be planted and cultivated so as to bring the most good sound grain, and put into the silo when this grain is beginning to glaze. Captain Geer's silo is too large for an average dairy say of 25 to 50 cows. I would build a silo of a size so that when feeding the whole surface could be taken down some four inches or more each day, or if at each feeding, all the better, as where the surface is exposed for any length of time, mold accumulates. Large silos are often cut down through, like hay, which is a bad plan, as the surface so exposed spoils to the depth of several inches, and though the cattle may consume more or less of this spoiled food, thus doing in a measure away with wasteage, it tends to make the milk taste of the spoiled food. Build silos for 50 to 100 head not more than 15 feet square and as high as you like; the higher the greater the pressure, and the more can be gotten in, and the smaller the surface exposed in feeding. Besides, in filling run the two, three or more pits up at a time, cutting say a day in each, allowing it to settle while cutting in the other. By this means again more can be placed in each silo and the chances of spoiling are lessened, as the silage is packed closer.

It seems to me there is no country in the world where dairying can be made to pay better than in Southern California, especially so where there is moist land that will grow corn. Milk products are reasonably high, and the residue from butter-making can be turned into

hogs, with green feed, as alfalfa, chopped fine for food, making cheaper pork than is possible in colder climates, and oows can be kept comfortable more cheaply here than elsewhere, and all grain foods average cheaper here than in the East, and butter on the average commands fully as high a figure. I. C. Wood, Palm Rest, Ontario, San Bernardino Co.

[Our dairy readers will welcome this communication and more like it.—EDS. PRESS.]

### Beets for Stock.

EDITORS PRESS:—In answer to numerous inquiries I will say: Stock beets should not be planted too early for two or three reasons—

First—In sections where there are sharp frosts, they are liable to be rendered wholly dormant if planted before March, in which case the crop is ruined; for when the young plants start again after their dormant state, they will run to seed, as this is the nature of all vegetables. The new start counts for the second season's growth, no matter how small the plant. The seedsmen should not be blamed in such a case; the seed might have been all right; the fault was in too early planting.

Second—Beets should not be planted before the heavy rains are over. Of course no one can tell when this period has come; the only way is to use your best judgment. If a heavy rain falls upon the soft land after it has been well pulverized and the crop has been planted, the soil is very likely to run together and harden and crack after a few days. In this case, the crop will be greatly injured if not spoiled. The soil should be kept in a loose condition around the roots to prevent being bound, stunted and dried out.

The conclusion is that beets cannot generally be safely planted before March or even April; of course it will depend upon the soil and the character of the season. If the soil is sandy and spring rains are light, the crop might do best if planted in January or February.

But in the coast counties north of the bay in four years out of five the best crop will be secured by planting from the first to the middle of April.

With the present prospect for light rains, some will be tempted to plant soon. But I would advise that the land be well plowed up and left until March at least. About six pounds to the acre of Long Red Mangle seed is considered enough. W. C. DAMON.

Napa Feb 24, 1891

## THE APIARY.

### Bee Buzzings.

EDITORS PRESS:—The steady downpour of rain will make some of our valley apiarists want to "flee as a bird to the mountains" to escape the flood. As the late rains are usually credited with producing the greatest yield of nectar, the bee-men can look out upon the storm with the assurance of a good season. Few, if any, hives are short of supplies. All that will be wanted this spring is an abundance of primed sections, with a few last-season sections, filled with comb, to act as starters. I was looking at a lot of hives the past week that were all tilted back; as the rain fell it poured in at the mouth of the hive, and as the bees had gazed the bottom board on tight, the hive held water like a bottle. The only way that it could escape was by the hive filling up to the level of the entrance. What a wet, moldy mess those bees will have of it, and how their owner will delude that "bees don't pay any more for some reason," but he is not alone. I have my stands one inch higher at the back than in front. This gives straight combs (if the hives are perfectly level across), drains the hive and enables the bees to stand their ground better when attacked by robbers; but in our long, damp seasons the hives get moist, then damp, and finally moldy. Some avoid this by raising the lids on fine days and thus giving the hives a needed airing; that does very well, but it breaks up the fastening each time, and if the fine day is followed by a cold night, or a windy day, it leaves the bees subject to a cold draught that proves the remedy worse than the disease. In summer-time, when the extremes of heat drive the bees out and cause them, in self-protection, to cluster in idleness on the outside of the hive, ventilation is again necessary, and the hive is usually raised from the bottom board to allow more air, and the larger opening taken advantage of by the robber bees; then the hive has to be suddenly closed down to an entrance only large enough for the entrance of one bee at a time, the comb melts down and the remedy again is worse than the disease. To avoid this, I shaded a hive completely, but still they hung out in idleness; then I cleared out all the full combs in the supers, but the bees bunched on the outside in idleness. Finally I bored two-inch holes in the rear of the hive, about an inch below the rabbet that the frames set on, and two inches from each side. These I covered with wire cloth, and the next day my idle bees were all indoors at work. When the weather changed it took but a minute's time to close the slides over the ventilators, and when a long wet spell, like the present, came, I could open the slides on the first warm clear day,

closing at night, and my bees soon had their hive sweet and dry. Beekeepers well know that a damp hive is more fatal to bees than a damp house to the bee-keeper, but few guard against it. However, while on this question of ventilation, I notice that some bee-keeper advises "a ventilated top box to be placed on top of the hives in moving," as "the bees will all leave the combs and cluster in this top box." Now a heeman doesn't want any more traps than is absolutely necessary, and I believe that if the screen that he puts over the hive has the end pieces one inch thick, the sides a half-inch, and the screen side placed next to the bees, the half-inch of space between the screen and the cover with the sides of the screen frame thus open will afford all the ventilation needed if the bees are moved, as they should be, after night. If an extra top box is needed, a super could be put on and the screen cloth placed over it, and if the roads are very rough, a few lengths of rope fastened length and crossways to the bottom of the screen and allowed to hang down midway in the super would keep the bees from jarring off, no matter how rough the road. These rainy days are the golden days for the apiarian; in them he nails up and paints his hives, primes his sections and prepares for the coming harvest of honey which at this time promises to be an unusual yield. E. H. SCHAEFFLE.

Mountain Bloom Apiary Murphys, Cal.

### Items of Interest in Modern Bee-Culture.

EDITORS PRESS:—The five-banded Italians are among the latest additions to our novelties in bee-keeping. These bees are a sport from the imported Italian bee, but like the white varieties of poultry, they have (by careful breeding) become a permanent and distinct strain. They are remarkably gentle, excellent honey gatherers, and are the most beautiful bees in the world; they are also known by the name of Golden Italians. I have lately received a report from the originator of this strain stating that he had a colony of the ordinary Italians the past season (standing alongside of several colonies of the five-banded Italian) which did not gather any surplus honey whatever, but had to be fed, while the five-banded colonies gave a surplus of 20 pounds each and this in the worst season in 15 years in the State of Michigan. The same writer also states that a bee-keeper near him owning 100 colonies of the ordinary Italians got only 20 pounds of surplus honey from his 100 colonies, while the owner of the five-banded Italians netted over 400 pounds of extracted honey from only 20 colonies. I have also received reports from several other owners of this strain to the same effect.

I intend to introduce these bees into California during the coming season. We want the best bees in the world, and although their beauty is only a secondary consideration, we shall have no objection to the most beautiful bees in existence so long as we have gentleness and superior honey-gathering qualities combined.

Other proofs of the good qualities of this strain of bees may be found in the *California Bee-Keeper*. "Progress with the times" is my motto.

The First Honey of 1891.

Bees have been gathering pollen for several weeks. During the last three or four weeks they have been bringing in immense loads, chiefly from the Acacia, and the cells are now loaded with new honey, or rather nectar, for there is none of it sealed as yet. Brood-raising is going on at a rapid rate. Since the rain came, the prospects of a good season are more encouraging.

Beeswax Getting Scarce.

The price of beeswax in the Eastern States is from 26 cents to 30 cents a pound, while in Ontario, Canada, it cannot be bought for less than 32 cents a pound. The chief cause of this rise in the price of this article is, no doubt, the increase in the manufacture of comb-foundations. A short time ago I received a communication from Messrs. Chas. Dadant & Son, Hamilton, Illinois, stating that they have made and sold in 1890, over 40 tons of comb-foundations. It is possible that we may have beeswax selling at 50 cents a pound this year, if the scarcity continues. WM. STYAN.

San Mateo.

DAMAGED EGGS.—It is an interesting fact that local commission merchants are using cold-storage warehouses because about \$12,000 worth of eggs were stored for them during March, April, May and June last year, but owing to carelessness, the apartments where the eggs were stored became filled with the odor of ammonia and other chemicals, permeating the eggs and destroying their market value. The sums sued for represent the difference between the prices which the eggs in good condition would have brought and the actual sums for which they were sold. The "fresh egg" surely has many ills besetting it, and, according to the allegations of the merchants, their eggs might as well or better have remained under the barn or alongside the strawstack as to have been treated as they were.

PRESSED PAPER PULP has been suggested for railway ties. The various uses to which this material has been put since the introduction of the wood-pulp process gives rise to the suggestion. There seems to be no good reason why it could not be put to this use.

## PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

## The Master's Desk.

R. W. DAVIS, W. M. S. G. OF CALIFORNIA.

Bro. X. X. Charters of Virginia, the zealous, efficient and painstaking Master of the State Grange of that glorious old State which is known as the "Mother of Presidents," has thanks for a bound copy of the Journal of the late proceedings. Bro. Geo. A. Bowen, the talented Master of the Nutmeg State Grange, has also "obligated" us for a copy of the Journal of Connecticut State Grange proceedings. Thanks, brothers. Your addresses have each been read and the Journals have been more than satisfactory in every particular.

Ohio intends to initiate 25,000 farmers into the Grange this year. How is that for progress? But you know Ohio is to have the next session of the National Grange. Can't California do about one-half as well as Ohio? Try, fellow-Patrons, try very faithfully!

Who is going to organize the greatest number of Granges in California this year? Now is the time to make a start. Send for blanks and for instruction, or get up a charter list and call for a Deputy. Who leads the van? Organize one Grange, anyhow.

There are indications that all the officers of one of the subordinate Granges will attend the annual session of the State Grange at Haywards, and while there will confer, in full and complete form, the four degrees. Such an object-lesson will be worth very much to all Masters.

There has been much said and written, recently, about Government loans. But who has struck the keynote? No doubt each lawmaker, each writer, each financier, and perhaps every thoughtful reader, thinks he is right; but, honestly, do you think the plan has been proposed that will not work hardship and invite danger? The question is one of the greatest magnitude. No safe conclusion can be obtained by a hop, skip and jump. Great care in every detail will be necessary. No loopholes should be left open. Guard safely and cautiously every inch of this territory or we may go from the pan to the fire. Let's make haste cautiously, and while wanting to advance, keep pretty near the middle of the road!

Would you like to see a farmer in the U. S. Senate from California? Seems to me 't would be a refreshing sight to see some man from the farm, called to leave his plow or dairy or drying-house, to go and occupy a seat in the council of the nation. Don't you know there are a hundred thrifty, honest, competent, successful farmers in California who would honor themselves, the State and the Senate, if sent to Washington. There are hosts of these "sons of toil" who are thoroughly posted, who are not for sale, who know what the interests of this State and nation demand, and who, if elected, could have and would have the courage of their convictions. No corporation would have its hand on these men, nor would the collar of any compact be found on their necks. The rights of the poor man would be as safely guarded and as studiously supported as would the interests of the rich man. Equal and exact justice would be the motto, not in words (empty words at that, too) but in votes and deeds as well. The home, the family, the little school and the country postoffice would be better legislated for by such a Senator than by a rich lawyer or retired millionaire. It is the humble citizen who now needs the assistance of legislation. Our wealthy "brothers" are amply cared for by present laws. Give us a Senator who will legislate for and guard the industrial interests of our State and nation.

The well-filled head, whether of the wheat or of the man, is the one that is most modest and most steady. If of the wheat, it turns toward Mother Earth, as if to show by modesty and humbleness its debt of gratitude for nourishment and development, and at the same time to seek shelter from the winds and storms. If of the man, the head is bowed because the thoughts are weighty and the laws of gravity prevent a heavy object from flying through space of its own force. It is the empty head of wheat and of man that is swayed by every breeze, and turned up and down, in and out, back and forth, by every passing, shifting current.

"Keep the eye of the mind open!" It will save you many steps, many stubs of the toe, many falls, many hardships, and many, many disappointments. It will insure you hosts of friends, much valuable information, many kind and needed companions, and thousands of opportunities to be good and to do good.

Study Cushing's Manual of Parliamentary Practice, and you will find a fortune of useful, practical information! See if you can't raise a "knotty question" of parliamentary law at

THE LATE C. J. CRESSEY, TREASURER STATE GRANGE OF CALIFORNIA.

your Grange meeting. It will sharpen your ideas to discuss the subject, if you get into the merits of the matter.

Weather and health permitting, a Grange is to be organized at Placerville this Saturday.

Nature presents many bright and beautiful objects. Do you see your full share of them? Do you enjoy the charms of Nature? There are many apparently silent objects that speak a "varied language." Have you ever conversed with a leaf, or a bud, or a flower? Do you understand the language of geology, or of chemistry? Nature addresses you on every hand. Do you return the salutation? If not, why not?

Standing Committees for the next session of the State Grange will soon be announced. Workers are wanted.

## Dixon Grange Reorganized.

EDITORS PRESS:—After a public meeting and two attempts, Dixon Grange was put on its feet again with 27 members to start in with.

I went to Dixon on Feb. 21st to reorganize it, but the weather being too stormy for the farmers to turn out, I returned without accomplishing anything. By correspondence, it was agreed that I should try it again on March 7th. On that day, with the exception of a north wind, it was fine, and the attendance was fully as good as I expected. About two-thirds were old members, and they showed a good deal of enthusiasm at the prospect of having the Grange started again. Officers were elected and installed, and were instructed in the work as far as time would admit.

Important business detained several who will come in later on. They elected a good set of officers, I think, and I expect to see a lively Grange at this place.

Dixon is surrounded by a fine farming country, with large barns and good farmhouses. Grain-farming seems to be their principal business, and some of their fields give great promise in the future.

They will meet again next Saturday and begin their drill. When they act their regular day of meeting, I hope some of our State officers will call on them and assist them in the work.

I wish Dixon Grange all the success it is possible for it to attain.

D. F.

## Death of Bro. C. J. Cressey.

Thousands of readers of the RURAL will grieve to know that the manly form of which we give a portrait upon this page is now silent in the embrace of death. Having for over a year struggled with bodily ailments which, however, could not repress the eager spirit nor chill its active interest and love, there came a time about a month ago when the strong man was obliged to retire to his bed and turn his face toward the unseen world. This he could do with the same firmness and fearlessness which marked his course throughout his life, and he devoted the few days remaining to him to the arrangement of his affairs so that the rewards of his years of toil and business effort should pass to the hands into which he desired to consign them. Thus the strong man, the loyal friend and earnest Patron passed away in the consciousness of a life honestly spent, leaving sadness and mourning in the hearts of all who knew him.

Calvin J. Cressey was of English descent, but a native of the old "Granite State," having been born in Conway, N. H., in the year 1830. He was raised on a farm (his father being a farmer), but at the age of 17 years, being tired of clearing land and digging rocks, he obtained the consent of his parents to start out and begin the battle of life for himself.

Going South, he spent five years in Georgia and South Carolina in various pursuits, and succeeded in accumulating a small amount of money. After this, on account of his health failing, he returned North, soon regained his strength, and in 1859 removed to California, where he landed with \$10 in his pocket and engaged in farming near Stockton.

Subsequently he moved southward, and was among the early farmers of Stanislaus and Merced counties, growing wheat and raising stock in company with his only brother, A. L. Cressey. The joint interest included 10,000 acres in Merced and 10,000 acres more devoted to cattle-raising in San Luis Obispo.

Of late, Cressey Bros. have engaged in banking in Modesto. They have been in partnership for 41 years, and their business has grown up with the country; and we understand that harmony has always prevailed between them through all the ups and downs of their career.

Bro. C. J. Cressey was a leader in organizing the Grangers' Bank of California, and has worked faithfully and honestly for the upbuilding of that prosperous institution, which has already done much to assist the farmers and Patrons of this State in storing and holding their crops at home and in obtaining money on them—to the extent of over \$500,000 in a single season. The charter list of Modesto Grange, No. 4, contains Bro. Cressey's name, and he was always an earnest and hard-working Patron. He was a director of the Grangers' Bank and the Bank of Modesto, and Treasurer of the State Grange. He was very decided in his convictions, and in all matters pertaining to the Grange, farm and finance was fearlessly outspoken.

Bro. Cressey, as his photo-facsimile portrait in this issue indicates, was a man of strong character. As manager of the Grangers' Bank during the financial panic that ruined older and bigger concerns and severely tried the Bank of California, he showed marked ability and firmness in carrying the Grangers' Bank safely through, the farmers and other depositors having great confidence in his honesty of speech and conduct.

During the last few years Bro. Cressey has been especially active in Grange work. He made a trip to Oregon and Washington, attending the meetings of the State Grange in May and June of last year. He attended the National Grange in Atlanta in November last and afterward visited the State Grange of Massachusetts and New Hampshire. He has also made his presence deeply felt at many of the subordinate Granges and general Grange gatherings in this State. He was a most entertaining speaker, his addresses being brim full of sparkling humor and sound sense. His visits to the various Granges were always welcome events, and while he held the floor the listeners were always interested and benefited.

Bro. Cressey was married in Brownfield, Maine, about 1854, to Lydia A. Cram, who died in Oakland some 12 years since. He was afterward married to Mrs. Georgia B. Heath of Oakland, who has ever since been the beloved partner of his life. Besides his widow and brother, he leaves to mourn his loss two sons and a daughter—Frank A. and W. C. Cressey and Mrs. C. C. Crow. All of his family were with him when the end came at his home in San Jose at 8:25 on Tuesday evening, March 10th.

Bro. Cressey's funeral will be held in Oakland, at Odd Fellows' hall, corner Franklin and Eleventh Sts., on Saturday, March 14th, at 1 P. M. The funeral will be held under the auspices of the State Grange, according to requests especially made by Bro. Cressey just before his death, and an address will be delivered by W. M., E. W. Davis, a fraternal associate and esteemed personal friend of the deceased.

His remains will be placed in his family lot in Mountain View Cemetery near Oakland.

## Cause of His Death.

Bro. C. J. Cressey complained for some two years of heart trouble. Through the irregular action of that organ he had been at times suddenly prostrated and for many months had to govern his actions with great care.

During the latter part of 1889 he seemed better of that difficulty. Yet he was far from feeling well on venturing to the National Grange at Atlanta last November. He managed, however, to speak there with his usual force and attractiveness, although immediately afterward taken quite ill. While spending nearly a month in the East, he failed to revive his strength and came home quite exhausted.

Early in January he was in attendance for a brief time at two daily sessions of the Executive Committee State Grange in San Francisco, and a day or two later took part in the meeting of the bank directors, which we think was the last day he remained on his feet. From that time his friends have considered his life in a very precarious condition.

Some four weeks since he was examined by an old and highly-reputed physician of San Jose, who reported that his difficulty was progressive pernicious anemia—a wasting away by blood turning to water. The examination showed through the best and most delicate of instruments but very slight action of the heart. His stomach and other alimentary organs had no natural action during the last month of his life. When we last visited him, Feb. 24th, he had been 12 days without food and, subsequent to that time, he swallowed and retained only the merest trifle of liquid nourishment. He was able to articulate audibly up to within a day or two of his death, being apparently calm and firmly satisfied and hopeful in his mind and belief, and without pain of body. His consciousness remained to within a few hours of his departure.

There is hardly a Grange household in the State that will not feel as if it had been visited by a personal loss, and many a Grange and family circle throughout the Union will personally mourn his loss. Although gone from our visible presence, his influence will remain as a continuous life-influence for good among those who have known him, loved him and been uplifted by his whole-souled examples of kind and right doing.

His widow, sons and daughter have our kindest sympathy with that of thousands of other sincere friends of the noble head of their household.

INFORMATION WANTED.—The Secretary is in receipt of the following from a brother Patron

in Illinois: Knowing you to be in constant communication through the Secretary's office with the several Granges of your State, I would like to inquire through you for information of the whereabouts of a brother, by name Wm. C. Depnty. I have not heard from him for 15 years, and thought I might perhaps hear something of him through the Grange. Any information concerning him will be thankfully received. Address Charles Depnty, Fairmount, Illinois. [Please read in the Grange—A. T. D., Sec'y.]

Official Circular.

DEAR PATRONS:—It becomes my painful duty, under request of the Worthy Master, to inform you that our Worthy Treasurer, C. J. Cressey, passed peacefully and quietly away at his home at San Jose at 8:25 P. M. on Tuesday, March 10th.

His funeral will be held at Odd Fellows' hall, Franklin street, corner Eleventh, Oakland, at 1 P. M. Saturday, March 14th.

It was the request of Brother Cressey to be buried by his brothers and sisters of the Grange, and it is hoped that as many of the officers and members as practicable will attend. Fraternally, A. T. DEWEY, Sec'y State Grange, P. of H. of Cal., S. F., March 11, 1891.

FARMERS' INSTITUTES.

Expenditure of the New Morrill Fund.

Provision for Farmers' Institutes.

At the meeting of the Regents of the University, held March 10th, the following report, providing for the fuller equipment of the colleges established under the Morrill Act, and for the establishment of Farmers' Institutes, was adopted:

To the Board of Regents of the University of California: Your Special Committee on the appropriation of the fund provided by the new Morrill Act reports as follows:

I. The committee has sent to the Alameda County delegation in the Legislature the draft of an Act accepting the new fund, necessary to secure the benefit of this Congressional grant, and such an Act will doubtless be passed.

II. In considering the proper distribution of the amount from this fund already available, your committee has been guided by the following principles:

1. This new grant, like the Morrill grant which it supplements, is intended chiefly for the direct benefit of the Colleges of Agriculture and Mechanic Arts. But the terms of the new Act specify also "the English language and the various branches of mathematical, physical, natural and economic science." Therefore it is the opinion of your committee that the Act should not receive a narrow interpretation, but that there should be a comprehensive view of all the departments which have "applications in the industries of life." And so statements of existing needs have been received from seven of the professors in the Faculties of Science and from the Professor of English.

2. This fund is intended to provide new facilities and appliances, and not to pay for those already existing.

It looks toward a more rapid expansion than would result from the natural growth of the colleges already established.

3. As has been suggested by the Association of American Agricultural Colleges and Experiment Stations, the first payment of \$15,000 should be regarded as an equipment fund, not to be used for salaries.

Your committee has therefore assigned this \$15,000 entirely to the side of equipment.

The \$16,000, of the second payment, may fairly be regarded as a salary fund for current expenses. But as the year is so far advanced, only a portion of this amount can be used for salaries; and the residue should, in the opinion of the committee, be reserved for use on the side of equipment.

Bearing these principles in mind, your committee recommends such an apportionment of the two payments as is indicated in the following schedule:

	Equipment.	Salaries.
College of Agriculture.....	\$2,850	\$3,800
College of Mechanics.....	6,800	3,200
College of Mining.....	2,680	1,320
College of Civil Engineering....	250	1,500
College of Chemistry.....	500	1,500
Department of Mathematics....	1,200	....
Department of Botany.....	980	1,020
Totals.....	\$15,260	\$12,340

Your committee also recommends that special courses of lectures be provided by the College of Agriculture, and, aided by this new fund, said lectures to be given daily for a short period, for the accommodation of those who cannot attend the longer courses of the college.

Your committee regards the specification as to the English language as one of much importance, and recommends that in the near future an allotment of \$1800 per annum be made for an Assistant Professor of English, whose work shall be especially adapted to the needs of the students in the Colleges of Science.

Calling attention, now, to the details of the appropriations in the foregoing schedule, your committee recommends:

(1) The adoption of the following explanatory resolutions concerning the Departments of Agriculture and Horticulture:

Resolved, 1. That in compliance with the request of the State Grange for the appointment of a lecturer to take charge of the holding of "Farmers' Institutes" in the various agricultural centers of this State, Mr. E. J. Wickson, the present lecturer on Agriculture and Horticulture, is hereby appointed to organize and carry into effect a system of farmers' meetings, substantially similar to that already in operation in Wisconsin and other agricultural States, with such modifications as the peculiar conditions existing in California may render expedient; and

Mr. Wickson is requested and instructed to report to the chairmen of the faculties a suitable plan and regulations for that purpose, including the enlistment of other speakers from the University faculties, and from the ranks of practical agriculturists as may be found feasible.

2. That as in view of the relatively sparse population of this State, it is presumable that only a portion of Mr. Wickson's time will be thus occupied; and in view, further, of the difficulty of providing competent instruction in the branches of agriculture now taught by Mr. Wickson at the University in their application to our peculiar climatic conditions, he is continued in charge of such instruction, with such assistance and necessary changes in the order of giving said courses as may be required to maintain their efficiency, and as may be provided and authorized by the Board of Regents, and his present title is changed to that of "Associate Professor of Agriculture, Horticulture and Entomology."

3. That in order to relieve the cumulation of duties now existing, and to better provide for the work required in the economic entomology of the State, there is hereby created the position of "Assistant in Entomology" to the Associate Professor of that branch, whose duty shall be to give instruction in entomology to such extent as directed by the Associate Professor, and to prosecute researches with special reference to noxious and useful insects. A salary not exceeding \$1800 per year, to be paid out of the lately created fund for the better endowment of the Colleges of Agriculture and the Mechanic Arts, is appropriated for this purpose.

4. That in order to provide for the more prompt carrying out of work in the agricultural laboratory, which now is largely in excess of the possibilities of the working force, and months in arrears; and also to relieve the director of the numerous details which now prevent his timely attention to the elaboration of plans and reports, Dr. R. H. Loughridge, heretofore Professor of Agriculture at the University of South Carolina, is appointed to the position of "Assistant in Agricultural Geology and Agricultural Chemistry," under the direction of the Professor of Agriculture. His salary shall be \$2000 per annum, payable out of the same fund.

5. That all the persons or officers hereinbefore mentioned shall act in the double capacity of lecturers or instructors and of officers of the Agricultural Experiment Station, in such manner as may be expedient, and determined by the Professor of Agriculture and Director of the station, in concert with the President of the University or chairman of the faculties. They may be called upon to participate in the Farmers' Institutes, and their expenses incurred while doing so, as well as those of other lecturers that may be called in, shall be paid out of the fund already referred to, under the same rules as now govern the traveling expenses of the Director, Inspector of Stations and other officers of the Experiment Station. For the payment of such expenses a sum not exceeding \$1000 per annum is hereby set apart, from the same funds.

It will be seen from the first of the foregoing resolutions that, while Prof. Wickson's salary would still be paid from the old fund, the work proposed for him is mostly new, and in direct response to the call for practical instruction in agriculture.

It is to be noted, also, that Prof. Hilgard urges the need of a plant-house, costing \$6000. This request, as also one for \$500 for changes in the present buildings, the committee judges to be outside the limitations of the new fund, but recommends to the favorable consideration of the board:

(2) To the College of Mechanics your committee has allotted the large equipment item of \$6800.

The chief need seems to be the full establishment of a department of electrical and hydraulic engineering. At present the college can lay no claim to having an adequate plant or apparatus.

The rooms occupied by this college are too few and small for this new department. Years ago the Legislature was ready to appropriate \$12,000 to this college for an additional building, but just then the One-cent Tax Act in favor of the University was passed, and all special appropriations were dropped. Since then the college has asked in vain for a new building, the need for which has become very pressing.

Presuming that this need will soon be recognized by the board, and met from the general fund, your committee recommends that this sum of \$6800 be expended in the purchase of a stationary plant and apparatus for the hydraulic and electrical department of the laboratory.

(3) The allotment to the College of Mines is needed now and can be put to immediate use.

(4) For the College of Civil Engineering the only salary proposed is for an instructor in free-hand, topographical and architectural drawing, which the committee deems a very reasonable request.

(5) To the College of Chemistry your committee allots one new salary, that of an instructor, to aid in the development of a science which has many "applications in the industries of life." The \$500 for equipment will help toward the same result.

(6) The sum assigned to the Department of Mathematics is needed chiefly for models, as described in the accompanying pamphlets.

(7) The allotment of the Department of Botany contemplates the beginning of a botanic garden, the great need of which is clearly shown in the statement of Prof. Greene.

The sums thus apportioned amount for equipment to \$15,260, for salaries to \$12,340, making a total of \$27,600 out of the \$31,000 placed at our disposal.

The balance, \$3400, and a large part of the salary fund for the current year, may constitute a reserve fund to be chiefly used for equipment.

In closing its report, your committee makes the suggestion that all appointments below the grade of associate professor, made by the Board of Regents in executing this new trust, be made for the period of one year.

We recommend that a separate set of books of account be kept in detail of all receipts and disbursements under this Act. Respectfully submitted,

J. F. HOUGHTON,  
GEO. T. MARVE, JR.,  
ARTHUR RODGERS,  
Committee.

March, 1891.  
The adoption of this report by the Regents makes its provisions operative and thus outlines their course in the directions contemplated.

FARMERS' ALLIANCE.

SUBSCRIBERS wishing fuller information of the Alliance can have their names changed to the Grange Edition of the RURAL PRESS free, much to their advantage, this department being continued in the same.

What Shall the Harvest Be?

To one who has sufficient leisure to stop and look around him, it must appear that the farmers and laborers of the United States are marshaling their hosts for some definite and well-planned purpose.

From Maine to California, in every city and hamlet, the different classes of laborers are already quite well organized. These organizations are fast pushing to completion, and at present progress and prospect, Jan. 1, 1892, will find an organization of farmers in almost every country school-house in the land.

For general purposes, these bodies are forming a solid compact. They feel that deep and grievous wrongs are being heaped upon them, and there is a resolute determination to right those wrongs.

These organizations represent at least three-fourths of our population. Their votaries are the bone and sinew of the land, and furnish the comforts and luxuries for all. They are the burden-bearers of the nation, the strength of our armies and navies, the balance-wheel of society, the backbone of the nation's credit, the stay and support of the banks and other financial institutions, the succor and stronghold of civilization and enlightenment, and the guardians of the nation's liberty.

In the various branches of their calling is founded the unprecedented thrift and advancement of the last half of the nineteenth century; yet as a class they are steadily losing ground in the midst of the very prosperity and great abundance which are the work of their own hands.

Mentally the peers of any class, morally their superiors, they are slowly sinking in the scale of human existence and falling to decay.

They have sought and found the cause; they have ascertained that the organized and fortified hosts of earth are preying upon them like vultures upon the carcass of an ox. They have found on our statute-books laws discriminating in favor of others and against themselves; they have sought and still seek a peaceful redress.

They have asked that class legislation shall be repealed and cease to exist; that the national currency and national credit shall not be loaned to the few but to the many, not to a class but to any who have good and ample security. In reply they are told: "It is not constitutional to loan to Jones the farmer, but to Jones the banker;" that "it is not safe to loan on solid soil but on paper security."

They have asked that the circulating medium be increased to a sufficient volume to do the business of the country on a cash basis, and are met with the assertion that such an act would be imprudent.

To the end that virtue be not trailed in the dust, industry strangled, and that the purity of a freeman's ballot be maintained, they have asked that the Australian ballot system be adopted, and have been turned aside.

They have asked that the Government assert its rights in the matter of the Pacific railroads, and are answered with an effort to virtually donate hundreds of millions of the people's money to those gigantic specimens of organized greed.

They have asked that the Government curtail the unwarranted and dangerous power of the great trusts that are sapping the vitality of our industries, and are answered with a bill to loan (donate) one hundred millions to establish the Nicaragua canal trust. They have asked for bread and have been given a stone. They naturally shrink from the political arena; but the idea that they are not concerned in our national movements has been abandoned, and it will soon be found that they are making it their business; then what becomes of the man who dares to assist in the perpetration of such infamous schemes against our commonwealth? The politicians have planted the seeds of discontent in deep and fertile soil to spring forth and bear fruit. It will be the business of the Alliance to eradicate them at the earliest moment.

ALLIANCE BUILDING WAREHOUSES.—The Rosalia Rustler says that A. J. Calhoun, A. J. Stone, J. H. Miller, John Weldon and Wm. Coleman have been elected as trustees for a term of six months to build and operate the Rosalia Alliance warehouse. The selection of trustees was a happy one. The success of the undertaking under their management is a foregone conclusion. The building of Alliance warehouses is a solution of the vexed railroad problem that promises good results. The Alliance should own and control a warehouse at every station along the railroad lines of the State. In this way the combination of railroad and warehouse interests against the farmer will be robbed of its sting.—Tacoma Ledger.

THE "GARDEN CITY ALLIANCE" is a bright new F. A. & I. U. weekly of eight pages just started in San Jose by Hulbert Bros. & Co., an enterprising firm of job printers. J. B. Rigdon, a newsy writer, is editor. It is the official organ of Santa Clara county and bears the appearance of being entitled to the favorable consideration of both members and citizens.

[For the PACIFIC RURAL PRESS.]

The New Age.

[By ELIZA A. PITTSINGER.]

All things are onward moving,  
Let the blessed time begin!  
The Old is swiftly passing,  
And the New is coming in.  
The golden bells are ringing,  
And the pageant sweeps along,  
Like an army that is marching  
To the music of a song.

Old theories are waning—  
They are weak to build upon;  
The light is on the hilltops,  
And Truth is marching on.  
Old landmarks are but shadows,  
And they fade and flee away  
Before the mighty forces  
That are coming in to-day.

Up with the larks of morning!  
Up with the rising sun!  
Waiting not for noonday,  
Nor halting when begun;  
For everything is moving,  
And everything will show  
That the Poet was the Prophet  
In the ages long ago.

Ye mourners weep no longer  
Mid the shadows grim and sere,  
The cross is crowned with blessings  
That will blossom every year!  
We know the soul is deathless,  
And that love can never fade;  
That our Father's heavenly purpose  
Is to bless what He has made!

What though a vacant chamber  
Or a vacant chair is seen?  
The Tree of Life is blooming  
And its leaves are ever green!  
What though the winged spirit  
Leaves its garment in the sod?  
It shall wear a robe of beauty  
In the summer-fields of God!

The Farmers' Alliance.

The phenomenal growth and spread of this organization is something rarely seen. At a single bound it has reached a position commanding universal attention. The eagle eye of the political demagogue realizes in it a potential reality pregnant with possibilities, if he can only steal into its graces and confidence. In his mouth the trite phrase that the farmer is the "bone and sinew" of the country and the farm the nursery of patriotism, will roll from him as ribbon from the mouth of a sleight-of-hand juggler. From now until the election of 1892 he will be dead in love with everything agricultural from a broken wheel-barrow to a thrashing-machine, and nothing but a personal knowledge of the orator could cause the farmer whose vote he is after to doubt the sincerity of his devotion. While these soft and sweet compliments from the mouths of vote-hunting demagogues will only be intended as taffy, the fact will remain that it is the farmer who feeds and clothes the people, and that whatever is detrimental to the farmers of any country is equally detrimental to its laborers, no matter what their vocations.

The object of the Alliance should be and doubtless is to discover the cause of their declining prosperity and apply a remedy. Class legislation has brought them to the door of the poor-house, and any legislation that has for its object the exclusive benefit of the farmers at the expense of others will bring no permanent relief. A fair chance to all and special privileges to none is all that legislation can perform. A political organization whose purpose is to help the farmers without regard to the rights of others might win one victory but not two. The greatest army that ever marched to battle is often doomed to defeat by a blunder or over-confidence in its numerical advantage, and the Alliance will shatter its prospects should it seek to secure redress through class legislation. Let the farmers concentrate their efforts to secure relief by the reduction of tariff taxes, free coinage of silver, and other reforms to which the Alliance is committed, and the people in general will flock to their support.

The reduction of taxes on what the farmer buys, to give him a fair chance in the foreign markets with his surplus products, the free coinage of silver, the prohibition of alien ownership of land, and the election of United States Senators by a direct vote of the people, are the fundamental ideas of the Democratic party, as well as of the Alliance. The restoration to power of that party, and the application of these ideas in the administration of the Government, is the shortest and most certain route to secure all the relief within the reach of legislation.—Santa Rosa Democrat.

OF EXCELLENT MATERIAL.—State Deputy Frank P. Cook writes from Galt, March 5: The membership in Sacramento county is remarkable for independence, intelligence and determination. The County Alliance, like those of Stanislaus and San Joaquin, submitted to the membership proposals for county laws for the Order, which, if adopted, will preserve the political power of the organization in the hands of the membership.

AN ALLIANCE was recently organized at Hartland with G. W. French, President; A. J. Pittman, Vice-President; C. Bridgefarmer, Treasurer; and Wm. Bridgefarmer, Secretary. They have over 30 members and are gaining steadily at every meeting.—Goldendale Courier.

### To a Lily.

(Written for the RURAL PRESS by S. H. DRYDEN.)

Oh, lily fair, O flower of creamy white,  
Which standest near the dark and silent pool,  
Spreading thy broad leaves to catch the tears of  
night,  
And set thy brow with jeweled dewdrops cool.

Sweet flower, the cold, pale moonlight's beam  
Spreads over thee a veil of silvery light,  
And in thy regal beauty thou dost seem  
To stand alone, bride of the silent night.

All through the day the balmy perfumed air  
Has bathed thy tender leaves with softest touch,  
While over thee the birds with notes so sweet and  
clear  
Sang love songs to thee from each leafy perch.

Oh, didst thou dream while in the depths below,  
In midnight darkness, wrapped in lonesome  
gloom,  
And in thy secret heart, oh didst thou yearn to  
know  
Of this thy life, the glory of thy fragrant bloom!

Oh, lovely flower, did throbblings come to thee,  
Shut in thy prison, bound with clods of clay,  
And whispers of the beauty thou dost see,  
And feel, within thy heart of gold, this summer's  
day.

Beneath the clay thy sweet life had its birth  
Pressed near the clay, thy tender rootlets grew,  
Wrapped in the darkness, solitude and dearth,  
In patient waiting thou didst fill thy mission true.

Prophetic flower, thou' dost to me unroll  
A world of beauty which above me lies;  
What if the world to me is darkness cold,  
And I, alone, must mourn my broken ties?

Oh, weary soul of mine, upreaching for the light,  
Struggling with mystery, doubt, and oft despair,  
Take heart, poor soul, 'twill not be always night,  
Thou, too, shalt rise up to a higher sphere,

And love's dear hands shall open my prison bars  
And love's sweet voices sing to me again;  
Oh love, thou birthright of my childhood's years,  
Thou shalt survive all sorrow, toil and pain.

### My Singular Friend Miss Ransome

FIFTH PAPER.

(Written for the RURAL PRESS by L. H. S.)

SILENT SPRING DISTRICT, Feb. 27, 1885.  
*My Dear Rose:* Now that you are married and have interests all your own to look after, I know that you do not expect to hear from me so often. But you must forgive me as before, dear Rose, for always writing what I happen to be thinking about and not what you might expect to hear. Yes, I am still single and still teaching in the great central valley that I have learned to love so much. Since mother passed away I have no desire to return to the city, and since I have sold the little cottage on Twenty-third street and invested it in fruit land, I feel sure that some time I can leave the school-room and found a little home for the development of my ideas of doing good in the world. I have not yet become convinced that the republican form of government in the home is the best. I believe that the home, until the new generation is of age, should be an absolute monarchy, with liberal reason the prime minister. If the father and mother are not king and queen, the home loses its charm for me. My ideal home will not have a king, that I know of, so I will have to be absolute mistress there; and if my subjects are not benefited thereby and do not love me as a mother and queen, I will dismiss my subjects and return to a selfish life. I would like to found a small orphanage all my own, and bring up four or five children on my ideal farm. It would be grand to be the mother, sovereign and mentor of so many souls and control their instincts and inspirations and education. I wonder if we could not all work together and make the farm support us! This is utopian and I am a dreamer! But I heard another old maid advance that plan, and I fell to thinking about it. As a financial scheme for self-supporting old maids that is not bad. Adopt an orphan boy at ten years; at twenty-one he is self-supporting. He will remember his foster-mother with love and gratitude and support her in her old age.

But this is not what I started to say in answer to your letter.

You amused and interested me very much by your account of the societies to which you belong, and your estimate of the good you are doing in the world. Not that I have anything to say against guilds, clubs and societies. They have become the ties of society now, I fear so. I fear it has come to pass that you can't have any social pleasures at all without belonging to a society or club and paying the usual fees and dues. The new customs are good enough. They afford one a large play of personal liberty. But I fear in our enthusiasm we are parting with many good customs and habits that have

been very dear to us during our national progress.

When I was in the city on my last visit, I was surprised to note how seldom I was invited to the homes of our old friends. For this reason I did not see many of the fathers and brothers who might have listened to my opinions on farming in which the women took not the slightest interest only to be disgusted that I should want to come back.

Mrs. Trotter apologized. "I would like to ask you to come to my home to dinner, Miss Ransome," she said, "but I have so many committee engagements this week that I don't know when I will be home to dinner."

The world must be reformed at any cost, I suppose, but I like living down here, where I can go to some one's home without being in danger of being elected recording secretary.

People are abandoning the custom of talking on theoretical or problematical subjects, because their views are they not already chronicled in the constitution of the several societies to which they belong?

My opinions are safely locked up in the minutes of the X. Y. Z. society; why should I trouble myself about further promulgating them?

I suppose it is a load off one's conscience; you pay your dues and the president and secretary will attend to the rest. People are rather at a loss for subjects of conversation. It is a kind of a chestnut to advance an opinion where two or three are gathered together. We can't even talk about the weather; the Signal Service attends to that.

We don't try to return visits as we used to; we relegate our social duties to the Visiting Committee of the U. V. W. society, and carry a free conscience. Where are the "old friends" and "old neighbors" and "intimate acquaintances" of simpler times? There isn't so much natural good-will; interest is based on mutual union, or club or circle relations, and is dissolved on non-payment of dues.

You might think I don't believe in organizing; but I do. It is grand machinery when there is power to run it. But when there is no special object, and sometimes no steam, it is an unnecessary burden on good, which would progress spontaneously.

Organization with definite ends in view, which means work and not so much play, is grand. Our women do not realize that they can actually do things by organization. They have idled around so long with resolving and dissolving that they have forgotten what it means.

If the women of this country would organize in the cause of education, we would not have to be so continually striving and striving to combat evil influences. More education for the masses in a direct way is what we need. Then we would have good society anywhere and a freer people.

In order to vote intelligently, a man ought to know something of the political history of every nation; and where we have no high schools or academies in many of our counties, it is serious to think about. Many of the boys in the country leave the public schools at the age of fourteen; and the only great man they know much about is the patriot Washington, and not much about him. If the women would organize and mean something definite, they could found several academies in this valley. When a boy is fourteen, he can run a harrow, and so his father takes him out of school. The women might organize and look after those kind of fathers politically and socially; or they could do some educating on their own account. Every twenty women, at \$15 a year apiece, could maintain a scholarship; or fifty women at \$6 each. I would like to be one of the twenty to do so noble a deed. Lord, where are the other nineteen?

A thousand women could maintain an academy. I think that would be a grand way to organize, and the fees and dues would be alive with virtue and pour out a plenitude of reward close at home. You can't reform the world without educating it, and a little more definite work of this sort would be like the little leaven that leavena the whole lump.

Kiss the baby over and over for me; I love it and love it, even if I am its mother's oranky old-maid friend. Yours seriously,

EMILY RANSOME

THE FIRST AMERICAN WHITE CHILD BORN ON THIS COAST—Henry Spalding, or Almota, Washington, writes to the Walla Walla Union of Feb. 28: The first American white child born on the Pacific Coast was Dr. Marcus Whitman's little girl. She was born at the Whitman mission station, in the Walla Walla valley, about five miles west of where the city of Walla Walla now stands. She was drowned when about two years old. That was the only child they ever had. The next was the Rev. H. H. Spalding's eldest daughter—who now lives at Brownsville, Or.—Mrs. Eliza Warren. She was born at Lapwai, ten miles east of Lewiston, Idaho, in 1837. Revs. Whitman and Spalding, and W. H. Gray, of Astoria, crossed the Rocky mountains in 1836; Walker and Ellis in 1838. You will see by this that Mrs. Eliza Warren, eldest daughter of Mr. and Mrs. Spalding, is the oldest now living.

OLD LADY (to little boy caressing dog)—That's right, little boy, always be kind to dumb animals. Little Boy—Yes, mum, I've got a kettle to tie on his tail as soon as I get him quiet.

### Young Shoppers.

(Written for the RURAL PRESS by MAUDE S. PRANLEE of California.)

So many people assume the cares and duties of housekeeping and home-making without the knowledge gained by experience in handling money. No amount of theoretical wisdom on the subject can compare with the ease and judgment in selecting goods of any nature, that comes from much practice and the many lessons that experience teaches. These lessons are oftentimes bitter and painful ones, almost always annoying, so happy and fortunate is the young housekeeper who learns them early in life.

The safest and least humiliating place to acquire this ease is under the home-roof, where a dear, loving, sympathetic mother can guide and advise against errors. Children may be trained very early to understand and appreciate the value of money, and I know of no better way than to allow them to purchase some simple articles for the house.

All children should have a little money of their own to accustom them to personal expense. No child realizes the unavoidable expense he is to his parents unless he handles, and, if possible, earns some of the money that is used in keeping him comfortable and happy. Such knowledge, if properly brought to a child's notice, will only serve to make him more considerate of his parents and less likely to make them needless trouble.

This habit of allowing young folks "pin-money" is a familiar one in many families, but few, I think, take the pains to instruct them in the important art of judicious buying. Children enjoy a little importance very much, and will exercise great care if sent on an errand in which they may use their own judgment. When the result is unsatisfactory, gently point out the fault; if all is well, be equally sure to give due meed of praise, for much credit is due the child who succeeds while learning something new.

One girl can never forget how hard was her path, when, on going at seventeen to live with an invalid aunt, she, for the first time in her life, had all the shopping to do. Totally without experience in this kind of work, for work it certainly was, she was often completely at the mercy of the storekeeper, and, on reaching home, extremely liable to her aunt's displeasure.

Let me relate one instance. She was sent downtown one day to buy gingham to make six short dresses for the year-old baby. For two, she bought material of a small blue check, for two more of a small brown check, and for the other two of a pink and white that was very pretty to the eye. No one had ever told her that pink rarely washed well, but she never touched one of those pink dresses in all the long winter that followed without thinking as she looked at the faded, slimpsey garment:

"Why couldn't some one have cautioned me against such a mistake?"

So, I say, it isn't enough to always see good judgment yourself in buying. You must teach your growing children why you select certain articles and why you reject others.

How, unless instructed, is a girl to know which dress-lining to select, when, perhaps, four kinds are spread on the counter before her? And yet upon this choice may depend the permanent fit of a dress that will, in many cases, be worn for best during two years.

Power in discrimination and comparison may be cultivated in this way at a very early age, and a child will often develop unexpected good judgment if permitted to exercise his own inclinations occasionally. Careful warnings, with given reasons, against what might prove tempting to the eye alone, should be part of such training. One wise mother said to her grocer, and to the head of the dry-goods house where she usually dealt:

"I shall occasionally send my little daughter to make small purchases, allowing her to use her own judgment. If I am in immediate need of anything for which I send her, she will bring you a note. Otherwise do not allow her to take time from your more important customers."

The dealers thanked her warmly, for there are many seasons when their time is altogether too valuable to permit of their turning the business into a training-school for young shoppers. So in this way the child had a chance to learn without defrauding others.

She was sometimes sent to "buy some suitable buttons for this gingham apron, dear," or some like instance, and although only ten years old, she showed considerable good taste and judgment.

She would occasionally beset to the grocery store to order vegetables for dinner, and was teasing hard to be taught all about meat, so she "could order papa's Sunday roast."

Not a precocious child, my reader. Only one whom a very conscientious mother had been training in this direction for several years.

Nor were other things neglected for this "fad" do you call it? Instead, all possible means were employed to develop all qualities into a perfect and harmonious character.

PHOTOGRAPHER—Your son, the student, had half a dozen photos taken a long time ago. Here is a proof I happen to have by me—a capital likeness, don't you think? But the young gentleman hasn't paid for them yet, I am sorry to say. Father—H'm! That's a good deal more like him.

### Shall the Producer Forbear?

EDITORS PRESS:—Your constituency should now certainly be smiling and complacent after such general and abundant rain. And as an interested reader of your entertaining and instructive columns, I extend the band of congratulation.

As pleasing as the crop prospects are, however, it was not of these I came to talk. Rather, I have been thinking along a line decidedly somber, induced in part by a newspaper reference to the raising of opinion in Southern California. True, the experiment was only on a small scale, still there seemed sufficient in it for encouragement, and quite enough to disturb every sincere sentiment of our public safety.

So this question most naturally presents itself: Will organized agriculture feel called upon to place its hands patronizingly upon the head of everything emanating from the soil?

Already it is finding serious problems, and one might heartily wish it freedom from foes of its own household.

But be that as it may, in all seriousness, if we must have drinks and opiates, by both production and importation in the name of our common humanity, ought it not to follow that the moneyed return from the traffic should be invested in institutions for the reclaiming of its victims? As an army in numbers, they stagger, swagger, maudlin and imbecile, to dishonored graves. And is this slaughter to forever continue and our humane, generous and strong Government to take no cognizance of and make no effort to save this diseased and pitiful class of its citizens?

Paved streets, or even electric lights and schools, are a mockery as any sort of substitute or honorable reparation for this destructive invasion of the bone and sinew of our land.

And whether the angels would sing for joy or no, this one thing is certain, benedictions innumerable are in waiting for the man or men who will invoke science in our behalf; and the ambition is little short of holy that aspires to have our great State inaugurate a pronounced and successful initiative. Know you of any law, written or unwritten, prohibiting California from establishing institutions for the care and cure of its inebriates? "VENTURA."

### Training Girls for Housekeeping.

There are the studies that must not be interrupted—social exchanges to be duly met; a certain amount of sewing and reading to be accomplished; out-of-door life in abundance, and enough sleep to insure health to be secured.

The most efficient, ambitious mother is often necessarily absorbed with other interests than adapting her spare moments to the intervals of her daughter's leisure; and the completion of house duties is imperative and cannot wait for the hand of a novice.

How would it do to begin the housekeeping lessons when the daughters are five and six? Teach them to handle their toys nicely and to arrange their playhouses conveniently for dolly's comfort. As they get older, show them how to dust and how to sew, using doll's patterns; and, when the study hours begin to grow longer, let them, once or twice a week, do some genuine housework, like the thorough sweeping of their own room; or making a certain kind of bread; the coffee for breakfast; from time to time a staple dish—desserts will easily follow. During vacation (with lots of fun in between), let them make out the program of two or three days' work, submitted the day before to the mother, to be carried through by them, with the exception of emergencies.

Let them contribute a share in the hospitalities of their home. Who is a more attractive hostess than the accomplished daughter, gracefully and intelligently entertaining guests in the home of her parents? And how easily and naturally all her growing duties will fall into line, in the home that follows that of her maidenhood.—L. H. Trivett in Rural New Yorker.

### An Enterprising California Woman.

Mrs. H. J. Langdon of Weaverville, Cal., the only woman mail contractor in the United States, is in Washington and has considerable business with the Postoffice Department. She is known to all the stage-drivers and mail-carriers in the West as "The Little Boss." She tells a reporter how she came to be a mail contractor: "It happened rather strangely. My first husband had been a large contractor and I was familiar with his business affairs. At his death he left a will bequeathing me twenty-five unexpired mail contracts and made me sole executrix of the will. I at once assumed control, and after they expired I began to bid on my own account and was successful in obtaining contracts. It is now nearly twelve years since I began to work for myself, and now that I am married again I have to bid in my husband's name. I am the only woman who carries the Wells-Fargo express, and from July 1 to the time the snow shut in we carried \$100,000 in gold dust. We have nineteen agents under our control. At present the longest route we have is 115 miles long, from Weaverville to Susanville, and 250 miles, or one-quarter of all the contracts, is under my personal supervision. "Black Bart" made his maiden effort at stage-robbing on one of her routes.—N. Y. World.

## Lost, Outside the Golden Gate.

[Written for the RURAL PRESS by M. F. ROWE.]

Lost! lost! oh, terrible fate!  
To be lost just outside the Golden Gate,  
Mid the furious, fearful tempest's roar  
To be driven helpless upon the shore,  
Engulfed in the waves, in the dark'ning night,  
With the beautiful harbor just in sight.

What tho' the voyage had prosperous been,  
With favoring winds and sky serene,  
What tho' the journey was almost o'er  
And just beyond was the dear home shore?  
Oh, it was sad—so near to come,  
And yet to be lost in sight of home.

Fellow-voyager over Life's sea,  
Little, oh little, it matters to thee  
Whether thy skies are bright and clear,  
And thou sail'st now without thought or fear;  
The storms will come, and alas, too late,  
Thy bark may go down outside heaven's gate.

Only one Pilot can steer thy bark  
Through the storm-tossed sea and the night so dark;  
Only one Hand can surely guide  
Through the breakers' roar and the swelling tide;  
One, only One, with His strong right arm,  
Can land you safe where no storms alarm.

Wilt thou let Him guide through the Golden Gate,  
To the Home where many loved ones wait?  
Or, all alone, wilt thou stem the tide,  
And vainly try the storm to out-ride?  
Then, alas, too surely 'twill be thy fate  
To be lost just outside the Golden Gate.  
Alameda, Feb. 27, '91.

## Chaff.

HENRY—Yes, I called to see Sickem's daughter last night, Harry, and I found it hard to tear myself away. Harry—She had such a hold on you, eh? Henry—No; it was the dog I had to tear myself away from.

WATTS—Now, if I understand correctly, the first principle of socialism is to divide with your brother man. Potts—Then you don't understand it correctly. The first principle of socialism is to make your brother divide with you.

"Oh, children! You are so noisy to-day. Can't you be a little stiller and better?" "Now, grandma, you must be a little considerate and not scold us. You see, if it wasn't for us you wouldn't be a grandma at all."

"Is he honest?" inquired a hanker of a friend who recommended a man for a porter. "Honest?" he echoed. "Well, I don't know what you call it, but he returned a borrowed umbrella to me yesterday." The man was engaged as cashier.

HIS ERROR.—Pedlar (in a conciliatory tone): I presume those lovely children in the yard are yours, madam? Madam (frigidly)—I have no children. Pedlar—Pardon me; since I see you more closely I see that the brats could not possibly be yours.

THEY were from Chicago, and rich. The daughter was taking lessons in coyness and social small talk. "A penny for your thoughts," she archly remarked to an abstracted visitor, and then felt from the look of horror that over-spread her parent's face, she must have been guilty of a false step. "Why don't you offer him a dollar?" was that lady's criticism after the visitor's departure. "We've got money and you mustn't be afraid to let folks know it."

GREAT EDITOR.—I advertised for a private secretary, whose chief duties will be to sit in the ante-room and keep poets, bores and other undesirable persons at bay. The position requires something of a diplomat as well as a fluent linguist. You would not do at all. Rickets (who stutters a trifle)—That's where you make a m-m-m-m mistake, equire! As sus-sus-son's a hub-bore cuo-cuo-cue in I'd hug-bug-beg-in to tell a l-l-long e-s-story, and before I'd gug-gug-get half through, bnb-hub-between w-hu-wh-what I'd sus-sus-say and w-wh-what I'd tut-try to sus-say, I'd have him cuc-cuo-completely tut-tled out. I ain't mnm-much of a dud-diplomat, perhaps, but as a l-l-linguist I'm a cuo-cuo-caution!

A GOOD USE OF ALLIGATORS.—Louisiana planters are finding that the slaughter of alligators has allowed muskrats, the great enemies of levees, to increase at an alarming rate. South Florida people have discovered that the rapid decrease of alligators in the peninsula has been accompanied by a corresponding increase in the moccasin, the most venomous of American snakes, and the alligator's choicest food. The saurian isn't pretty, but he is a friend of humanity, nevertheless.

TO CURL FEATHERS.—After the curl has come out of them by washing the feather or getting it damp, place a hot flatiron so that you can hold the feather just above it while curling. Take a hone or silver knife, and draw the fibers of the feather between the thumb and dull edge of the knife, taking not more than three fibers at a time, beginning at the point of the feather and curling one-half the other way. The hot iron makes the curl more durable.

APPLE BLOSSOMS IN WINTER.—Perhaps every one does not know how easily fresh apple blossoms can be had in winter. Get the ends of branches with plump flower buds and place them in water in a warm, sunny window and they will soon bloom. No doubt many other kinds of trees and shrubs will give as good satisfaction as the apple. Here, says *Vick's Magazine* for January, is an interesting field for experiment.

## YOUNG FOLKS' COLUMN.

### Grandma's Story.

"Just one more story, grandma, about when you were a little girl and lived in the woods," said Frank.

And grandma drew off her spectacles and shnt her book. She leaned her head back against her large easy-chair and shut her eyes, thinking.

"I remember as if it were only yesterday," she said, raising her head and looking at the children who had gathered around her. "I was only seven, and my baby brother wasn't a year old."

"I'm going to the spring-house," said mother, "and you must stay in the room and rock the baby if he wakes." So I took my knitting; for I had learned to knit, and was very proud of the stocking which was growing under my hand.

"It was a cold day late in the fall, and the doors were all shut. Baby slept, and I knitted for half an hour. As I got down from mother's great easy-chair, where I had been sitting, I thought I heard a strange noise outside. It wasn't Lion, for he had gone off with father to the mill. Something rubbed against the door and made the latch rattle. I felt afraid, and went to the door and fastened the bolt. I stood still, listening, with baby in my arms—he had stopped crying—and I could hear my heart beat, thump, thump, thump!

"All at once there came a short, cruel kind of a bark, and then a snap. A moment after, the window broke with a loud crash, and I saw the long head, open jaws and fierce eyes of a wolf glaring in upon me. An angel sent by our good Father in heaven must have told me in that instant of terror what to do. The wolf was climbing in through the small window, and to have lingered but a second or two would have been death. Moved as if by power not my own, and without thinking what was best to do, I ran, with baby held tightly in my arms, to the stairs that went up into the loft. Scarcely had my foot left the last step when the wolf was in the room below. With a savage growl, he sprang after me. As he did so, I let the door fall over the stairway; it struck him on the nose and knocked him back. A chest stood near, and something told me to pull this over the door. So I laid the baby down and dragged at the chest with all my strength. Just as I got one corner on the door, the wolf's head struck it and knocked it up a little.

"But before he could strike it again, I had the chest clear across. This would not have kept him back if I had not dragged another chest over the door and piled ever so many things on the top of these. How savagely he did growl and snarl! But I was safe.

"And now I grew frightened about mother. If she should come back from the spring-house the wolf would tear her to pieces. There was only one window or opening in the loft, and that did not look toward the spring-house, and so there was no way in which I could give her warning, or let her know, if she had seen the wolf, that we were safe.

"For a long time the wolf tried to get at us, but at last I could hear him going down the stairs. He moved about in the room below, knocked things about for ever so long, and then I heard him spring up to the window. At the same moment I heard my father's voice shouting not far off. Oh, how my heart did leap with happiness! Then came Lion's heavy bark, which grew excited, and soon I heard him tearing down the road in the wildest way. The wolf was still in the window. I could hear him struggling and breaking pieces of glass. Lion was almost upon him, when my father called him off in a stern command. All was silent now; but the silence was quickly broken by the crack of a rifle which sent a bullet into the wolf's head, killing him instantly.

"Father! father!" I cried from the loft window. He told me afterward that my voice came to him as from the dead. He ran around to that side of the house. Mother was with him, looking as white as a sheet. I saw them both clasp their hands together and lift their eyes in thankfulness to God.

"When I tried to pull the chests away, I could not move them an inch. In my great danger God had given me strength to drag them over the loft door; but now that the danger was past, my little hands were too weak to remove them. So father had to climb up by a ladder in the loft window and release baby and me from our place of refuge.

"Mother did not know anything of our danger until she had finished her work in the spring-house. Just as she came out, she saw the wolf's head at the window, and at the same moment father and Lion appeared in sight."—*Children's Hour.*

### Frisky and Her Rival.

[Written for the RURAL PRESS by R.]

Some time before our cat, Frisky, finally deserted her home, she had been away several days, and as our girl opened the front door one evening to take in the paper, lo and behold, there stood on the steps a black cat, the counterpart of our Frisky, with part of its tail cut off. So Emma exclaimed, "Oh, here is our cat, but somebody has cut off its tail." So the children all left their dinner and went to see pus-

sie and pity her. We coaxed her into the hall, but she seemed timid and had a scared look, and was so frightened that she ran upstairs and hid under one of the beds. So mamma was obliged to catch her and take her downstairs. Then she fed her and gave her a nice saucer of milk, for which she seemed to be very grateful, and settled down contented. All said, "Poor Frisky," and sympathized with her about the loss of her tail.

In the morning our oldest boy, Allan, heard a familiar "meow," and looking out of the window exclaimed, with great astonishment, "Holy Moses" (a favorite expression just then) "there's our Frisky with all its tail on!" Mamma laughed and said it was scarcely possible that the cat's tail contracted at night and elongated in the morning, and then remembered hearing cats quarreling in the night in the yard, and it was easy to understand that the bona fide Frisky had returned during the night and driven the intruder away. We had all been deceived, for she certainly bore a great resemblance to our cat, who soon afterward deserted us forever. Her place is now filled by a very pretty black and white "Topsy," as the children call her. Should anything remarkable occur during her residence with us, we will chronicle it for the readers of the PRESS.  
San Francisco, Feb. 27th.

## GOOD HEALTH.

INFLUENCE OF THE WIDTH OF STREETS ON PHTHISIS.—According to an American contemporary, remarks the London *Lancet*, Dr. Anders has been making certain inquiries in Philadelphia as to the influence of the width of streets on the mortality from phthisis, the wasting away of bodily tissue, and as the result of examining into the localization of 1590 deaths, he has arrived at the conclusion that the number of phthisis deaths is smaller in proportion to the population in wide streets than in narrow ones, and that in narrow streets the mortality is greatest where they are long, or where they form cul-de-sacs; in other words, complete movement of air about dwellings is a point of great importance in connection with the question of pulmonary phthisis. It is on this principle that all modern by-laws as to open space about houses are based, and it is as important to have wide, open spaces behind houses as well as in the streets in front, so as to secure a proper through current of air. There is, as a rule, not much difficulty in getting a reasonable width of street in the case of newly laid out areas for building, but there is a constant tendency to put an undue limit on the needed area behind dwelling-houses, although this is a matter of the first importance as regards the promotion of health and the prevention of a certain class of diseases. The observations from Philadelphia deserve the consideration of such sanitary authorities in this country as have not yet acquired proper control over the open spaces to be provided about new domestic buildings.

HOW VARIOUS NATIONS SLEEP.—In the tropics men sleep in hammocks or upon mats of grass. The East Indian rolls his light portable charpoy or mattress, which in the morning is again rolled together and carried away by him. The Japanese lie upon matting with a stiff, uncomfortable wooden neck-rest. The Chinese use low bedsteads, often elaborately carved, and supporting only mats or coverlets. A peculiarity of the German bed is its shortness; besides that, it frequently consists in part of a large down pillow or upper mattress, which spreads over the person and usually answers the purpose of all the other ordinary bed-clothing combined. In England the old four-posted bedstead is still the pride of the nation, but the iron or brass bedstead is fast becoming universal. The English beds are the largest beds in the world. The ancient Greeks and Romans had their beds supported on frames, but not flat like ours. The Egyptians had a couch of a peculiar shape, more like an old-fashioned easy-chair with hollow back and seat.

CURING COLDS.—A contemporary gives the following suggestions for curing colds: 1. Bathe the feet in hot water and drink a pint of hot lemonade. Then sponge with salt water and remain in a warm room. 2. Bathe the face in very hot water every five minutes for an hour. 3. Snuff up the nostrils hot salt water every three hours. 4. Inhale ammonia or menthol. 5. Take four hours' active exercise in the open air. A ten-grain dose of quinine will usually break a cold in the beginning. Anything that will set the blood actively in circulation will do it, whether it be drugs or the use of a backsaw. The following has been tried with very beneficial results for cold in the head: One teaspoonful of mustard dissolved in a tumblerful of cold water, and used as a gargle three times a day, will often effect a speedy cure. In more obstinate cases, equal parts of loaf sugar and pulverized alum, used as snuff, it is stated, will give instant relief.

THERE is to be a food and health exposition held in New York in March, its projectors wishing to teach the lesson that if people had proper food far less money would be needed for physicians and hospitals.

THE use of glycerine on a dry skin does not agree with it.

## DOMESTIC ECONOMY

### The Farmer's Version.

I hear the bell from the farmhouse—  
What a pleasure to note its glad peal  
And I turn from my toil in the corn-field  
To partake of my noonday meal.

Come bring to me some beefsteak  
Or a juicy and well-done roast—  
Some cabbage and turnip all steaming—  
Some coffee and well-buttered toast.

Not from the grand old kitchens,  
Not from the tables of wealth;  
For the consequent gout and dyspepsia  
Are known as despoilers of health.

Let the dinner be wholesome and hearty,  
A sweet smiling face at the tea;  
And I'll grant to the nabobs their splendor,  
For this is the dinner for me.

Saticoy, Cal.

### Uses for Stale Bread.

[Written for the RURAL PRESS by F.]

I have been visiting a young friend who has just commenced housekeeping, and it was with regret I noticed the unintentional waste of stale bread and other nice scraps of which not enough remained to put on the table again, and which just a little extra work might have been utilized in making many palatable dishes. So, for the benefit of other inexperienced cooks who wish to practice economy, I insert the following reliable and palatable recipes, hoping they will meet with favor by those who try them:

For breakfast, a very quick and easy way of using the unbroken slices that may have become a little dry is to simply toast them and serve with coffee or ham and eggs, or the bread may be fried in slices in a little lard until nicely browned on either side, or it can be crumbled into a frying-pan containing a little hot lard, and after frying a few moments, turn over it a little boiling water, covering it well so as to steam it, salt and pepper, then dish.

Another way of making a dish for breakfast is to break and beat one or two eggs in a deep dish, adding a half-teaspoonful of sweet cream (or milk, if the cream is not to be had); now put in a little salt and black pepper, stir well and dip the pieces of bread into it, then fry a nice brown. When fried in a little bacon or ham grease, the flavor is improved.

Steamed bread is very nice for breakfast. Any one who has a steamer can steam it in a very short time. Do not steam it too long, as it will become clammy or too wet.

When a whole loaf becomes too dry, wet or rather dip it quickly into cold water, then put in a quick oven for a few minutes, and it will be almost as good as when fresh baked.

Pieces of stale bread, laid in a bake-pan and allowed to remain in a slow oven until dried and browned (then tied up in a sack until needed), are very nice to use in soup, putting it in just before the soup is dished, in order that it may become soaked a little.

To make a dish to be eaten with a roast of pork, beef or mutton, place the stale bread in a pan, cover it with sweet milk, add one or two eggs (well beaten) and an onion chopped fine, some salt, pepper and sage; mix well and bake until browned. The pan it is baked in must be well greased; also spread a little butter or lard over the top before baking.

A nice pudding may be made by taking two or three eggs, and beat well; then add to two pints of sweet milk and a half-cup of granulated sugar a little nutmeg and half a spoon of extract of lemon, and a piece of butter the size of a walnut; then put in the bread and bake until thickened. A half cup of dried currants and the same quantity of raisins improve it very much. Sweet cream and sugar make a nice sauce for this pudding.

Unbroken slices make nice toast. For cream toast, place a slice of toasted bread in a deep dish, then cover with sweet cream and a tablespoonful (even) of white sugar; then another slice of toast, adding cream and sugar as before until the dish is full. Buttered toast is made the same way, with the exception of butter being used instead of cream.

Celery and mushroom toast are often very appetizing to invalids, and are made by placing stewed celery or mushrooms and sweet milk or cream, salt and pepper between each layer of toasted bread. A wholesome and good dish for the children's supper is to take a couple of pints of sweet milk, seasoned with a little salt and black pepper and a small piece of butter; allow to come to a boil, then add the bread and let simmer a moment before dishing. Some children of older growth are also very fond of this dish.

Had I the time I could perhaps tell of a dozen more ways of using this oftentimes-deplored article, "stale bread," and perhaps may some time send some more.

Hollister.

A CREAM DRESSING FOR SALADS.—Beat up two eggs with four tablespoonfuls of good cream, two tablespoonfuls of melted butter, small teaspoonful of salt, same of mustard, and half of black pepper and a small teaspoon of beet vinegar. Beat and mix all these up well together; put it into a saucepan and stir over the fire till it thickens. Do not let it boil or the dressing will curdle. Let it cool, when it is ready for use.

## SAN FRANCISCO:

Saturday, March 14, 1891.

## TABLE OF CONTENTS.

EDITORIALS.—Ronnaya Coulteri; On the Track of Bogus Butter, 237. The Week; Ramie Culture in Sonoma; University Equipment and Farmers' Institutes; Silver Legislation, 244.

ILLUSTRATIONS.—Our Grandest Wild Flower; Ronnaya Coulteri, 237. The Late Calvin J. Cressey, 240.

CORRESPONDENCE.—San Diego Notes; The Weather and the Roads, 238.

THE FIELD.—Peanut Growing; Directions for Making Sorghum Molasses; Hops in Washington; Sugar-Beet Growing, 238.

FORESTRY.—Forests and Floods, 239.

THE DAIRY.—Building and Filling the Silo; Beets for Stock, 239.

THE APIARY.—Bee Buzzings; Items of Interest in Modern Bee-Culture, 239.

PATRONS OF HUSBANDRY.—The Master's Disk; The Late C. J. Cressey; Dixon Grange Reorganized; Woodbridge Grange; Miscellaneous, 240.

FARMERS' ALLIANCE.—What Shall the Harvest Be; The New Age; The Farmers' Alliance; Miscellaneous, 241.

FARMERS' INSTITUTES.—Expenditure of the New Morrill Fund, 241.

THE HOME CIRCLE.—To a Lily; My Singular Friend Miss Ransome; Young Shoppers; Shall the Producer Forbear; Training Girls for Housekeeping; An Entertaining California Woman, 242. Lost, Outside the Golden Gate; Chaff; Miscellaneous, 243.

YOUNG FOLKS' COLUMN.—Grandma's Story; Frisky and her Rival, 243.

GOOD HEALTH.—Influence of the Width of Streets on Plutists; How Various Nations Sleep; Curing Colds, 243.

DOMESTIC ECONOMY.—The Farmer's Version; Uses for Stale Bread; Cream Dressing for Salade, 243.

ARBORETCULTURE.—Notes on the Eucalyptus, 245.

FLORIST AND GARDENER.—California Plants for California Gardens; Heteromela; Arbutifolia, 245.

THE BOTANIST.—Monterey County Blossoms, 245.

AGRICULTURAL NOTES.—From the Various Counties of California, 246.

THE VINEYARD.—The Sweet-Wine Investigation, 248.

HORTICULTURE.—State Horticultural Society; Shade Trees Beside Orchards, 250.

SHEEP AND WOOL.—The Tariff on Mohair, 253.

## Business Announcements.

(NEW THIS ISSUE.)

Orchard and Vineyard Tools—Truman, Hooker & Co.

Dairy Machinery—G. G. Wickson & Co.

Sale of Trotting Stock—Killy & Co.

Combined Harvesters—Holt Bros.

Spray Pumps—Bean Spray Pump Co., Los Gatos.

Cravon Portraits—E. W. Melvin, Sacramento.

Drifted Snow Flour—Central Milling Co.

Holstein Cattle—J. A. Scholfield, Hollister.

Sheep Dip—Cotton, Bell & Co.

Thoroughbred Jacks—L. U. Shilpee, Stockton.

Clydesdale Stallions and Mares—H. P. Mohr, Mount Eden.

Farmers' Agent—J. G. H. Lampadius.

Threshing Outfit for Sale—Mrs. A. Hook.

Timber Land—Story & Cutting.

See Advertising Columns.

## The Week.

Continued showers have convinced people that the weather is safe for the present at least, and attention can be given unreservedly to public affairs of an engrossing character.

All that is mortal of Senator Hearst seek repose in the soil of the State which honors him, while the Legislature at Sacramento is eagerly engaged in the effort to fill his vacant seat. Seven days of discussion and three of halloping bring us to Wednesday evening, with no indication of in whose hands the credentials will fall.

Early talk was of corruption of a most outrageous kind, but even so adventurous a thing as the "sack" seems for the time being at least to have been frightened away. May it never summon courage to appear. Amid

the throng of politicians, the manly form of Senator Johnston appears, and he scored five votes on Wednesday. In all, a round dozen of candidates were voted for, and as but one can succeed, the contest is apparently only beginning.

## University Equipment and Farmers' Institutes.

According to a report presented and adopted at the meeting of the Regents of the University, on Tuesday of this week, preliminary steps have been taken toward the holding of Farmers' Institutes in this State under the auspices of the University. We publish this report in full upon another page of this issue, in order that our readers may understand the features of the action taken.

It will be remembered that the conditions under which the new grant of government funds were made were that the money should be expended "for the more complete endowment and maintenance of colleges for the benefit of agriculture and the mechanic arts now established, or which may be hereafter established, in accordance with an Act of Congress approved July 2, 1862."

The law also specifies that the funds shall "be applied only to instruction in agriculture, the mechanic arts, the English language, and the various branches of mathematical, physical, natural and economic sciences, with special reference to their applications in the industries of life, and to the facilities for such instruction."

The report to which we allude shows that the Regents Committee took account of the needs of the several branches of the University thus specified in the law, and have apportioned the funds now available among them.

The better equipment of the College of Agriculture is somewhat explicitly stated in the Regent's report. The provision for the holding of Farmers' Institutes will suffice to make a trial of these institutions in California, and to demonstrate the field there may be for them and their usefulness. Upon experience thus gained it will be possible to extend the work intelligently if the interest warrants it. Probably there will be an announcement made concerning the holding of Institutes after due consultation on the subject.

The importance of the assistance provided for Prof. Hilgard by the provisions just made by the Regents is very great. In spite of the most assiduous application on his part, even to the utmost limits of his physical strength, he has not been able to keep abreast of the work, both in investigation and report, which is constantly crowding upon him. The new assistant in agricultural geology and chemistry, Dr. R. H. Loughridge, knows California from residence and investigation here, and brings also the resources of long observation and study in other fields. He can relieve Prof. Hilgard of much of the work on soils, etc., which is now much in arrears.

The new arrangements will also enable the Experiment Station to take up another important line of work which has only been deferred because of lack of time, and that is the investigation of California food grains, forage plants, millfeeds, etc., in order that their chemical constituents may be definitely determined and our dairy and stockmen may be assisted to prepare rations for their animals with intelligent understanding of the materials which are here available. There has been demand for this work for some time, and it will be very satisfactory to the authorities at the station to be able to enter upon it.

The arrangements made for the other technical branches of the University as mentioned in the Regents' report to which we allude are understood to be provisions for which the work stands in imperative need. The report also hints at other equipments to be secured in the future, among which is a new plant-house which is greatly needed, as there is nothing at Berkeley but the little houses erected in 1874 and which could have been designed only to serve a temporary purpose, as they would not be considered adequate or respectable even for a village florist's establishment.

THE SOUTHERN CITRUS FAIR.—As we go to press, the Citrus Fair is in full and fine progress in Los Angeles. The RURAL PRESS is duly represented, and next week we expect to have interesting descriptions of the important event.

## Ramie Culture in Sonoma.

In company with several other parties, a representative of the RURAL PRESS visited the city of Sonoma on Saturday, the 7th instant, to attend a special meeting of the farmers of that neighborhood called to meet representatives of an organization in this city, which has for its object the encouragement of ramie culture in California. This company has secured the control of what is considered a very superior machine for "decorticating" or putting into marketable shape the fiber obtainable from the ramie plant. The proposition is to place one of these machines in various central localities in the immediate vicinity of which say from 50 to 100 or more acres of ramie will be planted—an acreage sufficient to make such an expenditure profitable.

The ramie, as cut in the field, is of a very bulky nature—too much so for economical transportation. Hence it is necessary that it should be put through a machine for reducing it to fiber, representing but a small portion of its original bulk, in which condition it can be readily packed or baled by a bay-press and transported to market.

As stated in our last issue, present indications promise that this plant will soon become one of California's great industries. Experiments have shown that its culture is peculiarly adapted to the soil and climate of all our great interior valleys. The cultivation of the ramie has already become a great industry in France, where it was first introduced largely to take the place of the diseased vines. The fiber also forms quite a large staple for French manufacturing industries, being mixed with cotton, wool and silk. Many of what are here considered our best silk goods are largely composed of ramie. Some 30 large manufacturing establishments are engaged in that class of manufacture in France.

In England, where this manufacture obtained its first foothold outside of the Indies, it forms a much larger share of manufacturing industry, nearly or quite double that which has thus far obtained in France.

The climate of England is too moist for its successful culture, hence the English manufacturers are obliged to look to various points in Asia and the neighboring islands for the raw material, many thousands of tons of which are annually imported.

It is to the growth of this fiber to which California should now more especially turn its attention. The superiority of our climate and the facility with which machinery may be introduced and operated here is more than an offset for the cheap labor of the Indies. It is much more easily raised than cotton and far more profitable. The demand for it is reported to be greater than the supply and rapidly increasing. Samples of the fiber prepared in this city have been sent to fiber buyers in England, France, Germany and various Eastern States, where very remunerative bids for it have been made in any quantity. For the present, however, the Oakland cotton factory offers to purchase all which may be offered, as successful experiments in working it have been made there.

Quite a number of farmers about Sonoma are making arrangements to plant ramie this season, among whom Capt. H. E. Boyes is taking a very active interest, not only for himself but also in interesting his neighbors to join him in the enterprise. Mr. C. T. Wilkinson, of the Blind Asylum at Berkeley, who owns a ranch near Capt. Boyes, is also much interested in introducing this new enterprise. Both these gentlemen were present at the meeting which was held in the Agricultural Hall on the 7th inst. and spoke in favor of the enterprise. The meeting was also addressed by Mr. W. H. Murray, of the *Journal of Commerce* of this city, Mr. Arnold Becker of Berkeley, Mr. W. B. Ewer of the RURAL PRESS and several others. An encouraging letter was also read from Prof. E. W. Hilgard, of the State University, who had expected to be present at the meeting. Our trip to Sonoma was a most pleasant and interesting one, and we propose to make further reference to it in a future issue.

BRANDING OLIVE OIL.—The Governor has signed Senator Heacock's bill requiring every manufacturer or dealer of olive oil to place upon every bottle or can filled with olive oil and exposed or offered for sale as such a label stating clearly his name and address and the

place of manufacture, and to file with the State Board of Horticulture a copy of the label, accompanied by an affidavit that the oil is pure.

## Silver Legislation.

Congress adjourned on Wednesday of last week without further legislation on silver. There is no denying that bimetallics were sanguine of passing a free-coinage bill up to the time when ex-President Cleveland wrote his short but pointed letter taking grounds against unlimited coinage of silver by this country. With the ex-President's stand against unlimited coinage of silver, under the belief that the time is not ripe for such a measure, leading bimetallics evidently did not make much of an effort to promote further legislation by this Congress, well knowing that the next Congress is pledged to free coinage, and if President Harrison vetoes a free-coinage bill they will have a sufficient majority in both houses to pass the bill over his head. Indeed, several leading bimetallic papers at the East were outspoken in advising that legislation be not forced this session, claiming that with the Grange, Farmers' Alliance and Knights of Labor working in harmony to secure the free coinage of silver, large numbers are being proselytized, which will bring about the early consummation of their efforts in that direction.

Events within the past two months have, outside of Congressional legislation, put an entirely different phase on the silver situation. The present output of the mines in this country is claimed by well-informed parties to be not more than, if as much as, the Government's monthly purchases, and with our product being cared for by the Government, foreign buyers will soon absorb the available surplus of the world, besides taking the output of other silver-producing countries. Already free buying by India, China and Japan is setting in, while two other nations are quietly securing round parcels. It is said, in well-informed financial circles, that foreign purchases this spring will be unusually heavy and in consequence prices will steadily advance.

In this city, the first time since May, 1890, foreign buyers are in the market for silver bullion. India and China have agents here securing all they can at reasonable figures—even paying an advance over Mint quotations. It is also said that there is a speculative inquiry for silver coming from parties who believe in much higher prices.

Bearing on the present status of the market, we give the following from the New York *Iron Age* of Feb. 26th:

The silver pool in New York is reported to have lost heavily from the collapse of the Anti-Free Coinage bill in Congress. At the outset of the scheme silver jumped up rapidly until it was quoted at \$1.21 1/2 per ounce, and the metal was expected to rise to \$1.29, equal to a dollar in gold. At length silver was stored in New York to the extent of about 10,000,000 ounces, including 7,333,000 in the vaults of the Mercantile Safe Deposit Co. It is said that the average cost to the speculators has been about \$1.10 an ounce. To prevent importations, they have been compelled to keep the Government supplied, and their sales have realized, on an average, only about \$1.05 an ounce. They are, therefore, out five cents an ounce on their transactions, or say \$2,500,000, including storage charges and interest.

The above indicates that the big bugaboo of large holdings at the East has dwindled, under selling, to very small proportions.

CORK WORMS.—Investigation in France proves the existence of two or three types of moths in wine cellars. The grubs feed on the fungoid growth that forms on the wine-vats and moldy corks. The insect bores and forms galleries in the cork nearest to the glass, and through the holes thus formed, air gains access to the wine, spoiling it. In corroboration of the above, it has been remarked that one of the chief difficulties in bottling wines in California has been in obtaining a supply of perfect corks. About 25 per cent of corks, after examination for fitness, are rejected. It is often found that wine after being bottled oozes through the corks. Various methods have been resorted to, to stop the inroads of these grubs. After soaking the corks in hot water and then in brandy, they are dried, and when they are put into the bottles the tops are coated with a layer of paraffine wax previous to sealing them with ordinary wax. Neither the grubs nor the insects feed upon the wine, but simply use the cork as a place to deposit their eggs, and the coating may possibly prevent their entrance.

## ARBORICULTURE.

## Notes on the Eucalyptus.

(Written for the RURAL PRESS.)

The prediction was recently made by Dr. Mayr, an eminent German forester sent here by his Government to study our forests, that "In 50 years it will be inconceivable that California, the beautiful fruit garden of the Union, was once treeless. Amid magnificent forests of Australian eucalyptus and acacias, the visitor will be inclined to doubt that he is really in America."

This may be over-sanguine with regard to time, but these two genera contain many remarkable trees, some of which are certain to have a great influence on the future tree-planting of the State.

As this is now the planting season, your readers may perhaps be interested in some extracts from a Memoir\* upon the different species of eucalypts grown in Europe by the learned and distinguished botanist and acclimatizer, M. Chas. Naudin, director of the Gardens of the Villa Thuret near Nice, where the French Government has the largest collection of dry, country plants in the world.

M. Naudin speaks of the difficulty of determining many of the species on account of their resemblance to one another, especially after they have reached maturity and have dropped the leaves of their youthful state. In the same species also there is often much variation. A large part of the Memoir is therefore devoted to rules and descriptions for the determination of species of which over one hundred are at present known, a number of which gives the intending planter much room for choice according to the purposes for which the trees are destined.

The greater part are essentially forest trees, and their principal interest the production of timber of all dimensions, but their value for fuel is also great, and should be appreciated in those countries where the absence and dearth of coal are an obstacle to many industries and to the use of steam engines. Vast plantations of eucalypts could, in a measure, remedy this.

Two species of eucalypts, says M. Naudin, are distinguished above all others for the rapidity with which they form trees of the largest size; these are the *E. globulus* and *E. Mulleri*.

Others, without growing so fast, are still remarkable for the short time in which they may be utilized by carpenters, joiners, and wheelwrights, and as railroad ties and telegraph poles. These are among others—*E. diversicolor*, *marginata*, *corynocalyx*, *crebra*, *botryoides*, *robusta*, *leucocylon*, *Gunnii*, *viminialis*, *rufidis*, *rostrata*, *gomphocephala*, *cornuta*, *amplifolia*, *tereticornis*, *polyanthema*.

There are other products, secondary, it is true, to be obtained from the eucalypts.

All the species contain in their wood in different degrees kino resin which is extracted by distillation. Their barks are more or less charged with tannin, and in certain species (*E. leucocylon* and *viminialis*) the proportion is large enough to admit of their being used to advantage in the tanning of hides. The leaves have long been distilled to obtain antiseptic oils which have numerous uses in medicine. One other use of the eucalypts, even of those which retain the form of small trees or shrubs, is to furnish, by their abundant flowers, provision for the nurture of bees which extract therefrom a honey endowed, perhaps, with special hygienic properties.

From an esthetic point of view, continues M. Naudin, one may say that all the eucalypts of large size are decorative when developed under good conditions of soil and climate. Their elegant port and rounded or pyramidal head, according to the species, their flowers white or sometimes purple, their foliage so varied in tint, make them, in the opinion of those who know them, handsome ornaments for park, avenue and landscape. Those most to be recommended in this respect are *E. botryoides*, *diversicolor*, *polyanthema*, *amygdalina*, *robusta*, *calophylla*, *resinifera*, *urnigera*, *corynocalyx*.

The soil which in general seems best suited to the different species is sandy or granitic. What is indispensable to them is sunlight and a free circulation of air, two conditions necessitated by the great evaporation of water of which their leaves are the seat. It is known that the eucalypts exhale a considerable quantity of water taken from the soil which they drain in this way. Some of them, particularly those inhabiting very arid regions, lay up a store of water in their roots and in the lower part of the trunk, which is often swollen into a sort of bulb where they keep a sufficient supply to preserve them through long periods of drouth. This water in the root is sometimes abundant enough to refresh the Australian natives when suffering from thirst.

I might add that in my own collection in Santa Barbara a year-old specimen of *E. polyanthema*, less than an inch in diameter, has such a swelling just below the surface of the soil as large as a teacup.

It would be a mistake, says M. Naudin, to count upon reforesting with the aid of the giant eucalypts, arid and rocky hills almost denuded

of vegetable soil, and quickly dried by the sun, though some of the scrubby species, such as those which form the "mallee scrub" of Australia, might perhaps be made to succeed.

The proper time for cutting these trees should be when vegetation is suspended either by the low temperature of winter in some species, or in others by the dry season. Many interesting notes regarding the different varieties are given.

Of *E. globulus*, he says it was introduced into Algiers in 1854 by Ramel, at the instigation of Baron von Muller, who sent the first seeds. Its marvelous rapidity of growth made it quickly popular and it was soon cultivated in the south of France, where it is now common. Cut off at the base, *E. globulus* sprouts vigorously and the leaves of the young shoots take the youthful form and yield in the greatest abundance the eucalyptus oil now made in France. This oil has numerous uses as an antiseptic and is beginning to be employed for subcutaneous injections in various diseases, in rheumatism, in neuralgia, and even in pulmonary consumption. With respect to hardiness, *E. globulus* may be expected to withstand the climate wherever the orange can be grown out of doors.

A hardier species is *E. viminalis*, which endures a passing temperature of 12° or 14° Fah. and makes a good avenue tree 100 feet in height and of very rapid growth.

*E. urnigera* is the hardiest species yet known. It flowers and fruits at Brest, and what is more surprising, even in Scotland. In the Whittingham Gardens near Edinburgh, there is a large specimen (sometimes wrongly described as *E. viminalis*) which however has often been injured by frost, notably in the winter of 1860, when it was frozen to the level of the ground. It put forth a new stem and is to-day a tree 60 feet high.

Of *E. rostrata*, M. Naudin says it is tending to supplant *E. globulus* in Algeria on account of the superiority of its wood, which is of straighter fiber and easier to work, not liable to check, and great durability under ground and in sea-water, where it is not subject to attack by the teredo. In California there is much difficulty in getting trees or seed of this species true to name. I have no less than three distinct kinds all obtained from dealers as "red-gum," and all quite different from specimens obtained from the State Board of Forestry as the *E. rostrata* of Von Muller.

*E. marginata* is also famed for resistance to the teredo, impregnated as it is with kino resin and valuable wherever the wood is to be exposed to the action of sea-water. In Southwest Australia it forms vast forests and is the subject of considerable export. Some of the streets of London have been paved with this wood, an employment, says our author, which should be extended to other species.

*E. amygdalina* and *diversicolor* are referred to as making trees of the largest size, reaching, according to Von Muller, a height of 400 feet, taller, perhaps, than our sequoias, though not so great in diameter.

*E. corynocalyx* is a handsome tree from Southwest Australia, attaining a height of 125 feet and a diameter of four or five feet. It seems to delight in the most arid locations and to resist the most prolonged drouth, and appears indifferent to the nature of the soil. Baron Von Muller has repeatedly advised its use in reforesting parts of the Algerian Sahara. It grows rapidly and its wood is remarkable for its density and durability underground and for its adaptability to carpenter's use. In Santa Barbara this tree has done well in dry, stony places, where cultivation is impossible, as has also the following:

*E. polyanthema*, another species of great drouth, resisting power and of much beauty. The wood is perhaps denser and harder than that of any other eucalypt, and is highly prized by carpenters and especially by joiners.

*E. citriodora* has been much planted in Southern California on account of the pleasant odor of its leaves when the tree is young. M. Naudin praises it for its elegant shape, abundant flowers and excellent wood. It is the only eucalypt which I have observed in Santa Barbara to be troubled by any disease, its leaves being often spotted with a reddish fungus resembling that which infests the leaves of the almond in this locality.

From Prof. Malden of Sydney I have received a classification of eucalypti according to the humidity of the soil in which they are to be planted, which may be of use to some.

For moist situations, *E. rostrata*, *robusta*, *tereticornis*, *saligna*, *botryoides*.

For drier land, *E. maculata* and *longifolia*.

For high and very dry situations in poor soil, *E. Siberiana*, *paniculata*, *Maideni* and *corynocalyx*.

Santa Barbara.

SNOW WORMS.—A puzzling phenomenon has been noticed frequently in some parts of Valley Bend District, Randolph county, Va., this winter. The crust of the snow has been covered two or three times with worms, resembling the ordinary earthworms. Where they come from, unless they fall with the snow, is inexplicable. The snow is two feet deep, and the crust is too strong for them to have come up out of the ground. A square foot of snow can scarcely be found some days without a dozen of these worms on it.

HENS worth \$2000 apiece attracted corksightseers at a recent poultry show in New York.

## FLORIST AND GARDENER.

## California Plants for California Gardens.

EDITORS PRESS:—Some of these days the thought that has occurred to a few, that the proper plants to grow in any given place are those native to it, may perhaps spread widely until it finally reaches popular acceptances. Heretofore it has been the custom in most places to fill the garden with exotics—in fact anything not indigenous to the locality has always been considered the most correct thing to give space to and grow if possible. The more care and labor required to make the said vegetation succeed, the nearer right has been thought the choice made.

To speak squarely and to the point, all this is a mistake. The proper plants for California gardens are California plants. Have we any lack of attractive things? All the rest of the world answers that question with a most emphatic no. Look ye at the foothills! Behold the sandy fields by the seaside and the sheets of gold, of pale yellow and blues and most lovely harmonious grays that cover them over. Could anything be finer? Is anything more brilliant ever seen in gayest garden or the most extravagant roadside park-border elsewhere?

We have had but a single view as yet—the show is varied with every move we make in foothill land northward or southward or eastward over the flanks of two ranges.

What we need to do is simply to bring together the splendid collection Nature offers us and that is now so widely scattered over the State. These things she has planted where they are likeliest to succeed, in stony and sandy soils upon which the grasses and civilized weeds that love rank feed are not disposed to intrude and choke them out. We will not, we cannot, bring these all into one garden, but we may into any one town or county.

Each garden could show a different group. The annuals I would place in the wide depressed gutters at street sides, but the bulbous plants and more striking perennials in the borders against and around the house. The shade-lovers, that is to say, the violets, trilliums, the actaeas, the thalictrums, the anemones, the tritillaries, and all such modest things in size and dress, not to forget the ferns, would find room out of the sun's way, on the house's north side.

If need be, and very properly, as I think, the town trustees could furnish the seed for the gutter plantation, and the town marshal could vary his usual round of duties by filling a gardener's plot for awhile. Very agreeable recreation, one would think, for such an official, and a kind of recreation, only in largest measure, that we hope may be in store for all such people in a future not very distant. The gray-garbed hoarhound that we have given so much space to from the very beginning of things here, will, perhaps, feel out of place amid so much gayety and move to other and distant quarters.

The true California flower season lasts from March to mid-June, inclusive, though afterward here and there a bright spot lingers where some perennial possessed of deep-feeding roots and a longer or later flowering period has established itself. These are candidates for the garden I have in mind, its fixed features.

The practice of irrigating garden ground in summer should be abandoned, not only because unhealthy, as all confess it to be, but for the added reason that it will give relief from, frequently, an unpleasant bit of work and freedom as well, to betake oneself to other scenes at day's end, if desired. Our new scheme for the garden makes this *shelving of the hose* not only a possibility but a desirability, as the plants we are about to adopt know only a continuous dry summer, and, furthermore, have learned by long practice where to find all the water they need.

If the householder craves exercise, he can dig with the little three-tined fork—nice, pleasant work, too—and this will not only not harm his pets but will greatly help appearances. It would be well to say, perhaps, that there are many exotics whose proper season to be in slight closely corresponds with that of our California plants, as, for instance, many of the perennials called Dutch bulbs, such as crocuses, tritillaries, ixias, babianas, freesias, the narcissus, the tulips, winter aconite, some of the anemones, the showier buttercups and others. The two last named are not bulbous-rooted, but go with that class as florist's stock. These Dutch bulbs require no care and no handling after once placed in the ground. Indeed, they especially desire not to be touched—not oftener, at least, than once every third or fourth year—and ever thereafter with each recurring season they appear to slight the pleasant of pleasant things. These are really late winter and early spring bloomers, many disappearing before the native exhibition begins; but for them, as for our own flowers, Nature furnishes the needed moisture.

It is to be hoped Senator Stanford will bring together within the ample grounds of the University at Palo Alto the entire flora of California, so that we may all see just what may be done in the way of furnishing well a series of gardens with native plants only.

Santa Clara.

## Heteromeles Arbutifolia.

EDITORS PRESS:—A. L. Lance, your Gonzales correspondent, asks if any one has cultivated our California Holly or Toyon. I will answer yes. In my yard there is a handsome cultivated specimen, not yet to fruiting size, however. It is in a very dry place and has had little care, but holds its own well. With good care there would be little difficulty in growing this shrub, and it will stand much dryness. It ought to find its way into many California yards.

CARL PURDY.

Ukiah.

## THE BOTANIST.

## Monterey County Blossoms.

EDITORS PRESS:—On Feb. 21st, wild turnip was in blossom near Salinas, and an occasional "Spring Beauty" (*Calandrinia Menziesii*), near Chualar; also a few *Sidalcea humilis* in the same vicinity.

On the 23d, in a pasture-field just south of Soledad, a profusion of "Cream Cups" (*Platystemon Californica*), was in blossom. A few beautiful clusters of "Baby Eyes" (*Nemophila insignis*) bloomed by the roadside, and Pepper grass, Johnny-jump-ups, Forget-me-nots, Spring Beauties and an umbelliferous plant were plentiful.

Along the road leading to the Palisades a shrubby Lupin was in full blossom, and near by, in a magnificent cluster of *Cheiranthus asper* (Wallflower) was an annual Lupin, just opening.

A short turn in the road exposed a cluster of *Amsinckia spectabilis*, one of our "Fire Weeds," set in a border of white Forget-me-nots, and supporting several festoons of "Big Root," *Megarrhiza Californica*, in blossom. Why would not this plant make a good vine for summer shade, or covering unsightly objects? Its immense perennial roots give the vines a large and rapid growth, and its flowers and fruit are odd enough to make it more desirable than many so-called novelties.

Feb. 28th, near Salinas, a large-flowered species of *Zygadenus* was in blossom, and just across the road, on a low embankment thrown up for a fence, a row, many rods long, of *Oenothera ovata*, yellow primrose, was blossoming profusely, forming a beautiful golden edging for the entire distance. It was very suggestive, and for any but the more moist sections of our State, this plant would probably prove far more acceptable than the Irish or other European primroses. *Fritillaria biflora* and *F. liliacea* were in blossom in the heavy soil of the Gabilan mountains north of Salinas, and *Peony Brownii* and *Oenothera thyrsiflora*, California lilac, on the higher sandy hills. *Sanicula* (*Sanicula laciniata*) was plentiful in the same vicinity.

Near Natividad, on the old Los Angeles stage-road, a number of a dwarf, small-flowered *Zygadenus* were in blossom.

At San Miguel, March 1st, *Claytonia perfoliata*, commonly called California lettuce, was in blossom, and on the 4th at Gonzales.

## Correspondence.

Notes from San Miguel, San Luis Obispo county, mention Yellow Violets, Baby Eyes and Spring Beauties on the 21st.

Feb. 23d, Bert L. Hickok of Tancred colony, Yolo county, sends a "Lousewort" (*Pedicularis densiflora*), and a "Shooting Star" (*Doctea theon media*). He asks, what is the best botany I can get to study?

As far as his own benefit is concerned, let him examine the outlines, texture, arrangement and stems of the leaves of the plants around him—their location, the different organs of the flowers, the different fruits, seed-vessels, seeds, etc., and compare them; in short, learn to know them.

Any elementary work will give all the terms required till the observation has been sufficiently trained, and then we have "Rattan's Flora of California," which would be a very material aid in determining a large number of species. If I am not mistaken, it also has an elementary preface.

Bert Hickok of Caspar Valley, Yolo Co., under date of March 2d, sends California poppy, *Brodiaea capitata*, an annual lupine, forget-me-nots, an umbelliferous plant, and a buttercup. The species of the latter four cannot be determined without more perfect specimens including fruit, seeds, etc.

Dr. L. D. Morse of San Mateo writes that the Toyon does well as a hedge plant in that vicinity and stands trimming. He also mentions *prunus ilicifolia* (holly-leaved wild plum) as more useful for the same purpose. He also thinks *penstemon centranthifolius*, our flame-colored penstemon, worthy of cultivation. It surely is, as is also *P. heterophyllus*, with its showy rose-purple flowers. More of these two later.

Let me again remark that postage on pressed botanical specimens is but one cent for 2 ounces, and by numbering specimens and inclosing an addressed card the sender can have the names of specimens that can be identified returned at once. The writer would like to hear from the foothill regions of the Sierras and the Coast mountains.

A. L. LANCE.

Box 90, Gonzales, Monterey Co.

# AGRICULTURAL NOTES.

## CALIFORNIA.

### Butte.

**BUG INSPECTOR INTERVIEWED.**—Chico *Enterprise*, March 5: E. B. Stuckey having been appointed bug inspector by the Board of Supervisors for this section, is now at work inspecting all the trees in this vicinity. He informs us that there are yet plenty of hogs on the trees in the yards of Chico, but not near so many as there were two years ago. The San Jose scale is the only bug doing material damage. The red spider, which was so plentiful here years ago, has entirely disappeared.

### El Dorado.

**TO LICENSE SHEEP AND GOATS.**—El Dorado *Republican*, March 5: The ordinance exacting the payment of a license tax on sheep and goats was adopted by a unanimous vote of the Board of Supervisors this week. It requires the payment of \$5 per hundred animals from every person engaged in the business of "raising, grazing, herding, or pasturing sheep or goats, or sheep and goats" in this county. The money will be collected by the License Tax Collector, who will retain ten per cent for collecting and pay the remainder into the General Road Fund. The intent of the ordinance is to collect revenue from non-residents who pasture goats and sheep in the county and pay their taxes outside of it, thus deriving benefit from and also injuring our roads and pasturage without paying anything toward county revenue. In order to reach this class of stock-owners, however, the license was levied upon all, as no legal discrimination can be made.

### Humboldt.

**TREE PLANTING BOOM IN HUMBOLDT.**—Roberville *Herald*, March 4: The fruit-growing boom has commenced in earnest in this valley, and we are glad to know it. It is destined to be an important factor in connection with our material interests a few years hence. People generally lose sight of the idea that "one tree" or an orchard, in growth, will be a benefit to whoever may succeed him, and the thanks of their successors in life will fall thick and fast. Throughout Southern Humboldt more trees are being planted this year than in any previous one. The experience of cautious fruit-growers and packers within the last two or three years is becoming infectious. Darling the present season thousands of trees will be planted where no one ever thought of planting them before.

### Los Angeles.

**ORANGE YIELD AND PRICES AT RIVERA.**—L. A. *Evening Express*, March 7: E. A. Coffman of the Rauchito ranch says the growers near Rivera are picking oranges now as rapidly as possible and they are shipping as fast as they pick. The winds do not shake down any fruit to speak of, and the trees are laden with as fine fruit as they ever bore. This season is an "on" as contradistinguished from an "off" season, a season when the bearing is plentiful. The market is ready and prices are good. Buyers are paying \$1.25 per box, which is a big price for seedling oranges. The Rauchito ranch is 17 acres, all of oranges, and the yield will be 10,000 boxes, which are sold for \$12,500. The oldest seedling trees will yield from 600 to 800 boxes to the acre. George W. Maxon of that place sold from 3½ acres for \$2500; he sold the oranges on the trees, the buyer doing his own picking. Garrett Wich sold \$865 worth of oranges off of 103 trees that were not full grown.

**CALIFORNIA LEADS FLORIDA IN EARLY VEGETABLES.**—L. A. *Express*, March 7: S. A. Butler, of the Wells-Fargo Company, says that there are many calls from the East for California tomatoes. Strawberry shipments will commence in about ten days. There have been a great many green peas shipped lately; the demand in Eastern cities is active and prices are good, \$3.50 being paid for a 20-pound box of peas. Mr. Butler says he has positive advice that California vegetables rank ahead of those from Florida. This he considers important, as Florida is the only competitor California has in the Eastern vegetable market. Mr. Wisendanger, a farmer, has just tried the experiment of sending out samples of California-raised early radishes to Eastern points in hope of orders. He believes there will be big money in this. Mr. Butler believes that the success of shipping winter vegetables East via express has been satisfactorily demonstrated during the season, and he expects to sell a large amount of winter-grown vegetables shipped East next season.

**FLORIDA SCALE.**—L. A. *Herald*, March 7: Yesterday, Bug Inspectors Kercheval and Weiss brought to the Herald office a few leaves of an orange tree and an orange that were badly infested with the Florida purple oyster-shell scale. The pest looked very healthy on both leaves and fruit, which upsets a theory advanced by some that the Florida scales all perish in our climate. This tree is found in an orchard south of the city. It came from Riverside, where it was imported from Florida four years ago. It has been in the place where it now stands for two years.

**SOUTHERN PART OF THE STATE WILL BE BENEFITED BY THE STORM.**—Alhambra *Review*: The severe storm which commenced on Saturday morning and continued until Tuesday noon, seems to have been quite general throughout the State. Here in the south the storm has been one of the heaviest for several years.

San Bernardino county, as usual, on account of its exposed position, comes in for a full share of damages. On Tuesday there was not a bridge left over the Santa Ana river except that of the Santa Fe between Riverside and Redlands; many houses and barns were swept away and all the rivers were reported higher than for many years before. Los Angeles county has suffered less, and the practical loss as compared with that of last year is not great. The Alhambra valley has been especially fortunate. The gain which the storm has brought to the south is almost immeasurable. A bounteous harvest is assured, and prosperity is certainly ours for another year. Plowing will be prosecuted in earnest, and a larger acreage will be put under cultivation than ever before. Prospects are very bright, and comfort and plenty seem to have taken up their abode with us.

### Mendocino.

**HOP-KILN INCUBATOR.**—Ukiah *Dispatch*: D. G. Pitner has now 6000 eggs hatching in his hop-kiln, which he is using as an immense incubator. He is adding more eggs every day, and expects to have 8000 in before the kiln is full. Everything has gone on nicely so far, and the indications are that this novel hatching project will be a success.

### Nevada.

**SEVENTEENTH AGRICULTURAL ASSOCIATION FAIR.**—Grass Valley *Tidings*, March 6: The Board of Directors of the Seventeenth Agricultural Association met at Nevada City Saturday, for the election of officers for the ensuing year and the transaction of general business. After the reading and approval of the minutes of the last regular and special meetings, the election of officers was held and the following chosen: President, M. L. Marsh; Vice-President, John F. Kidder; Treasurer, E. M. Preston; Secretary, I. J. Rolfe. On motion it was resolved to hold the annual fair commencing on Tuesday, Sept. 1st, and continuing for five days, on the exhibition grounds at Glenbrook Park and in the Pavilion at Grass Valley. Directors Fletcher, Granger and Jacobs were appointed a committee to arrange a speed program, to report at a special meeting to be called by the president. The president was authorized to have such repairs and improvements made at Glenbrook Park as might be found necessary, and make arrangements for having the racetrack put in order previous to the holding of the fair.

### Plumas.

**WINTER IN THE MOUNTAINS.**—EDITORS PRESS: Our winter in this mountain region began with the first days of December. A night of rain followed by a day of rapidly falling snow caused us to remember with apprehension the terrible winter of a year ago. We do not usually have much snow here till Christmas or after; some seasons very little during the winter months. The December storm being one of unusual severity for the season, we naturally feared as to what the elements would have in store for us. The snow, however, melted and settled until the teams from the mining towns, which were from home when the storm came, were able to get home with their loads of freight, and other needed supplies were freighted to points distant from railroads. There was much threatening of storms, the snow laid but a very thin covering over the meadows, but not until Feb. 14th and 15th did the storm come, a two-days' fall of rain and snow, which wound up with a heavy southwesterly wind giving promise of more storm, which began again Feb. 22d and continued Feb. 23d and 24th, clearing off in the night, causing us to feel that the weather was still unsettled, and the evening of Feb. 25th more rain began to fall, which again changed to snow. The ground is thoroughly wet and the prospect for a good season seems assured. The storm through which we are passing is warm for the season, and consequently easier on stock. Having had very little cold weather, there has been less hay consumed than some other years, and last summer's hay crop being so abundant, there is a good deal left over in this section. *Two days later.*—Weather still unsettled, a little snow falling, with warm, thawing weather between the occasional snowfalls.—M. P. A., Beckwith, March 4.

### San Luis Obispo.

**GRAIN CROP PROSPECTS.**—Fawcett *Grove Cor. San Miguel Messenger*, March 6: I have not seen in the last 14 years grain look as well as it does now at this time of the year. I have always been taking note of the amount of grain sown in this part of the country. Calling San Miguel the northwest corner of a township, or six miles square, I find that there is in so small a space 11,000 acres of grain up and growing and it looks very well. At a low estimate it will yield 110,000 sacks of grain.

### San Diego.

**SANTA MARIA.**—EDITORS PRESS: We are having an abundance of rain now, as there has fallen in the past week over six inches and it is still raining. There is an average acreage of grain sown, which is in good growing condition, with but few exceptions where it is covered by water. There will probably be many more acres sown as soon as the ground dries enough to permit it. There are many orchards being planted in the valley and its environment—mostly peaches and prunes. Mr. J. Sherman, the largest planter, intends to finish putting out 90 acres that was commenced last year. Meeker & Chapin of Poway furnish him with home-grown trees. They have supplied several others in the valley with thousands of trees. Others

have planted quite extensively trees from the Phoenix nursery of Illinois, received through Mr. S. P. Layne of this valley. I am much pleased with the people of this vicinity. Most of them are "rustlers" who have come to stay and are not afraid to make improvements, whether done by their own or hired hands. There are hundreds of acres of brush land being cleared and planted to fruit trees and vines, which seem to give better satisfaction than that which is already clear, although the fruit and tree pests are more troublesome.—S. D. KIRKMAN, Nuevo.

**SAN DIEGO COUNTY SHEEP INDUSTRY.**—Bob Weyms in *Otay Press*, March 5: I will proceed to give you the names of the most prominent sheep-raisers in the Otay Valley and the surrounding country in its immediate vicinity. A. Schneck & Bros., Otay Valley, 2500 ewes, increase 2000; Andrews & Co., 3500, increase fully 3000; S. Schneck & Bros., 2800, increase 2400; Gambette & Co., 2000, increase 1800; Casarat, 2000, increase 1600; John Saeraval, La Jolla, 3000, increase 2500; Pedro Deleval, 1500, increase 1200. On the San Bernardo Rancho there are fully 10,000 head. At Temecula there are fully 20,000 head. At El Cajon there are 5000 wethers owned by Schneck Bros. At San Jacinto there are 12,000 head all told, and scattering in the county there are 9000 head. The above only includes old sheep. Excepting the 5000 wethers at El Cajon, the aggregate number of sheep now will come up to 70,000 head. The spring shearing will be much later than heretofore. The clip in the county will be a very large one, and I can safely say that the clip in the Otay for cleanliness cannot be surpassed, as the sheep are all in a fine, healthy condition.

**VINE AND TREE-PLANTING IN SPRING VALLEY.**—San Diego, Feb. 26: Estimating the land under cultivation in Spring valley, County Horticultural Commissioner Jones and his deputy, James F. Brooks, show that there are 14 people owning a little over 2465 acres. These have 900 acres in nursery stock, 141 in olives, 66 in mixed fruits, 57 in oranges and lemons, with 3375 trees additional, 45 in vines with 1200 additional vines, 20 in almonds, 13 in figs, 5 in guavas, 5 in blackberries, 4 in English walnuts, 3 in peaches and apricots, with 100 apricot trees, 75 prune trees, 70 lime trees, 25 apple trees and 7000 head of cabbage. There are also yet to be planted 5 acres of oranges and lemons; 3 acres to vines and 400 orange trees.

**NEW HAY.**—San Diego, March 3: New hay was brought in yesterday from W. R. Rea's Spring valley ranch. The crop of wild-oat hay now maturing will be of short cut and not heavy, but it will tide over until the later crops of barley and wheat hay are harvested. The price of hay is liable to drop from now on.

**GLOWING ACCOUNTS FROM THE BACK COUNTRY.**—H. F. Norcross in S. D. *Union*: The rain has been a glorious one—the best that has fallen, they all say, in six years. It soaked right into the ground, without any washing whatever, and the precipitation was very general and uniform. I was at Bear Valley, San Pasqual, Fallbrook, San Marcos, Escondido, etc., and everywhere I found things in most excellent shape. It was simply astounding to me to see the amount of planting that is going on—trees and vines of every kind and description, and in quantities that make a man feel good all over. Another encouraging feature of the situation is that fully 80 per cent of the season's plowing is done. Last year, you remember, people held off to await the rains, which, when they did come, continued so incessantly as to prevent plowing, the consequence being a small crop acreage. This year, however, every one pitched right in after that November rain, with the result indicated. We will have fine crops, and if planting keeps up for a few more years like it is now doing, the "back country" of San Diego will no longer need any foresight to defend it.

**RAISINS GOING EAST.**—San Diego, Feb. 26: The first carload of raisins to be shipped this year by the Producers' Union started for Chicago with about 11,000 boxes. They are mostly Three Crown raisins, with a few boxes of London Layers. Dr. Hillary's Poway vineyard furnished the fruit. The other carload which followed contains raisins from Frank Stephens of Ballena, J. M. Asher of Cajon, and several others. The raisins have been held at the union since December to wait a return to better prices, which now offer.

### Santa Barbara.

**THE OLIVE-OIL MILL RUNS NIGHT AND DAY.** S. B. *Press*: The olive-oil mill at Elwood has been kept going this year night and day, but has been unable to crush all the olives grown on this side of the mountains. It is estimated that at least 40,000 pounds of olives were wasted this year because of insufficient facilities for manufacturing. This represents about 10,000 bottles of oil, worth \$1 a bottle.

### Santa Clara.

**FRUIT-GROWERS COMBINE.**—Cupertino *Cor. San Jose Mercury*, March 5: The fruit-growers have combined for mutual support and protection, and now I hope to see the grape-growers follow their example. As our new hall was the meeting-place of the fruit-growers, now let it be the meeting-place of a viticultural combine.

### Shasta.

**RAMIE-PLANTING IN SHASTA.**—Redding *Free Press*, March 7: Arnold Becker of Berkeley will plant next month on the Howard ranch, owned by Mrs. Ella Pond, 60,000 roots, occupying 20 acres, and next year 300 acres will be

planted. As each root multiplies from 10 to 30 times in a year, and as three cuts can be made each year, by irrigation, giving from 2000 to 3000 pounds of product, it will be seen that this is a profitable plant to grow.

### Solano.

**PLANTING MUSCAT GRAPEVINES.**—Dixon *Tribune*, March 7: J. R. Bloom has prepared ground to put out 15 acres of Muscat vines. The vines are well rooted and were selected with great care. As soon as the soil is dry enough, they will be put out.

### Sonoma.

**RAMIE CULTURE IN SONOMA COUNTY.**—Sonoma *Democrat*, March 7: Captain Boyes of Sonoma valley has ordered 10,000 ramie plants which he will plant on his ranch in that valley. An acre of land will carry about 3000 plants. Captain Boyes has seen the plant growing in its native India, and seems to understand its adaptation to our soil and climate.

**TO ERADICATE SORREL.**—J. H. Close, Mark West Springs, in San Francisco *Alta*, March 8: Apropos of sorrel, it is rightly estimated when it is pronounced a difficult customer. Its presence always indicates an excess of oxalic acid in the soil. Hence in the same field there will be some spots where it will flourish much more luxuriantly than others. An acquaintance of more than 30 years with the pest has convinced me that digging and cultivating only tend to spread and foster the evil. But there is a remedy that in Pennsylvania, Ohio and Michigan, to my certain knowledge, has proved efficacious. Take slack lime and scatter not less than 25 pounds on every square rod, and you will see the pest vanish as if by magic. This would be a trifle expensive only on small areas. But when it is taken into account that the lime will double and sometimes treble the yield of other crops, it will be found a mitigating circumstance.

### Sutter.

**SALES OF WHEAT.**—Yuba City *Farmer*, March 6: The wheat market has been quite brisk here lately. G. W. Peacock last week bought over 700 tons in the Farmers' Co. Union warehouses, paying in the neighborhood of \$1.30 per cental. The following parties were concerned in the sale: J. A. Onstott 300 tons, B. F. Frisbie 100, J. C. Gray 130, Jas. Littlejohn 50, M. Kerns 133. W. T. Ellis & Son also bought 40 tons of Mrs. Mary Webber for \$1.30 per cental.

### Tulare.

**PRICE OF SHEEP.**—Porterville *Cor. Tulare Register*, March 6: Stock is doing well and the sheep-men are selling off the surplus stock in their flocks at good figures. C. T. Brown sold 175 young lambs at \$2 per head. Four dollars per head for full-grown mutton sheep has been the price.

**CENTRAL FARM NOTES.**—Central, March 5: J. J. Cairns has in 19,000 acres of grain and it is all up and looking fine. He is getting ready now to level 70 acres on his home place for orchard, vineyard and other purposes. There is a number of small vineyards being planted. Grape-raising is in its infancy here, but it is a thoroughly demonstrated fact that no trees are healthier, grow faster and bear better than the orange and lemon.

**ORCHARD NOTES.**—Phil Snyder, West End, in *Register*, March 6: Several fig orchards are being planted here. It is not an experiment in figs, as your correspondent brought over five fig trees and gave them to a neighbor two years ago. The first year, fine figs matured on one tree. Last year there was a nice crop for two-year-old trees. They have done extremely well and we are willing to try fig-raising.

**FIRST RABBIT-DRIVE.**—Porterville *Farm View*, March 6: There was a rabbit-drive at Dawey's ranch last Sunday, and over 500 pests were slain.

**CROP PROSPECTS IN 76 COUNTRY.**—Traver *Advocate*, March 5: The prospects for a bountiful harvest were never better in the history of the 76 country than at the present time. The rains during the past two weeks, followed by warm days, have caused the wheat, which had done nothing in the way of growth, to shoot forth its verdure very rapidly, and land which but a few weeks ago was almost as bare as fresh-plowed ground is now almost hid from view by the growing grain. The pruning of vineyards and orchards is nearly completed and the cultivation of the land has been commenced, and it will not be a great while until we shall see fresh fruit in our market.

**A SPLENDID IRRIGATION SYSTEM AND WHAT IT HAS DONE.**—Farmerville, March 5: The farmers here early learned the fact that irrigation was necessary to insure crops, and the Consolidated People's Ditch Co. was the outgrowth of a ditch right that was established as far back as 1860. The ditch is one of the best irrigation systems in the county, and carries enough water to irrigate at least 100,000 acres of land. There is no such thing as failure of crops on lands that are under this system of irrigation, and in fact the land is so well watered that irrigation would not be necessary for alfalfa, were it not for the fact that the lands have to be flooded each season to drown out gophers and squirrels. The richness of the soil is attested by the fact that Chinamen pay large rental for lands to be used for garden purposes. Corn grows on this land to a height of 12 to 14 feet, and produces from 60 to 80 bushels to the acre. Alfalfa yields from eight to ten tons to the acre annually. Fruit trees grown on these lands have the appearance of two-year-old trees in one year's growth, and for prune and peach trees no richer or better section can be found.

The farmers are just opening their eyes to this fact, and extensive orchards will be planted there in the future, the industry having a fair start this season.

How to GET RID OF ALKALI.—Visalia, March 5: T. J. Brundage states that when he located at Farmersville, the property where his house now stands was an alkali-bed, but like other alkali lands in that vicinity, the alkali was mostly on the surface, never reaching a depth of more than 12 or 18 inches. He now has a thrifty orchard on his property, and has no trouble whatever in growing trees or ornamental shrubbery. He got rid of the alkali by plowing trenches, in which he planted his trees, and turning the water into these trenches, the land was soon leached of alkali. Mr. Brundage is confident that the worst piece of alkali land in all that section can be "cured" by the method he followed. At times he allowed water to stand in these trenches for weeks, and says that though his trees were in pools of water, they suffered no injury, as the land was cool and did not bake.

NEW ORCHARDS AROUND FARMERSVILLE.—Visalia Times, March 5: The Giant Oak Fruit Co. is an organization composed of gentlemen from Vacaville, Solano county. Their property was purchased of ex-Sheriff D. G. Overall during the past summer. T. H. Thompson is foreman of the place, and he has had a large force of men employed in cleaning up the place and planting it to orchard. Two hundred and forty acres have been planted this season. The company took its name from an oak tree in the road near their place that measures over 11 feet in diameter. The same company purchased the W. G. Pennekaker ranch, but do not take possession of the property until next July. The Robert Broder ranch was purchased by a syndicate of San Jose gentlemen last spring. There are 271 acres of the property, and 240 acres of this have been planted to trees this winter, and the remaining 30 acres will probably contain fruit trees before the season for planting is over. George T. McLoughlin of San Jose, an experienced orchardist, is superintendent of this property. The Spear Bros., Henry and Jacob, have planted six acres to prunes. The Strong Bros. have leased a portion of the Hulse place for a term of ten years, and are this season putting out ten acres to prune trees. J. A. Hulse himself is putting out five acres. J. W. Mathewson has prepared 15 or 20 acres for trees, to be planted this season. W. G. Garland of Oakland, who owns a portion of what is known as the Bacon land, is planting 40 acres to vines and trees. W. Lytle of Tulare is superintending the work. Lewis Rice is planting 10 acres to vines. Mrs. N. Lawless is putting out trees and vines. J. F. Sullinger is devoting 10 acres to vines. H. T. Anderson is putting out peach and prune trees. McCutchan & Doty are putting out nursery stock and orchard. Parker & Rich are planting seven acres to peaches and prunes. W. A. Sims is preparing ground for orchard, to be planted next season. Fred Creighton is planting peaches and prunes. Yolo.

DAMAGE BY A BREAK IN THE YOLO LEVEE.—Sacramento Record-Union, March 5: News reached the city yesterday forenoon that the levee on the Yolo side of the river had given way below Reed's orchard. The course of the water inside the broken levee was turned mostly up toward Washington through C. W. Reed's pear orchard. There were no houses or barns in the direct line of the crevasse, and most of the stock had been removed, so that no particular damage will result to improvements except that of the loss of crops which were in. The current in the river set in strongly toward the break, which occurred in a sharp bend in the levee, and the river water was running up stream as well as down, toward the new outlet. Reed's fine orchard will be completely submerged. It was in fine condition and the trees (mostly pears) had been lately sprayed. If the water recedes before the weather gets warm, it is thought the trees will not be greatly damaged, as they will stand the water better than most other varieties of fruit trees. [The water has receded.—EDS. PRESS.] All crops of potatoes, beans, vegetables, alfalfa, etc., will of course be a total loss. The levee opposite the lower portion of the orchard is low and weak, and the sillage is causing it to slip on the inside slope. The water at this point is higher than the levee and is kept out with sacks filled with earth.

NEVADA.

OLIVE GROVES FOR NEVADA.—Virginia Enterprise, March 6: There is no reason why we should not have many great olive orchards in Nevada. It is well known that olive trees flourish finely in the southern part of the State. There are now in the country along the Rio Virgin many olive trees that were planted some 20 years ago when the Mormons were in possession of that country. The olive could probably thrive in places far north of Rio Virgin.

SHIPPING HAY TO CALIFORNIA.—Silver State: The ranchers of Lovelock are kept busy haling hay and shipping it to California. Last year it was different, Nevada was buying hay in California and shipping it to this State to feed the starving cattle.

PARTIES DESIRING IN GOOD FAITH, to purchase from the U. S. Quarter-Sections of Sugar Pine Timber Land, should write or apply for information to STORY & CUTTING, Surveyors and Land Agents, Rooms 26 and 27, No. 420 California St., San Francisco. Best of references furnished.

## A Great Event

In one's life is the discovery of a remedy for some long-standing malady. The poison of Scrofula is in your blood. You inherited it from your ancestors. Will you transmit it to your offspring? In the great majority of cases, both Consumption and Catarrh originate in Scrofula. It is supposed to be the primary source of many other derangements of the body. Begin at once to cleanse your blood with the standard alternative,

## Ayer's Sarsaparilla

"For several months I was troubled with scrofulous eruptions over the whole body. My appetite was bad, and my system so prostrated that I was unable to work. After trying several remedies in vain, I resolved to take Ayer's Sarsaparilla, and did so with such good effect that less than one bottle

### Restored My Health

and strength. The rapidity of the cure astonished me, as I expected the process to be long and tedious."—Frederico Mariz Fernandes, Villa Nova de Gaya, Portugal.

"For many years I was a sufferer from scrofula, until about three years ago, when I began the use of Ayer's Sarsaparilla, since which the disease has entirely disappeared. A little child of mine, who was troubled with the same complaint, has also been cured by this medicine."—H. Brandt, Avoca, Nebr.

## Ayer's Sarsaparilla

PREPARED BY  
DR. J. C. AYER & CO., Lowell, Mass.  
Sold by Druggists. \$1, six \$5. Worth \$5 a bottle.

## HORSE OWNERS!

### TRY COMBAULT'S CAUSTIC BALSAM.

A Safe, Speedy and Positive Cure for Curb, Splint, Sweeney, Capped Hock, Strained Tendons, Founder, Wind Puffs, all Skin Diseases or Parasites, Thrush, Diphtheria, Pinkeye, all Lameness from Spavin, Ringbone or other Bony Tumors. Removes all Bunches or Blemishes from Horses and Cattle. Supersedes all Caustery or Firing. Impossible to Produce any Scar or Blemish.

Every bottle sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars. Address  
LAWRENCE, WILLIAMS & CO., Cleveland, O.

## FOR SALE!

## PINOLITO OLIVE RANCH!!!

FORTY-SIX ACRES OF HILL LAND

In the Town of Auhurn, Placer Co.

Red soil, superimposed upon upturned, friable, decomposing slate, yielding iron and alumina, thus furnishing a soil which, as Prof. Hilgard said after his analysis, will retain moisture, will not require irrigation, and will not allow the vegetable mold to leech away; thus suited to the growth of fruit trees, especially the olive, as has been demonstrated both by the remarkable growth of the tree and the yield and the quality of oil.

It is situated only 15 minutes walk from Auhurn Station—the C. P. R. R. passes along one side—and is a less distance from the Court House. Thirty acres improved and planted to olives, set at long distances for permanent growth, and other fruits planted between the rows for temporary profits, mostly peaches of three best varieties, ripening in succession; prunes, mostly Petite; plums of several varieties, as Kelsey, Japan, Shropshire Damson, etc.; figs of several best varieties; a few apples, nectarines, blackberries, etc. Two acres of table and raisin grapes, never irrigated, the vines remarkably vigorous and in full bearing. The trees, especially the 1500 olive, have all been planted with regard to permanency. About one-half of them have an orchard growth of seven years; fruited last year 300 pounds, this year nearly one ton. They are mostly Mission and Picholine, with a few trees of other choice varieties. Two crops of the olives have been pressed. The yield has been, for the first press, 14 per cent of very clear delicious table oil, and four per cent from the second press—the Picholine yielding this, of a peculiarly clear, nutty oil.

There is on the ranch a few acres of grain sown for hay; two acres of well-set alfalfa, below the Auhurn ditch, which crosses one corner of the property; also a small house of four rooms and a kitchen; a well of good water; a small barn; a strong, permanent spring of soft, cold water, which wells up through the slate; a two-inch iron pipe connects the spring with an iron-hooded 20,000-gallon tank, situated on a beautiful pine clad hill, 40 feet above the spring, a point which overlooks the town and gives very charming distant views, and is one of the most lovely sites for a residence to be found. The water is pumped to the tank by a duplex pump; the power, a four-horse steam engine, which furnishes power sufficient to pump, saw wood, run an olive crusher and do all needed shop work.

The land is all suited to fruit, excepting along a rocky ridge, which furnishes three very desirable residence sites, and the olive, set promiscuously, thrives finely among the rocks. The property can be conveniently divided along a sag which separates two of the high knobs, and water from the spring can be pumped to each of them.

This desirable property is now offered for sale for less than the improvements cost. The land is fenced, the title good and unencumbered. It is connected by a roadway, which is one of the improvements made, with one of the principal streets of Auhurn.

The sale will convey the entire plant, furniture in the house, all utensils, etc. If sold before April 1st the sale will include the coming crop. If later, the crop will be reserved, unless otherwise by special agreement. If desired, one-half the purchase money can remain five years, secured by mortgage at eight per cent. For price and any further information desired, address

A. H. AGARD,

No. 1259 Alice Street, - - Oakland, Cal.

## Fresno and Merced County Lands

TO RENT AND FOR SALE.

75,000 ACRES OF WHEAT AND SUGAR BEET LAND

In the above counties to rent for a term of years;

—ALSO—

100,000 ACRES OF FINE RAISIN, FRUIT, ALFALFA AND SUGAR BEET LAND.

With water for irrigation, for sale in tracts of from 20 acres to large tracts, suitable for colony purposes. For particulars apply to

## THE VINEYARD.

### The Sweet-Wine Investigation.

Prof. Hilgard and assistants concluded on Friday of last week the experiments relative to the methods of determining the alcohol in sweet wines and the discussion of results. The record and discussion of this work was mailed to Commissioner Mason on Saturday.

The document is too lengthy and abstrusely technical for republication in a newspaper, but the following may be given as its main points:

In his letter to Prof. Hilgard, received on February 27th, the Commissioner assigns as the reason for the adoption of the "saccharometer method" that has given such alarmingly discrepant results with our sweet wines, that it

the distillation method is applied to sweet wines of high sugar contents, it is shown that the error in ports and sherries will not usually exceed six-tenths of one per cent, and by the government's own showing is therefore neglectable, and is ordinarily neglected in commercial transactions. But if it is desired to make the correction, it can readily be done without elaborate calculation by a "subtraction coefficient," dividing the sweet wines into three classes according to their sugar contents and using for each a corresponding correction, by simple subtraction. The percentage results thus obtained are shown in parallel columns and prove such close approximations, that outside of an analytical laboratory a better agreement would not be looked for. Prof. Hilgard therefore concludes that while there is every reason for the rejection of the saccharometer method, no valid objection lies against the well-understood "Salleron," and he accordingly hopes that the Commissioner will consent to the substitution.

The table below gives, in an abridged form,

#### Comparative Observations on the Determination of Alcohol in Sweet Wines.

was "desired to embody in the regulations some simple and approximate means for Internal Revenue officers to use in ascertaining roughly the alcoholic and saccharine strength of the wines the fortification of which they would be called upon to supervise." Elsewhere he states that the Department chemists "have not, by this rough method, found a difference exceeding two per cent, and in most cases the results of the rough method are less than one per cent lower than by analysis."

In his reply, Prof. Hilgard calls attention first to the fact that a much more accurate method, viz., that of distillation (by the "Salleron" still), is in common use in every important winery in California, and to a considerable, perhaps excessive extent forms part of the basis of bargain and sale of wines. That to put on record, officially, any widely discrepant determination of the alcoholic strength of a man's wines will disturb this basis and open the door to endless worry, contention, and possibly even legal difficulties, should any purchaser, or even a Government gauger, be disposed to harass the producer. He therefore concludes that the Government gauging ought in this, as in other respects, to be done with the utmost accuracy practically feasible.

That in its application to the young sweet wines at the time when fortification or refortification is called for, the government method does not even approximately come within the limits of accuracy required, is then shown by a tabulated statement of the results of eighteen tests made by both methods, partly conjointly with the Deputy Collectors at the Internal Revenue office, San Francisco, partly at the University Laboratory. Of the eighteen samples, one shows a difference of 3.6 per cent too low as compared with the "Salleron"; six show differences of over three per cent; thirteen show differences of over two per cent; and only three of less than one per cent. According to the accepted schedule, the wine-maker would, if these figures be admitted, have to make up such amounts by further fortification before his wines would be salable. It is true that, as stated by the Commissioner, the determinations of the deputies are not to be final, and doubtful cases would be referred to Washington for revision by the chemists. But under the showing made, the government method should possess very great advantages, not realizable by any other feasible one, to justify its retention.

This point is next taken up by Prof. Hilgard; a number of causes of inaccuracy are shown to be irreducible in the application of the saccharometer method to young sweet wines, and also that no uniform coefficient of correction is applicable to all cases, although that of division by .8 applies to a great many. The Commissioner's objections to the "Salleron" or distillation method are then discussed, his letter claiming it to "involve much more elaborate manipulations and calculations" than the saccharometer method. The fact that it is in general and satisfactory use by cellar foremen throughout this State, that students learn to carry it out correctly in the laboratory within a single day, and that Deputy Collectors are not likely to be less intelligent, is adverted to; and as to the brevity claimed for the government method, it is shown by actual timing to be far behind the still, at least two to one. In regard to the complex calculations claimed to be required when

the data upon which the discussion is based. Columns 3, 4 and 5 show the discrepancies resulting from the use of the government method; an inspection of columns 6 and 7 shows the close approximation that may be reached under the method recommended by Prof. Hilgard.

Dr. E. T. Miller, of Cross Plains, Wis., has expressed the opinion that, for obstinate cases of syphilis and scrofula, Ayer's Sarsaparilla is unquestionably the most effective remedy known to pharmacy. Wonderful cures have resulted from its use.

## RICE'S PATENT

### CALF

### WEANER

—AND—

### Sucking Cow

### MUZZLE.

Prevents Calf or Cow from Sucking Themselves or Each Other.

Thoroughly Tested and Endorsed by All. No Hindrance in Eating and Drinking. No Pain. Complete Success.

No. 1, for Calves, 50 cts. ea., by mail postpaid... \$ 55  
No. 2, for Yearlings, 75 cts. ea., by mail postpaid... 80  
No. 3, for full grown animals, \$1, by mail postpaid 1 10

## FUNK'S PATENT CALF FEEDER.

Also for Colts and Lambs.

Raises better calves than any other method. Better than the cow, because can feed prepared feed and give all the calf can eat. As soon as the calf feels the nipple it tastes the milk and is glad to suck; as it gets older it weans itself. No air swallowed; no fingers chewed; no ears sucked. Less trouble; greater success; easy to clean. Sample Feeder mailed postpaid, \$1.00; per dozen, \$9.00. There are Great Advantages in REARING YOUNG CALVES BY HAND over rearing them with the cow. It takes less time and trouble, because they are easier handled, depend on themselves and winter better; get to eating sooner by putting milk-stuff in the milk; make better calves, because plenty of skimmed milk and slop to spare; make more butter because the cream is saved; can run in the same pasture with the cow, never have to wean them, and the cow does no fretting for the calf. Will send trial Weaner and Feeder, postpaid, \$1.50. Don't fail to give them a trial.

## H. H. H. Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

MRS. H. H. MOORE & SONS, Stockton, Cal.—GRATEFUL: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (104 gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisters. Respectfully yours, FRANK H. BURKE, Breeder of Registered Holsteins and Berkshires, Meulo Park, Cal., January 23d, 1889.

Send for Circular and Price List.

## HORTICULTURE.

## State Horticultural Society.

The February meeting was held in this city on the 27th, President Hilgard in the chair. H. A. Baird of San Jose was proposed for membership.

Mr. Smith, from the committee appointed to tender an invitation to the American Pomological Society to hold their next meeting in this State, reported the receipt of a letter from President Beekman stating that the large expenses incident to the journey would prevent the holding of the meeting on this coast.

A. L. Bancroft tendered his resignation as director, which was accepted, and Emory E. Smith was elected to fill the vacancy.

The committee appointed at the December meeting to report upon observations by Prof. C. H. Allen on fraudulent sales of alleged California fruit at the East, submitted their report, which was published in full in last week's RURAL. The report was adopted.

President Hilgard announced the death of W. G. Kiee, an old and esteemed member of the society, and upon motion the following committee was appointed to draft a memorial expressive of the society's esteem of his valuable work and of honor for his memory: Dr. Edwin Kimball, Leonard Coates and Emory E. Smith.

Mr. Wickson asked for experiences regarding the cutting back of tree roots at transplanting. One member told of success in trimming roots to within a foot of the tree.

Dr. Kimball said he had had success with root-pruning orange trees the year before transplanting. From experience in raising orange trees in the nursery he was satisfied they would do better if the roots are cut off about a foot below the surface. He has some 12,000 trees which he proposes soon to treat in this way by running under the row with a tree-digger. A system of fine young roots develops after the deep-growing roots are cut off.

Mr. Mosher spoke of apricot trees girdled by gophers. He found a way to save such trees is to pack earth about the girdled part, wetting it and packing hard about the tree. His method had been successful in a great many cases, and he is now convinced that he could have saved trees which he had formerly dug up. If the wounded part is kept moist, a new bark will appear.

## Winter Spraying for Scale Insects.

Howard Overacker Jr. read an essay on Winter Spraying, which was published in full in last week's RURAL.

Prof. Hilgard remarked that winter washes must be much stronger necessarily than summer washes, and there seemed to be a disposition to depend more upon summer treatments. He had used a dilute solution of the Ongerth wash successfully in summer, and had also used coal-oil emulsion.

Rev. A. T. Perkins of Fruitvale remarked that his experiences with the Ongerth wash had been very disastrous, a great many trees being killed.

Mr. Bancroft thought growers should always make their own washes, because they could know the components, and not depend on any proprietary wash.

Mr. Mosher of San Jose, Commissioner of Horticulture, said he had done little or no spraying in his orchard. He thought he had realized great benefit from coating the trunk and main branches with lime, salt and sulphur, put on with a brush late in the spring.

Dr. Kimball remarked that the most successful fruit-raiser around Haywards is a modest man—Judge Blackwood—and he has for years done little or no spraying. Dr. Kimball confessed that after repeated experiments he had come to have little or no faith in any scale wash, and, like many others, he is now waiting for the discovery of a parasite that will destroy the scale.

Judge Blackwood remarked that he formerly sprayed his apricot orchards, but since he has abandoned the practice his trees have apparently done as well as ever, though, of course, he could not tell what the future would be. His theory generally is that nature supplies a remedy for nature's evils.

Prof. Hilgard summed up the discussion by urging the need of careful experimentation in the matter of spraying. There are beneficial washes and hurtful ones, and the careful grower must find by experience that which does his trees the most good. It certainly is a step backward to advocate no spraying, for its efficacy in many instances has already been shown.

Mr. Lelong distributed copies of a recent bulletin of the State Board of Horticulture, giving an account of the parasite of the orange scale discovered by Mr. Craw. This account was in the RURAL PRESS of February 28.

## Apple-Growing.

Mr. Leonard Coates read an essay on apple-growing, which was published in last week's RURAL.

Judge Blackwood expressed the opinion that the best apples of California will be produced above the snow line in our mountain valleys.

Dr. Kimball also advocated the highlands for apples and outside the Sierra the apple will not do well. If the ravages of the codlin moth could only be kept from the orchard he would

rather have a bearing apple orchard than any other orchard property. He recited several instances of California apples being received with delight by Eastern residents.

R. C. Kells of Yuba City spoke enthusiastically of an early apple raised near his home, known as the White Astrakan. Strong & Co. buy these every season, paying about \$1 a box, and ship them to Denver.

## Observations at the East.

Rev. A. T. Perkins of Fruitvale, who has just returned from a trip East, said he had found a general desire on the part of all residents to know more about California. A well-informed man told him that he never heard of the State except when there is a great storm or a failure of the fruit crop. A close search for dried fruits revealed to him in the markets a shocking lot of poor fruit, or better samples for which very high prices were asked. Peeled peaches in Baltimore were retailing at 50 cents a pound. Canned fruit is much cheaper and better, but apparently the interests of dried fruits have been very much neglected. Opinions concerning our fresh fruits differed widely in different places. All observations convinced Mr. Perkins that there is a steady demand for our fruit products in all Eastern cities, providing it can be sent there without too great a cost for transportation and marketed at a reasonable figure. He told of a pleasant visit at Washington with Secretary of Agriculture Rusk and his assistant, Mr. Willits. Secretary Rusk was found to be very cordial and expressed the greatest interest in all matters relating to California fruit interests, especially that of plant registration and nomenclature, which the society has lately been considering.

The subject chosen for the next meeting was spring and summer spraying for codlin moth and other pests, to be opened with an essay by Capt. Brainerd of San Jose. On motion the society adjourned.

## Shade Trees Beside Orchards.

EDITORS PRESS:—Along the east side of my prune and almond orchard in Santa Clara Co., there is a row of large eucalyptus and cypress trees, and the orchard trees near do not do well. Is it on account of the shade or the roots of these large trees robbing the soil of fertility? Which does the more harm, the eucalyptus or the cypress, and is there any remedy other than sacrificing the ornamental trees? Are there any other fruit trees that would do better there?—T. D. McADAMS.

It is usually considered that it is the theft of moisture rather than of fertility which makes adjacent trees suffer so severely from eucalyptus and cypress. The loss is felt probably in both directions, and the trouble may be attributed to the marvelous root extension of the border trees rather than the shade. We do not know of any fruit tree which will thrive when thus completely run under. Commonly the grower has to choose between the two rows which he prefers to save, fruit or shade. A temporary purpose may be served by deep trenching along the orchard side of the shade trees, cutting off all roots encountered. This operation will partly alleviate the trouble, but will have to be repeated at intervals.—EDS. PRESS.

Miss Bessie H. Badloe, of Burlington, Vt., had a disease of the scalp which caused her hair to become very harsh and dry and to fall so freely she scarcely dared comb it. Ayer's Hair Vigor gave her a healthy scalp, and made the hair beautifully thick and glossy.

## THE "TRIUMPH."

THE BEST PULVERIZER IN THE WORLD.

ALL METAL SPADING HARROW. HORTICULTURISTS AND FARMERS TRY IT! SPECIALLY ADAPTED FOR ORCHARDS AND VINEYARDS.

### TESTIMONIALS.

H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: After using your Spading Harrow in all kinds of work, I will say it is the best pulverizer that I have ever seen. I used it to cultivate my orchard and vineyard, and it does not only cut up all weeds, but leaves the roots up to the sun, which is sure death to them. You may praise it as high as you like, as you cannot say anything it does not deserve. Yours respectfully, C. A. MAUL.

LOS ALISOS RANCH, EL TORO, ORANGE CO., Jan. 25, 1891. MESSRS H. C. SHAW & Co., Stockton, Cal.—GENTLEMEN: The six-foot Spading Harrow which I purchased through Messrs. Nichols & Ulm of Santa Ana has given much satisfaction, and it does its work thoroughly and quickly. I have given my orchard several harrowings to keep down weeds, and with one pair of 1200-pound mares I harrow 8 to 11 acres per day. You can get nearer to trees than with any other rotary harrow I ever saw used. I have also used the harrow for seeding barley and for fallow land, and I consider it the best machine in use, as for a lump or clod breaker and an orchard evenner it does its work better than any harrow I have ever used. Yours truly, DWIGHT WHITING.

WALNUT GROVE, CAL., Feb. 21, 1891. H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: The Spading Harrow arrived all right and gives perfect satisfaction. I put it on a piece of very rough sod that had been used for pasture for several years, and when it was plowed it was as rough as it was possible to make it. I also had one of the leading Disc Harrows (6-foot) side by side with the Spading Harrow, and we gave them a thorough test, and it was conceded by all present (and there were five or six present) that it was the best thing in the way of a rolling harrow they had ever seen. It did better work and the draft was at least one-third less than in the Disc Harrow, and when we were through the man who owned the Disc Harrow said he wished he did not own it, as he would buy one of the Triumph Spading Harrows. Yours truly, L. D. GREEN.

EUREKA, HUMBOLDT CO., CAL., Feb. 17 1891. MESSRS. H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: We would have written sooner in relation to the Triumph Spading Harrow, but we have been waiting for the foreman's report on the Harrow's work. He says it is a "daisy" and beats anything he ever saw. Send us another at once, and oblige, Respectfully yours, H. H. BÜHNE & CO.

H. C. SHAW PLOW WORKS, Stockton, Cal.

## The Harvest Queen COMBINED HARVESTER.

The Lightest Draft Harvester in the Market.

ENDORSED BY ALL FARMERS AND RANCHERS. SATISFACTION GUARANTEED. NONE EVER RETURNED.

### POINTS OF MERIT:

FIRST—Having two pivot wheels on the ground enables it to turn square corners like a mowing machine. SECOND—All of the frame work about the cylinder is the best of oak lined with sheet steel and put on with screws. Other parts built of the best of material and painted inside and out. THIRD—The driver is NOT isolated by a ladder from the machine, but is safely seated on the separator, where he can bear and see the working of the machine and drive to suit. FOURTH—The new cleaner put on last season works perfectly. FIFTH—The machine is so geared that the cleaner, separator or header can be started independently of each other. SIXTH—The header is portable. By the use of our supplemental truck we can pass a 16-foot header through a 12-foot gate. SEVENTH—The shaftings are all made of steel.

SIZES, 10 TO 16 FEET.

Send for Price List.

With all our Machines we furnish Straw Dump and Header Truck separate from Machine. Machines delivered on board cars or boat.

## REGAN VAPOR ENGINE CO.,

221-223 First Street, San Francisco, Cal.

## Cheaper Than Windmills for Farmers!

Our Perfected "Safety" Engines Cost to Run only 1-8 Gallon of Gasoline per Horsepower per Hour. No Boiler, Fire, Smoke, Steam, Ashes or Heat. No Engineer, No License, No Danger. Single and Double Acting. 1/2 H.P. to 20-H.P.

GENTLEMEN—The 2-H. P. Engine received and set up yesterday. We attached it to part of the machinery in my shop, and it ran my Drill Press, a small Lathe, a large 24-inch by 14-foot Lathe, and a set of Emery Wheels, all of which it handled easily, to our great surprise. Yours very respectfully,

SAN BERNARDINO, CAL., January 10, 1891.

J. B. HENDERSON.

GENTLEMEN—I am satisfied, after running for over a month my Bean Cleaner, etc., with the 4-H. P. Engine you sent me, that it is much the best Gas Engine I have seen. The electrodes are certainly superior to all others; also your safety rotary slide-valve, which is the personification of simplicity, positiveness and durability; I am satisfied it will develop much more power than we have need for. I also want a 1/2 or 1-H. P. for my wife and daughters to use about the house; we have a rotary clothes washer, can also do the churning, etc. I do not know of any better recommendation than to order a second engine. Respectfully yours,

CARPINTERIA, CAL., January 12, 1891.

P. C. HIGGINS.

NOTE.—Both of these Engines were shipped to the parties named, and were set up by them solely by the diagram and printed directions we sent them.

SHEEP AND WOOL.

The Tariff on Mohair.

EDITORS PRESS:—A very important decision has been recently rendered by the Board of General Appraisers regarding goat hair.

The old tariff had a duty upon mohair, i. e., fleece of the Angora, and also upon alpaca and similar animals, but there was no duty upon the common goat hair.

Under the reading of the new tariff, all goat hair must pay a duty of 12 cents a pound, and naturally, the importers of common goat hair made a protest against this. It was necessary for the appraisers to decide that either all goat hair was dutiable at 12 cents a pound, or else all goat hair was free. This latter would have affected mohair and was of vital interest to the mohair industry.

The decision has just been rendered (as we have previously said) which makes all goat hair dutiable at 12 cents a pound, and while this is unquestionably very unjust to the importers of common goat hair, yet it removes a great danger to the mohair industry.

Manufacturers have been staying out of the market waiting to see the outcome of this controversy, and the result has been a weakness in prices.

The decision just rendered will strengthen values again, and we expect to see a better demand for mohair in the next 60 days than we have had during the 60 days past.

The grower should bear in mind that the foreign market has dropped, and this has its effect, but there still exists a good demand for domestic mohair at remunerative prices.

Our market is firm on your wools, and the stock considerably depleted. Our arrangements for the handling of next season's clip of wool and mohair are complete, and we have reasons to anticipate an active market and substantial prices, as the present outlook is not favorable to any declining tendency in values.

We will write you from time to time on any important topic relating to wool and its dependencies which may interest you.

New York. WM. MACNAUGHTAN'S SONS.

A GIGANTIC ENTERPRISE.

The Central Milling Company of San Francisco.

There is at least one industry in this State that has been thoroughly developed by the aid of immense capital, coupled with energetic enterprise, and that is our flouring-mills. No State in the Union can surpass California in the manufacture of flour, and in the front rank of our representative establishments is the Central Milling Company, with its thirteen fine mills and a cash capital of half a million dollars. This company was incorporated Nov. 17, 1886, with that well-known and enterprising capitalist, the late C. L. Dingley, Sr., as its president. Eleven mills were purchased outright, and since that time two were bought and transformed into a fine plant at Paso Robles, while within the past year the fine large mill at Gridley has been added to the list, and the combined daily capacity of these mills is something enormous. At a recent date the extensive manufacture of "Drifted Snow Flour" has been engaged in by the company and already has not only become a household word, but a household necessity. It is something of superior excellence, purity and sweetness, where once tested always desired. Every good housewife is anxious to present a tempting loaf at her table. With "Drifted Snow Flour" this is invariably accomplished.

The Board of Directors of this company are H. M. Leonard, F. E. Spencer, D. B. Moody, John R. Cross, Moses Hopkins, R. M. Shackelford and C. L. Dingley, Jr., the latter being the manager of the large supply house, No. 29 Steuart street, and inheriting the sterling qualities of his father, will continue to achieve the marked success of the past.

Among the stockholders are some of the wealthiest and most influential residents of California, who take a special interest in leaving nothing undone, financially or otherwise, to extend the fame of California flour to the other ends of earth. It is the enterprising development of such resources as this that brings wealth, happiness and prosperity to every commonwealth, and were our diversified industries only half so well fostered and developed, California would occupy a far more advanced position in the commerce of the world than she does at the present time.

Dispersion Sale.

Owing to the death of one of the partners, we will sell our herd of

THOROUGHbred HOLSTEIN CATTLE

At Less than Cost Prices.

Easy terms will be given with approved security, either for the entire herd or for individuals. These animals are ALL REGISTERED, and were especially selected for their superior breeding.

No better opportunity has ever been offered than this for any one wishing to engage in the business of raising Holstein Cattle.

Prang's Easter Cards and Souvenirs.

Regarding Prang's new line of Easter goods, it may be safely asserted that the refined taste, chaste and delicate designs and appropriate selections, which in the past have secured their productions such pre-eminent and popular favor, will be found even in a greater degree in the line they are just presenting for the coming season. In variety, beauty and richness of design, their list reflects the best thought and care of American artists of recognized standing.

This is expressed not alone in the cards but also in the handsomely and tastefully gotten-up tokens for Easter in books and booklets, in hand-painted and decorated novelties, in satin art prints made up in silk, satin and plush, including novelties in sachets, easel scarfs, mouchoir cases, portfolios, realistic shape mounts, etc., in all of which their line is unsurpassed, presenting a full variety of prices from the comparatively inexpensive to the costliest.

We have received from their local agent, Mr. Joseph H. Dorey, 527 Commercial St., S. F., a handsome collection of Messrs. Prang & Co.'s Easter publications, and can commend them both for sentiment and beauty.

NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. ADDRESS P. K. DEDERICK & CO.  
4 DEDERICK'S WORKS, ALBANY, N.Y.

Dewey & Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

## Red Polled Cattle.

We have 19 head of Imported Stock.

YOUNG BULLS and CROSSBREDS ON DEVONS for Sale.

### H. MECHAM,

Importer and Breeder of Shropshire Sheep. They were all imported from England in '83, or bred direct from Imported Stock, and all registered.

### H. MECHAM,

Breeder of American Merino Sheep Without Horns.

The only flock in the United States. When we bought our sheep East 20 years ago, among them was a ram without horns. He grew to be a fine large sheep, shearing at 2 years old, a 12 months' fleece, 35 lbs. of long white wool.

I have bred from him and his get ever since and have never made an out-cross and never used the same ram but one year on the same flock. My rams at two years old will weigh from 160 to 180 lbs. have a strong constitution, without wrinkles, and will shear on an average about 25 lbs., a 12 months' fleece, of long white wool. Rams and Ewes for sale. P. O. Address, **Stony Point, Sonoma Co., Cal.** R. R. Station, Petaluma.

## THOROUGHBRED JACKS!

A FEW MAGNIFICENT JACKS BRED FROM THE finest strains of blood from Kentucky. Correspondence solicited. **L. U. SHIPPEE**, Stockton, Cal.

## S. H. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, March 11, 1891.

The weather continues favorable for growing crops, which is gradually restoring confidence. This feeling is strengthened by the higher ranges of values for all kinds of cereals. The ranges are the highest since the disastrous wheat deal nearly four years ago. The Eastern and foreign wheat markets show quite an advance the past week. The following is to-day's cablegram:

LIVERPOOL, March 11.—Wheat—Firm. California spot lots, 85 3/4d; off coast, 41s 6d; just shipped, 40s 6d; nearly due, 41s 3d; cargoes off coast, firm; on passage, quiet; Mark Lane wheat, firm; English country markets, generally 6d to 1s dearer; French, firm; wheat and flour in Paris, quiet; weather in England, thawing.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	Mar.	April.	May.	June.	July.	Aug.
Thursday.....	71 1/4d	80d	80 1/4d	71 1/4d	71 1/4d	71 1/4d
Friday.....	80 1/4d	80 1/4d	80 1/4d	71 1/4d	71 1/4d	71 1/4d
Saturday.....	80 1/4d	80 1/4d	80 1/4d	80 1/4d	80 1/4d	80 1/4d
Sunday.....	80 1/4d	80 1/4d	80 1/4d	80 1/4d	80 1/4d	80 1/4d
Monday.....	80 1/4d	80 1/4d	80 1/4d	80 1/4d	80 1/4d	80 1/4d
Tuesday.....	80 1/4d	80 1/4d	80 1/4d	80 1/4d	80 1/4d	80 1/4d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market
Thursday.....	40-00	38-00	33-00	Held high
Friday.....	40-00	38-00	33-00	Held high
Saturday.....	40-00	38-00	33-00	Held high
Sunday.....	40-00	38-00	33-00	Held high
Monday.....	40-00	38-00	33-00	Held high
Tuesday.....	40-00	38-00	33-00	Held high

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

	Mar.	April.	May.	June.	July.	Aug.
Thursday.....	110 1/2	107 1/2	106 1/2	102 1/2	98 1/2	95 1/2
Friday.....	112 1/2	109 1/2	108 1/2	104 1/2	100 1/2	97 1/2
Saturday.....	112 1/2	109 1/2	108 1/2	104 1/2	100 1/2	97 1/2
Sunday.....	112 1/2	109 1/2	108 1/2	104 1/2	100 1/2	97 1/2
Monday.....	112 1/2	109 1/2	108 1/2	104 1/2	100 1/2	97 1/2
Tuesday.....	112 1/2	109 1/2	108 1/2	104 1/2	100 1/2	97 1/2

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

	Mar.	April.	May.	June.	July.	Aug.
Thursday.....	99 1/2	99 1/2	99 1/2	99 1/2	99 1/2	99 1/2
Friday.....	100 1/2	100 1/2	100 1/2	100 1/2	100 1/2	100 1/2
Saturday.....	100 1/2	100 1/2	100 1/2	100 1/2	100 1/2	100 1/2
Sunday.....	100 1/2	100 1/2	100 1/2	100 1/2	100 1/2	100 1/2
Monday.....	100 1/2	100 1/2	100 1/2	100 1/2	100 1/2	100 1/2
Tuesday.....	100 1/2	100 1/2	100 1/2	100 1/2	100 1/2	100 1/2

NEW YORK, March 11.—Wheat—\$1.12 1/2 for March, \$1.09 1/2 for May, \$1.04 1/2 for July, \$1.01 1/2 for August, and \$1.03 1/2 to \$1.03 1/2 for December.

CHICAGO, March 11.—Wheat—\$1.01 1/2 for May and 97 1/2 for July.

## Eastern Peach Crop Prospects.

New York Fruit Trade Journal, Feb. 28: We have received the following from a leading Baltimore house:

There is considerable uneasiness manifested in this locality concerning the peach crop of 1891. We have had excessively warm weather and the past week has been more like June than February. It is safe to say that so far there has been no damage whatever done to the peach crop, but if we have a continuance of such weather for a week or two longer, serious damage will undoubtedly result. What we want is cold weather and plenty of it to insure a good peach crop this season. It would be an almost fatal blow to Maryland and Delaware peach-growers to have another failure this year. Every one connected with the dried fruit and canning industries is aware of the necessity of a full crop, and it would be a bitter disappointment if their hopes were not realized.

## Raisins.

NEW YORK, March 4.—The Commercial Bulletin says: Reference has been made in this column lately to sales of California bag raisins for seemingly low prices. This plain statement appears to have aroused some criticism. We find, however, the reports have correctly reflected the actual transactions. It would appear, moreover, the evidences of undercurrent weakness to the market were not misleading. To the contrary, we learned Tuesday of sales of boxed fruit at prices relatively as low as any that have been quoted for sound raisins in bags the past week. Strictly standard 3-crown loose are held laterally at \$1.65 per box, to the extent of several hundred boxes at \$1.55, and are now offered at the latter price. A brand of 2-crown that would compare favorably with some goods of the 3-crown mark were disposed of at \$1.20 per box. We find evidence of indiscriminate forcing of goods upon the market, but it is patent that some holders have become wearied and are inclined to exchange their raisins for current funds. As a matter of fact we hear from a reliable source that some packers have withdrawn the limits on goods in stock here.

NEW YORK, March 8.—Raisins go out freely at easy prices. Two crown bags 3@4c; three crown 4 1/2@5 1/2c; latter extreme fancy; boxed three crown 5 1/2c; others 4 1/2@4 1/2c. Useful twos can be had \$1.10; selections \$1.20. Layers nominal. There are over 200,000 boxes Valencia in the market entirely neglected by the run of California sacks. The advertisement is an expensive one for the owners, but the low prices have introduced our rich-fleshed bulk Californians to a large line of new buyers, who now comprehend their merits and will retain their use, and it is not likely that quotations will be always in the muddled situation that attends this season's unusually large supply of wide-range quality wherein good grades suffer for bad.

## Eastern Wool Markets.

NEW YORK, March 6.—Bradstreet's will say: All the leading wool markets have been comparatively quiet during the past week. Manufacturers are well supplied with stock and are prepared to wait for lower values. It is generally expected that with the arrival of the wool bought at the London wool sales, choice domestic fleeces will weaken. There is still a fair demand for good staple lots, particularly Territories. Large sales of Australian wools have caused a quiet feeling in X and XX fleeces, and buyers can now secure slight concessions in these grades. Pulled wools are still in active demand and

stocks are said to be much reduced since the beginning of the year. The supply of these wools is not as large as it has been in previous years and values are higher in consequence. Stocks of one-quarter and three-eighths blood wools are very light and the demand continues strong. The distribution of these wools in particular, and all grades in general, has been unusually large. The mills have increased their consumption of wool to meet the greater demand for domestic goods. Carpet wools are quieter, but values are unchanged. Manufacturers are said to have an ample supply for the present.

NEW YORK, March 8.—The late character of the wool market has not notably varied. Buying has become somewhat tamer, but holders are not anxious, as stocks are small. Good mixing grades of foreign continue active. Utah lamb, 22@24c; 20,000 lbs XX Ohio, 34c; 5000 lbs extra pulled, 31c. Boston, quiet. Sales—565,000 lbs foreign and 1,521,000 lbs domestic at 19c; fine-washed fleeces, firm. Philadelphia—Trade is moderate; fair demand for delaine. Stocks and supplies are small. None were pressed.

## Decrease in the Wool Clip.

BOSTON, March 7.—The Commercial Bulletin will publish to-morrow statistical articles based upon the Agricultural Department reports, in which it is shown that the total number of sheep in the country to-day is 43,431,134, against 44,336,072 in 1890, and consequently that the wool clip will be 5,000,000 pounds less than last year, when it was 276,000,000 pounds.

## Dried Fruits.

NEW YORK, March 6.—Recently there were reports of inquiries from Chicago for California peaches. Yesterday a Chicago firm offered a line at prices on a parity with those current here.

NEW YORK, March 8.—Sack prunes, 10@10 1/2c; boxes, 10 1/2c obtained, seventies and eighties; no small in stock. Apricots are dull, 16c for best boxes. Choice bleached peaches declined to 15c; Chicago lots seeking market here. Dried apples tending lower offerings; sun-dried irregular in quality; best have to be toned up with State for use; this causes slow buying of Pacifics.

## Southern Fruit Crops Ruined.

NEW ORLEANS, March 9.—A freeze on the 26th of February did considerable damage to prospective fruit crops in this State. On Saturday afternoon hail fell, and Saturday night rain fell in torrents, causing greater damage by washouts and overflowing low lands than has been done in many years. Last night there was another freeze, this time preceded by rain, which finished up the peach-blossoms, and very few peaches, if any, will be produced this season.

## Peanut Prospects East.

New York Fruit Trade Journal, Feb. 28: In reply to a request we receive the following from a leading firm of cleaners in Virginia: "They have reached the lowest prices ever known for hand-picked goods and at present prices it is safe to speculate, as they are below cost of production, that there is an abundant supply in farmers' hands this season; the low values will increase the consumption enormously; any disaster to the coming crop would run up prices fifty to one hundred per cent. The trade is taking the goods freely."

## Miscellaneous.

NEW YORK, March 8.—Lima Beans—Abundant; all grades favor buyers; choice, \$2.70. Honey—Fairly firm. Maple Sugar—Season opened. This reduces some demand for table honey. Fair business in hops; home trade chiefly buying Pacifics. Quotations continue uniform and unchanged; 30c being the extreme for all best. There is a stronger feeling in hides. The late activity in leather brings a large attendance of tanners, but the business is mainly in cheap sorts. California dry are quoted at 13 1/2c.

## Local Markets.

NEW YORK, March 8.—The Commercial Bulletin says: Reference has been made in this column lately to sales of California bag raisins for seemingly low prices. This plain statement appears to have aroused some criticism. We find, however, the reports have correctly reflected the actual transactions. It would appear, moreover, the evidences of undercurrent weakness to the market were not misleading. To the contrary, we learned Tuesday of sales of boxed fruit at prices relatively as low as any that have been quoted for sound raisins in bags the past week. Strictly standard 3-crown loose are held laterally at \$1.65 per box, to the extent of several hundred boxes at \$1.55, and are now offered at the latter price. A brand of 2-crown that would compare favorably with some goods of the 3-crown mark were disposed of at \$1.20 per box. We find evidence of indiscriminate forcing of goods upon the market, but it is patent that some holders have become wearied and are inclined to exchange their raisins for current funds. As a matter of fact we hear from a reliable source that some packers have withdrawn the limits on goods in stock here.

NEW YORK, March 8.—Raisins go out freely at easy prices. Two crown bags 3@4c; three crown 4 1/2@5 1/2c; latter extreme fancy; boxed three crown 5 1/2c; others 4 1/2@4 1/2c. Useful twos can be had \$1.10; selections \$1.20. Layers nominal. There are over 200,000 boxes Valencia in the market entirely neglected by the run of California sacks. The advertisement is an expensive one for the owners, but the low prices have introduced our rich-fleshed bulk Californians to a large line of new buyers, who now comprehend their merits and will retain their use, and it is not likely that quotations will be always in the muddled situation that attends this season's unusually large supply of wide-range quality wherein good grades suffer for bad.

NEW YORK, March 8.—Raisins go out freely at easy prices. Two crown bags 3@4c; three crown 4 1/2@5 1/2c; latter extreme fancy; boxed three crown 5 1/2c; others 4 1/2@4 1/2c. Useful twos can be had \$1.10; selections \$1.20. Layers nominal. There are over 200,000 boxes Valencia in the market entirely neglected by the run of California sacks. ## Cereals.

H. Kains Jackson in London Farmer, Feb. 16: Some rain and temperate winds have carried off the coldness of the subsoil, and evaporation and radiation where the plow has been moving, have given the land surface a nice friable tilth favorable to spring seeding. Beans, peas, oats, and barley may very likely go in well and have a good start, with the help of warm April showers; but for wheat the acreage that can now be added must only be insignificant. What the total acreage may be we ought to learn from the new Agricultural Department in June, without waiting until September. It is not even now too early to say that whatever the produce per acre next harvest may be, the crop can only be the yield on a small breadth planted with wheat. Markets, however, are scarcely affected by the prospects of the home 1891 harvest. They are under the influence of the past, and are becoming somewhat sensitive to supplies, week by week. Of course stocks are decreasing, and the estimate of last week's supply against requirements debits 70,000 qrs. as taken from granary reserves.

London Agricultural Gazette, Feb. 16, summarizes foreign advices as follows: Latest advices from the Australasian colonies give no essentially fresh information; the South Australian wheat crop is expected to be smaller than that of last year, as also that of New Zealand, while that of Victoria may be larger, and non-exporting colonies are something to be feared. Samples of the new-crop wheats of the Argentine Confederation, as received in Liverpool, are stated to be of excellent quality. The wheat crops in Chili are reported to be spoiling for want of labor to secure them, resulting from the revolution in the country. Some sales of Manitoba wheats are said to have been made for this country, because they were not expected to remain sound with the advent of warmer weather. Severe weather is again reported from South Russia. In the western countries of Europe there has been a cold spell. Crop prospects are so variously reported that they cannot, at present, be safely discounted. Grain markets are steadier, especially in France, where the comparatively small offerings cause some uneasiness to the trade and stimulate the purchase of foreign grain.

A leading New York exchange says: The scarcity of fine wheat is a feature of the season, quite apart from the small bulk of the wheat crop, the following figures in relation to which are now officially published, giving the yield and acreage for each year since 1880:

Years.	production Bushels.	Total area of crops.	Average value per acre.
1880.....	498,459,868	37,986,717	\$12 48
1881.....	383,280,090	37,709,020	12 12
1882.....	504,185,470	37,067,194	11 09
1883.....	421,086,160	36,455,593	10 52
1884.....	512,765,000	36,475,885	8 38
1885.....	357,112,000	34,180,246	8 95
1886.....	457,218,000	36,806,184	8 54
1887.....	456,329,000	37,641,783	8 25
1888.....	415,868,000	37,336,138	10 32
1889.....	497,560,000	38,123,859	9 98
1890.....	399,262,000	36,087,154	9 28
Average 11 yr's.			
'80 to '90.....	445,110,508	37,170,798	9 91
'80 to '89.....	449,695,359	37,279,162	9 97
'70 to '79.....	312,152,728	25,187,414	13 00

From these figures it will be seen that both yield and acreage are slowly declining in the United States, while the profits have fallen below \$10 per acre. With the decline in the price of silver came the large decline in the price of wheat, as the above shows.—COMMERCIAL EDITOR RURAL PRESS.

The local wheat market has held to strong, advancing prices, closing the week at higher ranges than for three years. Patrons of the RURAL PRESS, who have acted upon our repeated warnings that the market must advance to good figures, have no cause to regret doing so. Our opinion was founded on the statistical position of the world's supply and the world's consumption, and also that silver legislation would bring about a higher range of cost for Indian and Russian wheat, which naturally would react in favor of American wheat. The better informed financiers are confident that the price of silver will not only go considerably higher but that the next Congress will remonetize it. English wheat-buyers are close students of the silver market, as is shown by the following from the Mark Lane Express of Feb. 23: "The market for Indian wheat, and in a measure that for Russian wheat also, is now reduced to a position of extreme uncertainty owing to the fluctuations in the price of silver. . . . The latest news of the American silver market is a trifle more reassuring than the earlier advices, but our own market for silver is a shade worse on the week. English farmers are becoming

increasingly impatient at the dependence of English market prices for wheat on the recondite operations of speculators in the precious metals." This indicates that English farmers are beginning to agitate in favor of remonetizing silver.

By reference to tonnage movement under "Miscellaneous," it will be seen that the engaged tonnage at this port is very large, while the tonnage on the way is about 100,000 tons register greater than at the like time in 1890.

Oregon and Washington advices are confirmatory of heavy shipments from Eastern Oregon and Eastern Washington to the East. These shipments are allowable owing to the lower (comparatively) freight rates to the East than they are to Pacific Coast ports. Not only are the freights comparatively less, but the markets in the Central and Eastern States are higher than are the export markets on this coast. Shipments to the East have tended to strengthen our market, owing to their easing us of a large surplus that otherwise would have been forced on us.

The stock of wheat in Salinas valley warehouses compares as follows: March 1, 1891, 15,185 tons, against 35,067 tons on Oct. 1, 1890.

The local barley market has made quite an up move under a good demand and light obtainable supplies. The cold rains have undoubtedly retarded the growth of the plant, which is apt to cause a late season, and if so, the surplus on this coast will be used up before the new-crop season. A fair idea of how fast the supply has gone into consumption is witnessed by the returns of stocks in the warehouses in Salinas valley. Returns on March 1st of this year give the total at 525 tons against 16,146 tons on October 1, 1890. Last year (1890) on March 1st the stock was 18,241 tons.

Oats have held to strong prices during the week. The uncertainty regarding the available surplus in Oregon and Washington is a disturbing factor in the market. For fully three months advices from up north have reported a light surplus, yet free receipts are still the order. The consumption is free. Corn shows more strength at a slight advance. Receipts are light, whether from bad roads or light available supply we are unable to state.

Rye and buckwheat are unchanged.

## Feedstuff.

There is a fair demand, considering the improved pasture, for ground feed. Bran and middlings are steady, while ground and rolled barley are strong. Feedmeal is also strong.

Hay maintains the strength heretofore reported. Choice grades are scarce. Nevada continues to send us fair supplies. Crop prospects continue of a most favorable character.</

tions, but for poor keepers and defective parcels the market is weak and low.

**Miscellaneous.**  
The poultry market is a shade lower for all kinds, except ducks, which are slightly higher.  
Seeds are weaker, outside of flax, which is steady.  
English mail advices, just to hand, report a strong, growing hop market, with the supply light. At the East, and on this coast, a strong bear influence is at work. An increased acreage is planted in this State, Washington and Oregon.  
In wool there is very little doing—being between seasons. Shearing will be late.  
Beans are well cleaned up. The demand is slack. To force a consignment, a shading in prices is necessary, but forced buyers have to pay full up.  
Exports by sea the past week aggregate as follows: Wheat, cts, Cork, 113,344; Havre, 192,436; Hull, 66,446; Liverpool, 23,658; Dunkirk, 151,421. Flour, bbls, Honolulu, 1100; Sydney, 230; Liverpool, 3875; Vladivostok, 3100. Barley, cts, Honolulu, 128. Rolled barley, cts, Honolulu, 1902. Beans, lbs, Honolulu, 2375; Victoria, 10,213. Hay, bbls, Honolulu, 1055. Wine, gals, New York, 50,004; Honolulu, 1374. Brandy, gals, New York, 1060. Sugar, lbs, Sydney, 448,000. Hops, lbs, Dunedin, 2727.

From the Commercial News of March 11th the following summary of tonnage movement is compiled:  
On the way to  
San Francisco.....260,887

**ORANGE CULTURE IN CALIFORNIA.**  
Now that the interest in the culture of the orange is extending so as to embrace nearly all parts of the State, a book giving the results of experience in parts of the State where the growth of the fruit has been longest pursued will be found of wide usefulness.  
"Orange Culture in California" was written by Thos. A. Garey of Los Angeles, after many years of practical experience and observation in the growth of the fruit. It is a well-printed hand-book of 227 pages, and treats of nursery practice, planting of orange orchards, cultivation and irrigation, pruning, estimates of cost of plantations, best varieties, etc.  
The book is sent post-paid at the reduced price of 75 cents per copy, in cloth binding. Address Dewey & Co., Publishers "Pacific Rural Press," 220 Market St., S. F.

**SEEDS** SEVIN VINCENT & CO., **SEEDS**  
ESTABLISHED 1851.

Oldest and Most Reliable Seed House on the Pacific Coast.

In no business in existence is there a greater room for fraud and deception than in the SEED BUSINESS. In nothing should more care be exercised than in the purchase of Seeds. Many Gardeners, both professional and amateur, have found out what it was to buy SEEDS from IRRESPONSIBLE SEEDSMEN.

We do not believe that people want to be HUMBLED when they buy Seeds, consequently we believe in sending out only the best which we can grow or procure. **HONEST SEEDS AT HONEST PRICES.** Those not already purchasers of our SEEDS are respectfully invited to make a trial of them.**WE GUARANTEE THAT ALL SEEDS SOLD BY US SHALL PROVE TO BE AS REPRESENTED.**

Will mail free on application our beautifully illustrated Catalogue, containing description and prices of Grass, Vegetable and Flower Seeds of all descriptions, Fruit Trees, etc.

## SANTA ROSA NURSERIES,

R. W. BELL, successor to L. Burbank.

REDDING PICHOLINE OLIVES,

1 to 1 1/2 ft. .... \$3 per 100

2 to 3 ft. .... 4 per 100

MISSION OLIVES,

1 to 1 1/2 ft. .... \$12 per 100

RARE KINDS,

1 and 2 years. .... \$15 to \$25 per 100

IN SURPLUS.

Oranges, Apricots, Almonds, Cherries, Apples, Japan

Plums and Small Fruits.

## PALM AND CITRUS NURSERY.

I OFFER THIS SEASON A LARGE AND SELECT  
stock in PALMS (50 varieties), in CITRUS—Eureka,  
Lemon, Washington Navel, Indian River, etc.; in  
OLIVES—Mission (100,000), Italian (Frantolo, Morinello,  
etc.) from imported trees; also the French and Spanish  
varieties. Large selections in PINEAPPLE and  
BANANAS. Also the largest collection of Tropical  
Fruit-Bearing Trees in the State, a few of which are:  
Alligator Pear, Cherimoya, Mango, Sour Sop, Sugar  
Apple, Star Apple, Cashew Nut, Rose Apple, Cocoa  
Plum, Elephant Apple, and others too numerous to  
name. Send for Descriptive Catalogue. KINTON  
STEVENS, Santa Barbara, California.

## Mandarin Oranges.

We sold in this market over 80,000 boxes sweet, seed-  
less, Japanese Mandarins at from 75 cents to \$1 per box,  
boxer being one-third of the regular size orange box.  
We offer 5000 Mandarin trees at \$20 per 100 in lots to suit.  
We have also a large variety of other fruit trees and  
garden plants, imported from Japan, at low figures.  
Apply at DOMOTO BROS. CO., Japanese Nursery, 663  
Third Street, Oakland.

### Dairy Progress.

Although our dairymen have accomplished very much in the line of progress during the last few years in the introduction of better machinery and processes and the construction of better buildings and other facilities, there is still much field for improvement. It is also true that there is much to be done in educating our dairy farmers to a proper appreciation of the benefit and profit in better work and better facilities. For this reason we welcome to our columns a stirring appeal which E. W. Steele of San Luis Obispo county makes to the dairymen of his county in the interest of progressive ideas and progressive work. Mr. Steele is one of our largest dairy owners and has been in the business in California ever since pioneer days. He is also quite abreast of the youngest and brightest of our newer generation of dairymen who have come into different parts of the State, introducing the latest Eastern ideas and methods. He knows from actual trial the advantages of having the best stock and having them intelligently fed and of having the latest improved devices for manufacturing their milk.

As Mr. Steele clearly shows, the dairy business at the East has been revolutionized almost during the last decade, and the only way we can compete with the Eastern product is to turn to account every feature of Eastern application of science and invention which is adapted to our conditions.

We have peculiar conditions to deal with, it is true, and many Eastern policies are not practicable here. That can easily be ascertained, and local skill in invention and adaptation will do the rest. But first of all, it is imperative that we should all be filled with the spirit of progress, and the methods and materials of progress will be almost immediately available. We hope all our dairy readers will weigh carefully Mr. Steele's propositions. If

he succeeds in arousing the interest in his county in a general dairy fair, and possibly a sort of dairy school during the fair, it will not be long before other counties and other districts, and finally the State at large, will enlist in such undertakings and we shall be as wide awake on these subjects as we are now on fruits and fruit products. Who will take hold and help onward this movement? We commend it to the attention of our contributors.

E. M. WARDALL. JAMES MORGAN. JOHN S. DORE. DAVID REID. JESSE POUNDSTONE.

MEMBERS EXECUTIVE COMMITTEE, CALIFORNIA FARMERS' ALLIANCE.—See page 265.

### The Wool Interest.

We are glad to see indications that the sheep interest is advancing in the direction of smaller flocks on a better system of management than formerly. We are told that the price of mutton has been influenced to some extent this winter by the demand for sheep among farmers, who propose to enter upon or extend their sheep-husbandry. This is quite different from the course of events during immediately previous years, when conditions were such that the course was out of the industry rather than into it. This is the result of the restored confidence inspired by the McKinley law, and we trust all anticipated benefits will be realized.

As the business is looking up, it is interesting to note that the Government has taken measures to note its progress on this coast systematically. Mr. John Minto of Salem, Oregon, whose stirring address to the members of the North Pacific Sheep Breeders and Wool Growers' Association was published in the *RURAL* for Nov. 29, 1890, has been appointed correspondent of the U. S. Bureau of Animal Industry in the special field of sheep and wool interests for the States of California, Oregon and Washington. In a recent letter Mr. Minto writes: "I hope and desire to avail myself of the aid of your columns, both to give and receive information as to the present status and means of future benefit to the sheep and wool interests of the field assigned me. It will be congenial work, in the discharge of

**THE ENGLISH SPARROW.**—At a recent meeting the Humboldt County Horticultural Society adopted a resolution directing the secretary to call the attention of the Board of Supervisors to the injurious work of the English sparrow, and request them to offer a bounty for its destruction, and also that each member of the Society should endeavor, so far as possible, to use all of the means in his power to exterminate it.

which, I recognize the influence of the *PRESS*." We shall be glad to assist Mr. Minto in every way in our power, and trust our readers will freely respond to such requests for information as he may make.

The publication will not only be of direct value to wool-growers in their work here, but will have a general effect in sustaining the industry in the protection from foreign competition which has recently been secured for it.

## THE DAIRY.

## A Stirring Address to California Dairymen.

The San Luis Obispo Tribune of last week has the following stirring address to the dairymen of that district by Mr. E. W. Steele, one of the best known and most progressive men in the California dairy interest. His points will be read by dairymen generally with marked attention, and we should like to have discussion upon the matters involved:

To the Dairymen of San Luis Obispo and Santa Barbara Counties: Every dairymen knows by his personal experience that for several years past dairying has not paid as well as it used to do, and in fact as well as it should, to make it a desirable and permanent business. Nor indeed, from a general view of the situation, is the prospect for future profits, under present methods, flattering. Competition from the cheap labor districts of the Eastern States—to be in the near future still further advanced by cheaper freights from the East, caused by the completion of other and competing overland routes to be built—and increasing business and volume of freight are, or surely will be, constant factors regulating and controlling the prices of dairy products in the future, and will surely make the competition closer.

What shall we do in the premises? Permit me to state a few facts and offer some suggestions that occur to me.

The facts already stated lead up to the pertinent question, how can the Eastern dairymen, with long and cold winters, requiring so much feed to keep up the animal heat in his cows, for such lengthy periods of feeding to contend with, on lands equally valuable and investments relatively as large, pay a heavy percentage on his produce as freight, and still make and sell his produce at a profit, and reduce our business almost, and in some years quite, to a losing one?

I have studied this question for years, and for a time was satisfied with the answer, "cheaper labor." But for some time I have known that this did not fully answer the question; did not account for very evident facts; was not, in fact, the principal advantage of our Eastern competitors.

What are their other advantages aside from the help of their families and cheap labor?

According to the light I have, I will answer. Better oows, careful care and shelter, and plenty of good food every day, of the kind best adapted to produce butter and cheese, in which the silo is an important factor in the non-producing season; improved methods for securing the full value of the milk for making butter and cheese; for making the best and longest and best-keeping produce; organizations of the dairymen for selling at home on stated market days for cash, at least cost to them, their produce; and last but not least, the careful saving of all the valuable manure and using the same on their land to keep up its productivity.

Now what are the advantages thus gained by the intelligent Eastern dairymen by these improved methods?

Let me answer this question with all sail set and headed for the breakers ahead (if there are any) in appreciable figures. Dairymen, refute these figures if you can. If you cannot, adopt improved methods or make up your minds to be content to work for a bare subsistence and "let the fittest survive."

I affirm that this advantage is 60 per cent over our average dairy methods, and this I believe to be a very conservative statement. This to many will seem to be a startling assertion.

Now I will try to sustain this assertion by theory and facts. The estimate of the most reliable Eastern authorities is that the unregenerated Eastern dairymen milk one-quarter of their cows at a positive loss, and one-third at no profit, thus leaving the other two-thirds of the dairy for profit. So much for poor cows.

These dairymen do not use a milk or cream tester, do not know the value of the milk of each cow for butter fat or cheese, and right here lose 33 1/3 per cent of their feed and labor. Some dairymen who have never thought of the subject or made tests, may say "this is hosh," or "we California dairymen can do better." I tell you you don't. For 33 years now in the State of California, there has not been one day that dairies in which I have been interested have not made butter or cheese. Our firm started with good American cows; we have been selecting and breeding for milk and the dairy with at least usual diligence and care for this country.

Many years since I awoke to the fact that I was losing much of the butter fat by the old method of setting milk in pans, but did not know how to overcome it save by the distant reports of deep setting, cooling creamers, etc. Directly I heard of the centrifugal creamer, when it first came into use in Europe. A friend saw one work and told me that it saved the butter fat to within one-half of one per cent, and as soon as I investigated a little more, and over three years since, I purchased a centrifugal creamer, and behold, presto! I at once discovered that a saving of butter fat equal to 20 per cent was made. I soon got another. Now, brother dairymen, are not most of you

losing this 20-per-cent profit on your whole investment in the dairy business? Our Eastern dairymen are not any more, and they will cinch the life out of us if we don't quit it, unless our beautiful and productive California saves us by its natural advantages. Again, I have got a milk tester; in a few months I can tell the percentage of butter in any cow's milk. The results are perfectly astonishing—great eye-openers. To illustrate, here is a cow that gives 40 lbs. of milk daily for a good long time. This is a large milker and you regard her as a No. 1 cow; here is another that gives only 25 lbs. of milk per day, and this is not more than or hardly an average. You test the milk of the two oows for butter fat. The 40 lb. cow tests 1 1/2 per cent, so makes .60 lbs. per day, while your little despised 25 lb. cow alongside tests 8 per cent butter fat, and so makes 2 lbs. of butter per day. Now these are not fancies; I find them to be facts in my dairy selected and bred for the dairy business for so many years.

The intelligent Eastern dairymen don't milk and keep his cows without testing them, and if we do, they will, as I said before, cinch the life out of us, and if they don't, my intelligent California dairymen, those that work up in these things will drive the silliness from the field.

The possibilities of the best bred and fed milk cows are being developed daily, and the best oows of ten years since are nowhere now. The Holstein oow Pauline Paul, of the Maplewood dairy farm, Pawling, N. Y., has the biggest known butter record of any cow in the world to-day, under test conditions. Being milked for a record in the advanced Holstein Registry, she made 1091 lbs. 15 ozs. of butter in 11 months, and at the end of the tenth month was still making 2 lbs. of butter per day. Up to that time the Jersey oow Euroclama had the biggest record, to wit: 945 lbs. and 9 ozs. in one year. Aggie the Second, another Holstein cow, has a record of 304 lbs. 5 1/2 ozs. in 90 days. Princess 23, a Jersey cow, in a seven days' test for butter, made 46 lbs. 12 1/2 ozs. of butter, being a pound of butter for every 6 4 lbs. of milk.

Mary Anne of St. Lambert, also a Jersey, in a seven days' test, made 36 lbs. 12 ozs. of butter, being a pound of butter for 6.66 lbs. of milk. Many of the best butter-bred Holsteins make a pound of butter for every 14 or 15 lbs. of milk, and give enormous quantities of milk, often milking nearly the year through. I have one Holstein cow that gave 51 9 10 lbs. of milk for 341 days on an average. All the milk in my dairy was weighed for three days, and made into butter, averaged 5 63 per cent or a pound of butter for 17.75 lbs. of milk. Different cows in my dairy gave, so far as I have tested, from 1 1/2 to 7 per cent milk. The average dairy ranges from 2 1/2 to 3 1/2 per cent milk; I am speaking now of butter fat. Of some oows' milk it takes 35 lbs. of milk for a pound of butter. In ordinary dairying it is rarely less than 25 lbs. of milk for one of butter, and often much more.

The Illinois Agricultural Experiment Station, in Bulletin No. 12 says: As much as one per cent of fat may often be found in skim milk, and the milk of many cows does not contain even 2 per cent of fat, and the average is from 2 1/2 to 3 1/2 per cent fat; often from 3 1/2 to 50 per cent of the fat goes off in the skim milk.

And now comes Mr. John Gould, a celebrated authority in all matters pertaining to the dairy, and says: One of the curious facts I am finding out is the loss of butter fat in churning, not more in the home-made butter than in the creamery butter. Two pounds of unchurned butter fat is often left in 100 lbs. of buttermilk; indeed it is not unusual. In a creamery that has 500 lbs. of buttermilk there would be a loss of 20 lbs. of butter. According to this, many of the dairies in our country are throwing away 20 lbs. of butter every day in the buttermilk. And now comes into view for favor and use the butter extractor, the newest important invention in dairy tools. It is a centrifugal creamer and churn combined. Put in the milk and it comes out butter in small grains about the size of turkey shot; the butter is run into brine or cold water, all the milky substance washed away and worked and salted at once. It is a new kind of butter (sweet cream butter) and the best makes in the East are selling for 40 cents per pound, or at least some of the fancy brands.

In late experiments with this new favorite it made a pound of butter from 5 1/2 lbs. less of milk than it took of the same milk with a Danish Weston centrifugal separator and the churn. An analysis of the buttermilk of the extractor in one case showed remaining in it still .17 of 1 per cent butter fat, in the other .32 of 1 per cent, both infinitesimal. How do the Eastern dairymen find out all of these things? By experiment at agricultural fairs, dairy schools and conventions, by experiments at the agricultural experimental stations, by the use of centrifugal creamers, milk testers and butter extractors. These institutions (dairy schools and conventions) receive appropriations from the States to aid and encourage them. They are alive, awake and organized; they have their cheese factories and creameries run by expert cheese and butter makers, and make the sales of their butter and cheese directly to the shippers and jobbers for cash, the price being made on market days at an agreed percentage less than the price obtained at the moment of sale by cable and telegram to the associated dairymen from the commercial marts of the world.

Should not the California dairymen awake

and organize for mutual protection and education?

According to scientific analysis, the manure of a dairy cow, fed a properly balanced feed, when all saved, is equal to more than \$18 invested in commercial fertilizers, and with our management of our manures, such as they are, we lose three-quarters of its value even if we do use it on our lands, which we often neglect to do, thus losing them entirely.

Why do we not here in California have these dairy schools, reports from agricultural experimental stations and dairy conventions aided by the State? Because we have no organizations to ask for and push such things. We have created no demand for such legislation and such valuable experiments in our behalf. In fact, we have been so primitive that we did not know that we wanted them. I speak from personal experience. This has happened because the business was profitable without them.

The practical man will ask, how are we to learn all of these things and know ourselves if they are true.

A proposition to the dairymen of San Luis Obispo, Santa Barbara and Monterey counties and a question:

## "Question."

Shall we, the dairymen of said counties (one or all of them), form an organization for mutual protection and education, and for securing the ear of our legislators in our behalf, with an eye also on the World's Fair Columbian Dairymen's Exposition, to be held in Chicago, to determine if we shall make ourselves heard there? I would like suggestions from any dairymen, and will help to get up such organization if it is deemed best.

## A Proposition.

At the coming fair of Agricultural District No. 16, to be held on the grounds of the Agricultural Park Association, in the city of San Luis Obispo, some time in September next (announcement of the time and society's premium list to be made in due time), I will have milk testers and dairy machinery for the purpose of testing the quality of milk and making the same into butter from each oow shown upon the grounds and entered for a premium, to determine the quality of butter each oow will make during the three or four available days of the fair, and I herewith personally offer the following

## Premiums:

To the oow that makes the most butter on the fair grounds in the three or four days, under test conditions (time to be hereafter determined) of well-worked, salted butter, salted one ounce to the pound, a thoroughbred Holstein bull, two years old or more.

Second best cow for butter, same conditions, a thoroughbred and registered Holstein bull six months old or over.

The society will probably offer a cash premium for the best butter herd of oows, conditions same, to be announced in due time.

I hereby agree not to compete for any of the above premiums or allow my oows to do the same.

E. W. STEELE

## THE DAIRY.

## The California Honey Product of 1890.

The following is the sixth annual market review of the honey and beeswax business of California for 1890, by Schacht, Lamoque & Steiner, San Francisco:

As we said in our last year's review, we thought that the crop of honey for 1890 would be a good one, and we are pleased to say that we were not wrong in our prediction. Last year's honey crop was larger than it has been for several years, and although the crop of 1884 has not been reached (and probably will never again be reached in California), we nevertheless have had a satisfactory yield, sufficiently large to supply the demand. We estimate the honey crop of 1890 at 4,500,000 lbs. of extracted honey, 500,000 lbs. of comb honey, or a total of 5,000,000 lbs., against 2,200,000 lbs. for 1889, 3,500,000 lbs. for 1888, 1,200,000 lbs. for 1887, 5,000,000 lbs. for 1886, 1,250,000 lbs. for 1885, 9,000,000 lbs. for 1884. Comparing last year's yield with previous crops, more honey than the average crop has been produced.

The quality has been very choice, and we think that no finer honey has ever been produced in California nor in any other country of the world. Prices, considering the large crop we have had, have been very good—thanks to the active demand we have had during the entire season, for shipment to Europe as well, as particularly for the different markets of the United States. Larger shipments than for many years have been made by rail overland, and a good proportion of this honey went from New York to Europe. According to statistics, 2,500,000 lbs. of extracted honey and 300,000 lbs. of comb honey have been shipped East during 1890, against: 1,000,000 lbs. in 1889, 1,000,000 lbs. in 1888, 950,000 lbs. in 1887, 2,000,000 lbs. in 1886, 1,270,000 lbs. in 1885.

All exports of honey by sail went to Europe and were made from San Francisco. They were, during 1890, by sail 4972 cases; 2708 cases to England, 2064 cases to Germany and 200 cases to France. One shipment, consisting of 775 cases, made to Hamburg by the Deanfield, has been lost, while all other shipments have arrived, with the exception of 1756 cases still on the way to England, which are on the following vessels: Desdemona, to Liverpool,

700 cases; Armida, to Liverpool, 631 cases; Cloucaird, to London, 125 cases; Shandon, to London, 300 cases. Shipments from here directly to Europe overland were 650 cases to France and 311 cases to Liverpool, which arrived in good condition. In Europe the supplies of California honey are only limited and particularly choice white honey is scarce, so that good prices are being paid in Liverpool and Hamburg. Comparing these shipments by sail to Europe with previous ones, we give the following list:

Year.	Cases.	Year.	Cases.
1889.....	1,500	1884.....	15,000
1888.....	5,000	1883.....	6,700
1887.....	2,000	1882.....	3,600
1886.....	7,500	1881.....	9,600
1885.....	3,800	1880.....	9,400

Or an average of 7000 cases per year. Since the 1st of January of this year, 584 cases were shipped by sail to Liverpool, 177 cases per the California and 407 cases per the Riverside; and overland for consumption in our country, 555 cases.

Arrivals in San Francisco during the past year have been 1,425,000 pounds of extracted honey and 100,000 pounds of comb honey, or a total of 1,525,000 pounds, against:

Year.	Pounds.	Year.	Pounds.
1889.....	1,300,000	1885.....	2,000,000
1888.....	1,500,000	1884.....	3,600,000
1887.....	1,300,000	1883.....	1,400,000
1886.....	2,500,000	1882.....	1,000,000

Since the first month of 1891, we have received 1153 cases extracted and 274 cases comb honey in San Francisco.

The stocks in San Francisco, in first hands, at the present time consist of 400 cases extracted honey and 100 cases comb honey, and the demand continues to be a good one, particularly for comb honey of choice white color, in one-pound frames. In the interior very little comb honey is left, while of extracted honey hardly 600 cases could be found in the southern part of California. This stock is only a small one, comparing with previous years at the corresponding time:

Year.	Cases.	Year.	Cases.
1889.....	1,500	1886.....	5,000
1888.....	1,200	1885.....	5,500
1887.....	1,600	1884.....	15,000

In the East the supplies of honey are also limited, and as we have several good consuming months still before us, we do not doubt that all the honey of last year's crop will have been consumed before we get any new honey. The prices for extracted honey have opened at 5@5 1/2, but soon they advanced to 6c, which price has been sustained, more or less, during the entire season. As a rule, the honey was of very choice quality, as we have said already, and besides it has been put up in better shape than in previous years; but some counties are still using old cans and cases, which is much to be regretted, and honey—particularly of choice quality fit for shipment to Europe—should be in new, strong cans and new cases, having partitions between the cans.

For comb honey we have had a much larger demand than could be supplied. A great many orders from the East remain unfilled, although good prices have been offered, and at the present time there is hardly any choice comb honey left in our market. The average price for comb honey has been 12c to 13c for one-pound frame, and 10c to 11c for two-pound frame. The demand for two-pound frame honey grows less from year to year, while the same increases for one-pound frame, so that it is strongly to be advised that apiarists should put up honey principally in one-pound frames.

## Beeswax.

Beeswax has been very scarce during the entire season, and the demand has been a very good one for Europe as well as for the Eastern markets. At the present time there are more orders in the market than can be filled at prices a good deal higher than for several years, which is rather strange, as the duty on beeswax has been abolished. The production of beeswax in California is not important, and we estimate the same at 40,000 pounds for 1890, against 30,000 pounds in 1889 and 40,000 pounds in 1888. Arrivals in San Francisco during the past year have been 33,000 pounds. Exports to Europe have been 9600 pounds and 17,000 pounds have been shipped by rail and steamer to New York and other markets, against 20,000 by sail to Europe and 5000 pounds to New York, for 1889. Stocks at the present time in San Francisco are 4000 pounds, but these have already been sold to England and will be shipped in a few days, so that we find only a few hundred pounds unsold in San Francisco. It is therefore likely that prices will remain very firm or will still further advance, as the demand continues to be a very active one. We now quote 23c to 25c, against 18c to 20c in the previous year.

The prospects for the coming honey crop have been poor till the middle of February, but lately we have had very welcome rains, and in consequence the outlook for this year's crop has improved a good deal.

## Queen Rearing.

EDITORS PRESS:—As the time will soon be at hand for bee-keepers to be weeding out all poor and inferior stocks of bees, or queens rather, a short article on that subject will not come amiss.

On the queen depends all the success in bee-culture. With good prolific queens we have hives overflowing with bees at the proper sea-

son, and colonies that mean business when the honey-flows come.

Bee-keepers of experience have noticed how certain colonies in their apiaries surpass all the others in honey-gathering, prolificness of queen, etc. They should breed queens from all such colonies and have the rest of the swarms in their apiaries as near like as possible. It is also a good idea to pick out a colony with choice drones, for usually the best queens for breeding queens from are not the best drone-producing queens.

After once understood, it is not such a great trick to raise queens; but to honey-producers generally it is necessarily expensive, as in good honey-yielding seasons they could buy their queens cheaper than they could afford to use part of their apary for queen-rearing. Quite a simple and practical method of queen-rearing is as follows: Take a frame of empty comb, and with a thin, sharp-pointed knife cut out a V-shaped line as follows: Commence at one end of the comb, about three inches from the bottom, and draw the knife in a circular line so that when it is in the middle of the comb the line will be 2½ inches from the bottom, and at the other end three inches from the bottom. The next thing on the program is to have a little melted wax and a cup of hot water; your work should be done in a room at a temperature of 100°.

Now go to the colony containing your best queen, and from one of the combs select a piece having larvae in the cells not over 24 to 36 hours old. After getting the larvae to the warm room to where you are going to work, shave off the cells on this little piece of comb down to within one-eighth of an inch of the base of the cells. Cut a sufficient amount of this larvae up into small strips of one row of cells and then cross these strips up into two cell pieces. Now invert your frame of empty comb and quickly dip each little piece of comb containing larvae in the melted wax, and fasten to the edge of the V-shaped line in the empty comb. Fasten these small strips of comb about 1½ inches apart and to project slightly outward. Another row of strips can be placed on the opposite side of the comb if needed. Now take your frame of cells and insert it in a queenless hive in the space you left for it. No doubt the bees are much bewildered at the loss of their queen; but as soon as this prepared frame of cells is lowered into the hive, they will immediately commence building queen cells. It is best to give this frame of prepared cells to a colony that has just been made queenless, because they will nearly every time give a good queen cell for every egg that was put in in good condition. Large colonies will sometimes build from 50 to 70 queen cells by the method I have given. I think old, tough comb is best to graft these small strips of larvae to, because it will hear to be handled considerably and no danger of breaking.

If you wish to raise another hatch of queens, in four days time remove this frame to the top story of some hive, that is fixed with a queen-excluding honey-board. You can immediately give your other swarm another batch of eggs, and in a few days you can remove the cells again, and repeat the operation until you have all the queen cells desired. When the cells are about ready to hatch in the top story of a hive, they should be given to a nuclei or otherwise cared for. If you give them to some nuclei, it is best to protect the cells with a queen-cell protector, so as to be on the safe side. If you intend to allow all the queens to hatch in the upper story of the hive, you must have each cell protected from each other by a wire-screen partition. When the cells are starting to hatch, you must be on the lookout all day long and remove each queen as soon as hatched and place where wanted.

By all means try and raise queens from the purest and best queens you have in the apiary, either Italian or Carniolan. I have found that Carniolan bees give greater returns than Italians.

Grizzly Flats Cal., Feb. 17th.

### Honey Notes and Honey Packages.

EDITORS PRESS:—Acting upon the supposition that subjects presented in your journal are open for discussion, I wish to comment upon several recent communications.

A correspondent from Murphys appears to think that Uncle Amos is in the dark. In my opinion this is not so, for the aforesaid uncle knows full well that Nevada is not situated in California, and he also is aware of the fact that our State is far ahead of anything East for honey production, as he has visited the Southern counties and repeatedly passed judgment upon our honey as being of the best. We should in charity remember that the editor of whom the writer speaks is a very busy man, and, like the balance of mankind, is but human (to err is human); and yet it must be admitted that it was a most grievous mistake to advise a man to emigrate from the Golden State. While we remember that Uncle Amos is the proprietor of the best all-purpose bee journal now before the public, and that he is thereby doing good for himself and others, let us in charity forgive this error, but admonish him to be very careful in the future.

It is considered poor policy to paint a town red; it is also, in the opinion of progressive apiarists, not good to paint hives red or any other dark color. Light colors are said to radiate heat, dark to absorb. We also note that advanced thought recommends placing hives nearly on a level with the ground on account of ease in manipulation and accommodation of

heavy-laden bees. Who has not seen many a poor, heavily laden worker come in nearly exhausted from long and weary flight? The less elevation she has to maintain, so much the easier to alight. Does our correspondent advance the idea of permitting bees to build combs outside of the hive as in keeping with progressive bee-culture? Honey stored as above is nearly worthless for sale. In one-pound sections the price is from 12 to 15 cents per pound. The reader can easily discern the value of progressive ideas.

War is declared against second-hand cans and cases. A can once filled with coal oil is easily cleansed with a solution of concentrated lye, one pound dissolved in ten gallons of water; rinse twice with this solution and twice with water; expose the cans in the sun for two or three days and they are as good as new. Use nothing but coal-oil, gasoline or alcohol cans. It's the slovenly method of cleansing that plays the mischief.

The cost of new cans and cases to us in the interior places their use almost in the list of impossibilities. Oost per case in San Francisco, 95c, freight and drayage not less than 40c, making the cost of package \$1.35, or more than one cent per pound; yet the trade will allow no advance in the price of honey packed in them. It is a well-known fact that extracted honey does not retain the delicacy of flavor under any circumstances, also that the output is largely concerned in the various lines of manufactured food products. Hence the best we can expect to do is to put the product upon the market as cheaply as possible and still be in keeping with cleanliness and purity, which I claim can be done in the second-hand package. I will recapitulate: Let none but bright, new cans thoroughly cleansed be used. The case should be renailed and bonded with a twisted wire at each end and the marks of the oil brand removed with a plane. One often sees in the commission-house, cases broken, cans leaking, comb honey in all manner of conditions. Is it to be wondered at that the long-suffering commission-man's heart becomes hardened, and he charges shortage, breakage, (damages and various ages to shippers' account? Let all who put honey upon the market in California remember that it must be so packed as to be received in good merchantable order in New York, Liverpool, Berlin or Sydney, as the case may be. Too much care cannot be exercised in this respect. There are a thousand and one people growing at their commission-house, while the cases in a majority of cases lie with themselves. The fixing up of things just to get them off your hands will never do; be assured your sins will find you out.

Furthermore, we learn that the use of second-hand packages will knock the bottom still further out from under the price of California honey. If this be true, why doesn't the use of brand-new and tidy cases enhance the salable value? Please arise and explain, gentlemen. Remember, I do not recommend the use of filthy receptacles. Let each shipper put nothing out but first-class honey of the different grades. Let all be just what it purports to be—nothing else. Place the name of the producer upon each package as a guarantee of value.

Again, let us compare the price of California extracted with Eastern. A circular of one of the leading apiarists of the States quotes prices in a jobbing way at 8 cents New York, and other points quote California at 7½ cents in car lots. Commission-houses of Cincinnati with whom I have corresponded make no distinction between Eastern and California honey. Some time since, the writer shipped a consignment of five tons to the largest dealers in the city of San Francisco. It was immediately sold to the export trade, and an order given for a carload. So much for tidy second-hand packages.

Lastly, as the parson says in closing his discourse, nearly all of the "war to the knife" cry on packages proceeds from supply dealers or commission-men who wish to eke out their scanty incomes by 33 per cent commission on new packages. We propose to put our product out in the cheapest possible package, guaranteeing its quality and trusting to the merit of the goods and not the shimmer of a package for its sale.

Bakersfield March 1891.

## THE IRRIGATOR.

### Irrigation in Arizona.

The following is the introductory portion of a census bulletin by F. H. Newell, for which we are indebted to C. C. Babb:

The total area in Arizona on which crops were raised by irrigation in the census year ending June 30, 1890, was 65,821 acres, or 102.8 square miles, less than one-tenth of one per cent of the entire area of the Territory. The aggregate number of farms was 1448, and of these 1075, or 74 per cent, depended upon irrigation, the remaining 26 per cent being stock ranches, or farms situated high in the mountains, where crops can be raised by what is known as "dry farming." The average size of irrigated farms, or rather of the irrigated portions of farms on which irrigation was practiced, was 61 acres. In this connection the term "irrigated farm" is used to include only the area on which crops were raised by irrigation, the uncultivated portions of such farms not being taken into account. With this under-

standing the irrigated farms or areas cultivated by each person have been classified as follows: Seven irrigated farms of 640 acres or upward, 15 of from 320 to 640 acres, and 57 of from 160 to 320 acres. These 79 farms contain an average of 287 acres each, and have a total area of 22,656 acres, or 34 per cent of the entire amount watered in the Territory. The remaining 996 farms, under 160 acres in size, comprise only 66 per cent of the total irrigated area, and average 43 acres each. In other words, seven per cent of the farmers of the Territory owned over one-third of the productive land, and the remaining 93 per cent of irrigators owned an average of 43 acres each.

Counties.	Number of irrigators.	Total irrigated area in crop acres.	Average size of irrigated farms in acres.	Average value of products per acre.
Apache.....	182	5,545	30	\$13.36
Cochise.....	32	2,372	46	26.93
Gila.....	18	815	45	23.85
Graham.....	199	7,558	38	16.06
Maricopa.....	327	35,212	108	9.26
Pima.....	85	3,053	36	30.36
Pinal.....	115	6,919	60	11.25
Yavapai.....	91	3,762	41	31.00
Yuma.....	6	555	93	10.50
Total.....	1,075	65,821	61	\$13.92

Taking all the counties in the Territory, with their varying conditions, the average cost of water right was \$7.07 per acre. This includes all cases, from the one extreme, in which the farmer dug his own ditches from the river—the cost of water right in that case being the amount which the ditch cost him in labor and material—to the other extreme, in which he purchased his water right from some company, paying a certain sum per acre for the privilege of renting or buying water each year. The selling value placed upon this by the farmer, whenever his right was transferable, was \$12.58. The average annual cost for water was \$1.55 per acre, this expenditure being either in labor in keeping the main ditches and dams in repair or paid as a cash assessment or rental to an association or corporation.

Besides the first cost of the water and the annual assessment for its use, an estimate has been made of the first cost of bringing the land from a wild state under cultivation by irrigation beyond the expense for the water right. This estimate, which is \$8.60 per acre, includes the cost of plowing, grubbing sagebrush, cutting mesquite, fencing and leveling, or otherwise preparing the ground for irrigation.

Assuming, then, that the original purchase price of the land was \$1.25 per acre, the cost of preparing for cultivation by irrigation \$8.60 per acre, and the first cost of water right \$7.07 per acre, the land cost the original owners a total of \$16.92 per acre. It is ascertained, for comparison with this, that the average valuation, including buildings, fences and other improvements of the land on which irrigation is practiced, is placed by the owners at \$48.68 per acre, showing an apparent profit, less cost of buildings, of \$31.76 per acre.

In comparison with the annual outlay for water, it is found that the average annual value of farm products is \$13.92 per acre, leaving the farmer \$12.37 per acre per annum as a return for his labor and as interest on his investment.

On examination of the figures for the different counties, it will be noticed that in general the value of products per acre increases as the average size of the farm diminishes. For example, in Maricopa county the average size, 108 acres, is the greatest in the Territory, while the average value of product, \$9.26 per acre, is the least. Next comes Yuma county, with an average of 93 acres per farm and products averaging \$10.50 per acre; then Pinal, with an average of 60 acres per farm and products of \$11.25 per acre. In other words, the larger irrigated farms were not so closely tilled as were the smaller, and a lower-priced crop was the result.

Deducting the 79 large farms, on which the average value of product was \$9.05 per acre, there remain 996 farms, with an average extent of 43 acres each, on which the value of product was placed at \$16.75 per acre; that is to say, the farmers, in the main, if their statements are correct, must have supported themselves and made their profits out of gross earnings averaging \$720 per annum each.

These results have been computed from data acquired both by field work and correspondence. The enumerators in the several districts obtained the acreage and likewise the value of land and products of each farm. On the completion of this field work, a blank schedule was mailed to each farmer, requesting a more detailed statement as to the location of his land, the source of his water supply, the cost of irrigation, and also as to local customs. The replies were compared with the statements of the enumerators, and in every case of apparent misunderstanding or serious discrepancy a second letter was sent. The information thus obtained was then carefully examined in the light of personal knowledge of the climate and products of the Territory. Besides the blank schedule sent to farmers, correspondence was entered into with the owners or officers of canals, with a view of obtaining statistics as to cost of construction, etc. The result of this correspondence will be given at a later date.

The agricultural and irrigable land of Arizona is situated in the southwestern half of the Territory. If a line be drawn from the northwestern to the southeastern corner diagonally across the Territory, this line will lie for a greater portion of the distance along the face of the great escarpment which divides the high plateaus from the plains of the Gila basin.

Against the face of this escarpment the larger portion of the available moisture is precipitated, rolling back to feed the tributaries of the Gila, thus rendering possible a certain amount of irrigation in the narrow valleys, especially on the Gila and Salt river plains near the point where their waters leave the canyons. High up on the edge of the plateau country and among the mountains, at elevations of from 5000 to 7000 feet, a little agriculture is successfully carried on without irrigation, usually in connection with stock-raising or in the immediate vicinity of mining towns. The crops raised, however, are comparatively insignificant.

The acreage at present under irrigation may be regarded as approaching the maximum possible with the present supply of water and methods of using it. In other words, all the easily available water has been utilized, and expansion can come only by a greater economy in the use of the existing supply or by the adoption of systems of storage for the conservation of the flood-water now annually running to waste. The irrigators look forward to the latter alternative as the most effectual means of obtaining relief from present troubles and uncertainties. Progress in this direction will, however, be slow, from the necessity of a large outlay of capital before any return can be realized, and from the fact that the controllers of capital, whether governmental or private, have had comparatively few facts on which to base reliable estimates. The amount of water that can be reserved by storage is known from common observation to be very large, but it is usually greatly overestimated, from the fact that even a small volume of water, coming all at once and with great velocity, is often extremely destructive and creates a vivid impression, while the same amount, if distributed through as many days or weeks as it is hours, would not excite comment. Measurements have been made in a few instances by engineers and by the United States Geological Survey, but the operations of the latter were discontinued before a range of much over a year had been obtained. For example, taking what is probably the best storage site in Arizona, that on the Gila at the Buttes above Florence, the mean discharge at this place, as shown in the eleventh annual report of the Director of the United States Geological Survey, from September 1, 1889, to August 31, 1890, when operations were suspended, was 503 second-feet, averaging 1000 acre-feet per day, or 365,000 acre-feet for the whole year. Assuming a water duty of 100 acres to the second foot, this, if all the water could be stored, would irrigate 50,000 acres, instead of the 7000 acres or less now irrigated in the vicinity of Florence. A large reduction from this theoretical amount must, however, be made for losses by evaporation and seepage. Without going into a discussion of the measured water supply, this will suffice to show that it is possible to determine the volume and intensity of floods, and that when this has been done the water-storage problem will be in a fair way to solution, since only then will it be possible to prepare reliable estimates of costs and profits.

Shortage of water, and consequent loss of crops on irrigated land, are reported by the majority of farmers whose rights to water are secondary to those of the first comers. The latter, however, report that there is ample water for all their own needs, except in general from the middle or latter part of June, through July, August, and into September. Before this time, however, the cereals, with the exception of corn, should be matured and probably two or more cuttings of alfalfa made.

For the greater part of the Territory it may be said that irrigation is practiced or is necessary to successful farming throughout the entire year. In the lower plains the temperature is such that crops will grow and mature at any season of the year, provided there is a sufficient supply of moisture. Crop follows crop in constant succession, if only there is an abundance of water in the ditch or of summer rains. During the winter, and also in the early spring and late fall, water is used on the alfalfa and hay crops, from three to six cuttings of alfalfa being made annually, the average of the entire Territory being five. Usually, two waterings are given for each cutting, the total amount of water used being thus largely in excess of that required by any other crop. Later in the spring, when the rivers begin to decline, the alfalfa is neglected, all the water being needed for the cereals and vegetables, and still later, before the summer floods set in, in many places the entire flow has to be taken to save the trees and vines.

The water is, in most cases, applied by flooding, as, for instance, on alfalfa and grain, or through furrows laid off at regular intervals, no especial care being taken in the preparation of the fields. The Mexicans still practice the old method of flooding in small "pools" or rectangular areas, separated by ridges of earth. The farmers, almost without exception, look forward to better methods of distributing and applying water. Since the soil and local conditions vary so widely, there can be no absolute rule as to the number of waterings or the time required for the different products. There is a growing impression that in many cases too much water is used, and that better crops could be matured by using the water more sparingly, which would also have the effect of increasing the cultivable acreage.

The bulletin continues at considerable length with a description of the counties mentioned in the table.

## PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

## The Master's Desk.

R. W. DAVIS, W.M. S. G. OF CALIFORNIA.

In the death of Bro. Calvin J. Cressey, the Worthy Treasurer of the State Grange, the writer lost one of his truest, sincerest and most faithful friends. Though his death was not entirely unexpected, yet the announcement was all too much for physical and mental strength, and nothing but the balm which Time brings will restore to mental equilibrium. To attempt to express the real emotion and the innermost sensibilities of love and esteem for the deceased is to attempt the impossible. The farewell of sight we have said, but the farewell of memory, of love, of admiration, of devotion, of fraternity, will linger while life is spared.

Farmers should have sentiments and speak them.

The nation listens when power speaks. Tillers of the soil, you are a power in this nation. Be sure to be right, then speak, though the (political) heavens tremble.

Gardening, dairying, poultry-raising, flower-culture and housework are a few of the many employments our sisters of the farm find at this season of the year. It will soon be picnics, preserving, harvesting, and so forth. And thus one's life runs away.

If there be members in your subordinate Grange who are inclined to rule or ruin (we hope there are none so minded), ask them to commit to memory the obligation of the first degree, and to repeat the same on the way to and from each Grange meeting. Perhaps such a remedy may cure the evil, and surely 'twill not hurt any one.

How about an Arbor Day in your Grange? Why not plant a tree, rosebush, flowering shrub?

Your Grange will be a most unqualified success if each and every member will take an active, earnest, honest interest in all that tends to elevate humanity and to make the farming class the equals, and so far as possible the superiors, of all with whom they come in contact.

The members of the Grange cherish in their hearts every kind feeling toward all other Orders as associations which seek to promote human welfare, and it will work hand in hand with all who are laboring for the good of humanity.

American River Grange, Sacramento county, is having a boom. They have a class of 20 persons on the way to the Master's office. It is reported that this class will arrive at the Master's office about the last Saturday in March, but before reaching their destination, it is expected to kill the fatted pullet, pick the glorious gobbler, and steam the coffee-pot, for the Good of the Order.

What are you doing to make the next session of the State Grange a rousing success? Don't forget, there is something for willing hands to do, and active minds are just as much in demand.

Isn't it better to bear a great wrong than to commit a small wrong? But remember, two wrongs do not make one right.

A very great effort is being made, in many places, by diverse persons and on a multitude of pretext, to get the Grange into partisan politics. We both hope and believe all such efforts will be failures. The Grange has done more than well enough. Its success has been (as some think too) slow, but its results are permanent, because founded on RIGHT. No one who knows what the Grange has done need be ashamed of belonging to the Order. Stand by the Grange and it will stand by the farmers.

Does your Grange want to assist in holding a Farmers' Institute in your neighborhood? If so, communicate with E. J. Wickson (care of University) Berkeley, Cal.

This is the time of year to "plant right" in the public schools. It is more important to have a crop of good young men and young women than to have a large yield of wheat. Look well to the public school.

Do your boys know as much about their arithmetic and geography lessons as they know about baseball and the percentages of the ball-tossers?

How very few of our schools turn out good readers. Why is this? There is nothing more important than to be able to read with the spirit and the understanding.

Get an idea in your head before you try to let it out of your mouth!

A premeditated lie will travel a long distance, but the maker always has to pay the

THE LATE C. J. CRESSEY AND BABY GRANGER ROACHE.

freight. No transportation company will accept it C. O. D. Charges must be paid in advance, and no risk is assumed on the part of the transmitter.

An appeal comes from the drought-stricken portion of Nebraska for aid. The farmers in many places are without seed or feed and without money. Send money if you can spare it. But if you can't send money and have seeds (garden or field), send them to J. R. Cantlin, Sec'y State Grange, Webster, Neb. Let the sisters take this matter in hand, and then there will be something done.

## Executive Committee Meeting.

A special meeting of the Executive Committee of the State Grange was held, with all members present, on the evening of March 14th, at which Past Master I. C. Steele was elected Treasurer of the State Grange, in place of Bro. Cressey, deceased. It was also voted that E. W. Davis, Worthy Master, write resolutions of regret on the death of Bro. Cressey for publication.

The following tribute of respect was adopted by the Executive Committee:

WHEREAS, Death has invaded, unbidden, our circle, and has taken one of the strongest links in our fraternal chain; and

Whereas, The Executive Committee of the State Grange of California feels most deeply the loss of an esteemed friend, a noble Patron and a conscientious brother; therefore

Resolved, That in the death of C. J. Cressey the Order of Patrons of Husbandry has lost an able advocate, a trustworthy brother, a faithful, honest officer, a persevering citizen, a grand man among men. His labors, for the Order he loved so well, have endeared him to members of the fraternity from the Pacific to the Atlantic and from the Lakes to the Gulf. But words fail to give our grief; therefore it is

Resolved, That a copy of these resolutions be spread on the pages of our proceedings and a copy duly attested be sent to the family of our deceased brother, for whom our prayers and our tears are most freely given.

E. W. DAVIS,  
For Ex. Com. State Grange of Cal.

AT GALT AND WOODLAND.—Organizing Deputy F. B. Logan has been at Bro. McConnell's, Elk Grove, this week and will soon visit Galt, Woodland and other places in the interest of the Grange and its official organ, the RURAL PRESS. He is a good correspondent and worthy worker in the interest of the Grange and farm. We bespeak favorable consideration for him in his arduous labors.

ANNUAL PROCEEDINGS.—We acknowledge the receipt of the Proceedings of the 19th Annual Session of the Wisconsin State Grange from the Worthy Secretary, Bro. H. E. Husley; also the Proceedings of the 21st Annual Session of the Iowa State Grange from its Secretary, Bro. J. W. Murphy.

A decent man who picks up a paper to find what is being done at Sacramento and sees nothing but sack, sack, gets disgusted.—*Tulare Register.*

## The Grange and the World's Fair.

The Chief of the Department of Agriculture of the World's Fair invites the co-operation of the Granges in carrying forward his important work. We commend the subject to discussion at meetings of subordinate Granges from time to time, and such discussion, coupled with the fresh information which is promised, will, no doubt, show ways in which the agricultural features of the great occasion can be made truly representative, and reflect both credit and benefit upon the greatest industry of our great country. The following letter explains itself:

OFFICE OF THE DIRECTOR GENERAL,  
WORLD'S COLUMBIAN EXPOSITION,  
CHICAGO, ILL., March 13, 1891.

Mr. A. T. Dewey, Sec'y State Grange of California, San Francisco, Cal.—DEAR SIR:—I am greatly obliged to you for your kind inclosure of the 9th inst. containing a list of your Grange Secretaries. Information will be sent them from time to time that will, I know, be of interest to them.

In your official position you can do much for the Exposition and for the agricultural industry by impressing farmers with the benefits that can be derived by their localities and States from their becoming individual exhibitors. By sending to the Exposition, small, carefully selected specimens of the very best products of their neighborhood, the State becomes a gainer, and a larger interest is awakened through the country in this feature of the Exposition. Yours very truly,

W. I. BUCHANAN,  
Chief Department of Agriculture.

## "A Good Word," Etc.

"Give everybody their due" is a good motto. The Australian Ballot law passed by the present session of the Legislature is an Act to make every honest citizen happy over and proud of. The Governor and some of his leading friends turned in and helped secure it. We would like to see meetings of rejoicing held as soon as the Governor signs the bill. Its passage is real encouragement. It took hard work to squeeze it through the present Legislature, but the members have passed it. This one Act, we personally believe, will be of greater benefit to the State of California than the whole legislation enacted at any one session of the past five years.

All honor to Bro. J. D. Huffman, ex-Congressman Berry, the Legislative Committee of the State Grange and Federated Trades, and ALL who have worked for the passage of this all-important bill. Let their work be well remembered. Now let us prepare for more good accomplishments in legislative reform.

WATERTOWN GRANGE, Jefferson county, N. Y., is the banner Grange of the United States as far as heard from. It now reports 583 members and 40 applications.

PAST MASTER J. V. WEBSTER says some very plain things about Government ownership of railroads which should be read by all and candidly considered.

## Funeral of C. J. Cressey.

The funeral of Bro. C. J. Cressey at Oakland Saturday, March 14, was largely attended by Patrons and friends from different parts of the State. The address by E. W. Davis, Master of the State Grange, was an able and touching tribute to the memory of one of the best and most remarkable Patrons and farmers ever known on the coast.

The view of the several stalwart Past Masters of the State Grange as pallbearers, and other veteran Patrons assisting in calmly and tenderly laying away the body of their deeply loved companion, was a scene of lifelong impression upon the hearts of all present.

A godly band of true Patrons accompanied the remains of the deceased and family from San Jose.

The floral decorations contributed were tasteful, rare and abundant.

Seldom has any large or small memorial gathering ever evinced so universal a love and respect for a deceased friend.

Verily, his cheerful countenance, encouraging words and good deeds will ever dwell with us and their good influence bless our successors like unto a continued good life on earth.

On this page we add to the illustration and sketch of his life given last week, a later photo-facsimile view, (taken in October last by request of his friends) including the portrait of "the baby of the Grange"—"Granger Roache"—son of A. P. Roache (Overseer of the State Grange), and Sister E. Z. Roache (then Master of Watsonville Grange).

In compliment to the unusually successful efforts of Sister and Brother Roache in making Watsonville the Banner Grange of the State, and the most generous entertainment of the State Grange tendered by Watsonville, a purse of \$105 was contributed by Patrons, and presented in eloquent words by Bro. Cressey, to the parents, for the future benefit of "Baby Granger Roache."

The beautiful harp of flowers, shown at the left of the ploture, was gracefully tendered Bro. Cressey (after making his presentation), by young ladies of Watsonville.

A further description of the funeral, etc., will be found in the supplemented pages of our Grange edition this week.

## Letters of Regret, Etc.

Letters of sympathy and regrets for inability to be present were received from I. C. Steele, P. M., A. P. Roache, W. O., Sister E. Z. Roache, A. T. Perkins, W. M. of Temescal Grange, Geo. Steele, W. L., and others.

From Past Master I. C. Steele:

"Dear friends from Boston are visiting us for a day or two, and have to start on their return trip on Monday. I have not seen them before for 14 years, and this is perhaps the only opportunity I shall ever have of seeing them in this world. Brother Cressey, with all his strength of body and will, has been called to the higher life, while I, with all my weakness and accumulated years, remain in this. We shall miss his manly form and words of wisdom in our councils, and with deep regret continue to work for the right as we understand it."

By request we met Past Master Overhiser at the Kness House, Friday evening. He, with Bro. J. D. Huffman, had engaged to meet the Board of Directors of the State Prison at San Quentin, and confer with them in regard to furnishing grain sacks to farmers during the coming year. It was a trial for them to give up attending the funeral, as they finally did, believing it a matter of much importance that they attend the meeting, for the benefit of Patrons and farmers at large.

## A Noble Tribute From Pomona.

WHEATLAND, CAL., March 15, 1891.

DEAR BRO. DEWEY:—It was with feelings of deepest sorrow and regret I read your notice of Bro. Cressey's death.

We have lost one of the strongest pillars of our Order; for his life has been so interwoven with it as to become a part of its history. In enterprise, sagacity, unlimited energy in qualities of head and heart which mark a man from his fellows, Bro. C. J. Cressey has been one of the foremost whose efforts have established the Grange upon the sound foundation which it now stands.

Surely, Pomona's choicest treasure has been plucked from her orchard; not, however, in bud or blossom, but in the fully matured fruit—the fruit that has passed through storm and sunshine, darkness and light, yet ever found with its rosy tints unveiled.

Hard indeed will be the task for us to meet at Haywards without that well-known figure, whose cheery voice is forever silenced. With sorrowing hearts we shall drape his vacant chair in mourning, not only in the outer habiliments of somber hues, but with the tender thoughts of his past life among us. Truly and fraternally yours,

ROSE OSTROM,  
Pomona Cal. State Grange.

SANTA ROSA GRANGE conferred the third and fourth degrees on a class of five in a very creditable manner March 14th. Had six applications for proper credentials for the fifth degree, which is to be conferred in full at the next meeting of Pomona Grange. Had a good attendance of visiting brothers and sisters from each Grange in the county. One topic agitated was the "children's picnic" (another the "Trade-Card system").

[Such correct correspondents should give their signatures.—EDS.]

## FARMERS' ALLIANCE.

SUBSCRIBERS wishing fuller information of the Alliance can have their names changed to the Grange Edition of the RURAL PRESS free, much to their advantage, this department being continued in the same.

## The Alliance Business Arm.

Knowing that members everywhere wish to know as much as possible of the men to whom the business interests of their Order have been intrusted, we present an opportunity for all to look upon some of their faces through an accurately produced photo-facsimile engraving, which appears upon the first page of this issue. The accompanying brief life-sketches will also give further insight to the fair character of our chosen business council.

While we thus vary the official order of rank in presenting the Executive Committee at this time in our gallery of Alliance portraits, we would not by any means hold any other officers in light esteem for ability, fidelity and importance, and shall soon publish sketches of several whose engravings are already wholly or partly prepared. This feature of our issues will also be of much interest to general readers.

JOHN S. DORE.

CHAIRMAN EX. COM., CAL. S. F. A. &amp; I. U.

Bro. Dore was born at Harmony, Maine, Dec. 26, 1838. When six years of age his mother died. Then for two years he lived with his grandfather Stafford at Hartland, Maine. His earliest recollection of farm work (still clear and pointed) viz.: picking Canada thistles out of wheat cut with a hand-sickle, and barefooted. Among the delights of his two years life (in the circle of nearly a dozen big uncles) were the sugar-camp, burning coal pits, bee tree cutting, rides to school on high loads of tanbark, fishing, skating, etc. Thus surrounded by a large family of the early New England type, the foundation of a strong, self-reliant manhood was based.

His father again marrying, he returned and remained at home, and in 1850, with his parents, removed to Princeton, Marquette (now Green Lake) county, Wisconsin. His father's poor health, with a large family, and lack of school facilities in a new country, prevented the son from attending school for two years. From that on for several years, attendance during the winter terms was all the schooling secured. At 18 he began teaching, with success, near Montello, Wisconsin. From that on he worked summers and taught winters. In '59, '60 and '61, he kept the village school of Neillsville, county seat of Clark county, afterward entering the University at Galesville, Wis., intending to work his way through a thorough classical course. Although making rapid advancement and receiving the highest of testimonials from the faculty, in less than a year, he began to be restless and returned to industrial employment in Clark county, and there he resided continuously till 1883, when he came to California. He was married to Miss L. Jennie Angell in La Crosse Co., Wisconsin, Jan. 1, 1863.

During some 20 years residence in Clark county, he was for a time engaged in publishing a newspaper; superintendent of schools for five terms—ten years (there being nearly 100 teachers employed the last term); Chairman of Co. Board of Supervisors, six years; Pres. of Co. Agricultural Society, several years; member of State Board of Agriculture, four years; by State appointment, visitor to the State Normal schools for one year. The last five years in Wisconsin were spent on a farm of 320 acres, all originally heavily timbered. One hundred acres were cleared by Mr. Dore, who for two years made dairying the leading feature of the farm. He also engaged in lumbering, but unsuccessfully.

During his active life in Wisconsin, public affairs claimed his earnest attention, as attested by his aid in the construction of county and school buildings and the successful exposure of official thievery which secured over \$60,000 in judgments in favor of the county against defaulting officials and their bondsmen.

In the fall of 1883, after looking over the State several months, he decided to locate near Fresno, buying land wholly on time—he having barely money enough to transport his family and build a comfortable house—which is still his home. From 1880 Mr. Dore suffered poor health until greatly benefited by the change to Fresno climate. Nothing could induce him to try again to live in a cold or damp climate. He has accomplished good results in vineyard work, last season producing 50 tons of raisins on his own vineyard and as many more from other vines in his care.

Politically a Republican till the close of the war, he later worked vigorously with the Greenback party, and lately has been an independent voter. Having formerly belonged to the Grange, when the Alliance was organized near his home last summer he joined and was delegate to the first State meeting at San Jose. Although unknown to but few present, without evident desire for promotion, his superior and desirable qualities as a worker in the cause, like those of President Cannon, became clearly apparent, and stamped him as a most able and suitable Chairman of the Executive Committee—the business arm of the Order. Popularly elected to that important position, he has unquestionably highly honored the position.

As a presiding officer, he proves most efficient in expediting the work in a satisfactory and business-like way.

Bro. Dore is of medium size and height; has an affable, yet in a measure reserved and dignified manner in public. He is capable of leading in whatever business or social calling he may be engaged, and seems thoroughly in earnest in the cause, and for the highest interests of the Farmers' Alliance.

EDWIN MELTON WARDALL.

VICE-PRES. EX. COMMITTEE.

Bro. Edwin Melton Wardall was born in Indiana, Nov. 29, 1841. His earliest recollections of home are of a log house in the woods of Southern Wisconsin, to which Territory his parents moved when he was about a year old. Here he attended district school sixteen weeks during the winter, assisting his father on the farm the balance of the year.

In the spring of 1850 we find him mourning a boy's best friend and counselor, his mother, who died, leaving a family of small children, he being the eldest.

When 13 years of age, the family moved to Springfield, Ill. Here the children enjoyed excellent school advantages. The family subsequently settled in Iowa, the land of log schoolhouses and short terms of school.

In 1861 we find him enrolled as a private soldier in the Third Iowa Infantry. He was honorably discharged at Savannah, after the famous march to the sea. From the war he, with his brother Alonzo Wardall (now residing in South Dakota and a very efficient worker in both State and National Alliance), returned to Iowa and resumed his labor on the farm.

In 1868 he was married to Miss Abbie M. Rhamer, at St. Ansgar, Iowa. They moved to Los Angeles in 1875, since when he has engaged in farming exclusively. He is now living near Monrovia on a small fruit ranch.

During the Grange movement he was a very active member, was appointed Business Agent for a Grange Elevator Company in Mitchell county, Iowa; was one of the first, and is now one of the most enthusiastic workers in the Alliance movement of Los Angeles county, being President of Duarte Alliance No. 111 (to which 12 of his near relatives belong), an officer in Los Angeles County Alliance as well as Vice-President of Executive Board of State Alliance.

Thus it will be seen he was born, raised and educated a farmer, and thoroughly appreciates the magnitude of the issues and dangers surrounding this Alliance movement.

Much of his early life was spent with dog and gun on the frontier, which, in connection with his army training, has no doubt aided in developing him into the firm six-foot-two-inch man which the readers of this paper see pictured before them to-day. We look upon him as a man free from vice, above the average physically, mentally and morally; unselfish and always ready and anxious to work for the uplifting of humanity.

JESSE POUNDSTONE.

SEC. EX. COM., CAL. S. F. A. &amp; I. U.

Was born in Amador county, Cal., Oct. 7 1866; attended school at St. Augustine College, Benicola, and was assistant cashier of the Bank of Benicola for two years. He was married in December, 1888, when he resigned his position at the bank to engage in farming. He now conducts the well-known Poundstone ranch at Grand Island, Colusa county.

Mr. Poundstone is one of the Colusa county Board of Directors of the California World's Fair Association, and is taking an active part in having that county fully represented at the Exposition.

He recently resigned the secretaryship of the Colusa County Farmers' Alliance, and is Secretary of Grimes Grange and of the Executive Committee of the State Farmers' Alliance. His efficient labors in both are fully known to many of our readers.

Bro. Poundstone is the youngest of the elective officers of the State Alliance; is a pleasant, bright member, a good writer, and, we should judge, of brisk business qualities. He was prompt and active at the recent tri-daily business sessions of the committee. He seems evidently popular in his own community, and favorably circumstanced, with a promising career as a temperate, intelligent, progressive young man.

JAMES MORGAN.

MEMBER EX. COMMITTEE.

Bro. James Morgan was born in Columbiana county, Ohio, Aug. 7, 1832. He removed in 1844 to Marlboro, Stark county, same State, and received his education in the Marlboro Seminary, attending school in the winter and working on the farm during the spring and summer. He commenced teaching at the age of 18; and at 20 he entered the Marlboro Normal and Training School, then under charge of Mr. Alfred Holbrook, since principal of the Southwestern Normal School at Lebanon, Ohio. On completing a two-years' course in this school, he was elected principal of the Marlboro Union School and retained the place two years, then taught in Iowa, and afterward in Michigan and Ohio, and again settled down on the home farm.

Mr. Morgan served a short time in the Union army, being honorably discharged in Sept., 1864. He sold his farm in March, 1866,

and moved to the Northern Peninsula of Michigan, where he engaged in the hardware business. In April, 1868, he removed to West Liberty, Iowa, where he continued in the same business for some 13 years—most of the time owning and controlling a farm, and making a specialty of breeding and rearing pure-bred Shorthorn cattle. At the organization of the Iowa Shorthorn Breeders' Association in 1882, he was elected secretary, and retained the office until his removal to California in October, 1887.

In February, 1883, Mr. Morgan became a partner in the publication of a local weekly paper—the *Wapsie Index*—and a monthly—the *Dairy and Farm Journal*—and assumed editorial control of both. During much of the time of his residence in Iowa he was a member (and for some years secretary) of the Wapsie Farmers' Club, a real live association. He was also for 20 years connected, as director or secretary, with the Union District Agricultural Society, which allowed no liquor-selling or gambling on its grounds and always paid 100 cents on the dollar on all premiums. Mr. Morgan is a born and bred abolitionist, and was raised in a station of the underground railroad. He learned to write his name when a boy, that he might sign the Washingtonian temperance pledge, which he has never violated, having been a total abstainer from all kinds of intoxicants and tobacco in every form. He is a Republican, in full sympathy with most of the work of that party for 30 years past, especially in Iowa. He was married in 1854, and has two daughters—one married—residing in his own vicinity, near Santa Barbara.

DAVID REID.

MEMBER EX. COMMITTEE.

Bro. David Reid was born in 1832 and came to California in 1856. He spent seven years in the mines of Tuolumne and El Dorado counties, and then engaged in mining in Idaho, where he married. He went to Chico, Butte county, three years later and prosecuted the dairy and farm business up to March of last year. He was interested in the Chico water and ice works, and was one of the directors and the secretary of the O. F. B. A. from its organization. In March, 1890, owing to ill health, Mr. Reid removed to San Lucas, Monterey county, where he enjoys much better health. He has a 160-acre ranch, on which he is planting trees, vegetables and grain. He is the father of eight children. Although somewhat reserved in manner, Bro. Reid is not lacking in earnest attention in his official duties, and seems well calculated to increase in the confidence of his brethren as all become better acquainted.

## The Work in Fresno County.

Fresno County Organizer in *Central Californian*: An Alliance has been organized at Coalinga, Fresno county, with the following officers: A. R. Eckert, President; Mrs. Myrtle Douglass, Secretary; G. M. Douglass, Business Agent.

In the Lucerne valley (about Hanford, Armona and Grangeville) the Alliances are holding important conferences about establishing one or more co-operative packing-houses. Similar enterprises are being dissonsed at Oleander, Washington Colony, Fowler and Malaga. With the immense body of Alliance men in the east and south; with our facilities for direct and confidential communication with them, it will not be difficult to reach a vast number of purchasers and save many of the intermediate expenses of handling. Possibly one or more agents may be sent out to introduce the goods and stimulate consumption.

As soon as the rush of farm and vineyard work is over I shall organize several new Alliances. We must have one in every school district, for in union and numbers lies our power to make our influence felt and to secure our rights.

The regular April meeting of the Fresno County Farmers' Alliance has been changed from Malaga to Fresno, and the date from April 3d to the 2d. These changes have been made on account of the Farmers' Institute to be held at Fresno April 3d and 4th.

Prof. E. W. Hilgard of the State University, with one or more assistants, will be present to lead and have general direction of the work of the Institute.

CONVENTION OF SPOKANE COUNTY ALLIANCES. At a meeting of the Spokane County Farmers' Alliance, held at Fairfield March 7, a Committee on Credentials and Resolutions was appointed by the chair. The proposition to call a State meeting to be held at Oakesdale after some discussion was referred to the State Executive Committee, the validity of the call to be decided by the Executive Committee, the delegates from the trades council consenting. The matter of boycotting certain firms in Spokane was tabled. Farmers, unlike the labor unions, expressed themselves as opposed to the word "boycott." Resolutions were adopted in favor of free and unlimited coinage of silver, against the McKinley bill, against national banks, in favor of the sub-treasury bill, and against a third political party.

MOVING FORWARD.—Adelaida Cor. San Miguel *Courier*: Our Alliance is moving steadily forward. The subject for discussion at the last meeting was concerning the best method of serving the whole people, their general welfare, morally, socially, intellectually and financially.

## Death of Dr. W. S. Manlove.

Dr. W. S. Manlove of Brighton, Sacramento county, died March 17 of pneumonia. The Sacramento *Bee*, in noticing his death, says that Dr. William Stark Manlove came of good old Virginia stock, and was himself born at the Virginia homestead, in Dinwiddie county, on Dec. 9, 1824. He attended private schools and the University of Virginia, and graduated from the Medical Department of the University of Pennsylvania, at Philadelphia, in 1847. He practiced his profession in his native State until 1849, when, with 125 others, he organized a stock company which purchased the ship *Mary Ann*. The vessel was taken to Richmond, Va., loaded with supplies, and in March, 1849, the voyage for California was begun. After a most eventful voyage, the ship landed in San Francisco in September, 1849. The owners disposed of the vessel and cargo and the company disbanded.

Dr. Manlove remained in San Francisco six weeks, and then went to the mines in Amador county, where he remained until the spring of 1851, mining, trading and practicing his profession. He then went to Nevada City, where he located for a short time, but he finally selected this county as his permanent home. He purchased a half-section of land on the old Jackson road, seven miles east of this city, where he resided continuously up to the time of his death, with the exception of two years—1857-59—when he was sheriff of the county. He took a deep and intelligent interest in fruit culture and horticulture, and his place was in the highest state of cultivation. He was one of the first in this section to engage in grape culture, and about 100 acres of his vineyard was devoted to the finest varieties. He also had 100 acres planted to small fruits—cherries, plums, etc. He was authority on all subjects relating to fruit culture, and in 1887 was appointed a member of the State Board of Viticulture—a position which he filled with ability and credit.

Sixteen years ago he was Chairman of what was known as the Farmers' Union, which organization was succeeded by the "Grangers," Dr. Manlove being the first Master of the Sacramento Grange. He was elected President of the Sacramento County Farmers' Alliance, at a meeting held at Elk Grove on the 3d of the present month.

In politics, Dr. Manlove was a Democrat, and, up to very recent years, was prominent in the councils of his party in this State.

His wife, who was a daughter of Hon. Shubel N. Baker, a merchant in this city in early days, still survives him, as do a grown son and daughter—J. Edward and Catherine A. Mrs. Manlove, in the early years of the Grange, was elected Pomona. Dr. Manlove was well known throughout the State. He was everywhere regarded as a man of sterling worth, and one who had done much toward advancing the agricultural interests of the State.

## Farmers' Institute.

We notice that Edson Grange has requested Judge Blackwood to meet with the Farmers' Alliance of Alameda county for consultation regarding the organization of a Farmers' Institute. We take this method of notifying the Grange of Alameda County that the Farmers' Alliance would be pleased to have Judge Blackwood and a number of other delegates from the Grange meet with them at Pleasanton on Saturday, April 4, at 1 P. M., for the purpose of consultation and for organizing an Institute in our county.

GEO. W. KRAFT.

Pres. Alameda County F. A. &amp; I. U.

ALLIANCE MEETING.—The San Miguel *Messenger* says that a meeting of the Joint Committee of the San Luis Obispo and Monterey County Alliances was held at San Miguel, March 11th. They organized by electing P. T. Waggener of Parkfield president, and Mr. D. Miller of Bradley secretary. The meeting was held to discuss the mill project, and was attended by the full committee of ten. They were: Chas. A. Barlow, Chas. E. Toby, L. D. Murphy, Levi Exline and J. D. Linder of San Luis Obispo Co., P. T. Waggener, Chas. J. Lydell, S. O. Pugh, Wate Williams and David Reed of Monterey. The meeting was a very enthusiastic one, and the mill project was talked of from different standpoints, yet perfect harmony prevailed. It was deemed advisable not to give the business done publicly.

"FARMERS' ALLIANCE GIRL" writes from Melville, San Luis Obispo county: Our Alliance is still alive and having as good times as ever. At the last meeting, the Alliance was presented with a very pretty gavel by Mr. and Mrs. Hover. Bro. Waggener has been very sick with the grippe, but is better and intends to attend the meeting at San Miguel with Mr. Cole, who is chairman of the Committee on Constitution and By-laws. Mr. Waggener is chairman of the Milling Committee.

GAINING STRENGTH.—Hardscrabble Cor. San Miguel *Messenger*: The Farmers' Alliance is rapidly gaining strength in this benighted corner of the moral vineyard. The majority of the farmers belong to it, and it is to be hoped they will do a power of good, as we think there is room for a great reform. The meetings are well attended and the interest seems to be increasing.

### The Bird's Invitation.

Up in the top of a maple tree,  
A little bird sits and sings to me  
A sacred song, this Sabbath day,  
Worshipping God in his own sweet way.

And he looks at me with two pure eyes,  
Like one who is sent to evangelize,  
And seems to say, "Come sing with me,  
Just listen, and try to catch the key!"

And I have been trying to learn his words,  
And follow the play of his wondrous chords,  
And to tune my voice to the joyous note  
That swells and ruffles his gold-brown throat.

But he is beyond me! No more can I sing  
That song than fly with his dainty wing;  
And so I sit still, and let him do  
Alone, the singing service for two.

But it seems not right; I feel in me  
That I ought to sing as sweetly as he;  
That the woman's soul and the mother's heart  
Should give me in even his song apart.

But if I am silent to-day, while he  
Is splitting his throat in ecstasy,  
I know that, to me, some day shall bring  
A gift of song and a song to sing,

Which the little heart in his vest of gold,  
Is altogether too small to hold—  
A song unwritten forever more;  
No seraph even hath seen its score.

Sometimes I have felt the delicious thrill  
Of the songful tide that then shall fill  
My soul; but at best it has only been,  
As yet, a dream of what shall be then.

So, beautiful bird in the maple tree,  
You may sing and sing and laugh at me,  
As I try to mimic your song, but I  
Can afford to wait for my by and by.

—Mrs. S. M. I. Henry in Union Signal.

### Why He Turned Farmer.

[Translated for the RURAL PRESS from the French of  
André Theuriot by ALMA BLAKEMAN JONES.]

The first time that I encountered my old friend, Vital Herhelot, after a period of twenty-five years, was at an alumni banquet of the provincial lycees where we had plodded through our course. These reunions are almost always alike; hearty hand-shakings, noisy recognitions, and a jolly good fellowship that it seems strange to resume after a quarter of a century's silence; there is the melancholy perception of changes wrought by the years in faces and fortunes; and then comes the president's solemn address, followed by the toasts; and finally, the exchanging of college reminiscences, from which time has extracted all bitterness, leaving only a mellow flavor of the days when each of us held in his hand a Pandora's box full of golden hopes.

I was tolerably surprised to find this Vital Herhelot quite different from the one whose memory I had cherished. I remembered him as a slender, timid youth, looking as if he had come out of a handbox, precise and reserved, and combining all the amiable qualities of the young supernumerary who wishes to make his way in the office where his family has placed him. I now saw a jolly fellow, strong and well built, with a sunburnt neck and face, a bright eye, and the loud, clear, impulsive speech of a man who was not accustomed to weigh his words. With his hair cut like a brush, his suit of English cloth, his pepper and salt, fan-shaped beard, his easy bearing and blunt frankness, he presented no resemblance to the dapper official of other days.

"See here!" I demanded, "what has happened to you? Are you no longer in office?"

"No, my old friend," answered he; "I am a plodding tiller of the soil. Half a league from here at Chauteraine, I am farming some land, quite a patch, where I raise grain and make a little Burgundy wine—which you shall taste, if you will visit me."

"Is it possible?" I cried. "You, the son and grandson of bureaucrats, you whom they held up as the model official, and for whom they predicted a brilliant future, you have renounced your profession, have converted your gown into a scarecrow?"

"Thank God! Yes."

"How did it happen?"

"My dear fellow," replied he, smiling, "great effects are often produced by trivial causes. I threw up my commission for two peaches."

"Two peaches?"

"No more nor less; and when we have had our coffee, if you will accompany me as far as Chauteraine, I will tell you how it came about."

After our coffee, we left the banquet hall, and while we walked along the oozal smoking our cigars that warm afternoon near the end of August, my friend Vital told me his story.

"You know," said he, "that I was brought up in my father's profession, and that my

father, an old government clerk, saw nothing equal to the career of an official; also, as soon as I had taken my degree, they hastened to install me as a subordinate clerk in the paternal office. I was unconscious of any very decided conclusion as to a career and entered passively on the beaten highway of bureaucracy along which my father and my grandfather had slowly but surely advanced. I was a painstaking, well-disciplined youth, reared from the cradle with a respect for superiors and with a proper sense of the deference due to those in authority, consequently I was much noticed by my chiefs and I rapidly won my earlier promotions.

"When I was twenty-five, my chief, who had taken a liking to me, attached me to his bureau, and my comrades envied my lot. They already spoke of me as a future superior clerk and a most brilliant career was predicted for me; and then I took me a wife.

"I married a young girl, very pretty, and, what was of more importance, very good and very loving, but dowdier. It was a serious mistake in the eyes of my fellow-clerks. Of that they were very positive; they looked on my marriage as a pretty mess, and they applied the rule that 'if the husband supplies the breakfast, the wife should furnish the dinner.' Now my wife and I 'had hardly enough between us for a meager supper.' They loudly declared that I had done a foolish thing. More than one good fellow of my acquaintance rated me openly as a fool who had willfully ruined a fine opportunity.

"Nevertheless, as my wife was very pretty and a very nice little thing, as we lived modestly and by dint of economy succeeded in making both ends meet, people contented themselves with criticizing my 'improvidence' and the local society deigned to continue to receive us.

"My chief was a rich man, fond of display, and he prided himself on cutting a good figure in the world. He entertained much, gave sumptuous dinners, and from time to time he gave a ball to his officials and the noteworthy people of the town. My wife, being poorly, had to stay at home, and, as much as I would have preferred to hear her company, I was compelled to assist alone at the official receptions, for the chief would accept no refusal to his invitations, and in his service the clerks had to amuse themselves to order.

"At the very time when my wife was in a most delicate state of health, a grand ball was in order, and, as usual, willy nilly, I had to don my dress coat.

"At the hour of departure, while pretending to put the finishing touches to the knot of my white cravat, my wife gave me a great many instructions:

"It will be very fine. Do not forget to notice everything, so as to tell me all about it: The names of the ladies at the party, their toilets and the menu for supper. For there is to be a supper. It seems that they have ordered heaps of good things from Chevet's—things out of season; they talk of peaches that have cost three francs apiece. Oh! those peaches! Do you know—if you were good, you would bring me one!"

"In vain I cried out. I remonstrated with her that the thing was not to be thought of, and pointed out how difficult it would be for a gentleman in a dress coat to smuggle a peach into his pocket without the risk of being seen and ridiculed. The more I objected, the more obstinately she clung to her whim:

"On the contrary, nothing easier! No one will notice it while the guests are passing in and out for supper. You can take one for yourself and you can conceal it carefully. Don't shrug your shoulders! You may think it babyish, but I am longing for one; ever since hearing these peaches spoken of, I have had a foolish desire to taste them. Promise to bring me back at least one. Swear it!"

"How in the world can one refuse the woman he loves? I ended by murmuring a vague assent and hastened to be off, but just as I was turning the button of the gate, she called to me again. I saw her great blue eyes shining with coquetry turned toward me, and she cried:

"You promise me?"

"It was a very fine ball; there were flowers everywhere, and brilliant toilets; the orchestra was excellent. The prefect, the chief justice, the officers from the garrison, all the leaders of society were there. My chief had spared no pains to give brilliancy to this fête over which his wife and daughter graciously presided.

"At midnight the supper was served, and in pairs the dancers passed into the supper-room. With inward trepidation I forced my way thither, and had hardly entered when, in the place of honor, the center of the table, I perceived those famous peaches from Chevet's.

"They were heanties, those peaches. Rising in a pyramid from a basket of Juneville faience and tastefully arranged with vine leaves, they proudly displayed their ravishing cheeks on which a blushing red overspread the creamy white, velvety skin.

"One had only to look at them to divine the delicately perfumed flavor of that rosy, melting flesh. I eyed them fondly at a distance and thought of the joyous exclamations that would greet me on my return if I succeeded in carrying away a specimen of that exquisite fruit. They excited general admiration; the longer I gazed at them, the more my desire took the form of a fixed purpose, and the stronger grew my resolve to obtain one or two of them. But how?

"The servants on duty acted as a good guard

about the rare and costly hothouse fruit. Our host was reserving for himself the pleasure of offering his peaches to an honored few. Every now and then, at a sign from his master, the butler took up a peach daintily, out it with a silver-bladed knife and presented the two halves on a Sevres plate to the person indicated.

"Eagerly I watched these proceedings and it was with fear and trembling that I saw the pyramid lessen. However, they did not exhaust the contents of the faience basket. Whether the instructions had been cleverly carried out, or some discretion had been exercised, it chanced that when the guests, warned by a prelude from the orchestra, had thronged into the salon, there were still left half a dozen of the lovely peaches on their bed of leaves.

"I followed the crowd, but this was only a subterfuge. I had left my hat in a corner—a hat of tall shape, which had inconvenienced me considerably during the whole evening. I went back under the pretext of securing it, and as I was well known in the house, the servants took no notice of me. Besides, they were busy carrying away the plates and glasses which had served the guests; and, for a moment, I found myself alone near the table. There was not a second to lose. After a stealthy glance to right and left, I approached the basket, quickly dropped two peaches into my hat, where I concealed them with my handkerchief; then, apparently very calm and dignified, although my heart beat frightfully, I quitted the dining-hall, carefully placing the opening of the hat against my breast, and holding it thus with the help of my right hand thrust into the front of my vest, which gave me a very impressive pose, Napoleon-like, as it were.

"My object was to cross the salon quietly, to steal out unobserved, and once outside, to carry home in triumph the two peaches wrapped up in my handkerchief.

"The thing was not so easy as I had at first supposed. They had just begun the cotillon. All around the great room there was a double row of black coats and marriageable ladies inclosing a second circle formed by the chairs of the dancers; then, in the center, was a large, empty circle where the couples waltzed. I had to cross that space in order to reach the door of the ante-chamber.

"I timidly crept between the groups. I wound my way about the chairs with the suppleness of a snake. I was fearful every instant lest some brutal elbow should knock my hat out of place and cause the peaches to fall. I felt them rolling about within and I grew red up to the roots of my hair. Finally, after much trouble and many frights, I reached the clear space in the center at the moment they were organizing a new figure. A lady was surrounded by a ring formed of gentlemen who danced around with their backs toward her. She had to hold a hat in her hand, and, while they passed, to place it on the head of the cavalier with whom she wished to waltz. Scarcely had I taken two steps when my chief's daughter, who was leading the cotillon with a young member of the council, cried:

"A hat! We must have a hat!"

"At the same time she perceived me with my stovepipe pressed to my breast. I caught her eye and my very blood froze.

"Oh! said she, 'you have come just in time, Monsieur Herhelot! Quickly, your hat!'

"Before I could stammer a word, she had seized my hat so rudely that at the first touch the peaches rolled over the floor, dragging along my handkerchief and two or three vine leaves.

"You can picture the tableau. The dancers laughed behind their hands at the sight of my mishap and my rueful countenance; my chief frowned; the solemn ones whispered together, pointing at me with their fingers.

"I felt my legs tremble, and wished the floor would open and swallow me.

"The young lady hit her lips to keep from laughing and gave back my hat.

"Monsieur Herhelot," said she in a sarcastic tone, 'pick up your peaches!'

"Laughter then burst from all sides of the room. The very servants held their sides; and pale, haggard and staggering, I fled, covered with confusion. I was so overcome that I could hardly find the door, and I went home sick at heart to relate my misadventure to my wife.

"The next day the story overran the town. Upon entering the office, my comrades greeted me with:

"Herhelot, pick up your peaches!" which made the blood rush to my face.

"I could not venture into the street without hearing behind me a hoarse whisper:

"It is the gentleman of the peaches."

"The place was no longer endurable, and eight days later I threw up my position.

"My wife's uncle had a farm on the outskirts of my native village. I begged him to take me as an assistant. He consented, and we installed ourselves at Chauteraine. What more can I tell you? I resolutely took hold of the work, rising at dawn, and not complaining of hardships. It seemed that I was better adapted to farming than to scribbling, for in a very short time I became a downright farmer. The place prospered so well that at his death my uncle willed it to us. Since then I have enlarged it and brought it to the present satisfactory state in which you are about to see it."

By this time we had reached Chauteraine. There we entered an orchard full of fruit trees whose branches loaded with apples and pears

drooped to the ground. Farther on, a sloping meadow inclined to the blue river, on the other side of which rose an upland vineyard where the grapes were beginning to ripen and the thrushes were singing. To the left, behind the trees, the rumbling sound of thrashing indicated the direction of the barn; and when we had crossed the kitchen garden, we could see the white front of the dwelling-house where peach trees covered with beautiful ripening fruit were climbing on espaliers.

"You see," said Vital Herhelot, "I make a cult of peaches. I owe my happiness to them. But for them I should have remained a petty official trembling at the slightest frown of a superior, and increasing the already too numerous mob of underlings who have a hard time to make both ends meet."

At that moment I heard the joyous laughter of boys and girls within the house; and at a window, enframined in the peach-covered lattice, appeared Madame Herhelot, healthy and beautiful still, herself a ripe peach, gilded by the warm light of a magnificent setting sun.

### New Laws on Public Morals.

The following new laws have received the Governor's signature:

Amending the Gambling Act as follows:

Every person who deals, plays or carries on, opens or causes to be opened, or who conducts, either as owner or employee, whether for hire or not, any game of faro, monte, roulette, lansquenet, rouge et noir, rondo, tan, fan-tan, studhorse poker, seven-and-a-half, twenty-one, hokey-pokey, or any banking or percentage game played with cards, dice, or any device, for money, checks, credit, or other representative of value, and every person who plays or bets at or against any of said prohibited games, is guilty of a misdemeanor and shall be punished by a fine not less than \$500 nor more than \$500, or by imprisonment in the county jail not exceeding six months, or by both such fine and imprisonment.

Adding the following new section to the Penal Code relative to the sale or furnishing of tobacco or preparations thereof to persons under 16 years of age:

Every person who sells or gives or furnishes in any way to another who is in fact under the age of sixteen years any tobacco, or preparation of tobacco, is guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine not exceeding \$500: *Provided, however*, that this section shall not be deemed to apply to articles furnished on prescriptions from physicians authorized by law to practice medicine, nor to persons who supply such articles to their own children, nor to sales made to such minors upon the written consent of the parents or guardians of such minors first obtained in writing by the vender.

### A Reminder of Youthful Days.

When our eyes fell upon the following clipping, it had a familiar appearance. Wonder if it has an old-time look to any of our male readers—and we also might add, to our female readers:

One of the most delicious love letters that the listener has ever read was intercepted the other day by a teacher in one of the public schools. The boy who wrote it was 10 years old, and the girl presumably of the same age. Here is the charming missive:

DEAR EMMA: I love you and I wish you would write to me I love you and I wish I could kiss you. Emma you look so rosy. I love you don't you love me? I wish you would write to me, I guess you love me. I don't care if you don't, I will write to you anyway. I want you to write to me and if you have no lead pencil I will give you one and some paper. I am so glad that you love me, Emma, did you tell that boy that lives besides your house that you was going to slap my nose? Emma, I could not help but cry when that boy told me, Emma, I thought you thought more of me. I have given you about twenty-five cents' worth of candy, and you don't treat me well, besides I give you some gum.

There is no doubt about the condition of that boy. He is in love. He may be only 15 years old, but if he lives to be 100 he will never be any more in love than he was when he penciled this letter.

IN GREENLAND, north of 75° of latitude, the entire land is covered with a sheet of ice estimated to be about 5000 feet thick over all the valley regions. So far as has been observed, no mountains are discernible above the ice, or even any elevations which can be attributable to underlying mountains. The whole is a vast plain at an elevation of from 5000 to 6000 feet above the sea level. This is probably the last remnant of the great ice cap which must, at some time in the past, have covered nearly or quite all the land from the pole to the equator.

A VINEYARDIST, that is, a will be vineyardist, put in yesterday, so it is said, hunting a Tomale tree. He was told of the wonderful profits in a Tomale orchard near Hanford, and set about at once to get a few of the trees to set out on his twenty near Selma. He could find no trees, but L. A. Rockwell says he has some fine-rooted Tomale trees in his lake warranted to grow the genuine chicken tomale. The only trouble is that the trees grow under water and the catfish in the lake eat the tomatoes before they are more than half ripe.—Selma Irrigator.

FIRST BOY (to second boy, who has been fishing)—Catch anything? SECOND BOY—I haven't been home yet.

# The Authors Unite in Acrostic

FOR THE  
Pacific Rural Press.

[Compiled by H. C. CLABBY, Cincinnati, O.]

Since brevity is the soul of wit and tediousness the limbs  
and outward flourishes, I will be brief.—SHAKES-  
PEARE.  
Use the means and God will give the blessing. It's good  
to dread the worst, the best will be the welcome.—  
PROVERB.  
Burns o'er the plow sang sweet his wood-notes wild;  
and richest Shakespeare was a poor man's child.—  
ELLIOTT.  
Sin hath broke the world's sweet peace—unstrung th'  
harmonious chords to which the angels sung.—DANA.  
Children of wealth or want, to each is given one spot of  
green and all the blue of heaven.—O. W. HOLMES.  
Religion is slow to no sect, takes no private road, but  
looks through nature up to nature's God.—POPE.  
It is the care of a very great part of mankind to conceal  
their indigence from the rest.—JOHNSON.  
Beauty is but a vain and doubtful good, a flower that  
dies when first it 'gins to bud.—SHAKESPEARE.  
Every man, however humble his station or public his  
powers, exercises some influence on those who are  
about him, for good or for evil.—SKEWICER.  
Fine thoughts are wealth, for the right use of which  
men are, or ought to be, accountable.—BAILEY.  
Oh wretched is the dame to whom the sound "Your lord  
will soon return" no pleasure brings.—MATURIN.  
Reflect upon a clear, unblotted, acquitted conscience,  
and feed upon the ineffable comforts of the memorial  
of a conquered temptation.—SOUTH.  
The idle, who are neither wise for this world nor the next,  
are emphatically fools at large.—TILLOTSON.  
He who receives a good turn should never forget it; he  
who does one should never remember it.—CHARLTON.  
Everywhere throughout all generations and ages of the  
Christian world, no church ever perceived the word  
of God to be against it.—HOOKER.  
Perseverance wins each God-like act and plucks success  
even from the spear-proof crest of rugged danger.—  
HAYARD.  
All deception is nothing else but a lie reduced to prac-  
tice, and falsehood passing from words to things.—  
SOUTH.  
Charity is a tribute imposed by Heaven upon us, and he  
is not a good subject who refuses to pay it.—FREO-  
HAM.  
If we will stand boggling at imaginary evils, let us never  
blame a horse for starting at a shadow.—L'ESTRANGE.  
Frugality may be termed the daughter of prudence, the  
sister of temperance and the parent of liberty.—  
JOHNSON.  
It is hard to jest and not sometimes fear too, which  
oftentimes sinks deeper than was intended or expect-  
ed.—FULLER.  
Common sense is a phrase employed to denote that de-  
gree of intelligence, sagacity and prudence which is  
common to all men.—FLEMING.  
Reason cannot show itself more reasonable than to leave  
reasoning on things above reason.—SIDNEY.  
Under the divine influence the weaker sex becomes ca-  
pable of the most difficult enterprises.—BURKE.  
Repentance so altereth and changeth a man, he ever  
so deified, that it maketh him pure and clean.—  
WHITFOIT.  
A good man's prayers will from the deepest dungeon  
climb to Heaven's high, and bring a blessing down.—  
BAILEY.  
Life's evening, we may rest assured, will take its char-  
acter from the day which has preceded it.—SHUTTLE-  
WORTH.  
Power, when employed to relieve the oppressed and  
punish the oppressor, becomes a great blessing.—  
SWIFT.  
Resignation casts a grave but tranquil light over the  
prospects of even a toilsome and troubled life.—HUM-  
SOLDT.  
Employment is so essential to human happiness that in-  
dolence is justly considered the mother of misery.—  
BURTON.  
Scaliger, in comparing the two orators, says that nothing  
can be taken from Demosthenes nor added to  
Tully.—DENHAM.  
Study to fill your mind. Gold and silver were origi-  
nally mingled with dirt until avarice and ambition parted  
them.—SENECA.

## Chaff.

JUDGE—What is this man charged with?  
Officer—Electricity, your honor. He stole  
a battery.  
THE difference between a starving man and a  
glutton is that one longs to eat and the other  
eats too long.  
THE cat has nine lives, which shows that  
nature had a pretty fair idea of what the cat  
would have to go through.  
CHAWLEY—Your dog won't bite me, will he?  
Farmer Spinwheel—Gosh! I hope not. It spiles  
'em for rabbits when they get dude blood in  
their veins.  
A MAN told his daughter that if she learned  
to work he would give her a surprise. She  
learned the art, and he surprised her by dis-  
charging the servant girl.  
"I DON'T know what it is, Mark, but I can't  
hit a bird to-day!" "Let's see your gun, sir.  
Ahl well, I'd try what you could do with some  
cartridges in it, if I was you, sir!"  
A WOMAN'S dress, recently invented, has no  
less than six pockets. The man who cannot  
find the one pocket in his wife's dress is going  
to have a life job when he undertakes to look  
for six.  
YOUNG WIFE—I am your treasure, darling!  
Young Husband—You are indeed. I don't see  
how I had the good luck to get you. Young  
wife—Oh, well, you know, mamma attended to  
that! It wasn't luck.  
OLD GENTLEMAN—Louie, I heard some one  
being kissed once or twice in the hall last night.  
Was it you? Louie (blushing)—Once or twice  
did you say, papa? Old Gentleman—Yes.  
Louie—Then it wasn't I.  
BRIDGET (in the witness-box)—Did he have  
an impidimint in his spach? Faith, an' that he  
had; for his false teeth were loose an' kept  
jimplin' up an' down, hitin' the words in two.  
Shure it was an impidimint he had!  
PRIVATE THEATRICALS—Fond Parent (to Pro-  
fessional Lady)—Tell me, Miss Le Vavasour,  
did my son acquit himself creditably at this  
afternoon's rehearsal? Miss Le Vavasour—  
Well, my Lord, if your son only acts the lover  
on the stage half as energetically as he does in  
the green-room, the piece will be a success.

# YOUNG FOLKS' COLUMN.

## Little "Put-Off."

"I'm going to ask Jessie to come and see me  
this afternoon after school, mamma."  
"Are you, dear?"  
"Yes; and couldn't you let us have a little  
afternoon tea?"  
"I think I could."  
"Something very nice?"  
"I'll see about it."  
"I know what that means," said Patty,  
giving her mamma a very nice, loving kiss.  
"But wait, Patty," said mamma, as the  
little girl was tripping away. "I want you to  
come straight home, so as to attend to your  
little duties before Jessie comes."  
"My darning my own room, you mean?"  
"Yes; it ought to have been seen to this  
morning, hey, Patty?"  
"Yes, mamma; but I had to study my read-  
ing lesson this morning."  
"I thought the evening was always the time  
for that."  
"But I put it off, because I wanted to play  
checkers with Jack."  
"I wonder if my little daughter will ever  
learn not to put off duties for pleasures. And  
it seems to me there was something out in the  
arbor which ought to have been looked after."  
"Oh, I remember. I was pasting scraps out  
there with May the day before yesterday, and  
I put off picking up the things till morning;  
and then I wanted to weed my flowers."  
"I hope you will do it before Jessie comes."  
"That's what I mean to, mamma. Good-  
by."  
"Where's mamma?" asked Patty, on her  
return from school after the short afternoon  
session.  
"She's gone out," said Jane, the girl.  
"Gone out! Did she say anything to you  
about a little snapper for me, Jane?"  
"No; I didn't hear anything about it."  
"That's very strange of mamma," said Patty.  
"She must have forgotten it. Oh, perhaps  
she put it off until she comes home. I wish  
she hadn't."  
The "put-off" reminded Patty of the room  
she was to dust. But as she passed a window  
she caught sight of some of her flowers which  
grew outside.  
"Oh, my pansies!" she cried in great concern;  
"they are all drying up and withering." She  
was very fond of her flowers; and everything  
else was for the moment forgotten, as she  
hurried for some water to give them.  
"You dear little things," she said, "you  
almost seem to know I am giving you a nice,  
cool drink. You look just as if you wanted to  
say, 'Thank you.' Oh, I wish I was a fairy,  
and lived in the times when they could hear  
flowers and lambs and birds and things talk."  
Walking on with her watering-pot, dreaming  
of delights of such a condition of things, she  
came near the arbor.  
"Now I must tidy up the arbor. Jessie'll  
be here in a minute, and I'd better put off my  
dusting until she's gone home. I shan't take  
Jessie up to my room; I'd hate to have her see  
how untidy it is. I do wish mamma did not  
think little girls ought to keep their rooms  
dusted and pick up their things after they're  
done playing. Ah! look at that great weed  
growing so near that beautiful white lily."  
The weed was removed with little fingers  
which took tender care not to disturb the roots  
of the queenly lily. And then Patty looked  
up and smiled a very loving greeting to a blue-  
bird, which chirped above her in the branches  
of a tree.  
"There you are, you little beauty! Are  
you singing to this lily? Of course you are.  
You sing to the flowers all day, don't you?"  
And off went the little lassie into a train of  
fancies to which flowers she would sing to often-  
est if she were a bird, springing up at length  
to say:  
"But I must be sweeping the arbor."  
Sheran for the broom; and as she hurried  
back, her little friend Jessie came down the  
garden walk.  
"Ahl! there you are, Jessie. I'm glad to see  
you. I was just going to sweep the arbor,  
but it can wait till you go."  
The sweeping of the arbor would not have  
taken more than five minutes; and Patty felt a  
little prick of conscience as she led the way to  
another part of the large, pleasant garden.  
But she quieted it with the reflection that it  
would not be polite to work when she had  
company, and that of course mamma would not  
wish her to.  
They played croquet for awhile, and then  
made dolls of daisies and hollyhocks. When  
they had a long row of the flower maidens,  
Patty thought it was full time for the treat  
which had been promised; and, excusing her-  
self to her friend, she ran into the house.  
"Hasn't mamma come yet?"  
"No," said Jane.  
"Dear me, Jane, can't you give us some-  
thing nice for a tea with Jessie?"  
"I don't know, I'm sure," said Jane, good-  
naturally. "To-morrow's baking-day; and  
there's nothing much in the house now, for  
we're to have hot hisonits for tea by and by."  
"Not a hit of that cocoanut cake?"  
"Not a hit," said Jane, going to look.  
"There was a little this morning, I know."  
Jane did what she could for her; and Patty  
returned to the garden with a piece of apple-pie,  
some crackers, and a little currant jelly—a very

poor sort of tea she thought—and wondered  
more and more how mamma could have neglect-  
ed to see to it when she had promised.  
Mamma was famous for getting up nice little  
treats when Patty's friends came, and it was  
easy to see that Jessie was rather surprised.  
Patty's mother came home a few minutes  
after Jessie was gone, and Patty met her at  
the door with a very mournful face.  
"I suppose, mamma," she said, "that you  
put off fixing my nice little tea until you came  
back. But it's too late now, for Jessie's gone."  
Mamma smiled at Patty's injured tone, and  
asked:  
"Did you dust your room, dear?"  
"No, ma'am; I went to water my pansies,  
and—"  
"Did you clean up your paper in the arbor?"  
"No, ma'am; I put it off because Jessie  
came."  
"Well, I think you had better go at once  
and do them."  
Not one word of regret for the neglected  
afternoon tea.  
Patty went up to her room and began dust-  
ing.  
What was that behind her toilet cushion?  
A game for which she had been for some time  
longing. There it had been all the afternoon,  
when it would have been such a delight to try  
it; for they had become tired of those flower  
dolls.  
She put her room in good order and then  
went down to the arbor. An unfolded napkin  
lay over something in the seat, and Patty lifted  
it up to see what it might be hiding.  
"Oh, my!"  
What a dainty lunch lay on the little tray!  
The last of the cocoanut cake was there, with  
macaroons and kisses, some cunning little  
sandwiches, sliced pineapple, and bunches of  
grapes. And Jessie was gone, and there was  
no one to see it or help her enjoy it.  
Poor Patty sat down and cried. Then she  
swept the arbor, singing to herself:  
"Oh, dear! If only I hadn't put off!"

# DOMESTIC ECONOMY

## The "Servant" Question.

EDITORS PRESS:—There is no end to the  
senseless articles that crowd newspaper and  
magazine columns on the subject of kitchen  
girls. Prominent women in New York City  
and elsewhere have formed societies, ostensibly  
to solve the knotty problem of domestic serv-  
ice, but the result has generally been to build  
the social fence higher and stronger that sepa-  
rates mistress and maid. The unconscious,  
unexpressed sentiment possessing the souls of  
these would-be helpers is that labor is dishon-  
orable.  
It is pleasant for many women to have a  
companion, a congenial, helpful friend in the  
family as well as a servant, one that children  
can safely imitate her manners and language  
and one to whom they can with safety be  
trusted in the mother's absence.  
With this thought in mind, I am thankful  
that a highly cultured gentleman of enviable  
position in the community in which he resides  
has, without making the "help" question the  
harden of his article, given a hint of the better  
way in which our family affairs may be  
managed. Mr. M. L. Ward of Chula Vista, in  
an essay on that model town read before the  
County Horticultural Convention of San Diego,  
has the following to say of the household  
service of his little Eden:  
It is a peculiarity of this country that each in-  
dividual imagines he lives in the most favored locality  
on earth. We at Chula Vista are no exception to  
the rule.  
It seems to us that we have in some respects quite  
an ideal community. We have a Union Sunday-  
school; Union church services; a literary society,  
maintained by the young people, besides our Im-  
provement Society. There is a good wholesome  
sentiment there upon some vexed social questions.  
Our wives who need assistance to do the housework  
employ the young ladies who can be spared from  
their own homes—young ladies who are educated  
and accomplished, and who would grace any com-  
pany; who would entertain perfectly in the parlor,  
and yet who are accomplished housekeepers and  
good cooks, and have the good sense not to be  
ashamed of the fact nor the foolish vanity to refuse  
to employ their talent for the good of themselves  
and others. They are made welcome as valuable  
members of our families and treated as such. At one  
of our public meetings held a few weeks ago, there  
was a paper read by one of the brightest, most in-  
telligent and wealthy ladies in San Diego county,  
being one number on the program, and upon the  
same program there was a number scarcely less  
meritorious, given by the young lady who presides  
over the kitchen in the wealthy lady's house.  
With such an advocate of manual labor, it is  
to be hoped that the influence of his words may  
awaken the minds of women and good girls to  
the fact that intelligence, education and lady-  
like demeanor are not incompatible with help-  
fulness everywhere. The kitchen and dining-  
room may be made as holy ground as the  
school-room, office or store. B. B.

# GOOD HEALTH.

## Failure of a Noted Case of Skin- Grafting.

Some two or three months since Mr. John  
O. Dickerson, a prominent Mason of Chicago,  
had a cancer removed from his person by the  
knife. The wound refused to heal, and 132 of his  
brother Masons came heroically to his relief.  
Each allowed a piece of skin to be removed from  
his person, to be transplanted upon the body of  
the afflicted brother. The victim of cancer and  
the surgeon's knife died February 24th.  
It is truly melancholy to know of the im-  
mense suffering and loss of life by this fearful  
cancer malady all over the country and the  
world. Over 2000 people are dying of this  
dread disease in the United States every  
month, and yet we have in this city a most un-  
doubted cure for it, to which we have been  
calling the attention of our physicians and the  
people generally for some four years past, with  
very little response from either the physicians  
or the press, although great numbers of the  
people are becoming interested in the matter.  
We have given masses of testimony of every  
character from patients that have been cured  
and from individual physicians who have  
watched the successful treatment of patients  
with more or less carelessness; but the faculty  
as a body have thus far refused to investigate  
or make any official report either for or against.  
We are pleased, however, to state that several  
of the more considerate are beginning to give  
the cure some attention, and are watching the  
convalescence of several very pronounced cases  
now under treatment, and it is to be hoped that  
the result in those cases will lead to an official  
investigation by our City Board of Health or  
some other official body.  
We have no interest in the matter, so far as  
the practitioner is concerned. The end which  
we desire to reach is such an official medical in-  
vestigation as will place the value of the as-  
serted remedies beyond all controversy. If  
such investigation should prove favorable,  
there are those who stand ready to do what-  
ever may be required to place the remedies in  
the hands of physicians everywhere. We hold  
that the evidence is amply sufficient to war-  
rant the Board of Supervisors in asking the  
City Board of Health to look into this matter  
officially.  
THE TREATMENT OF DANDRUFF.—Dr. Ed-  
ward Clarke, in the *Lancet*, states that he has  
had good results in persistent dandruff from the  
following treatment: The scalp should first  
be thoroughly washed with soap and hot water  
and then thoroughly dried with a warm and  
soft cloth; there should then be rubbed into  
the scalp a glycerole of tannin, of the strength  
of 10 to 30 grains to the ounce. Very obstinate  
cases will require the higher strength of tannin.  
This process should be repeated twice a week  
at first, once a week afterward. If tannin  
fails, as it will in some cases, then resort is had  
to resorcin. After the formation of dandruff  
has ceased, the head should be rubbed daily  
with olive oil containing, to the ounce, ten  
grains of carbolio acid and a dram of oil of cin-  
namon.  
THE MICROBE OF RHEUMATISM.—A distin-  
guished French physician, after much research,  
thinks he has discovered a micro-organism, spe-  
cific in character, which is the direct cause of  
rheumatism. He reports that he has isolated  
and cultivated the microbe, injected it into the  
carotid artery of rabbits, and engendered an  
inflammation which to all indications is the  
same which accompanies inflammatory rheuma-  
tism in human beings. These investigations  
will undoubtedly stimulate parallel researches  
by other investigators and may lead to import-  
ant therapeutical results.  
POISON IN WALL PAPER.—We have already  
called attention to the fact that there is danger  
of poison from wall paper, especially that which  
contains green colors, which are generally pro-  
duced by arsenic. We see by an Eastern ex-  
change that ex-Mayor Oohh of Boston is now  
suffering from what is pronounced an incurable  
illness attributed to the absorption of arsenical  
poison from wall paper in his own house.  
PEPSIN IN PINEAPPLE.—It is stated that there  
is an element in the common pineapple similar  
to pepsin, and of such remarkable strength  
that the juice of a single apple will digest ten  
pounds of beef. It is further stated that the  
juice of the fruit is a very active solvent of the  
membrane found in diphtheria.  
A DIPHTHERIA LYMPH.—The Government  
medical authorities at Washington have, after  
many experiments, announced the discovery of  
a lymph which gives immunity from diphtheria,  
and they hope to make it a certain cure for that  
disease.  
HAIR DYES should always be avoided. All  
the various "hair restoratives" are both un-  
wholesome and uncleanly. The loss of color of  
the hair depends upon constitutional causes,  
and it is rarely or never restored.  
DIED OF TOO RAPID GROWTH.—A 15-year-  
old boy has just died in Brooklyn, N. Y., of  
too rapid growth. At the time of his death he  
was six feet two inches tall, but did not weigh  
100 pounds.

## TABLE OF CONTENTS.

**EDITORIALS.**—Dairy Progress; The Wool Interest, 261. The Week; The Eastern Corn Situation; Water Rates in Towns and Cities; Weather Injuries in Europe, 268.

**ILLUSTRATIONS.**—Executive Committee California Farmers' Alliance, 261. C. J. Cressey and Baby Granger Roaches, 264.

**THE DAIRY.**—A Stirring Address to California Dairywomen, 262.

**THE APIARY.**—The California Honey Product of 1890; Queen Rearing, 262. Honey Notes and Honey Packages, 263.

**THE IRRIGATOR.**—Irrigation in Arizona, 263.

**PATRONS OF HUSBANDRY.**—The Master's Desk; Executive Committee Meeting; The Grange and the World's Fair; Funeral of C. J. Cressey, 264.

**FARMERS' ALLIANCE.**—The Alliance Business Army; The Work in Fresno County; Death of Dr. W. S. Manlove; Miscellaneous, 265.

**THE HOME CIRCLE.**—The Bird's Invitation; Why He Turned Farmer; New Laws on Public Morals; A Reminder of Youthful Days; Miscellaneous, 266.

**The Authors Unite in Arrostic; Chaff, 267.**

**YOUNG FOLKS' COLUMN.**—Little "Put-Off," 267.

**DOMESTIC ECONOMY.**—The "Servant" Question; A German Salad, 267.

**GOOD HEALTH.**—Failure of a Noted Case of Skin-Grafting; The Treatment of Dandruff; The Microbe of Rheumatism; Poison in Wall Paper; Pepsin in Pineapple; A Diphtheria Lymph; Hair Dyes; Died of Too Rapid Growth, 267.

**HORTICULTURE.**—The Southern Citrus Fair, 269.

**FLORIST AND GARDENER.**—Annals in California, 269. Rhododendrons, 270.

**AGRICULTURAL NOTES.**—From the Various Counties of California, 270.

**THE PUBLIC LANDS.**—The New Land Law, 272.

**ENTOMOLOGICAL.**—The Boll Worm of Cotton, 274.

**FRUIT MARKETING.**—California Fruits in Illinois; Eastern Fruit Shipments, 277.

## Business Announcements.

(NEW THIS ISSUE.)

Poultry and Poultry Supplies—Pacific Incubator Co., Oakland.

Dry Goods, Etc.—Weinstock, Lubin & Co., Sacramento.

Dairy Machinery—G. G. Wickson & Co.

Sale of Trotting Stock—Killip & Co.

School Furniture and Supplies—J. Dewing Co.

Blue Ribbon Cart—Frank Brothers.

Whale Oil Soap—Arctic Oil Works.

Scales, Trucks, Etc.—C. H. Lindemann.

Mechanical School—A. Van der Naillen.

Organs and Pianos—Daniel F. Beatty, Washington, N. J.

Poultry—Woodside Poultry Farms, Danville.

Poultry and Pige—Dellwood Poultry Yards, Napa.

See Advertising Columns.

## The Week.

Showers have continued over a considerable area of the State, and the abundant moisture with a higher temperature has brought forward a growth of alfalfa and clovers which has beautified the valleys and hillsides and brought joy to the stockman. Grain is growing well and the outlook for hay and threshed crops is as good as could be asked.

The citrus fair at Los Angeles, of which we present the first installment of our report upon another page of this issue, was a notable success, and will do much to spread the fame of the State. It is announced that with the material gathered and the surplus funds coupled with private subscriptions, there will be a citrus fair opened in Chicago, which will further spread the renown of the Southern counties. The State Board of Trade also inclines now to fixed exhibits at good Eastern points, and it is likely that such displays will be set up.

The Legislature is still struggling with the

Senatorial question, and up to our going to press on Wednesday afternoon no choice has been made. The air is full of ugly rumors of corruption, but the public is awakened and it is doubtful if such measures will succeed even if attempted. It is time something were done to abolish these disgraceful Senatorial fights. Let the people elect the Senators; this seems to be the only solution of the question.

## The Eastern Corn Situation.

Although corn is one of the minor cereal grains of California, the corn situation at the East often exerts marked effects in California. When corn is abundant and cheap at the East, it is brought to this coast and largely used as a feed grain, thus taking the place of California-grown barley and reducing the market price thereof. Now that the season promises good cereal crops here, and as the barley acreage is probably considerably larger than usual because of the apprehension of a season better suited to barley than wheat, it becomes of much importance to local barley-producers to know the corn situation in the great West. We find in an interesting circular just issued by Bartlett, Frazier & Co. of Chicago, on the available supplies of corn and kindred matters, the following significant paragraph:

From the facts as above stated, we think there is but one conclusion to be drawn, and that is that never in the history of the trade in this country has there been such a small proportion of feeding grain to consumptive requirements as exists at the present time, and this we consider the true explanation of the fact that, in spite of the perfect weather conditions for the delivery of grain that have existed ever since harvest, and in spite of prices that in ordinary years would have brought the grain to market, we now enter the season of unsettled weather, bad roads and spring work, not only with the smallest visible supply of corn ever known in this country, but with the smallest amount ever known in country cribs and warehouses.

It seems that the local consumption of corn in the great producing States of the West is rapidly increasing. Hon. J. R. Dodge, Statistician of the Department of Agriculture, says in his December report:

Our annual records show that five-sixths of the crop (corn) is consumed in the country where grown, only about 20 per cent being distributed beyond county lines. This consumption on the farm is in the nature of a fixed requirement for work animals, meat production, seed, etc., and is a demand not flexible in its character. The stimulus of high prices would, of course, shorten to some extent the rations of beasts, but very high prices indeed must rule before the commercial supply would be largely augmented at the expense of home consumption.

This statement not only accounts for the small supplies of corn available in the Western centers, but it indicates indirectly the increase in the cattle census, which also has an effect upon values out here and shows that the cattle-growers in the range States and Territories must not overlook the tendency toward greater meat production in the States of the Mississippi valley. Messrs. Bartlett, Frazier & Co. cite the following figures:

On Jan. 1st, '88, there were in the United States 15,363,000 horses and mules, 49,234,000 cattle and 44,346,525 hogs. In the seven surplus Corn States of Ohio, Indiana, Illinois, Iowa, Missouri, Kansas and Nebraska, there were 4,810,000 horses and mules, 14,803,797 cattle and 20,802,110 hogs. On Jan. 1st, '91, there were in the United States 16,352,750 horses and mules, 52,895,239 cattle and 50,625,106 hogs. In the seven surplus Corn States enumerated above, there were 5,205,796 horses and mules, 17,262,112 cattle and 26,208,193 hogs. In other words, on Jan. 1st, '91, we had in the whole country 989,750 horses, 3,661,239 cattle and 6,278,581 hogs more than Jan. 1st, '88, and in the seven surplus Corn States 395,796 horses, 2,458,315 cattle and 5,406,088 hogs more than on Jan. 1st, '88.

The West evidently proposes to try the profit in condensed products. They have grown weary of producing cheap grains and are trying the experiment of turning the grain into milk and flesh and marketing such articles instead of grain. As before stated, this new direction of production has bearings upon values on this coast, and therefore we bring the facts concerning it to the attention of our readers.

CALIFORNIA WHEAT FOR FRANCE.—A feature of the wheat market this year is the heavy buying for account of French importers. Last year no cargo was cleared at San Francisco for Havre direct. This year there have been quite a number, with the clearances in this month being almost entirely for French ports.

## Water Rates in Towns and Cities.

Many readers of the RURAL live in towns and cities, and are, therefore, interested in water rates of municipalities. Even those who do not live in towns have an open eye for water prices, for the subject is of vital interest everywhere in California. For this reason we present the results of a systematic inquiry, made by one of our most progressive cities in this direction.

The Citizens' Committee of One Hundred of Oakland sent out, some time since, a number of circulars to the larger cities of the United States with a view to obtaining information as to their water supply. The questions asked were as follows:

1. Is your water supply drawn from wells, lake or stream?
2. Is water furnished you by a corporation, or does your city own the plant?
3. If water is furnished by a corporation, by whom and how often are the rates fixed?
4. If water is furnished by a corporation, what arrangements have you with them for furnishing water for public use, viz: street sprinkling, Fire Department, public buildings, etc?
5. If your city now owns its plant, but water was formerly furnished you by a corporation, what was the chief cause or causes that brought about the change?
6. Does your water require filtration, and, if filtered, by what process?
7. What proportion of your consumers use meters?
8. If city owns plant, is it a source of profit or expense?
9. Do your people appear to be satisfied with your present water service?
10. Can you send us list of rates charged or any other literature on the subject?

In response to this circular letter issued by Recording Secretary J. W. Dutton, answers were received from 172 cities, and with these answers came a mass of information pertaining to the subject, in the form of letters and reports, all of which have been carefully compiled by Prof. Frank Soule, of the State University, Corresponding Secretary of the Committee.

This compilation has not yet been published, but the following is a brief summary of the facts and figures contained in the manuscript copy now in the possession of the Committee of One Hundred.

## SUMMARY.

No. of cities answering questions of committee.....	172
No. of cities owning their own water works and water service.....	120
Of these, satisfactory.....	105
Unsatisfactory (on account of quality of water).....	8
Not stated.....	7
No. of cities in which water works were controlled by private corporations.....	52
Satisfactory.....	22
Unsatisfactory.....	30

The reports from 162 cities in the East where water-meters are used are as follows:

Average minimum price per 1000 gallons.....	9½c
Average maximum price per 1000 gallons.....	25c

## IN OAKLAND.

Average minimum price per 1000 gallons.....	30c
Average maximum price per 1000 gallons.....	65c

In 162 Eastern cities the following are the average annual rates:

Dwellings, one family.....	\$6 35
One bath-tub.....	3 44
One horse.....	2 04
One water closet.....	3 70
Lawn, 60x120 feet.....	1 35

In Oakland the annual average rates are as follows:

Dwellings, one family.....	\$27 60
One bath-tub.....	6 00
One horse.....	6 00
One water closet.....	4 20
Lawn, 60x120 feet.....	\$9 96

Other items bear the same general ratio. Except in case of replies from private water companies themselves, the opinion is unanimous that the city should own the water works and control the service through a Board of Water Commissioners.

Since the compilation of these figures, the City Council of Oakland has reduced the rates of the company slightly, especially in the case of smaller dwellings. But in the opinion of the citizens, the rates still continue much too high. The same condition exists in a number of other towns in this State.

GOATS.—A recent issue of the Statistician's monthly publication from the Department of Agriculture reproduces the greater part of the manifesto which our Angora Association recently adopted, asking that the Government assist in the securing of pure Angoras from Turkey and the keeping of the same upon proper stations where they would be available as sires to our goat-breeders. We are glad the measure is attracting attention.

PROTECTION TO MINORS.—The Governor has signed the bill prohibiting the selling or giving of liquors in any quantity to minors under 16 years of age. The bill also makes the keeper of any place where games of chance are played guilty of a misdemeanor if he permits minors to be present or take part in such games.

## The Santa Clara Fruit-Growers.

The fruit-growers of the west side of the Santa Clara valley are going ahead with their organization in opposition to the fruit-buyers' combine, although, as was stated at the meeting on March 10, the buyers have been obliged to "back down considerably."

The by-laws of the new growers' organization provide for a payment of 20 per cent of the par value of the stock at once and the balance as the directors may order; no person can own more than 25 shares, nor can any one be admitted who has not five acres of orchard or vineyard; no one can sell other fruit than he grows through the organization; no one can own stock whose interests as a buyer are greater than as a grower.

If the corporation handles only the fruit of its members, the profits, if any, shall be divided in proportion to the amount of fruit each one delivers to the association. Should the corporation buy fruit from persons not stockholders, the profit, if any, upon fruit so bought, shall be divided among the stockholders.

The following were elected directors: S. P. Sanders, Colonel E. G. Hall, S. Lydlard, E. T. Pettit, A. R. Woodhams, Philo Hersey and Captain Blake.

## Weather Injuries in Europe.

European horticultural journals have been rather dreary reading for the last few weeks. The vast losses of garden and florists' stock by the heavy winter makes one sad both for the plants and their owners. To the rich it means temporary desolation of beautiful grounds; to the poor it means want and discomfort. The fruit interests of South Europe have suffered severely. The olives and citrus fruits in their traditional homes in Spain, France and Italy have been measurably ruined. Nor did the severe December and January freezes complete the evil, for it is telegraphed this week that advices from Sorrento, Italy, say the damage to the orange and lemon crops has been enormous and was caused by a gale of wind which swept all the leaves off the trees, leaving the oranges and lemons without protection. The crop will be reduced about 75 per cent. Had it not been for the gale, Sorrento would have shipped during the spring fully 300,000 boxes of oranges. The lemon crop has suffered chiefly from the hail. Sorrento will not export this summer much over 20,000 to 30,000 boxes of lemons, instead, as formerly, about 100,000 boxes.

## The New Public Land Law.

We give considerable space in this issue to the full text of the new law concerning the acquisition of public lands of the United States. The new law should be carefully read by all intending settlement upon public lands and should be filed away for reference by all those likely to be called upon for information of this character. Since the enactment of the law a circular letter has been issued from the General Land Office to registrars and receivers concerning its execution. The office holds that all bona-fide claims lawfully initiated under the new law prior to March 31 are protected. The letter says in part: "Timber-culture applications pending before the date of the approval of the recalling Act should be passed on with reference to the special provisions therein in favor of bona-fide claims lawfully initiated, including pre-emption claims, when the settlement is alleged."

NOT FOR REFINING.—It is telegraphed from Washington that Assistant Secretary Spaulding has decided that the law which admits duty free until July 18, 1892, machinery used in the production of beet-sugar, does not apply to machinery used for refining beet-sugar. This is rather a peculiar decision. It would be no more than right, perhaps, that Mr. Spaulding should be put upon a diet of raw sugar for awhile.

SWEET WINE ANALYSES.—Prof. Hilgard has published a statement, in answer to misleading telegrams sent from Washington, that he has not retracted his charges against the defective system of analysis of sweet wines authorized by the Revenue office, and which he describes as grossly inaccurate. The full statement in last week's RURAL gives Prof. Hilgard's position and the analyses upon which it rests.

## HORTICULTURE.

## The Southern Citrus Fair.

(Written for the RURAL PRESS by CLARA S. BROWN.)

The second annual citrus fair of the Sixth Congressional District, under the auspices of the State, opened in Hazard's pavilion, Los Angeles, on the evening of March 10th. It had been deferred a week on account of the washouts that blockaded all the railways in the southern part of the State, still the large force of workmen engaged in preparing the designs of the fair, assisted as they were by many ladies, found it necessary to labor far into the night for days before the opening. The task was greater than last year because at that time most of the fruit was spread out upon tables, making a gorgeous mass of coloring as one looked down upon it from the galleries, and no attempt at elaborate designing was made. This year it was thought best to vary the character of the display, and to that end a special premium of \$400, to be paid from the gate receipts, not out of the \$2500 allowed by the State, was offered for the best design in citrus fruits. Over 20 localities responded enthusiastically, and the result forms a scene which must be gazed upon in order to be comprehended.

As one followed the crowd into the spacious building—the main room is 120x166 feet in dimensions, with an arched ceiling 57 feet in height—and stood just inside the main entrance confronted by a Turkish mosque, like concentrated and solidified sunlight in color, and beyond caught glimpses of other wonderful conceptions through the moving mass of humanity, it seemed futile to attempt a description. The task is beyond any pen to adequately portray. Bear with me, then, while I give you a bald outline of the glowing reality.

The hall is elaborately draped with strips of pink, green and orange bunting, extending from the center of the roof to the sides of the upper gallery. Both galleries are festooned with cypress and studded with rosettes of blue and orange, and under the lower gallery is a delicate tracery of ivy. Looking straight across the hall, one sees over the stage the immense arch erected by Los Angeles county (not for prize purposes, however). It is 72 feet wide and reaches to the top of the building. The effect is that of tri-colored squares and is accomplished by using oranges with red and blue wrappers. In the center, on a green background, are the words "State Citrus Fair" in immense gilt letters; below are suspended the words "Los Angeles County" in silver letters. This beautiful arch is illuminated at night by a star of incandescent lights. Beyond, well back on the stage, stands a model of the new County Court House, upon which members of the Ladies' Annex to the L. A. Chamber of Commerce have worked for days. It is complete, even to the clock in the tower, and when illumined excites much admiration. Upon this 40 pounds of raisins were used in delicate fresco work, and 7500 limes, tangerines and oranges, besides a quantity of dried fruits. On the stage at the left is Pomona's long table of fruit; on the right, Vernon's packing-house and car. In the center of the hall, Pasadena's tower rises 40 feet. To the left of it is Redlands' wondrous arch and facsimile of the Bear Valley dam. Between them stands "the old oaken bucket" and well-sweep contributed by Whittier. Beside Duarte's mosque stands the gravity car used on Euclid avenue, Ontario. At the right of the hall is the gateway of "Sunny Slope" and a model of the old Mission at San Gabriel. Beyond is an Egyptian design furnished by Glendora, Azusa and Covina; and next the stage rises the pagoda of Rivera. These designs will be described further.

All the space in the first gallery is occupied by Santa Barbara county, San Diego county, Boyle Heights, the W. C. T. U., the ice-cream parlor, the band-stand, and some minor booths. If Riverside and Orange county had exhibited, it is difficult to see how room for all would have been obtained, for the building appears to be full now.

## Los Angeles County.

Los Angeles county exhibits are mostly in the main hall. Beginning at the right hand, or southeast corner, one comes to a table about 12 feet square, surmounted by a beautiful silk banner inscribed "La Canada; J. L. Lanterman." The exhibit is Mr. Lanterman's entirely, and is piled up on the table and arranged in terraces at the back, divided by rows of English ivy. There is a pyramid of lemons and Navel oranges, in one side of which a box of nice-looking raisins is fixed. It rises from a bed of choice Navel and Malta Bloeds and is crowned with a cluster of calla blossoms.

Cahuenga, as usual on such occasions, makes a display of great variety, which is tastefully decorated and adorned with choice flowers. This settlement is one of the chief garden spots of Los Angeles, lying close to the foothills and protected from frosts. On her sunny slopes vegetables ripen earlier and more persistently than almost anywhere else, and she ships large quantities to Eastern markets. On a table 12 feet square were crowded Lima beans, string beans, peas, tomatoes, egg-plants, loquats, St. Michael oranges, limes, and raspberries and blackberries, just setting their fruit, from the ranch of W. S. Benedict; also citrons, limes and large seedling oranges grown in adobe soil

without irrigation by ex-Senator Cornelius Cole; large Navels, cherimoyas or custard apples, and St. John's bread-fruit, grown by Jacob Miller. For the first time I here tasted a cherimoya, and found it delicious. One of the Santa Barbara attendants asserted that it was the most delicious fruit grown in California. It should be better known. H. Stoll has a box of dried white Smyrna figs, Eureka lemons, bottles of Hamburg claret, canned fruit and jellies. Frank Alderson shows two boxes of tomatoes. Back of the table, a half-pyramid is built against the wall composed of oranges and lemons decorated with English ivy, and in front stand two banana trees bearing clusters of fruit, the property of M. L. Yager and Jacob Miller. The coffee plant with its green berries is an object of interest.

Next comes the Cucamonga table mentioned elsewhere, then the unique booth planned by Santa Monica. Its sides are covered with canes and fish net; in the rear is a sea view painted on canvas; in one corner a rustic-house of bark. The flooring is raised on one side to simulate a wharf, and covered with palm leaves; to it is moored a boat piled high with oranges and lemons contributed by J. Steere. Here are sea shells and mosses and exquisite baskets of flowers. Over the door hangs a bunch of bananas grown by M. H. Kimball. Clusters of Navel oranges, exhibited by E. H. Sweetzer, ornament the sides. Santa Monica's purpose was to demonstrate both the beauty of her situation by the sea and her capability of growing citrus fruit, if not to the perfection attained by foothill lands, at least to a satisfactory degree of goodness.

She attests this by baskets filled with oranges, lemons, limes and loquats, grown by W. D. Vawter, O. H. Baxter, H. H. Dow and Mrs. N. B. Boyce. Mr. Vawter also exhibits walnuts, and Dr. J. S. Elliott has a fine lot of Navel, Malta Blood and seedling oranges, lemons and limes.

Now we come to a table 20 feet long and 6 feet wide over which is a large sign—"Artesia and Norwalk; Without Irrigation." Some nice-looking fruit is heaped upon the table and rises on a bank at the back. The trimmings are pine and spruce, bouquets of callas, and a centerpiece of pampas plumes. I did not find any one in charge of this table, and as no information was to be derived from the cards, only general mention of it can be made.

These tables are all under the east gallery. Next in order is an arbor marked "Rivera," which is but a small part of Rivera's exhibit. The main design stands out beyond the gallery, at the right of the stage, and is a beautiful pagoda 25 feet in height. The floor space allotted to Rivera is 12x60 feet, and half of this is raised two feet and laid out in imitation of ornamental grounds, from which the pagoda rises to its imposing height. An octagonal column of walnuts in glass cases rests on a base of stars and other figures worked out in red mandarin and Tangerine oranges and limes on an evergreen background. The nuts are shown by the Los Nietos and Rivera Walnut Growers' Association. The roof is covered with oranges and lemons and festooned with limes, a pomelo hanging from each loop. The whole is surmounted by an immense black eagle bearing in its talons a cluster of mandarin oranges. Below, a choice lot of fruit—Navels, Mediterranean Sweets, St. Michael's, sweet lemons, Eureka and Lishon lemons and pomelos—exhibited by the Orange Growers' Association of Rivera, is arranged in beds, divided by walks of wheat and corn.

An orange tree 15 months old from bud and seven feet high is shown by Dunham and Beckwith. W. F. English entered 10 boxes of seedlings. He has 17 acres of orange trees 12 years old, and has sold this season's crop for \$12,000. L. Bequet exhibits seven boxes of Navels and St. Michael's, fine-looking fruit. J. Root shows White Pacific figs, and G. D. Bunch 4 boxes of White Adriatic figs, also walnuts. A cluster of 26 large oranges on one stem is a marvel.

This season's product is estimated by Rivera as follows:

Walnuts.....	Carloads.
Oranges.....	50
Figs.....	175
Corn.....	6
Vegetables.....	75
	150

Downey has a table 20 feet long and 6 wide, with a bank against the wall. There is a large pile of Eureka lemons shown by E. L. Barnett, flanked by apples in good, sound condition. T. J. Kerns, the leading exhibitor, has Washington and Australian Navels, seedlings, Eureka and Bonnie Brae lemons, late budded St. Michael oranges and a jar of walnuts.

This brings us to the end of the walk under the gallery, and we next inspect Vernon's exhibit upon the stage. This is decidedly unique and occasions many smiles. A large packing-house is stuccoed with oranges, and within it sits a dwarf figure in the act of wrapping oranges. From the opening in the side of the house another man in miniature is taking out a box to be placed in the freight car which stands alongside. This is cleverly constructed of oranges. Near by, still another figure stands on a ladder, with sack at side, picking oranges from a tree. A loaded express-wagon is in waiting, drawn by a pair of grays and driven by a companion to the other figures. Still further illustrating the orange industry of this State, there is a nice piece of work arranged by E. L. Henck. A pretty cottage stands in the midst of shrubbery, with a lawn and graveled walks in front, a flower garden on the sides,

and in the rear a miniature orange orchard, true to life.

There is a bank of 30 boxes of fruit entered by Vernon people, whose names I was not able to obtain, with the exception of that of I. Inverarity.

Pomona has a table 48 feet long by 15 feet wide covered with noble fruit, in the style of last year, not competing with any architectural design. The center of the table is covered with lemons, and from their pale-yellow setting rise enormous letters, extending the whole length of the table, spelling the name "Pomons." Each letter is formed of a variety of orange, and the specimens of each variety are as perfect as it is possible to produce. A wall of oranges surrounds the table, with turrets in each corner. The principal exhibitors are James Becket, seedlings; Stoddard Jess, Malta Bloeds; O. Seaver, Navels; Mrs. I. Thnrher, Mediterranean Sweets; F. J. Smith, St. Michael's; Mr. Davenport, Eureka lemons. The wall back of the table is adorned with fan palm leaves and evergreens, surrounding a handsome crimson silk banner.

No blue ribbons are yet to be seen, but it was said that Pomona had been awarded the premium for best exhibit of citrus fruits from any locality—a big feather in her cap. The crop this season will be greatly in excess of that of any previous year. About 130,000 orange trees will be planted during 1891, and there are already more than 4000 acres of orange groves, largely the Navel variety. Pomona claims the largest orange orchard in the world; it contains about 400 acres, and is owned by Seth Richards.

North Pomona has a table of her own in the ante-room at right of main entrance. This room—20x45 feet in dimensions—was reserved for Orange county, and was quickly secured by other exhibitors when it was learned that it would not be occupied as originally intended. Mrs. J. L. Loomis, Mrs. I. L. Thnrher and Henry H. Wheeler show a choice lot of Navel, St. Michael, Malta Blood, Mediterranean Sweet and Nonpareil oranges. The latter is the same variety that is exhibited elsewhere as Valencia Late or Rivers' Late. The gentleman in charge of the table said that he had written the U. S. Pomologist at Washington, H. Van Dieman, with regard to the orange and had learned from him that its true name was Nonpareil.

Long Beach has a small but creditable exhibit in this room to gainsay the assertion that citrus fruits will not do well near the ocean. Joshua Smith raised good-sized, deep colored Navel oranges and Eureka lemons one mile from tidewater.

James C. Dunn has lemons growing three-fourths of a mile from the ocean, and J. R. Nevin has successfully produced the same 180 yards from tidewater.

Henry Eims, Pasadena, makes a splendid showing of Mediterranean Sweet oranges in the ante-room. John S. Calkins, Pomona, exhibits young trees, such as the olive, grevillea, peppermint, gum, paniclata, etc.

Verdugo has a small table covered with fruit in plates. J. C. Thomas shows enormous Navels, Malta Bloeds crossed with Navels, Eureka lemons, Japanese persimmons and extra large walnuts. S. I. Mayo has seedling oranges and Eureka lemons.

A large table is crowded with pots of cinerarias, azaleas and other plants in full bloom from the Raymond nurseries, Pasadena. It is a mass of gorgeous coloring and delights every one.

Returning to the main hall, we come to San Gabriel's exhibit on the right of the space between the galleries. This is perhaps 16x20 feet in dimensions. In the center of the table stands a beautiful model of the old Mission at San Gabriel, as it appears to-day wrought in tangerines chiefly. Across one corner of the table is the gateway of "Sunny Slope," paneled with lemons and oranges, and under the arch is an exhibit of L. J. Rose's famous wine.

Around the Mission design, oranges are neatly piled in a setting of lemons. The exhibitors are: Mrs. W. H. Winston, seedlings, St. Michael and Rivers' Late from buds imported from Thos. Rivers, England, Malta Blood and Joppa oranges and Eureka lemons; A. S. Chapman, Rivers' Late Navel (this cross was not seen elsewhere in the fair) and Malta oranges, Villa Franca lemons; J. Jacobow, Navels; J. R. Dobbins, Valencia Late, Malta, seedling and three large piles of big Washington Navels; Geo. S. Patton, prize seedlings; H. D. McDonald, W. Navels and seedlings; F. Q. Story, Premier, Malta, St. Michael, W. Navels, Tangerines and Satsuma oranges; J. A. Cooper, seedlings; J. De Barth Shorb, tall cone of seedlings. There were fair-sized seedlings from the old Mission orchard planted by the padres 100 years ago.

Glendora, Azusa and Covina—all in the Upper San Gabriel valley—combined forces and prepared an Egyptian pyramid and Cleopatra's needle about 25 feet high, beneath which is spread a quantity of very fine fruit. These towns are young, but they are situated in the "citrus belt," and are already producing oranges and lemons that will compare favorably with the best from better known localities. There are now about 3000 acres set to fruit in this section, and the area will be largely increased this year. C. T. Robedeau, M. Baldrige and S. A. Overholtzer of Covina exhibit Washington Navels that seem unsurpassable in size and beauty, large seedlings and Mediterranean Sweets. W. F. Powell and J. G. Madden of Azusa show Late Valentinas and W. Navels. Glendora is largely represented by

Powell and Spalding, J. J. West, M. H. La Fetra, John Bender, Mr. Shorey, Geo. D. Whitcomb and Mr. Thomas, with citrons, W. Navels, Mediterranean Sweets, Malta Bloeds, Paper Rind St. Michaels and limes; also by Henry Englehart, raisins; C. E. Needham, tomatoes; and A. B. Rogers, a Washington Navel tree nine feet tall, budded Oct. 20, 1889.

Pasadena occupies the center of the hall, and has erected a graceful column 44 feet high, towering nearly to the roof, and covered with oranges relieved with smilax. Fruit, flowers and vines are tastefully arranged around the shaft, and the whole is inclosed by a chain fence of limes. This design required 125 boxes of oranges. O. H. Richardson exhibits 23 varieties; the Queen, Chinese Mandarin, Satsuma, Malta Blood, Peerless, Old Vina, Rio, Magnum Bonum, Wolfskill's Favorite, Hart's Tardy, Small St. Michael, Workman, Acapulco, Polynesia, Homasassa, Nicaragua, Mediterranean Sweet, Portugal, wild orange of Florida, Lake Vineyard, Washington Navel and Australian Navel, also Eureka and Genoa lemons. The other exhibitors are Jas. Clark, A. O. Clark, Mr. Rosenbaum, Jas. Craig and H. H. Rose, who showed oranges and citrons; E. H. Dane, raisins; and Philbrook and Stetson, orange and lemon juice.

Duarte's oriental mosque is 27 feet high, and occupies, with its surrounding parterre, a floor space of 35 by 40 feet, in which 140 boxes of fruit are displayed. The design is copied accurately from a photograph of a Turkish caliph's tomb at Cairo, and is covered with choice specimens of citrus fruits. Its golden dome is a thing of beauty, and by many persons the design is considered the finest in the hall, conforming most closely to the call for artistic designs of citrus fruits. Duarte people certainly think so, and have entered a protest against the decision of the committee, who awarded the fourth premium to the mosque. They assert that the Redlands display is made up of drapery, rocks, etc., more than it is of citrus fruits, and that the San Gabriel Mission and Los Angeles County Courthouse models, being covered chiefly with tangerines, should not have been ranked ahead of Duarte's design. The exhibitors in various classes are Ernest Watson, manager of the exhibit, E. Myers, W. H. Young, J. A. Maddock, A. C. Thomson, Bliss Bros, Church & Arthur, T. B. Glenny, L. L. Bradbury, H. A. Buttolph and W. H. Lancaster.

Whittier is represented by a well-ourb, bucket and sweep of oranges fantastically covered with snow.

[This interesting description will be concluded in next week's RURAL.—EDS. PRESS.]

## FLORIST AND GARDENER.

## Annuals in California.

(Read by MRS. HELEN P. SMYTH before the California State Floral Society.)

As this paper is the result of "greatness thrust upon" me by the wonderful unanimity of sentiment that prevented those who knew more of the subject than I do from giving voice to their knowledge, I will undertake to co-estimate myself an attorney for annuals, though I frankly confess I no longer have them in my garden. Beginners always take to annuals, but after awhile experience causes them to grow indifferent, even in some cases to go so far as to call them weedy and short-lived things. So they are, many of them, while others again cannot be surpassed by any other class in delicacy of beauty, and none can be found that will give such liberal returns in gay display of color, as in the great variety of both character and color.

A great point, and this also shows a season for the beginner's preference for annuals, lies in the fact that everybody can grow them; they require neither glass, flower-pots, compost, sticks nor shades, and in climates where rain falls, not even watering. Of course these accessories add to the beauty and length of life of a plant, but for those who have no desire to go to much trouble or expense, there is a fertile field in the cultivation of annuals, as they yield abundant satisfaction for a minimum of labor. Then, another consideration is their cheapness; it is simply marvelous to see how far a dollar will go, and what an endless amount of pleasure will be found in the truly beautiful display.

In planting the seeds, the earlier the better in the months of February or March, for this reason—the longer time the plants grow and spread before flowering, the finer will be the production. One great secret in securing fine blooms is to encourage each separate plant to make as much growth as possible before it begins to flower. Late-sown seeds are hurried into blossom before a good-sized plant is formed, and are not therefore so satisfactory, if we care for excellence of production. There is no fear of cold weather affecting the seed sown early, for seeds of all kinds remain dormant and unhurt all winter until the genial sun calls them to life and action. The danger lies in this—that after responding to the sun's kiss by germinating a cold snap may follow, in which case it is "Love's Labor Lost." In San Francisco and later in Berkeley, I need to sow half of each package of seeds early, sometimes if the weather was mild as early as January, saving the other half to fall back on if misfortune came, but I very seldom have had recourse to the second planting.

My experience goes to show that if hardy an-

annuals are planted in somewhat poor soil in August, the seeds will germinate at once and be among plants before winter. These will bloom earlier and be stronger than those sown in spring. In my garden, self-sown *Coleopsis*, *Sweet Pea*, *Godetia*, *Nasturtium*, *Eschscholtzia*, *Dianthus*, *Larkspurs*, *Corn Flower*, *Nemophila*, etc., are found in the walks, are in fact established weeds, which fact led to their banishment. When an unusually fine plant appears, I sometimes transfer it to a border where it can have soil, and am amply rewarded by the vigorous strength of the plant and beauty of the flowers.

As to those varieties which have the longest continuance of bloom, my personal experience would lead me to conclude that in our climate annuals cease to exist almost altogether except in name. *Mignonette* lives placidly through the winter, and before the rains permit of much outdoor work, it becomes so rich in fragrance, so fresh and daintily green, that one loses the stern "Roman parent" feeling and allows it to be a biennial or perennial as it lists in defiance to all rules.

Again, the duration of bloom depends largely on the cultivation; for instance, according to Shirley Hibbard, one plant of *Virginia stock*, allowed to attain complete development, will cover more than a square foot of surface, lasting in blossom two months, while 20 in the same space will be spindling with flowers all over within three weeks at the utmost. Then by carefully removing all seedpods the moment the flowers wither, the blossoming season may be prolonged almost indefinitely. Sweet peas on the south side of the house, planted in February, grew to be 12 feet high and were in full bloom, filling the air with fragrance at Christmas, and lasted until it grew too troublesome to keep the seedpods cut off. So, to my mind, by bestowing care and attention, a plant may be kept in blossom the whole season, even the most diffident giving double the number that would be given if left to themselves.

Before considering by name some of those annuals whose length of blossoming time is a factor in their consideration, I would like to call attention to *Mimosa Padica*, more widely known as "Sensitive Plant." I raised a number from seed last year, and every one who saw them was tempted to experiment with the foliage, at times barely touching the tip end so as to watch the dispatch sent along, each opposite pair of leaflets closing one after another, till the whole seems withered; or perhaps the experiment consisted of suddenly lifting the pot, when every one of the compound leaves would not only close up, but the leafstalk would drop instantly as though broken off. If left undisturbed, it soon resumes its original appearance.

Also I would mention *Gypsophila*, so fairy-like, fine for bouquets, either green or dry. There is also a white perennial which I have never tried. There seem to be so many coming under the head of long continuance in bloom that I will mention only a few. *Calliopsis*, beautiful, rich-colored flowers, showy in beds and good for cutting; dwarf sorts good for edging beds. They begin to bloom early and continue many weeks. *Centaurea Cyanus* are hardy flowers on long stems and of desirable colors. The dark-blue is said to have been the favorite flower of the late Emperor William; profuse in bloom, lasting all season. *Caillardia*, splendid for beds, no annual, blooming more freely throughout the summer. Flowers showy and much admired.

Ten Weeks' Stock is one of the finest annuals in circulation, when well grown. The flowers are perfectly double, graceful in form, showy yet delicate. The plant comes into bloom in midsummer, and from that time blossoms continuously until after severe frosts. If neglected, will mostly produce single flowers or insignificant double ones. *Schizanthus* are beautiful flowers of odd shape and curiously marked, somewhat resembling a butterfly in form and marking; bloom freely and continuously during the season; fine for boxes or pots, winter or summer. There is a beautiful wild variety, pure white, which I found on the Berkeley hills and brought down into the garden, where it lived, flourished, and I am glad to see has produced seed.

*Salpiglossis* are wonderful in the rich pencillings of the flower, as also for the fine texture and beautiful coloring. They are easily grown from seeds and bloom during the entire season. Most of us will remember with pride those exhibited by one of our members at the spring exhibition last year—they were universally admired. *Portulacca* are dwarf plants, succulent in growth, bloom throughout the summer. I lately saw an account of a bed four feet square which had some days nearly 600 blossoms, most of them double. The rose-flowered varieties are very beautiful.

*Phlox Drummondii* is everywhere conceded to be of the finest varieties. The flowers are large and bright and produced in great clusters, so that a bed of phlox becomes a mass of gorgeous color. The plants grow more bushy and cover the bed better if pinched back while small. The profusion of bloom is remarkable, and there are 26 different shades of color; a new shape, totally unlike any other, is five-pointed, exquisitely fringed between points, frequently measuring  $1\frac{1}{2}$  inches from tip to tip. Phlox is in bloom the entire season and is a continual source of enjoyment. *Godetia*, flowers are large, delicate and very pretty. They like a shady place and are very popular in England. Asters are beautiful and gorgeous autumn-blooming annuals, and flowers are freely produced, but with me the season of

bloom would not warrant them a place in this list.

*Clarkias* grow and bloom well in moist soil; flowers showy of peculiar form, freely and continuously produced. *Browallia* is easily grown, blooms incessantly; its modest blue flowers always gain attention. If the amateur florist can have but half a dozen annuals, one of those should be Sweet Pea. These plants are easily grown, bloom throughout the summer, if flowers are cut freely, so no seeds are allowed to form. The flowers are of almost innumerable rich shades and variegations and their fragrance is delicious. The name of *Cosmos* needs only to be mentioned to bring to mind these magnificent plants, which are a mass of elegant foliage until they bloom in September. From then to November they are literally covered with beautiful flowers, resembling single Dahlias. These range in color through all shades of rose, purple, flesh and pure white.

Besides those already mentioned are those annuals so well known as to need only the names: *Nasturtium*, especially the Dwarf, which are largely used in England instead of *Geraniums* for bedding; double *Zinnias*, each flower lasting several weeks; *Poppies*, of which the Shirley variety deserves special mention, its new shades being superb, also the Peony-flowered being fine; the Sunflower, so dear to the catholic heart; *Marigolds*, *Balsams*, *Candy Tuft*, *Larkspur*, *Mourning Bride*, *Scarlet flax*, *Eschscholtzia*, *Nemophila*, with innumerable hosts of wild flowers which immediately present their claims at the sound of the last two names so dear to the California heart; but time and space forbid that I should enter the field where the annual is most truly found in the plant which comes up from the seed, grows, flourishes, blossoms and produces a single season.

### Rhododendrons.

[Read by MRS. HELEN A. CROSS before the California State Floral Society.]

These beautiful flowering shrubs, which include Azaleas in the large genus *Rhododendron*, belong to the natural order Ericaceæ, and the class Pentandria. The word *Rhododendron* is from the Greek word signifying "rose tree," and comprises trees, shrubs and rootlet climbing epiphytes, with entire alternate evergreen or rarely deciduous leaves, and showy flowers in terminal clusters, with funnel-formed, five-lobed corollas and usually ten declining stamens.

The *Rhododendron* is found in the mountains of the northern hemisphere and in Java and the neighboring islands. The greatest number of species occurs in the high mountain regions from Java and Borneo on the south, to the Sikkim Himalaya on the north. Several species are found in China and Japan, two in Kamchatka and one in Alaska. The Arctic species, *Lapponicum* of Lapland and Greenland, is also found in the White mountains. The only two other European species are the *R. ferrugineum* and *R. hirtum*, the "Alpen rose" of the Swiss Alps. The species peculiar to the United States are too numerous and widespread to mention at length in this article.

As may be readily inferred from the extremes of latitude in which this plant grows, there is a great diversity in the size which it attains. While the Arctic *R. Lapponicum* attains the height of only a few inches, the *R. Rolissonii* of Ceylon grows 30 feet high with a trunk more than a foot in diameter. With the exception of the *R. Chrysanthum* of Siberia, which furnishes a medicinal narcotic, this shrub is more ornamental than useful. Several species from Southern Asia are cultivated in this country, those best suited being *R. Arboreum*, *R. Dalhousii*, *R. Argentum* and *R. Jaminiflorum*. Of hardy species there is the *R. Duricum* of Siberia, with small, deciduous leaves and rose-colored flowers, blossoming very early in the spring.

But the finest and most hardy rhododendrons are hybrids, produced by crossing the *R. Catawbiense* with the Eastern *R. Ponticum*, and these are more generally planted than any other. The following hybrid varieties can be confidently recommended as hardy and beautiful garden plants, viz.: *R. Everestianum*, *R. Roseum*, *R. Album grandiflorum*, *R. Purpureum*, *R. Grandiflorum* and *R. Coriaceum*. *Rhododendrons* are propagated from seed and the plants resulting are then grafted. This should be done upon seedlings two years old. Sow the seed in October or November and transplant in February or March.

To attain the best success in the cultivation of these shrubs, they should be planted in well-drained peat mixed with sand, or leaf-mold and sand. So far as the writer knows, peat is not sold in California, but is brought here from Oregon and Idaho. The leaf-mold will be found an excellent substitute. Bone-meal is by some considered a desirable component of the soil.

*Rhododendrons* will grow well out of doors in deeply shaded places, as on the north side of the house where they may get the morning and evening sun, or under large trees. Florists keep them in lath houses. They blossom out of doors from April through July, according to variety, and their colors are purple, lavender, scarlet, crimson, pink and white. The Himalaya species are most beautiful and in greatest variety. Some species droop their foliage and appear as though they had at some time been borne down by a weight of snow.

The rhododendron, if it has proper care, is

very healthy and free from insect pests, and if it is seen to be attacked by them, one may know it has been neglected. The plant requires no pruning unless it is growing out of shape, and then the knife should be used as little as possible, and that after the blooming season is over.

The Azalea, from the Greek word signifying "parhed," is of the genus *Rhododendron* and comprises a hundred species or more, natives of North America, China and other countries. Like the rhododendron, it varies in height from a few inches to 20 feet, and its blossoms are of almost every conceivable shade. The Azalea *Indica*, a favorite of florists, is remarkable for its brilliant colors. The *A. Calendulacea* of the Southern States sometimes almost clothes the mountains with a robe of living flame color.

Azaleas in this State are propagated late in the fall and in early winter by cuttings placed in sand. They will root in six weeks with bottom heat. Without it they may require three months. The best plants are those grafted on one-year-old cuttings. If grown out of doors they must have shady places where they will get the rays of the morning sun only. Many florists here grow their Azaleas in lath-houses which afford a slight protection from both heat and cold. In this city (San Francisco) they may with safety remain out of doors all winter in ordinary seasons, but farther inland, where frosts at night are sharper, they should be transplanted to the greenhouse in October. If early blooming is desired, they may be forced by artificial heat in the conservatory.

The soil used is the same as for *Rhododendrons*. If one is in the possession of both early and late varieties, he can have a succession of bloom from November through May. The Azalea is usually a healthy plant, but if it has the misfortune to be neglected, other misfortunes will follow. There are the red spider, mealy bug and black scale. Too much dampness will result in mildew. The grower may avoid all of these troubles by a reasonable amount of attention to the needs of the plant.

Prune after the flowering season is well over. July is a good month, as this gives the plants time to make new wood and set their buds. In Europe they are often trained into various shapes, such as arches, circles, etc. The names of some of the species in common cultivation are *Francis de Vos*, a double white; *Baron de Viere* and *Apollo*, both large single white; *Kaiser Wilhelm*, very double rose red; *Emperor of Brazil*, double white; *Duke of Connaught*, dark red with two rows of petals and a large red calyx; and last and best of all as a beauty and a bloomer, *Prince Albert Edward*, rose pink with blotches of dark red on three petals.

In conclusion, let it be said that any amateur in California who follows the instruction given in this paper will be abundantly rewarded by the success which will attend his efforts at growing these charming shrubs. In purchasing them of a florist, he will find them a little more expensive, but he will also find them much healthier, longer-lived and more satisfactory than many of the other easily-grown greenhouse plants.

## AGRICULTURAL NOTES.

### CALIFORNIA.

#### Butte.

GOOD CROP PROSPECTS AROUND CHICO.—*Chronicle Record*: A drive through the country surrounding Chico reveals the fact that an unusually large acreage of grain has been sown, and also that it is in fine condition, having been well watered by the recent rains. In the orchards in many places the almond and peach trees are in full bloom. The buds on all fruit trees are swelling and everything points to an early fruit crop. This condition of affairs is very encouraging to orchardists and ranchers. To the former it means good prices, as early fruit is always in great demand, and to the latter a just reward for their labors.

#### Colusa.

FRUIT-RAISING IN FAIRVIEW DISTRICT.—*Maxwell Mercury*, March 14: This district, about four miles southwest of Maxwell, is beginning to make a record in fruit-raising. Already Geo. F. Scott, of the firm of E. F. Peart & Co. of Maxwell, has planted 25 acres in raisin grapes, which are looking fine, and about 75 acres more will be planted this spring by Assessor Durban, John Rice and others. This is only a beginning, for the farmers of that fertile section intend next year to plant a much larger area in trees and vines, for they will then have the benefit of the water from Central canal.

#### Fresno.

FOWLER FRUIT NOTES.—*Fresno Expositor*, March 11: R. W. Langrum and M. R. Harlan have a force of men at work planting a vineyard about two miles northeast of Fowler. They will have when finished about 120 acres planted to Muscat vines. Howard Harris will plant 20 acres to vines and trees soon.

SHEEP-RAISING.—*Fresno Californian*, March 7: Sheep-raising is a business no longer to be ignored. With mutton selling at eight cents per pound dressed in the whole carcass, and the price of wool steadily advancing, there is a bright future for our sheep-owners, especially for those who have good ranges not adapted to other purposes. There are millions of acres of good mountain range in California especially

adapted to the raising of sheep and goats, which can now be devoted to that industry with profit.

#### Inyo.

BUYING STEERS.—*Independence Independent*, March 13: L. J. Rose Jr. has been in the valley during the past week buying up steers. It is his intention to drive them to his ranch in Ventura and fatten them for market. It is reported that he is buying two and three year old steers for from nine to fifteen dollars per head. With a railroad to Mojave, every steer in the valley could be fattened here at home and shipped to market. Under the present conditions, they must be driven several hundred miles and put in condition for market. By this means, the producer loses his just profits, and the farmer loses the market for his hay.

#### Lassen.

LASSEN COUNTY CROP PROSPECTS.—*Susanville Advocate*, March 12: The outlook for crops was never better than at present. We have had an abundance of rain and snow; there has been no cold weather, and the ground has been in good shape for plowing nearly all winter. Indeed we may expect to have one of the most prosperous seasons ever had in Lassen county.

#### Los Angeles

THE VALUE OF IRRIGATION.—*Pasadena Star*, March 14: As an illustration of rapid development, attention is called to the Alessandro Irrigation district of 25,340 acres. Six months ago the land in that district could not be sold for \$10 an acre, and without irrigation actual settlers could not afford to take it as a gift. As soon as it was decided to district and irrigate the land, sales commenced, and up to date \$400 acres have been sold for \$660,000 in 10 and 20 acre tracts, mostly to actual settlers.

#### Marin.

FARMERS AND PRISON JUTE BAGS.—*San Francisco*, March 14: At a meeting of the Prison Directors at San Quentin to-day, a committee of San Joaquin county farmers appeared before the board and requested a reduction in the price of grain bags. They were informed that as the reduction in the tariff on jute does not take effect until next year, the price of bags could not be reduced until then. The committee complained of a scarcity of bags, and were told that the farmers themselves were to blame. The farmers are allowed to order 5000 bags, and frequently when they require only 1000 will order the full amount and dispose of the surplus at a slight profit to merchants, and then when the supply at the prison is exhausted, the merchant will sell the stock he has accumulated in this manner at an increased price.

#### Mono.

FARMING INDUSTRY IN MONO.—*Bridgeport Chronicle*, March 12: Hundreds of cattle were sold last year from the Big Meadows of Bridgeport, and the storm of this winter have insured them plenty of water for hay, of which there will be large crops. The Antelopers are expecting good crops of garden truck, for which they usually get good round prices; so it cannot be said that the farming industries of our county are not remunerative.

#### Napa.

NAPA AGRICULTURAL SOCIETY.—*Calistogan*, March 11: The annual meeting of the Napa County Agricultural Society was held at Napa Saturday afternoon last. Included with the business transacted was the reading of the secretary's report for the past 12 months and the election of officers for the ensuing year. Directors were elected as follows: John Even, John McCord, G. W. Hill, L. L. James, Chas. Scott, Nathan Coombs, F. W. Loeher, H. W. Orabb and L. L. James. President, L. L. James; vice-president, Fred W. Loeher; treasurer, L. L. James; secretary, A. H. Conkling.

#### Orange.

CREAMERY AT WINCHESTER.—*Winchester*, March 12: A meeting of farmers was held here to see what encouragement the Westminster people would give to Halstead & Co., of Pasadena, to put up a creamery here. The meeting was largely attended. R. T. Harris guaranteed to give them a two-acre lot close to town, and Mr. Case secured sufficient capital to insure the erection of buildings, in return for which Halstead & Co. agreed to put in a costly plant of latest improved machinery, calculated to extract butter from fresh milk, and further promised to sink an artesian well for their dairy. They will also bring from Pasadena at least 50 milch cows from their herd of 150 head, and they may bring all of them down here.

#### Santa Clara.

A LARGE ORCHARD.—*Gilroy Advocate*, March 14: Tree-planting is in progress on the ranch of Lion & Buckley near this city. The most extensive planting of this valley is contemplated by these enterprising gentlemen. Three hundred acres will be cultivated to fruit this year, to be followed by an equal or larger acreage next year.

FROG CATCHING COMPETITION.—*San Jose Herald*, March 14: The frog-catchers of Agnews station are finding that they are being ruined by Chinese cheap labor. The Chinamen are not afraid of getting their feet wet, and the other day three of them caught four dozen in as many hours. Frogs sell in San Francisco for \$2.50 a dozen.

CROP OUTLOOK IN SANTA CLARA COUNTY.—*San Jose Better Times*, March 13: We doubt if in the memory of the oldest inhabitant the country has ever presented so promising an

appearance as it does just now. The abundant rains, followed by spring-like warmth, light showers and cloudy skies, are bringing forward all kinds of vegetation at a most astonishing rate. The almond and apricot orchards are radiant with blossoms—soft and fleecy clouds fragrant and luminous with promise—and the verdure of the fields and the sloping hillsides present a picture of rare loveliness. Surely the prospect was never brighter for this valley of beautiful homes.

**Santa Cruz.**

**OLD VS. NEW POTATOES.**—Watsonville *Rustler*, March 12: The market is not very favorable to those who have stocks of old potatoes on hand, and new ones are making their appearance in the city market.

**San Diego.**

**POTATO INDUSTRY.**—Otay *Press*, March 12: While the work of planting and digging potatoes is now going on in the Otay valley, E. Owens, W. J. Wheeler and others have been busy putting in their crop. E. Danerl, up the valley, has been digging and hauling 1500 sacks to town.

**San Joaquin.**

**PROMISE OF THE LARGEST WHEAT YIELD FOR TEN YEARS.**—Stockton *Independent*, March 11: A tuft of wheat pulled from Hammond & Yardley's ranch, near Lockford, yesterday, indicates that the yield of that grain in that vicinity will be something phenomenal. The tuft contains 44 stalks, which all farmers agree is an extraordinary growth, ten being unusually large. The farmer in charge of the ranch says the whole crop of wheat has stood out unusually thick, several other tufts showing from 35 stalks to the number in that on exhibition. This unusual "stooling" is attributed largely to the recent cool weather which has arrested upward growth and caused the seed to send forth so many more shoots and roots. It is regarded as a promise of an unusually good yield, and Hammond & Yardley expect the biggest crop they have had for ten years.

**San Luis Obispo.**

**FRUIT NOTES FROM FOLSOM DISTRICT.**—San Miguel *Messenger*, March 13: A considerable number of orchards and small vineyards are being planted. Mr. Durham, who resides on the old Archer ranch in Pine canyon, has planted a nice family orchard. T. B. Gourley has added to his orchard and has planted two acres of grapes, consisting principally of raisin grapevines from Fresno county. C. W. Gourley has quite a large orchard of different kinds of fruit trees, mostly propagated by himself on his homestead in Taylor canyon. The writer believes this could be done by many others. There would be more than one advantage in so doing. Trees propagated at home would be sure to grow if carefully handled. Then a person would be certain of having the varieties he wished, which is not always true of trees obtained from agents of nurseries, as many have found to their cost. It is not encouraging to pay a high price for trees, plant and attend to them carefully for years, expecting to grow choice fruit, and then, when they begin to bear, have inferior fruits of perhaps a different variety from that intended to be borne. Mr. Pennan is planting several acres to fruit trees and vines on his homestead in Mason valley. Mr. Draffin is also enlarging his orchard.

**RESULT OF OVERCHARGING A SPRAY PUMP.**—S. L. O. *Tribune*, March 13: County Fruit Commissioner Maulsby of Santa Maria was in town Monday, and told of the curious experience of one of the Santa Barbara fruit-growers, who overcharged his spray pump until it finally exploded, nearly scaring him to death.

**SUMMER - FALLOWING EARLY.**—Slimmer, March 11: The recent rain has put the ground in splendid order for plowing, and some of our more thrifty farmers have taken Father Time by the forelock and are plowing their lands for early sowing next fall. They can see the benefit of early-sown grain in the advanced condition of grain sown before the rains set in last fall.

**San Mateo.**

**TREE-PLANTING AT PESCADERO.**—Redwood City *Times Gazette*, March 14: A large number of fruit trees are being planted at Pescadero, chiefly apples and pines, as experience shows that this neighborhood produces the finest apples and so far free from worms. As far as tested, pines do well, while a few localities produce excellent peaches and cherries, and we learn of some grapes being planted, though rather as an experiment.

**Sonoma.**

**OLIVE PLANTATIONS.**—Healdsburg *Enterprise*, March 14: Gny E. Grosse is making a success of olive culture, and his orchard is one of the "sights" of the magnificent country surrounding our delightful county seat. His neighbor, F. Warthorst, is now going into the olive business, too, and this season is planting 500 olive trees. Lay, Clark & Co., also of Santa Rosa, are doing even better, for they are setting out 2000 trees.

**GUARD AGAINST INFESTED FRUIT.**—Sonoma *Democrat*, March 14: Horticultural Commissioner Rogers says: I was advised by Alexander Crow, State Quarantine Officer, to inspect some trees imported by W. D. Sluk from Japan, as he had found Mytilus-pi gloverii scale on trees lately shipped from that country. Commissioner Gladden of Healdsburg came up with me. We inspected them and discovered no scale. I then called at a grocery store and purchased some lemons affected with the above scale, also another scale which I could not name. It is as dangerous to have fruit sold at

our stores infested as it is to have infested trees sent here. The red orange scale is shipped here from Lower California, and it is considered by the orange-growers to be the worst enemy they have to contend with now. Buying the orange and throwing the peeling away will cause the spread of the scale. The lemon peeling is generally used, consequently those that infest them are destroyed. It stands every citrus-fruit grower in hand to see that none is sold in the market which is infested.

**Sutter.**

**DISTRICT No. 70.**—Yuba City *Independent*, March 13: Supervisor L. Summy, who resides in District No. 70, says that things have not been altogether as bad in that district as represented. The water has at no time been so high against the levee as to require watching, or to be considered at all dangerous. The water inside the district was not seepage but rain-water. Owing to the past wet season, the low ground in the district was already moist to the surface, and the six or eight inches of rain which fell in a few hours remained upon the surface. As soon as the tule water receded sufficiently, the back levee was cut so as to allow this rain-water to escape. In this way the land was relieved to some extent, but there still remain about 1200 acres under water, and upon this land the wheat is dead. The land will be replowed and seeded to late crops this spring. Mr. Summy also said that during the coming summer the directors will build a mound at the lower end of the district upon which an engine and pump will be placed as a precaution against a repetition of present conditions.

**A LARGE FRUIT CROP PREDICTED.**—Marysville *Democrat*, March 13: J. P. Oustott, an extensive fruit-grower of Sutter county, says that during the past few days the average fruit trees have made a very perceptible development, and the numerous healthful looking buds indicate a bountiful crop of every variety except the Moorpark apricot, which for some reason does not appear as promising as usual.

**Tulare.**

**STOCK STEALING BECOMING TIRESOME.**—Porterville *Enterprise*: Our White River correspondent informs us that there has been a regular system of stock thieving carried on in his neighborhood for some time past, by a certain gang of depredators who hang around Porterville. He says that it is becoming such a common thing for the stockmen to lose a number of cattle that they are getting tired of the business, and unless it stops they propose to hunt up the thieves and treat them to a little hemp or something of that sort.

**PORTERVILLE CITRUS - FRUIT INDUSTRY.**—Porterville Cor. *Visalia Times*, March 12: The fact that citrus fruit can be grown here with profit has had much to do with the upbuilding of the town and maintaining property values. There are not less than 300 acres of land, within a radius of one mile of the town, devoted to orange culture. The oldest orange orchard in the immediate vicinity of Porterville is that planted out several years ago by the late A. R. Henry, and is about a mile east of the town. These trees have been in bearing for several years, and are to-day loaded with golden fruit, which can be seen glittering in the sun long before the orchard is reached. It was the fruit of this orchard that gave an impetus to orange-growing in this vicinity. In most all of these orange orchards a few lemon trees have been planted. There are a number of bearing lemon trees in the vicinity, and the fruit is generally of an extra size, fine flavor and high color. The trees are proving steady bearers, and those who have gathered and sold their fruit report a profit of from \$20 to \$23 per tree.

**CROP OUTLOOK.**—Visalia *Times*, March 12: Here and there fields of grain are heard of that have grown to a height of two and three feet, but this is an exceptional growth. The majority of the grain is not over six inches high, and there is much of it just coming out of the ground. A continued spell of warm weather, without devastating north winds, would, however, shoot the grain up enough to shade the ground. Several showers will be needed in April to insure a good crop, notwithstanding the prospects are now very flattering.

**ARIZONA.**

**CONDITION OF STOCK IN ARIZONA.**—St. John's *Herald*: We believe grass was more abundant in Apache county last summer than it had been for many years. Cattle were fat in the fall, but their condition at present is far from satisfactory; they look hard, and a long dry spring, such as we have seen, would mean a heavy loss. Even with the best prospects, many cows will be lost in the river, however well the hog-riders do their duty. Some stockmen say the late rains washed the strength out of the grass. No doubt this, to some extent, accounts for the poor condition of the cattle at present, but we think there is a much more serious and permanent reason for the rapid deterioration in the condition of stock during the last three months. In our opinion, the range is overstocked. Cattle have certainly doubled in number during the last six years, while sheep have probably increased as rapidly. There has been no increase in grazing capabilities of the range; in fact, it must be worse on an average. Ten or twelve years ago it would have been simple to name the remedy. There was plenty of new country then, and a stockman on finding his range crowded could move to a new range. Where can he go now?

# Cough-Cures

Are abundant; but the one best known for its extraordinary anodyne and expectorant qualities is Ayer's Cherry Pectoral. For nearly half a century this preparation has been in greater demand than any other remedy for colds, coughs, bronchitis, and pulmonary complaints in general.

"I suffered for more than eight months from a severe cough accompanied with hemorrhage of the lungs and the expectation of matter. The physicians gave me up, but my druggist prevailed on me to try

## Ayer's Cherry Pectoral.

I did so, and soon began to improve; my lungs healed, the cough ceased, and I became stouter and healthier than I have ever been before. I would suggest that the name of Ayer's Cherry Pectoral be changed to Elixir of Life, for it certainly saved my life."

—F. J. Olliden, Salto, Buenos Ayres.  
"A few years ago I took a very bad cold, which settled on my lungs. I had night sweats, a racking cough, and great soreness. My doctor's medicine did me no good. I tried many remedies, but received no benefit; everybody despaired of my recovery. I was advised to use Ayer's Cherry Pectoral, and, as a last resort, did so. From the first dose I obtained relief, and, after using two bottles of it, was completely restored to health."—F. Adams, New Gretna, N. J.

## Ayer's Cherry Pectoral,

PREPARED BY

Dr. J. C. AYER & CO., Lowell, Mass.  
Sold by all Druggists. Price \$1; six bottles, \$5.

## BLISTER FOR HORSES.

For a blister to use on live-stock,

## COMBAULT'S CAUSTIC BALSAM

Has NO EQUAL. Why?

Because it is a perfectly safe remedy for any one to use. After applying as directed it needs no attention, acts quickly and is effective. Removes all bunches or enlargements and guaranteed not to leave scar or blemish. Supersedes all cautery or firing. Every bottle sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by all druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars. Address LAWRENCE, WILLIAMS & CO., Cleveland, O.

# THE PUBLIC LANDS.

## The New Land Law.

### Text of an Important Act.

Be it enacted, etc., That an Act entitled "An Act to amend an Act entitled 'An Act to encourage the growth of timber on the Western prairies,'" approved June 14, 1878, and all laws supplementary thereto or amendatory thereof, be, and the same are, hereby repealed: *Provided*, That this repeal shall not affect any valid rights heretofore accrued or accruing under said laws, but all bona-fide claims lawfully initiated before the passage of this Act may be perfected upon due compliance with law, in the same manner, upon the same terms and conditions, and subject to the same limitations, forfeitures and contests as if this Act had not been passed: *And provided further*, That the following words of the last clause of Section 2 of said Act, namely, "That not less than twenty-seven hundred trees were planted on each acre," are hereby repealed: *And provided further*, That, in computing the period of cultivation, the time shall run from the date of the entry if the necessary acts of cultivation were performed within the proper time: *And provided further*, That the preparation of the land and the planting of trees shall be construed as acts of cultivation, and the time authorized to be so employed and actually employed shall be computed as a part of the eight years of cultivation required by statute: *Provided*, That any person who has made entry of any public lands of the United States under the timber culture laws, and who has for a period of four years in good faith complied with the provisions of said laws and who is an actual bona-fide resident of the State or Territory in which said land is located, shall be entitled to make final proof thereto, and acquire title to the same, by the payment of \$1.25 per acre for such tract, under such rules and regulations as shall be prescribed by the Secretary of the Interior, and registers and receivers shall be allowed the same fees and compensation for final proofs in timber-culture entries as is now allowed by law in homestead entries: *And provided further*, That no land acquired under the provisions of this Act shall in any event become liable to the satisfaction of any debt or debts contracted prior to the issuing of the final certificate thereof.

### DESERT LANDS.

SEC. 2. That an Act to provide for the sale of desert lands in certain States and Territories, approved March 3, 1877, is hereby amended by adding thereto the following sections:

"SEC. 4. That at the time of filing the declaration hereinbefore required the party shall also file a map of said land, which shall exhibit a plan of showing the mode of contemplated irrigation, and which plan shall be sufficient to thoroughly irrigate and reclaim said land and prepare it to raise ordinary agricultural crops, and shall also show the source of the water to be used for irrigation and reclamation. Persons entering or proposing to enter separate sections, or fractional parts of sections, of desert lands may associate together in the construction of canals and ditches for irrigating and reclaiming all of said tracts, and may file a joint map or maps showing their plan of internal improvements.

"SEC. 5. That no land shall be patented to any person under this Act unless he or his assignors shall have expended in the necessary irrigation, reclamation and cultivation thereof, by means of main canals and branch ditches, and in permanent improvements upon the land, and in the purchase of water rights for the irrigation of the same, at least \$3 per acre of whole tract reclaimed and patented in the manner following: Within one year after making entry for such tract of desert land as aforesaid, the party so entering shall expend not less than \$1 per acre for the purposes aforesaid; and he shall in like manner expend the sum of \$1 per acre during the second and also during the third year thereafter, until the sum of \$3 per acre is so expended. Said party shall file during each year with the Register proof, by the affidavits of two or more credible witnesses, that the full sum of \$1 per acre has been expended in such necessary improvements during such year, and the manner in which expended, and at the expiration of the third year a map or plan showing the character and extent of such improvements. If any party who has made such application shall fail during any year to file the testimony aforesaid, the lands shall revert to the United States and the 25 cents advanced payment shall be forfeited to the United States and the entry shall be canceled. Nothing herein contained shall prevent a claimant from making his final entry and receiving his patent at an earlier date than hereinbefore prescribed, provided that he then makes the required proof of reclamation to the aggregate extent of \$3 per acre: *Provided*, That proof be further required of the cultivation of one-eighth of the land.

"SEC. 6. That this Act shall not affect any valid rights heretofore accrued under said Act of March 3, 1877, but all bona-fide claims heretofore lawfully initiated may be perfected, upon due compliance with the provisions of said Act, in the same manner, upon the same terms and conditions, and subject to the same limitations, forfeitures and contests as if this Act had not been passed; or said claims, at the option of the claimant, may be perfected and patented under the provisions of said Act, as amended by this Act, so far as applicable; and all Acts and parts of Acts in conflict with this Act are hereby repealed.

"SEC. 7. That any time after filing the declaration, and within the period of four years thereafter, upon making satisfactory proof to the register and the receiver of the reclamation and

cultivation of said land to the extent and cost and in the manner aforesaid, and substantially in accordance with the plans herein provided for, and that he or she is a citizen of the United States, and upon payment to the receiver of the additional sum of \$1 per acre for said land, a patent shall issue therefor to the applicant or his assigns; but no person or association of persons shall hold by assignment or otherwise, prior to the issue of patent, more than 320 acres of such arid or desert lands, but this section shall not apply to entries made or initiated prior to the approval of this Act: *Provided, however*, That additional proofs may be required at any time within the period prescribed by law, and that the claims or entries made under this or any preceding Act shall be subject to contest, as provided by the law relating to homestead cases, for illegal inception, abandonment or failure to comply with the requirements of law, and upon satisfactory proof thereof shall be canceled and the lands and moneys paid therefor shall be forfeited to the United States.

"SEC. 8. That the provisions of the Act to which this is an amendment, and the amendments thereto, shall apply to and be in force in the State of Colorado, as well as the States named in the original Act; and no person shall be entitled to make entry of desert land except he be a resident citizen of the State or Territory in which the land sought to be entered is located."

### PRE-EMPTION OF PUBLIC LANDS.

SEC. 3. That Section 2288 of the Revised Statutes be amended so as to read as follows:

"SEC. 2288. Any bona-fide settler under the pre-emption, homestead, or other settlement law shall have the right to transfer, by warranty against his own acts, any portion of his claim for church, cemetery, or school purposes, or for the right of way of railroads, canals, reservoirs, or ditches for irrigation or drainage across it; and the transfer for such public purposes shall in no way vitiate the right to complete and perfect the title of his claim."

SEC. 4. That Chapter 4 of Title XXXII, excepting Sections 2275, 2276, 2286 of the Revised Statutes of the United States, and all other laws allowing pre-emption of the public lands of the United States, are hereby repealed, but all bona-fide claims lawfully initiated before the passage of this Act, under any of said provisions of law so repealed, may be perfected upon due compliance with law in the same manner, upon the same terms and conditions, and subject to the same limitations, forfeitures and contests as if this Act had not been passed.

### REVISED STATUTES AMENDED.

SEC. 5. That Sections 2289 and 2290, in said chapter numbered 5 of the Revised Statutes, be and the same are hereby amended so that they shall read as follows:

"SEC. 2289. Every person who is the head of a family, or who has arrived at the age of twenty-one years, and is a citizen of the United States, or who has filed his declaration of intention to become such, as required by the naturalization laws, shall be entitled to enter one-quarter section, or a less quantity of unappropriated public lands, to be located in a body in conformity to the legal subdivisions of the public lands; but no person who is the proprietor of more than 160 acres of land in any State or Territory shall acquire any right under the homestead law. And every person owning and residing on land may, under the provisions of this section, enter other land lying contiguous to his land, which shall not, with the land so already owned and occupied, exceed in the aggregate 160 acres.

"SEC. 2290. That any person applying to enter land under the preceding section shall first make and subscribe before the proper officer and file in the proper land office an affidavit that he or she is the head of a family, or is over twenty-one years of age, and that such application is honestly and in good faith made for the purpose of actual settlement and cultivation, and not for the benefit of any other person, persons, or corporations, and that he or she will faithfully and honestly endeavor to comply with all the requirements of law as to settlement, residence and cultivation necessary to acquire title to the land applied for; that he or she is not acting as agent of any person, corporation, or syndicate in making such entry, nor in collusion with any person, corporation or syndicate, to give them the benefit of the land entered, or any part thereof, or the timber thereon; that he or she does not apply to enter the same for the purpose of speculation, but in good faith to obtain a home for himself or herself, and that he or she has not directly or indirectly made, and will not make, any agreement or contract in any way or manner, with any person or persons, corporation or syndicate whatsoever, by which the title which he or she might acquire from the Government of the United States should inure, in whole or in part, to the benefit of any person, except himself or herself; and upon filing such affidavit with the register or receiver on payment of \$5 when the entry is not more than 80 acres, and on payment of \$10 when the entry is for more than 80 acres, he or she shall thereupon be permitted to enter the amount of land specified."

SEC. 6. That Section 2301 of the Revised Statutes be amended so as to read as follows:

"SEC. 2301. Nothing in this chapter shall be so construed as to prevent any person who shall hereafter avail himself of the benefits of Section 2289 from paying the minimum price for the quantity of land so entered at any time after the expiration of fourteen calendar months from the date of such entry, and obtaining a patent therefor, upon making proof of settlement and of residence and cultivation for such period of fourteen months; and the provision of this section shall apply to lands on the ceded portion of the Sioux reservation, by Act approved March 2, 1889, in South Dakota, but shall not relieve said settlers from any payments now required by law."

### CLERICAL ERRORS.

SEC. 7. That whenever it shall appear to the Commissioner of the General Land Office that a clerical error has been committed in the entry of any of the public lands, such entry may be suspended upon proper notification to the claimant, through the local land office, until the error has been corrected; and all entries made under the pre-emption, homestead, desert-land or timber-culture laws, in which final proof and payment may have been made and certificates issued, and to which there are no adverse claims originating prior to final entry, and which have been sold or incumbered prior to the 1st day of March, 1888, and after final entry, to bona-fide purchasers or incumbrancers, for a valuable consideration, shall, unless upon an investigation by a Government agent, fraud on the part of the purchaser has been found, be confirmed and patented upon presentation of satisfactory proof to the Land Department of such sale or incumbrance: *Provided*, That after the lapse of two years from the date of the issuance of the receiver's receipt upon the final entry of any tract of land under the homestead, timber-culture, desert-land or pre-emption laws, or under this Act, and when there shall be no pending contest or protest against the validity of such entry, the entryman shall be entitled to a patent conveying the land by him entered, and the same shall be issued to him; but this proviso shall not be construed to require the delay of two years from the date of said entry before the issuing of a patent therefor.

### SUITS FOR ANNULLMENT.

SEC. 8. That suits by the United States to vacate and annul any patent heretofore issued shall only be brought within five years from the passage of this Act, and suits to vacate and annul patents hereafter issued shall only be brought within six years after the date of the issuance of such patents. And in the States of Colorado, Montana, Idaho, North Dakota and South Dakota, Wyoming and in the district of Alaska, and the gold and silver regions of Nevada, and the Territory of Utah, in any criminal prosecution or civil action by the United States for a trespass on such public timber lands or to recover timber or lumber cut thereon, it shall be a defense if the defendant shall show that the said timber was so cut or removed from the timber lands for use in such State or Territory by a resident thereof for agricultural, mining, manufacturing or domestic purposes, and has not been transported out of the same; but nothing herein contained shall apply to operate to enlarge the right of any railway company to enter timber on the public domain: *Provided*, That the Secretary of the Interior may make suitable rules and regulations to carry out the provisions of this section.

SEC. 9. That hereafter no public lands of the United States, except abandoned military or other reservations, isolated and disconnected fractional tracts authorized to be sold by Section 2455 of the Revised Statutes, and mineral and other lands the sale of which at public auction has been authorized by Acts of Congress of a special nature having local application, shall be sold at public sale.

SEC. 10. That nothing in this Act shall change, repeal, or modify any agreements or treaties made with any Indian tribes for the disposal of their lands, or of land ceded to the United States to be disposed of for the benefit of such tribes, and the proceeds thereof to be placed in the Treasury of the United States; and the disposition of such lands shall continue in accordance with the provisions of such treaties or agreements, except as provided in Section 5 of this Act.

### ALASKA LANDS.

SEC. 11. That until otherwise ordered by Congress, lands in Alaska may be entered for townsite purposes, for the several use and benefit of the occupants of such townsites, by such trustee or trustees as may be named by the Secretary of the Interior for that purpose, such entries to be made under the provisions of Section 2387 of the Revised Statutes as near as may be; and when such entries shall have been made the Secretary of the Interior shall provide by regulation for the proper execution of the trust in favor of the inhabitants of the townsite, including the survey of the lands into lots, according to the spirit and intent of said Section 2387 of the Revised Statutes, whereby the same results would be reached as though the entry had been made by a County Judge and the disposal of the lots into such townsite and the proceeds of the sale thereof had been prescribed by the legislative authority of a State or Territory: *Provided*, That no more than 640 acres shall be embraced in one townsite entry.

SEC. 12. That any citizen of the United States twenty-one years of age, and any association of such citizens, and any corporation incorporated under the laws of the United States or of any State or Territory of the United States, now authorized by law to hold lands in the Territories, now or hereafter in possession of and occupying public lands in Alaska for the purpose of trade or manufactures, may purchase not exceeding 160 acres, to be taken as near as practicable in a square form, of such land at \$2.50 per acre: *Provided*, That in case more than one person, association or corporation shall claim the same tract of land, the person, association or corporation having the prior claim by reason of possession and continued occupation shall be entitled to purchase the same; but the entry of no person, association or corporation shall include improvements made by or in possession of another prior to the passage of this Act.

SEC. 13. That it shall be the duty of any person, association or corporation entitled to purchase land under this Act to make an application to the United States Marshal, *ex-officio* Surveyor-General of Alaska, for an estimate of the cost of making a survey of the lands occu-

pied by such person, association or corporation, and the cost of the clerical work necessary to be done in the office of the said United States Marshal, *ex-officio* Surveyor-General; and on the receipt of such estimate from the United States Marshal, *ex-officio* Surveyor-General, the said person, association or corporation shall deposit the amount in a United States depository, as he is required by Section numbered 2401, Revised Statutes, relating to deposits for surveys.

That on the receipt by the United States Marshal, *ex-officio* Surveyor-General, of the said certificates of deposit, he shall employ a competent person to make such survey, under such rules and regulations as may be adopted by the Secretary of the Interior, who shall make his return of his field notes and maps to the office of the said United States Marshal, *ex-officio* Surveyor-General; and the said United States Marshal, *ex-officio* Surveyor-General, shall cause the said field notes and plats of such survey to be examined, and, if correct, approve the same, and shall transmit certified copies of such maps and plats to the office of the Commissioner of the General Land Office.

That when the said field notes and plats of said survey shall have been approved by the said Commissioner of the General Land Office, he shall notify such person, association, or corporation, who shall then, within six months after such notice, pay to the United States Marshal, *ex-officio* Surveyor-General, for such land, and patent shall issue for the same.

SEC. 14. That none of the provisions of the last two preceding sections of this Act shall be so construed as to warrant the sale of any lands belonging to the United States which shall contain coal or the precious metals, or any townsite, or which shall be occupied by the United States for public purposes, or which shall be reserved for such purposes, or to which the natives of Alaska have prior rights by virtue of actual occupation, or which shall be selected by the United States Commissioner of Fish and Fisheries on the islands of Kodiak and Afognak for the purpose of establishing fish-culture stations. And all tracts of land not exceeding 640 acres in any one tract now occupied by missionary stations in the said district of Alaska are hereby excepted from the operation of the last three preceding sections of this Act. No portion of the islands of the Pribilof group or the seal islands of Alaska shall be subject to sale under this Act; and there shall be reserved in all patents issued under the provisions of the last two preceding sections, the right of the United States to regulate the taking of salmon and to do all things necessary to protect and prevent the destruction of salmon in all the waters of the lands granted frequented by salmon.

SEC. 15. That until otherwise provided by law, the body of lands known as Annette islands, situated in Alexander Archipelago in South-eastern Alaska, on the north side of Dixon's entrance, be, and the same is hereby, set apart as a reservation for the use of the Metlakahla Indians, and those people known as Metlakahla, who have recently emigrated from British Columbia to Alaska, and such other Alaskan natives as may join them, to be held and used by them in common, under such rules and regulations and subject to such restrictions as may be prescribed from time to time by the Secretary of the Interior.

### MINERAL LANDS.

SEC. 16. That townsite entries may be made by incorporated towns and cities on the mineral lands of the United States, but no title shall be acquired by any such towns or cities to any vein of gold, silver, cinnabar, copper or lead, or to any valid mining claim or possession held under existing law. When mineral veins are possessed within the limits of an incorporated town or city, and such possession is recognized by local authority or by the laws of the United States, the title of town lots shall be subject to such recognized possession and the necessary use thereof, and when entry has been made or patent issued for such townsites to such incorporated town or city, the possessor of such mineral vein may enter and receive patent for such mineral vein and the surface ground appertaining thereto: *Provided*, That no entry shall be made by such mineral-vein claimant for surface ground where the owner or occupier of the surface ground shall have had possession of the same before the inception of the title of the mineral-vein applicant.

### RESERVOIR SITES.

SEC. 17. That reservoir sites located or selected and to be located and selected under the provisions of "An Act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1889, and for other purposes," and amendments thereto, shall be restricted to and shall contain only so much land as is actually necessary for the construction and maintenance of reservoirs; excluding so far as practicable lands occupied by actual settlers at the date of the location of said reservoirs, and that the provision of "An Act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1891, and for other purposes," which reads as follows, namely: "No person who shall, after the passage of this Act, enter upon any of the public lands with a view to occupation, entry or settlement under any of the land laws, shall be permitted to acquire title to more than 320 acres in the aggregate under all said laws," shall be construed to include in the maximum amount of lands the title to which is permitted to be acquired by one person only agricultural lands, and not to include lands entered or sought to be entered under mineral land laws.

SEC. 18. That the right of way through the public lands and reservations of the United States is hereby granted to any canal or ditch company formed for the purpose of irrigation and duly organized under the laws of any State or Territory which shall have filed or may

hereafter file, with the Secretary of the Interior a copy of its articles of incorporation, and due proofs of its organization under the same, to the extent of the ground occupied by the water of the reservoir, and of the canal and its laterals, and fifty feet on each side of the marginal limits thereof; also the right to take from the public lands adjacent to the line of the canal or ditch, material, earth and stone necessary for the construction of such canal or ditch: *Provided*, That no such right of way shall be so located as to interfere with the proper occupation by the Government of any such reservation; and all maps of location shall be subject to the approval of the department of the Government having jurisdiction of such reservation, and the privilege herein granted shall not be construed to interfere with the control of water for irrigation and other purposes under authority of the respective States or Territories

SEC. 19. That any canal or ditch company desiring to secure the benefits of this Act shall, within twelve months after the location of ten miles of its canal, if the same be upon surveyed lands, and if upon unsurveyed lands, within twelve months after the survey thereof by the United States, file with the Register of the Land Office for the district where such land is located a map of its canal or ditch or reservoir; and upon the approval thereof by the Secretary of the Interior the same shall be noted upon the plats in said office, and thereafter all such lands over which such rights of way shall pass shall be disposed of subject to such right of way. Whenever any person or corporation, in the construction of any canal, ditch or reservoir, injures or damages the possession of any settler on the public domain, the party committing such injury or damage shall be liable to the party injured for such injury or damage.

SEC. 20. That the provisions of this Act shall apply to all canals, ditches or reservoirs heretofore or hereafter constructed, whether constructed by corporations, individuals or associations of individuals, on the filing of the certificates and maps herein provided for. If such ditch, canal or reservoir has been or shall be constructed by an individual or association of individuals, it shall be sufficient for such individual or association of individuals to file with the Secretary of the Interior, and with the Register of the Land Office where such land is located, a map of the line of such canal, ditch or reservoir, as in case of a corporation, with the name of the individual owner or owners thereof, together with the articles of association, if any there be. Plats heretofore filed shall have the benefits of this Act from the date of their filing, as though filed under it: *Provided*, That if any section of said canal or ditch shall not be completed within five years after the location of said section, the rights herein granted shall be forfeited as to any uncompleted section of said canal, ditch or reservoir to the extent that the same is not completed at the date of the forfeiture.

SEC. 21. That nothing in this Act shall authorize such canal or ditch company to occupy such right of way except for the purpose of said canal or ditch, and then only so far as may be necessary for the construction, maintenance and care of said canal or ditch.

SEC. 22. That the section of land reserved for the benefit of the Dakota Central Railroad Company on the west bank of the Missouri river, at the mouth of Bad river, as provided by Section 16 of "An Act to divide a portion of the reservation of the Sioux nation of Indians in Dakota into separate reservations, and to secure the relinquishment of the Indian title to the remainder, and for other purposes," approved March 2, 1889, shall be subject to entry under the townsite law only.

SEC. 23. That in all cases where second entries of land on the Osage Indian Trust and diminished reserve lands in Kansas, to which at the time there were no adverse claims, have been made, and the law complied with as to residence and improvement, said entries be, and the same are hereby confirmed, and in all cases where persons were actual settlers and residing upon their claims upon said Osage Indian trust and diminished reserve lands in the State of Kansas on the 9th day of May, 1872, and who have made subsequent preemption entries either upon public or upon said Osage Indian trust and diminished reserve lands, upon which there were no legal prior adverse claims at the time, and the law complied with as to settlement, said subsequent entries be and the same are hereby confirmed.

SEC. 24. That the President of the United States may from time to time set apart and reserve, in any State or Territory having public land hearing forests, any part of the public lands wholly or in part covered with timber or undergrowth, whether of commercial value or not, as public reservations; and the President shall, by public proclamation, declare the establishment of such reservations and the limits thereof.

Each season has its own peculiar malady; but with the blood maintained in a state of uniform vigor and purity by the use of Ayer's Sarsaparilla little danger need be feared from meteorological influences. No other blood medicine is so safe and effective.

ORANGE PLANTERS

Should read the advertisement of the Aloha Nurseries. The best varieties are offered at rates so low that no one need hesitate about planting for experiment, or for investment in places where the orange is known to thrive

## ENTOMOLOGICAL

## The Boll Worm of Cotton

The Entomologist of the U. S. Department of Agriculture, Dr. Riley, has just submitted to Secretary Rusk for publication a progress report on the investigation of the boll worm of cotton, an investigation provided for under the Act making appropriation for the Department of Agriculture for the current fiscal year. Although only a progress report, the writer, Mr. F. W. Malley, who has had charge of the details of the investigation, under the direction of the Entomologist, and who has been constantly in the field since last July, presents some facts of great importance to planters. He points out in the first place that the damage inflicted on cotton by this insect is far less than has been generally supposed. Careful investigation, showing the damaged bolls in the fields observed to amount to nearly 23 per cent, indicate that less than a third of this damage was due to the boll worm. It is nevertheless generally agreed that the damage was fully up to the average, some even thinking that it was above the normal, while none estimated it as lower than usual. The conclusion is, evidently, that many planters fail to distinguish the boll worm ravages from those of other insects, from physiological phenomena of the cotton plant, and from some of the fungoid diseases. In order to aid the planter in this matter, the report offers some valuable observations upon insect ravages easily confounded with those of the boll worm. A considerable portion of the report is directed to a consideration of the remedies, and to presentation of the results of experiments made during the past season. This would indicate that, on the whole, of the remedies so far employed, that of using corn as a trap-crop seems to be the most satisfactory. In reference to a supposed protection not uncommonly employed, namely, the use of lights to attract the moths in their flight through the field, the somewhat slight favorable results seem to be far more than counterbalanced by the large destruction of parasitical insects. A chapter is devoted to insect diseases affecting the boll worm, but with these, as well indeed as with most of the field work, the very late date at which the appropriation for this investigation became available last year, it has been impossible to do much more than to provide effectual means for continuing the work under the most favorable conditions the coming season. In this respect the report furnishes ample testimony as to the importance of early action on the part of Congress with reference to appropriations for agriculture. It can be readily understood that for work necessary to be done in the field, appropriations not available as was that of last year until the middle of July, are of little avail for immediate use, while even an appropriation made in the spring is liable to be so late as to make adequate preparations for necessary field work impossible in time for the opening of the season.

The report in question will be published as Bulletin No. 24 of the Division of Entomology, U. S. Department of Agriculture, and those who are interested in the subject should immediately address their applications to the Department.

[Additional interest pertains to this insect because it works here so freely upon corn and is found in the ears of corn grown for table use.—EDS.-PRESS.]

"Ayer's Medicines have been satisfactory to me throughout my practice, especially Ayer's Cherry Pectoral, which has been used by many of my patients, one of whom says he knows it saved his life."—F. L. Morris, M. D., Brooklyn, N. Y.

Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

MEMBERS, H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (10½ gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful liniments. Respectfully yours,  
**FRANK H. BURKE,**

# CALIFORNIA'S TRIUMPH!

A COMBINED HARVESTER

— FOR —

Horse Power or Traction Engine.

AWARDED FIRST PREMIUM

— AT —

California State Fair, 1890.

## Daniel Best's New Steam Harvester.

SHOWN AS AT WORK IN THE FIELD.

Improved for season of 1891 with all latest improvements, including Best's Peerless Grain Cleaner.

All sizes made to order, from 14 to 40 feet.

As a Steam Traction Harvester, Straw, Wood or Coal can be used for fuel.

These Steam and Horse Power Combined Harvesters were run successfully all last harvest, giving entire satisfaction in all ways in grain in every condition.

SEND FOR NEW CIRCULAR. For further information, prices, etc., address

DANIEL BEST, San Leandro, Cal.

SAFE!  
SIMPLE!  
CHEAP!

## REGAN VAPOR ENGINE.

NO BOILER. FIRE. EXPLOSION. STEAM, ASHES OR ENGINEER.

Started Instantly Without Even a Match. Will Run on Natural or Manufactured Gas or Gasoline. The Moment Engine Ceases to Run, all Expense Stops.

Upright and Horizontal, Stationary and Marine Engines from 3-4 Horse Power, Upward.

Our Engines are especially adapted for Pumping and Irrigating and Spraying Fruit Trees; in fact, for any use where power is required.

OVER 400 IN USE.

POPE & TALBOT, LUMBER, Office, 204 California Street.  
SAN FRANCISCO, Feb. 25th, 1890.

REGAN VAPOR ENGINE Co.—Gentlemen: The 4 H. P. Vapor Engine I bought of you last May has been in constant use ever since, and has given me entire satisfaction. I have found the engine to be all that you claimed for it, and more too. You can use my name for reference if you so desire. I am, yours truly,  
H. TALBOT.

We Carry Thos. Kane & Co's Famous Racine Launches, fitted with our New Compound Engines.

Send for Circular.

REGAN VAPOR ENGINE CO.,

221-223 First Street, San Francisco, Cal.

## Cheaper Than Windmills for Farmers!

Our Perfected "Safety" Engines Cost to Run only 1-8 Gallon of Gasoline per Horsepower per Hour.

No Boiler, Fire, Smoke, Steam, Ashes or Heat. No Engineer, No License, No Danger. Single and Double Acting. 1/2-H.P. to 20-H.P.

SAN BERNARDINO, CAL., January 10, 1891.

GENTLEMEN—The 2-H. P. Engine received and set up yesterday. We attached it to part of the machinery in my shop, and it ran my Drill Press, a small Lathe, a large 24 inch by 14-foot Lathe, and a set of Emery Wheels, all of which it handled easily, to our great surprise.

Yours very respectfully,

J. B. HENDERSON.

GENTLEMEN—I am satisfied, after running for over a month my Bean Cleaner, etc., with the 4-H. P. Engine you sent me, that it is much the best Gas Engine I have seen. The electrodes are certainly superior to all others; also your safety rotary slide-valve, which is the personification of simplicity, positiveness and durability; I am satisfied it will develop much more power than we have need for. I also want a 1/2 or 1-H. P. for my wife and daughters to use about the house; we have a rotary clothes washer, can also do the churning, etc. I do not know of any better recommendation than to order a second engine.

Respectfully yours,

P. C. HIGGINS.

NOTE.—Both of these Engines were shipped to the parties named, and were set up by them solely by the diagram and printed directions we sent them.

Pumping Plants, Yachts & Launches, Street Cars, Fire Engines, Water Works, Etc.

ELECTRIC VAPOR ENGINE CO.  
218 California St., San Francisco.

Complete Plants of all kinds, Stationary or Mounted on Wheels  
U. S. AND FOREIGN PATENTS.

# FRUIT MARKETING.

## California Fruits in Illinois.

EDITORS PRESS:—Although it may be too early to predict with much certainty the prospect for a crop of fruit here, yet we can say that so far the present winter has been favorable. While we have had no very cold weather, the general temperature has been such that fruit buds have not developed yet so as to be hurt if the temperature should go as low as zero, though a few days of warm weather would bring them out so that a freeze such as we had the first of March last year would kill them to some extent. Peach trees were injured some by the heavy load of ice that came upon them the day before Christmas, some reporting that a third of the trees were broken down. My trees were not injured by that storm, and I do not know of any in this immediate vicinity that were, the injury being farther south of here.

Of the small fruits, strawberry plants are in better condition for a crop than they were last year. The vines are not so thick on the ground, and the buds have not developed. Other small fruits seem to be in equally good condition.

A word in relation to California fruits in our market may be of interest. A few days ago I stepped into the store of one of our leading grocers, Mr. J. M. Evans, and found the following canned goods on his shelves with the prices attached as here noted:

Muscat Grapes.—Hercules Packing Co., 20 cents per can. A. Lusk & Co., Bear Brand, 25 cents per can.

Crawford Peaches.—Sierra Packing Co., 25 cents per can. J. M. Spafford & Co., Golden West Brand, 30 cents per can. A. Lusk & Co., Bear Brand, 30 cents per can.

Apricots.—Pacific Packing Co., 20c per can; Eagle Canning Co., 20c per can.

White Cherries.—Hercules Packing Co., 35c per can.

Black Tartarian Cherries.—Santa Rosa Packing Co., 25c per can.

Egg Plums.—Carquinez Packing Co., 20c per can.

I might say that upon asking the price of some Ben Davis apples I saw in the same store, it was given at 55c a peck, which would be \$2.20 a bushel. The sale of California canned fruit has been double what it was last year. The only Baltimore goods that I saw on the shelves were a few canned pears.

The forepart of the season Mr. Evans sold quite a quantity of green California fruit, getting it from Chicago. He also sells canned goods in gallon cans. Chicago seems to be the distributing point for California goods to this part of the Mississippi valley.

Carbondale, Ill. G. H. FRENCH.

## Eastern Fruit Shipments.

The following table of the Eastern shipments of California fruit, in pounds, by the Southern Pacific Company's lines during the year 1890, as given by the Sacramento Union, will answer numerous inquiries and be read with interest by all:

Stations.	Dried Fruit.	Deciduous Fruit.	Citrus Fruit.
San Francisco.....	4,708,630	75,520	144,500
Oakland.....	856,020	1,871,930	.....
Sacramento.....	8,275,920	46,865,220	.....
San Jose.....	13,962,210	12,185,020	.....
Stockton.....	8,534,350	5,040,630	.....
Marysville.....	2,131,770	992,510	20,850
Los Angeles.....	2,256,050	1,063,290	7,477,120
Colton.....	2,592,900	.....	10,801,850
Totals.....	43,377,910	68,031,120	18,444,320

Stations.	Nuts.	Raisins.	Canned Goods.
San Francisco.....	181,320	597,620	45,630,140
Oakland.....	.....	20,050	316,240
Sacramento.....	108,170	3,797,290	10,376,640

Totals.....	1,574,230	27,370,330	80,121,950

## Cattle Sale.

The sale of Black Polled and Devon cattle from the Cook Stock Farm, held in this city on the 5th inst., was well attended, but there were evidently few buyers present. Thirty-one head of black cattle sold for an average of \$32.35; 20 head of Devons, an average of \$31; 2 Short-horn bulls, 13 months old, each, \$62.50.

The cattle were all young and in nice condition, and would have sold for more money had there been any demand for them among breeders; but, so far as we could learn, nearly all of the bulls were for use among beef cattle on large ranges, and few, if any, to those intending to start new herds of either of the breeds.

The demand for the kind of cattle offered is evidently not active in this State, as the bidding was slow and dragging throughout, excepting that for two young Shorthorn bulls, sold at the last of the sale, for which the bidding was brisk enough.

One of these sold for \$75, being the highest-priced animal of the sale, as well as one of the youngest—13 months old—by which it appears that cattle of this breed hold their popularity in this as in other parts of the world.

BACK FILES OF THE PACIFIC RURAL PRESS (unbound) can be had for \$2.50 per volume of six months. Per year (two volumes) \$4. Inserted in Dewey's patent binder 50 cents additional per volume.

## List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

FOR WEEK ENDING MARCH 10, 1891.

- 448,105.—WHIFFLETREE—B. B. Allen, Hanford, Cal.  
 448,000.—BED—F. H. B. Babbe, S. F.  
 448,118.—WASHING MACHINE—J. N. Bunch, Eugene, Or.  
 448,121.—ROTARY ENGINE—W. & L. Carter, Spokane Falls, Wash.  
 447,810.—WATER-POWER WHEEL—J. & O. N. Dahlquist, Portland, Or.  
 448,012.—COIN-OPERATED CHAIR—L. M. Erb, S. F.  
 447,767.—ELECTRIC ARC LAMP—H. C. Forgason, Oakland, Cal.  
 448,022.—BALE-TIE FASTENER—D. W. Gish, San Jose, Cal.  
 448,185.—CANE MUSIC STAND AND HOLDER—Harders & Fleischmann, S. F.  
 448,035.—CABLE GRIP—C. Hazard, S. F.  
 448,047.—CAN-CAPPING MACHINE—M. Jensen, Astoria, Or.  
 447,830.—BASKET HAMPER—D. J. Johnson, S. F.  
 447,952.—WRENCH—T. D. Keith, South Pasadena, Cal.  
 448,153.—APPARATUS FOR INTENSIFYING ELECTRICAL UNDULATIONS—J. C. Ludwig, S. F.  
 447,781.—WEED-CUTTER—F. E. Lux, Walla Walla, Wash.  
 447,962.—LOCK VALVE AND FAUCET—C. E. Mason, S. F.  
 447,893.—WHEEL—J. G. McAlpine, Bakersfield, Cal.  
 447,972.—BRICKS—E. L. Ransome, S. F.  
 448,078.—FENCE POST—T. S. Riddel, Eugene, Or.  
 448,082.—TIMBER CLASP—H. A. Salisbury, Vinson, Or.  
 447,915.—CURRENT WHEEL—Wm. Stephens, Santa Rosa, Cal.  
 448,090.—CAR-REPLACER—Stephens & Mott, Redding, Cal.  
 447,983.—CASE FOR MAPS, ETC.—E. B. Strong, S. F.  
 447,991.—DECORATING GLASS, ETC.—Westwood & Mallon, Oakland, Cal.  
 447,992.—CULTIVATOR—B. P. Whitney, Los Alamos, Cal.  
 447,928.—SPRING SEAT FOR VEHICLES—W. H. H. Wright, S. F.

The following brief list, by telegraph, for March 17 will appear more complete upon receipt of mail advices:

California—Edwin J. Fraser, San Francisco, device for controlling horses; Edmund Kenoyer, Hanford, windmill; John E. Lambern and R. Richards, Dixon, washing machine; Geo. E. Minges, Atlanta, chaff separator for thrashers; Jas. W. Ferry and R. H. Dixon, Santa Rosa, pruning implement; Daniel S. Regan, assignor to Regan, vapor engine; Geo. St. Pierre, Oakland, bearing-box; Frank Walker, Los Angeles, window-screen; Facifax H. Wheelan, Santa Barbara, separator; Fred W. Wood and J. Fowler, Los Angeles, gripping machines for cable roads. Oregon—Wm. C. Price, Woodburn, horse-shoe gauge.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast Inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

## Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

## Scales for Farmers and Merchants.

Attention is called to the advertisement in another column of the Osgood & Thompson Scale Company, Binghamton, New York. This company will ship you scales on trial; their claims are for cheapness, accuracy and durability. Send for their very interesting and instructive catalogue to the Pacific Coast Agent, C. H. Lindemann, 126 Kearny St., San Francisco, Cal.

## Raisin, Fruit and Grain Lands

## AT EXTREMELY LOW PRICES.

Seven miles S. W. of Tulare city. 164 acres of rich land is offered for sale, with well-improved homestead, large flowing artesian well, reservoir, alfalfa, orchard (seven years old), pasture, one of the healthiest and most comfortable seven-room, two-story residences in Tulare valley. Must be seen to be appreciated. Will be sold soon at a very low price and extraordinary reasonable terms to a good purchaser. Some 320 acres of good and well-cultivated land adjoining is also offered low. Address E. M. Dewey, Publisher, Porterville, Tulare Co.; A. T. Dewey, 220 Market St., S. F.; or call on Capt. Thos. H. Thompson, Tulare City, Cal.

## A Few Local Experiences.

[Copy.]

CONCORD, CAL., Dec. 23d, 1890.  
 MESSRS. G. G. WICKSON & Co.—Gentlemen: In response to your inquiry, I will say that I consider the Rochester Gang Plow the best that I have ever used or seen.  
 [Signed] B. H. BANCROFT.

APTOS, CAL., Dec. 23d, 1890.  
 MESSRS. G. G. WICKSON & Co.—Gentlemen: Having used the Rochester Orchard Gang Plow in my Orchard, I am pleased to state that it does its work very well, and is much lighter on my team than I expected.  
 [Signed] E. C. WILLEKES McDONALD.

SARATOGA, CAL., Jan. 3d, 1891.  
 MESSRS. G. G. WICKSON & Co.—Gentlemen: The "Cyclone Pulverizer" I purchased from you last year I have thoroughly tested, and am well pleased with it. For the last workings of an orchard it is especially valuable, leaving the ground well pulverized and level, and I think it deserves a trial by horticulturists.  
 [Signed] GEO. W. HANDY.

SANTA ROSA, CAL., July 14, 1890.  
 MESSRS. G. G. WICKSON & Co.—Gentlemen: We have used a set of your Deerfield Steel Harness in plowing vineyard, and find it the most complete arrangement we ever saw. We have used them also for two-horse work on wagon, and they work equally as well as in our vineyard or orchard work.  
 [Signed] W. E. & H. BENJAMIN.

EVEROREEN, CALIFORNIA, Aug. 1st, 1890.  
 MESSRS. G. G. WICKSON & Co.—Gentlemen: I take pleasure in stating that your Deerfield Steel Harness has been given a thorough trial in my vineyard and found to work well, preventing injury to vines and trees to a great extent. It is a decided advantage to be able to hitch up the horses separately in the Harness and attach them afterward.  
 [Signed] WILLIAM WEHNER.

CARPINTERIA, CAL., February, 1891.  
 GENTLEMEN: After giving the Deerfield Steel Harness a trial, I am prepared to say that I find it very successful for use in orchards. I can recommend it to all who wish to use a harness which will not injure their trees.  
 [Signed] G. F. SMITH.

CARPINTERIA, CAL., February, 1891.  
 GENTLEMEN: After having used the Deerfield Steel Harness and giving it good tests, I am now prepared to say that it is the best harness for orchard work I have had on my place. I have recommended its use to my neighbors and have no hesitation in giving you a recommendation for it.  
 [Signed] RUSSELL HEATH.

Send for Circulars. Address  
 G. G. WICKSON & CO.,  
 3 and 5 Front St., San Francisco.  
 346 N. Main St., Los Angeles. 141 Front St., Portland.

## NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & Co., Publishers,  
 No. 220 Market St., S. F.

## FOR SALE!

## PINOLITO OLIVE RANCH!!!

## FORTY-SIX ACRES OF HILL LAND

In the Town of Auburn, Placer Co.

Red soil, superimposed upon upturned, friable, decomposing slate, yielding iron and alumina, thus furnishing a soil which, as Prof. Hilgard said after his analysis, will retain moisture, will not require irrigation, and will not allow the vegetable mold to leech away; thus suited to the growth of fruit trees, especially the olive, as has been demonstrated both by the remarkable growth of the tree and the yield and the quality of oil.

It is situated only 15 minutes walk from Auburn Station—the C. P. R. R. passes along one side—and is a less distance from the Court House. Thirty acres improved and planted to olives, set at long distances for permanent growth, and other fruits planted between the rows for temporary profits, mostly peaches of three best varieties, ripening in succession; prunes, mostly Petite; plums of several varieties, as Kelsey, Japan, Shropshire Damson, etc.; figs of several best varieties; a few apples, nectarines, blackberries, etc. Two acres of table and raisin grapes, never irrigated, the vines remarkably vigorous and in full bearing. The trees, especially the 1500 olive, have all been planted with regard to permanency. About one-half of them have an orchard growth of seven years; fruited last year 300 pounds, this year nearly one ton. They are mostly Mission and Picholine, with a few trees of other choice varieties. Two crops of the olives have been pressed. The yield has been, for the first press, 14 per cent of very clear delicious table oil, and four per cent from the second press—the Picholine yielding this, of a peculiarly clear, nutty oil.

There is on the ranch a few acres of grain sown for hay; two acres of well-set alfalfa, below the Auburn ditch, which crosses one corner of the property; also a small house of four rooms and a kitchen; a well of good water; a small barn; a strong, permanent spring of soft, cold water, which wells up through the slate; a two-inch iron pipe connects the spring with an iron-bound 20,000-gallon tank, situated on a beautiful pine clad hill, 40 feet above the spring, a point which overlooks the town and gives very charming distant views, and is one of the most lovely sites for a residence to be found. The water is pumped to the tank by a duplex pump; the power, a four-horse steam engine, which furnishes power sufficient to pump, saw wood, run an olive crusher and do all needed shop work.

The land is all suited to fruit, excepting along a rocky ridge, which furnishes three very desirable residence sites, and the olive, set promiscuously, thrives finely among the rocks. The property can be conveniently divided along a sag which separates two of the high knobs, and water from the spring can be pumped to each of them.

This desirable property is now offered for sale for less than the improvements cost. The land is fenced, the title good and unencumbered. It is connected by a roadway, which is one of the improvements made, with one of the principal streets of Auburn.

The sale will convey the entire plant, furniture in the house, all utensils, etc. If sold before April 1st the sale will include the coming crop. If later, the crop will be reserved, unless otherwise by special agreement. If desired, one-half the purchase money can remain five years, secured by mortgage at eight per cent. For price and any further information desired, address

A. H. AGARD,

No. 1259 Alice Street, - - Oakland, Cal.

Address, **WILLIAM NILES**, Los Angeles, Cal.

## THE BEST FENCE YET!

Cheap, Durable, Portable and Safe.

**THE SPALDING HUMANE WIRE FENCE** is composed of eight No. 12 galvanized steel wires, woven into four cables of two wires each; interwoven every five feet is a corrugated iron stay or guard, and held in place by the cables, thereby holding the cables firmly in place, preventing them being spread apart and letting stock through. The stays or guards are corrugated and an inch and three-quarters in width, making the fence as visible as a board fence, which is a very essential point. Write for circulars and prices. Address **BIRD-TURNBULL MFG. CO.**, 195 La Salle St., Chicago.

**PURE**

**TRUMBULL, STREAM & ALLEN**  
SEED CO.,  
Grass, Field, Garden and Tree Seeds, Onion Sets, Etc.  
Send for Catalogue. Mailed Free.  
1420-1422 St. Louis Ave. KANSAS CITY, MO.

**SEEDS**

**MANHATTAN STOCK FOOD.**

Saves One-Quarter of Grain Feed.

**FRAUDULENT PARTIES** have been selling an article, claiming theirs to be the same, and, in order to mislead, have added a prefix to "Manhattan." Our genuine food is called simple "Manhattan Food," with the Red Ball Brand.

623 Howard St., San Francisco, Cal.

Breeder of Light Brahma, Plymouth Rocks, Black Minorcas, Brown and Black Leghorns; also Rouen Ducks. Birds from \$2.50 to \$5 each; Eggs, \$2.50 for 13. Stock extra fine and satisfaction given to all.

## MILK TESTERS

Test Your Cows. Poor Cows are Bad Investments and Should be Replaced at Once. Quality, not Quantity, Pays Best.

## EDSON'S CREAM TESTER.

A dairyman's practical invention. Consists of frame holding six test tubes graduated into hundredths to ascertain the per cent of cream in freshly drawn milk. The glasses are well protected and can be easily removed for cleaning. The frames are substantial, carefully graduated and varnished, large size holding about Reg'r Size, \$1; Postpaid, \$1.12 Large Size, \$2; " \$2.15 as other.

**DIRECTIONS.**—Fill the glasses with fresh drawn milk up to the line indicated by 0. Set in cool place for 24 hours, when the separation of cream from the milk will be perfect and the figures will tell the per cent of cream in the milk.

Actual tests prove that common or grade cows give as good results in cream and butter, when pains have been taken in selection, as Jerseys, Holsteins, or other imported stock, but in order to do this, they must be bred from deep and rich milkers, the hull as well as the heifer, and the best authorities place more dependence on the bull than on the heifer, thus showing that we should take great care in the selection of cows to raise hulls from. Begin at once to test your milk, and note amount by weight, given by each cow. Then multiply the pounds of milk by the per cent shown by the tester and you know just what each cow is worth to the dairy. There is a great deal of money made by dairying, but it is all made from good cows. If you want to make money out of your dairy, rear your own cows and use only your best ones as mothers and breed them to a good bull.

WE ALSO CARRY A FULL LINE OF LATEST IMPROVED SCIENTIFIC

**CREAM AND BUTTER TESTS,**  
Both Chemical and Mechanical, for Dairy and Creamery Use.

**Curtis Test Churns, Short's New Method, Farmer's Test Churn, Lactometer, Lacto-Butyrometer, Lactoscope, Peoscope, etc., etc.**

FEWER EASTERN EGGS.-In February and March of last year the receipts of Eastern eggs aggregated 500,310 dozen; but in February and so far in March of this year, they do not aggregate 50,000 dozen. This is accepted as evidence that California farmers are giving more attention to the poultry product.

Where are the Best Bugles Made?  
The Pioneer Buggy Co., Columbus, Ohio, on receipt of ten cents, will send you their treatise on the horse which also answers the above question.

THE HYBRID REMONTANT ROSE, HEINRICH SCHULTHEIS.

#### A Grand Rose.

We are indebted to John N. May of Summit, New Jersey, the well-known rosarian, for the opportunity of placing prominently before our readers the grand rose which appears upon this page. It is a variety of well-proved merit, but one which had become quite rare both in this country and Europe. It has an interesting history and its reassertion of a claim to popular favor comes about in so interesting a way that we cannot refrain from its recital. Mr. Julius Roehrs, a Carlton Hill (New Jersey) rose-grower of great resources, imported a lot of Anna Alexieff roses, and about the middle of November, 1887, noticed among them a bloom of exceptionally fine quality very different from the flowers planned for at planting. Experience with the apparent upstart taught Mr. Roehrs its fine forcing quality, and his sales of the out flowers demonstrated the popular appreciation of it. As it was thought to be new, it soon became known as the Roehrs rose, and Mr. Roehrs propagated a large stock for his own use and placed the balance in the hands of Mr. J. N. May for introduction to the trade.

Mr. May had the grand picture prepared and his announcement printed, but before sending it out found that the Roehrs rose was really the Heinrich Schultheis, and thus he placed it before the public in its proper character. We are pleased to note this fact, for we fear there are some rose propagators who would have taken a different course and have persisted that the rose was new, at least until the exclusive control of the stock passed away. If we mistake not, there are roses with such a history, and we are glad that the one we present on this page does not take place on that list.

We find then Mr. May or Mr. Roehrs, as the case may be, with a fine stock of Heinrich Schultheis on hand, and the rose is just as good and just as deserving of popularity as though it bore the name of an American rose grower. It is a fine, bright, clear, rose color of the largest size, possessing a fragrance superior to almost all other varieties of the Hybrid Remontant class. The fine foliage, clear stems from one to two feet long each, make it a favorite with amateurs, and all lovers of fine roses, and will be a grand addition to their collections. Who can report on this rose in California?

#### The Orange Trade.

The California orange crop this year is the largest on record. Though the trade opened slowly because growers were not satisfied with the terms offered, it is now being marketed actively and at satisfactory prices. The Florida crop was large but is well out of the way, and the supply from Europe has been reduced by the severe winter and disastrous storms already noted in the *RURAL*. Taken as a whole, the crop in California shows a decided improvement in quality, which probably is largely due to the fruiting of improved varieties and to better knowledge and better care of the trees. This is well illustrated by a published statement that a well-known orange-grower in Los Angeles will market this year over 10,000 boxes of the fruit against less than 1000 boxes last year. The increased yield is said to be due to the destruction of scale insects which threatened the life of the trees. Better informed dealers in this city are confident that under the new or improved system of ridding the trees of the scale and other pests, the older-established groves will turn out as many oranges, and of as

fine quality, as they did in their palmiest days. It is already noticeable that there is a very marked falling off in the quantity of "scaly" oranges marketed in this city, which shows that growers are mastering the situation.

The weather this season has been favorable for the maturing crop. Owing to its being fairly cool, oranges have ripened slowly, which has admitted of the market being supplied more evenly, and not being crowded, there being an absence, except of the poorer fruit, of forced sales. This slow ripening has admitted of fewer shipments to the East than was made up to this time in last year. Had the fruit matured rapidly, forced shipments would have followed and the Eastern markets be glutted with both Florida and California oranges, but as it now is the former were about all marketed before we began to send East in large quantities, which doubtless has tended to keep the markets firm and at good prices.

A dispatch in our market columns this week shows that there is great activity now in orange gathering, and the buyers are eager even at advanced rates. Producers have profited by their firm stand early in the season.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## Reno, Nevada and Vicinity.

EDITORS PRESS:—During a recent visit to Reno, I gleaned a few facts from some of her citizens that may be worthy of notice. While not the metropolis of Nevada, being outranked in both age and population by Virginia City, it is generally conceded to have more elements of substantial prosperity than any other town in the State. It is pleasantly situated on the Truckee river at the northwestern edge of the famous Truckee meadows, a fertile and productive basin, moderately estimated at 225,000 acres of arable soil. Four-fifths of this extent, it is safe to assert, is devoted to pasturage and the production of hay. Though all kinds of cereals, vegetables and hardy fruits are congenial, no attempt has scarcely been made to produce them for export, it having generally been considered less remunerative than hay, which has usually found a ready sale at a high price. For hundreds of miles north, east and south of here, beef cattle are annually collected at this point and fed during winter months on the alfalfa hay of the meadows, and shipped as required to the California market.

At this place reside a number of the prominent stockmen of the State, the town affording ample educational and social advantages for families. Geo. W. Mapes, who bears the distinction of being the Cattle King of Nevada, and owning large herds in Northern California and Oregon as well as one of the public-spirited men of the place. Sheep as well as cattle owners rejoice over their success during the past year. While the year 89-90 proved the most ruinous in the loss of live stock since the country was occupied by white men, the last winter was about the lightest ever known. All stockmen I met reported alike: "No loss this year, and still in nearly as good condition as in the fall." Train loads of beef cattle were passing westward every day during my stay, and prices tended upward. I saw no mutton sheep being shipped, and it was said that the supply was literally exhausted. The last lots sold here brought over \$5 per head. Among those who have made sheep-raising a practical study and have had their efforts crowned with success in this part of the State, are D. C. Wheeler, H. Anderson, J. Talbott, Prosser, Franson and others. Shearing was just starting, it being the custom here to clip before lambing when the weather proves favorable. A heavy fleece is reported and a large increase of the flocks is confidently predicted on account of their thrifty condition. Among the enterprises inaugurated here is a commodious wool storehouse constructed last year, which ought to prove a success.

The Riverside Flour Mill of Reno bears a good reputation for the quality of its manufacture. Its capacity is 100 bbls. per day. From Mr. H. H. Beck, the superintendent I learned to my surprise that Washoe county produced for market only 350 tons of wheat last year. This gentleman has made a close calculation (and from his long and intimate acquaintance with the country his estimate should be reliable) and sums up that the Truckee Basin is capable of furnishing breadstuffs for the entire State. At present the Riverside Mill gets most of her grain from California, a small proportion coming from the Lovelock settlement on the Humboldt and from Honey Lake, also from Salt Lake Valley. It is Mr. Beck's opinion that farmers here would enhance their gains to devote more attention to wheat-growing as they would always find here a ready home cash market at \$8 per ton more than their California neighbors—that being the cost of importing grain by S. P. R. R. Reno has been unfortunate in losses sustained by fires from time to time, Riverside mill being the fifth and only mill now standing. The fire of two years ago has still left its mark, though the district has been partially rebuilt with substantial brick houses. Two causes seem to conspire in effectually preventing Reno from making the advancement which her position and other elements of prosperity would promise. Business men claim that the S. P. R. R. Co. have discriminated against Reno on freight charges, very materially for years, out of spite for having been compelled to pay their taxes to Washoe county. Another cause why capital and population seek other fields is said to be the high taxation imposed in Nevada in order to enjoy the luxury of a State government.

Reno has good transportation facilities, the overland S. P. R. R. from east to west, the V. & T. leading south and the N. O. O. R. y north. The Truckee river affords an unfailing supply of the finest water for every use, including mill power and for irrigation. A number of enterprising men here are investing capital for the advancement of irrigation schemes on a large scale. The town has a population of 4000. Its altitude is 4500 feet. For healthfulness it has very few rivals. Its claims in this respect are recognized substantially in different ways, one of which is in having established the best schools, both public and private, in the State, including the State University. I had the pleasure of visiting this institution, of which Prof. S. A. Jones is the president. It was established at Elko in '77 and removed to Reno in '83. The attendance is reported on

the increase, there being 60 students at present and ten instructors.

The various secret and benevolent Orders and churches appear to be well represented. The streets are lighted at night by electricity, and there is apparently an air of thrift and comfort about most of the homes, notwithstanding the murmur of dull times is occasionally heard.

I heard of a worthy enterprise which is being inaugurated by W. H. Gonid, an old patron of the RURAL PRESS. It is the establishment of a creamery, which is very much needed at Reno. I called on G. H. Douglas, another good friend of the PRESS. He has a fine farm three miles east of town. I also visited the State Insane Asylum, which is located one mile east of R. R. depot. I found Dr. G. H. Thoma, the superintendent, an affable gentleman, and in conversation with him learned that the institution has now 183 patients—largest number since its completion in 1881. The doctor gave it as his opinion that the most prevalent cause of insanity among his patients is syphilis and intemperance.

Adjoining the asylum, you are confronted with a species of political jobbery which was put through the Legislature in '83. The stone walls for a penitentiary, in a needless and half-completed state, mock the honest taxpayers who were jilted out of \$100,000. It is still believed, however, that the penitentiary will eventually be voted here from Carson City, and that in such case the present waste will not be all a waste.

F. B. L.

## Stanislaus Notes.

EDITORS PRESS:—Since the heavy rains have ceased falling, we are having fine weather here. The peach trees are in full bloom and the flowers are springing out of the moistened earth. The Oakdale Irrigation ditch is being pushed forward and we will have water by the first of May. The ditch is 12 miles long and has already cost \$75,000. Five thousand more will push it to this place.

The Turlock ditch is also being pushed as rapidly as possible. It is 40 miles long and will cost \$500,000. The Modesto ditch is surveyed, but nothing of importance is done to it. It is also 40 miles long and will cost \$600,000. In contemplation of the completion of these ditches, many trees and vines are being planted and nurseries are planted by almost every one. The vegetable gardens are being enlarged and many orange trees are being cultivated.

People, however, are not willing to invest largely in lands until they see the water here; there have been so many drawbacks in getting the ditches completed. There will evidently be a boom when the water gets here, as many inquiries are made about the price of land and the nature of the soil.

Among the prosperous fruit-growers might be mentioned A. Scheil, and the Knights' Ferry people, and the Stewarts of Oakdale, Mr. McHenry of Modesto, the Italian gardens, C. S. Hill, F. A. Sawyer and others. The Knights' Ferry oranges are the largest fruit of the kind brought to market.

The time will come when the land around this place will be out up into 10, 20 and 30 acre lots, and the population will be more than doubled. But it takes time to plant and to grow orchards. Ten years from now will present a different sight of the settlements around Oakdale. We do not wish to boom the place, as exaggerated statements only disappoint people. We are willing to let the place boom itself. Certainly the location is all that could be desired in regard to health and beauty of surface. The soil is well adapted for all kinds of fruit. All we need is water and capital and industry.

A large quantity of grain was sown around Oakdale this year and there is a promise of an abundant harvest. We will let you know when the ditch is completed to this place.

Oakdale

S. B. McCORMICK.

## Water Pipes for Irrigation.

EDITORS PRESS:—I have been a subscriber and constant reader of the RURAL for several years, and I have gained much information from the many essays therein; but there is one topic which I have never seen treated upon in your columns, and that is the subject of water pipes for irrigating purposes, the friction that the water has to encounter, etc. There must certainly be some among your correspondents who know all about those matters from actual experience, and from such I would like to hear.

Suppose that the main water ditch runs along a ridge 150 or more feet higher than the ground to be irrigated; the distance between 100 rods; the pipe after receiving its water from the main ditch descends the hill to a depth, if measured perpendicularly, of say 200 feet, there crossing a narrow ravine, thence ascending the opposite slope to a height of 100 feet, thence descending again 50 feet to the ground to be irrigated. Suppose this ground requires six inches of water. Under such a condition of things, I would ask how large a pipe is it necessary to have; or, in other words, how small a pipe could be used, considering friction, etc., to give satisfactory results? And also would like the experience of others as to the kind of pipe best adapted for that purpose.

Now another question: Mr. A, we will say, owns the ground just mentioned, and Mr. B, who lives beyond him, would like the pipe to

continue to his place adjoining, and large enough to supply both; but while Mr. A wants six inches Mr. B only wants three inches. Is there any way the water can be equitably divided in the pipe so that Mr. A and Mr. B can get their just proportion of water, and so that the pressure be not materially lessened for either Mr. A or Mr. B? Will some one give information on these points?

C. H. KELLOGG.

Newcastle, Cal., March 14, '91.

[These questions are both interesting and important. We should much like to have correspondence upon them.—EDS. PRESS.]

## FLORIST AND GARDENER.

## Native Plants in a San Rafael Garden.

EDITORS PRESS:—May I ask for precious space for a few lines in the "Florist and Gardener" column of your interesting and valuable paper to say that I have seen a handsome Toyon or California holly (*Heteromeles Arbutifolia*) in the garden at "Miller Hall," that is about four years old, is fully 12 feet high, and has been bearing beautiful scarlet bunches of fruit since last November. The tree was transplanted from the woods when very small to its present sheltered location of good soil, where it thrives satisfactorily and improves its fruit in size and color each year, until now it is "a certain charm and sweet delight."

I quite agree with your Santa Clara correspondent that California plants should be cultivated in California gardens. In the garden at the Miller Ranch I was also shown a towering Redwood tree from Nicasio Valley, that is nearly 80 feet high, planted to mark the centennial year of the immortal Declaration of Independence, 1876. The trunk is now 15 inches in diameter; the tree is sturdy and likely to reach mammoth proportions as it is well protected and in good ground. An attractive hedge I would suggest the wild flowering currant or "Incense plant" (so called by the native Californians, probably on account of the odor it exhales as resembling the perfume of burning incense which is used in Catholic church ceremonies).

It is a shrub of rapid growth with Currant leaves and abundant beautiful pink blossoms, which though smaller in form, resemble the purple Lilac. Those in the grounds mentioned above, are now in full bloom, and particularly sweet in untold charms for bees of almost every variety that swarm over and around the bush in the sunshine, and add to the peculiarly dreamy *dolce far niente* effect of the flowers, fragrance on the beholder by their monotonous droning and drowsy humming. We find here too, the red elderberry, a handsome shrub which has been successfully cultivated. The *Ceanothus* or California lilac has grown here into an elegant tree, and attracts attention to its soft pale blue flowers delicately fragrant as a spice breath of air from "Araby the blest."

The staunch Laurel, or *Lavrelle* as the natives called it, has grown to goodly trees around this home circle, from nuts, they tell me, that have stolen in with leaf loam. Trimmed and cultivated, they make unique and graceful ornamental trees. Oaks that have reared themselves in the same manner stand like steady friends wherever they are let; and the dear little *Manzanita*, with its pearly pendants of white delicious flowers, is as easily grown as a rose tree, if netted and cared for a little. The stately *Madrone*, whose leafage resembles the Magnolia of Georgia, is quite as beautiful as the latter under cultivation were not its blossoms so diminutive and delicate. The native White Clematis, or "Virgin's Bower," is a graceful pretty runner that attention soon fashions into an elegant climber. The pink and white Azalea requires moist soil and is worth considering, in face of the fact that it was mentioned under the name *Californica Rhododendron* for adoption as the "State flower." Native ferns and innumerable flowers, such as the Bleeding Heart (*Decentra Spectabilis*) *Cerulia Houstonia* or *Nemophila*, etc., have been gathered from their shady woodlands by the nature-loving inmates of Miller Hall, to add to the already endless "things of beauty that are a joy forever" in this perfect home and its sweet surroundings. P. S.

San Rafael, Marin Co., Cal.

## Trimming Ornamental Trees.

EDITORS PRESS:—I find such a strong feeling here in favor of cutting the lower branches of ornamental trees—even those of conifers—that I wrote to Prof. Charles S. Sargent asking his opinion. He is one of the greatest authorities upon arboriculture in the United States, being at the head of the Arnold Arboretum connected with Harvard University.

He answered: "Your inquiry about the removal of the lower branches of trees raises a question of considerable public interest, and I propose, therefore, to shorten your note a little and publish it in *Garden and Forest*, with an editorial expression of opinion on the subject which, I am sure, will have more influence than any personal expression from me. Of course you are perfectly right; there can be no more barbarous or horrible practice than cutting the lower branches of trees."

I send the editorial and will beg you to allow it space in your paper.—M. C. in Santa Barbara Press.

It should be the aim of cultivators of ornamental trees to preserve as far as possible all

their lower branches. The highest type of beauty in a lawn or park tree is that in which the lower branches repose on the ground, and which present a solid mass of foliage from top to bottom. It is not easy always to produce trees of this description, and it can only be accomplished by allowing them abundant room and air on all sides for free growth and development. Even with sufficient space about them, certain trees, like some of the pines and the sugar maple, lose their lower branches early and develop tall naked trunks. Lower branches are essential to the beauty of all coniferous trees which grow naturally with a pyramidal habit, like the firs, spruces and araucarias. Nothing is more ugly than one of these trees deprived of its lower branches growing by itself as a specimen.

Lower branches perform a valuable service to the tree, especially such trees as grow in very moist climates or in situations where they are exposed to high wind. Young trees, like firs and spruces, which grow generally on high mountains where the rainfall and wind are excessive, are provided invariably with long lower branches, which have two purposes: first, to check evaporation from the ground immediately about the stems of the trees, and then by keeping the principal weight of the branch near the base of the tree to enable it to withstand severe lateral pressure from wind. Such trees, as they grow naturally in the forest, become crowded, and the lower branches being deprived of light, cease growing and gradually die and fall off, being no longer needed for the welfare of the tree, which is protected by its neighbors from evaporation from the surface of the soil and from the sweep of the wind.

A specimen tree growing by itself with all its lower branches preserved is in very much the same condition, as far as protection is concerned, as the same tree growing in the midst of a dense forest and entirely destitute of branches for a height of perhaps 50 or 60 feet. That this is true appears from the fact that if all its neighbors are cut away from about a tree which has grown in a dense forest, it will soon perish from exposure to the sun, or will succumb to the first severe gale. It is more important to check evaporation from the surface immediately about the trunk of a tree than it is to cultivate the ground. Trees feed only through the ends of their roots, which extend laterally as far or farther from the trunk than the branches. The removal, therefore, of the lower branches of ornamental trees, especially of conifers, is a barbarous practice, which destroys their beauty and sometimes seriously threatens their existence.

## SHEEP AND WOOL.

## Sheepmen and Mountain Parks.

EDITORS PRESS:—In your issue of March 7th, under the heading "The Yosemite National Park," there appears an article signed "H.," accompanying a map of the reservation lately set apart by Congress. Familiar as I am with that wonder of wonders, the Yosemite valley, and with the grandeur of its surrounding country, I always read with pleasure any article descriptive of its beauties, and more particularly so when coming from the pen of so gifted a writer as "H.," who, when dilating upon his favorite subject, the Yosemite, can carry his reader with him to such an extent that he recoils in imagination from the precipice to which "H.," with his vivid word-painting has led him, and reading further he can readily believe that he is beneath the waving boughs of the mighty sequoia and the perfumed scent of the pine is in the air. I have, therefore, no criticisms to make upon his poems in prose; no fault to find with his vivid and realistic word-painting; no complaint to make by reason of his enthusiastic plaudits over the Act of Congress in setting apart this magnificent domain as a national park; but I do, in all earnestness, object to his uncalled for criticisms and unwarranted assertions in relation to the acts of those sheep-owners who took advantage of the free pasturage offered them to drive their flocks to the mountains in the summer-time. To us (and I include myself for the reason that I was the first who was attracted in '63 to the "ancient grasses" which abounded in the mountains now included in the region set apart for a park) he applies the name of "vandals" and "despoilers," and "thanks God" and several other powers "that the bands of the despoiler and vandal are from henceforth to be legally paralyzed."

Allowing God to be the judge, I would be perfectly willing to place side by side any number of "sheepmen" who have been guilty of taking their sheep to the mountain, with an equal number of tourists and campers out for pleasure; have them hold up their hands, and ask that a special dispensation of temporary paralysis be visited upon those who have been guilty of the greatest amount of "despoliation." There is a slight inconsistency in the reasoning of "H." when he accuses the sheepmen of this wanton destruction. Would he liken them to that famous personage, so often referred to, who killed the goose that laid the golden egg? Is it likely that practical business men will burn the grass and brush which furnish the feed for their sheep? Now, isn't it very probable, "H.," that these 19 fires which you counted from your lofty view on top of the South Dome, and which, by the way, is lower

than the surrounding peaks, might possibly have been started by campers?

Have you ever heard, "H" (and I know you have had a long experience in the mountains), of campers setting fire to dead pines at night in order that they might have a glorious Fourth of July time in the midst of their wild and wild surrounding; and then have you never known of their going away in the morning leaving them burning? And then, too, have you never seen these vandalistic sheepmen work like Trojans to fight it down in order that the fire might not be destroyed?

I am inclined to believe that "H," in his earnestness to convict these "shepherders," has allowed his zeal to overcome his judgment. Possibly his vision, like the echoes of that remarkable region, repeated itself; otherwise he would have had the mountains in the immediate vicinity of the Yosemite absolutely swarming with those woolly pests, for, crediting a flock of sheep to each of his 19 fires, all to the northward, there would have been at least 38,000 sheep grazing in the forests, surrounded by fire, and leaving in their wake a "dusty" fire-swept country, where but a short time before was a beautiful "mountain garden." I say they would have been swarming because the south dome is lower than the surrounding country on all sides excepting toward the valley, and therefore "H's" view must have been somewhat limited. We are almost forced to believe that "H" must have had a "pull" at something else, other than the Anderson rope, before he could have arrived at such a kaleidoscopic conclusion.

As a matter of fact, and no doubt "H" will hold up his hands in holy horror at the statement, sheep prevent the spread of forest fires by thinning out the undergrowth and by the making of trails, which always assist in preventing the spread of fire. I believe that the Government should continue to allow the sheep to be driven to the mountains in the summer for the purpose of allowing an industry to continue to thrive which has always had access to the feed and which may be seriously jeopardized by the deprivation of it, and also to keep down the undergrowth which, once having caught fire, will endanger a whole forest. There is no doubt, however, that the Government should closely watch the campers and compel them to cease setting dead pines on fire for their own amusement, and who carelessly leave their campfires burning when they break camp.

As for our being "vandals"—God save the mark—what have we done to warrant such a term being applied to us? Have we destroyed any works of art or literature? Have our woolly pests trampled into the "dust" any masterpiece of some famous artist? Have we torn a leaf from any work of prose or poetry to start a devastating, forest-consuming fire? Even "H" would acquit us of such a charge. There only remains, therefore, according to the definition of vandal, that we are ignorant, ferocious, rude or barbarous.

My camp was on the trail to the Yosemite, in early days, and but a few miles from there. It was a convenient stopping-place for parties on their way to and from the valley; the lath-string was always out, and everybody was welcome to what there was in the larder. Nor was it my custom to charge a dollar a meal and fill them up with an eloquent dissertation on the unapproachable sublimity of the Yosemite. So it was with every sheep camp. Travelers were always welcome. Therefore, I believe that we can demand a verdict of acquittal as to the charge of being ferocious, rude or barbarous. I grant we may be. We are practical men. We were looking for sheep feed and we found it. We did not have time to lie in the shade of a lofty pine listening to the soft sighing of the wind through the branches of the trees, to the distant roar of the mountain torrent, and anon to the echoes of the crashing, booming waterfall as it leaped and tumbled over some mighty precipice, carrying with it tons of ice, and then with "eyes in fine frenzy rolling," indite a poem descriptive of all these wonders, and have our minds brought back to this lowly sphere by the discordant sounds of a sheep bell, or perhaps by the aroma from a passing flock.

Sheep men and artists, poets, and the like, have probably a different idea of the beauties of nature. Sheep men, upon discovering a mountain meadow enclosed by lofty peaks and precipices, might turn their sheep in on the grass, and build a brush fence across each end of the meadow. An artist, a man fitted by nature to guard the beauties of such a spot, and keep untarnished this jewel in nature's crown, would, if we may judge from the Yosemite, immediately fence it in with wire fences, plow up the natural grass, sow it with grain, raise hay and sell it to the campers at \$40 a ton; chop down the trees for cord-wood and place flaming notices upon the trees in various places that no camper would be allowed to graze his horses, except in a certain limited space, and that no shooting would be allowed. The beauties of nature would in this way be fully protected, but the sheep man, unappreciative creature, despoiler of nature's charms, destroyer of forests, vandal, and all that is bad, would spoil all, if he were allowed to even approach it.

H. J. OSTRANDER.

Merced, March 16th

RACING AT SAN JOSE.—The spring meeting of the San Jose Blood-Horse Association will be held April 4th, 7th and 9th, 1891, at Agricultural Park, San Jose. A very attractive program will be presented.

## THE VINEYARD.

### Census Report on Viticulture in California.

The Census Bureau has issued a bulletin on the subject of grape culture in the United States. A table gives in detail by States the development of this industry, and the figures show that California has more acreage in grapes than all the others combined.

The following are the statistics of that State for the year: Area in bearing vines, 155,272 acres; area in non-bearing vines, 45,272 acres; average yield of grapes per acre, 17 tons; market value per ton, \$1766; sold for table use, 38,785 tons; sold to wineries, 235,526 tons.

Wine made, 14,626,000 gallons; raisins produced, 1,372,195 boxes; value of plants, including land, \$86,640,350; persons employed, 100,422. Of California the bulletin says: There are 53 counties in California, nearly all producing grapes in greater or less degree, the larger proportion producing wine for home consumption or export. There is an established demand for this wine to the amount of 1,000,000 gallons per month from this country alone, making 12,000,000 gallons annually, an exportation to foreign countries of \$11,922 gallons being made in 1889, valued at \$217,093.

California may be divided into three grape-growing districts, the coast district, the Sierra Nevada foothills and Sacramento valley district, and the southern district. In the first district the finer grades of white and red dry wines are made, and the choice varieties of French and German types seem to come nearer to reproducing themselves here than elsewhere.

In this district are successfully grown the finest varieties of French champagne grapes, which yield a handsome profit to the producers. There is one cellar in this district with a capacity of 800,000 bottles, producing champagne by natural fermentation in bottle. The champagne industry in California is a growing one, and its future is bright with promise. White wine is the leading viticultural product, and fine table grapes are also produced in this district.

Some good white and some dry wines are produced in the second district, but they are in different character from the German and French types of grapes for table use, and raisins are extensively grown, a large portion of the new planting being for raisins. In the Sacramento and San Joaquin valleys and in the southern district the same excellent dry wines are produced, but these valleys excel in their port, muscatel, angelica and other heavy sweet wines. In Napa county there are 20,763 acres.

Phylloxera has destroyed many acres of vines in this county, but the acreage has been kept up to about the same point by replanting on resistant stock and planting new vineyards farther up on the foothills, where a choice variety of grapes is grown and phylloxera is not such a scourge. There are 142 wine-cellars in Napa county; many of them are modern constructions, containing all the appliances for the manufacture and handling of wines. There were 3,000,000 gallons of wine made in this county in the census year 1889.

Sonoma county.—This district in 1889 had 21,683 acres in bearing vineyards, and the same conditions exist here relative to the quality of grapes and wines produced as in Napa. The ravages of phylloxera were felt in Sonoma at an earlier day than in Napa, appearing about 1874, and a great many vineyards were destroyed. It is now generally believed that the destruction caused by phylloxera can be stayed by growing native resistant stock and grafting upon that the foreign vinifera. In Sonoma county in 1889 there were produced about 1,756,300 gallons of wine and 250,000 gallons of brandy. The quality of dry white wines was marked.

Santa Clara county.—This district contains some 12,500 acres of bearing vineyards, and should enjoy a reputation for fine white and red wines equal to Sonoma and Napa. This and Santa Cruz county in 1889 produced 2,544,000 gallons of wine. As yet phylloxera has troubled the vineyards but little in comparison with the counties before mentioned. There is said to be a deep gravelly bed underlying this whole surface, in which the growers say the phylloxera does not work with success.

Alameda county, in the first district, has 6500 acres in bearing vines, and produces a type of wine resembling the white and red wines of France, and in the part of the district known as the Livermore district a high grade of Sauterne and claret is produced. The geological formation of the valleys and slopes of the Mount Diablo range more nearly reproduce the soil conditions that characterize the department of Gironde in France than any other section on the coast. In this district there were produced in 1889 some 60,000 gallons of wine, noted more for its quality than for the quantity produced. This is comparatively a new wine district and has grown up within the last decade. The first systematic planting of high grade grapes began in 1882.

There is in the second district a great viticultural interest, embracing the table grapes, raisins, sweet and dry wines and brandies, excelling in the latter. Sacramento, Placer, El Dorado, Tehama, Yuba, Butte and Yolo produce large quantities of table grapes, and quite a large quantity of raisins is shipped from some of these counties. Tehama has the largest vineyard in the world, 3800 acres, to which the

manager says 1000 acres of new vines are to be added within a year. There were in the distillery on this vineyard in April, 1890, which was visited by the special agent of the Census Office, 300,000 gallons of brandy and 1,700,000 gallons of wine.

Another large vineyard, the second largest in the State, contains 1500 acres, and is situated at Folsom. The Sacramento winery belonging to the vineyard has a capacity of 600,000 gallons. Many table grapes are shipped from this vineyard to Eastern markets, and sales in this direction have largely increased during the past two seasons.

The third district is composed of San Joaquin, Merced, Fresno, Tulare, Kern, Ventura, Santa Barbara, Los Angeles, San Bernardino, Orange and San Diego counties. Near Stockton, in San Joaquin county, is located one of the largest vineyards and wineries. Fine brandies are made in this district; also sherry, ports and some excellent clarets. Fresno county contains at this time some 25,000 acres in bearing vines and 15,000 acres in new plantings, the larger portion of which is grown for raisins. There are, however, a great many gallons of wine and brandy made in this county. The wines are mostly sweet and of excellent quality.

The raisin pack in 1890 was 626,595 boxes, and the wine produced 1,200,000 gallons. The soil seems to impart a vigor to the vines that is unknown elsewhere in the world. The second crop is often very nearly equal to the first, and the third comes before the leaves fall off. More than half the raisin grapes grown in California are produced in Fresno county. San Bernardino county, in this district, is also principally devoted to growing raisin grapes. There are 9562 acres bearing and 4125 non-bearing.

The raisin pack for 1890 amounted to 375,000 boxes. Two wineries in San Bernardino county produced 279,000 gallons of wine in 1889. There were also shipped from this district 1700 tons of table grapes. Los Angeles county has 18,120 acres in bearing vines. A new and mysterious disease attacked the vines in the southern portion of this district about 1885 and ruined more than half the acreage. Every effort has been made to discover the cause and remedy the evil. The most expert scientists have been consulted by the State Board of Viticulture in California, and the Department of Agriculture has appointed an expert to investigate and report upon the matter.

There were produced in 1889 in Los Angeles county 25,820 tons of 511,640,000 pounds of grapes for wine, and 1000 tons or 2,000,000 pounds for table purposes. The wines in this county are justly celebrated and were the first shipped from California to the Eastern markets. This county excels in its sherrys, ports and brandies. There were 20,000 boxes of raisins packed in 1889, the new disease having reduced the product about one-half. The product of Orange county, lately formed from portions of Los Angeles county, is included in the above figures.

In San Diego county there is an acreage of 6000 bearing, and 7500 non-bearing vines. Of the latter 6000 were just coming into bearing in 1889 and did not add much to the product. While this shows a fair increase in the growth of the industry during the last four years, the increase is accounted for by the fact that a new disease that was so injurious in Los Angeles did not affect San Diego county. It is in El Cajon Valley of San Diego county that the most progress has been made in viticulture. There are 27,000 acres adapted to fruit-growing and 3000 acres bearing raisins in the vineyards in El Cajon.

The raisins from this valley are among the finest produced in California. The product of the El Cajon valley in 1889 was 75,000 boxes; in the balance of San Diego county the pack was 75,000 boxes, and in all, 150,000 boxes. Another successful branch of viticulture in this district, is in the shipment of table grapes to the Eastern markets. Many of the elevated localities are so free from frost that grapes can be left on the vines until January. As it has been noted in this bulletin that California has the largest vineyard in the world, it may be well to state that she has also the smallest.

It is a vineyard consisting of a single vine in Santa Barbara county. It was planted by a Mexican woman about sixty-eight years ago and has a diameter, one foot from the ground, of twelve inches, its branches covering an area of 12,000 feet and producing annually from 10,000 to 12,000 pounds of grapes of the Mission variety, many bunches weighing six and seven pounds, the crop being generally made into wine. The old lady who planted this one-vine vineyard died in 1865 at the age of 107. Viticulture is already a great industry in the Pacific division, and promises to become still greater in the near future.

The total area and production of the vineyards of the United States during the year 1889 are given as follows:

Area in bearing vines, acres.	Average yield of grapes per acre, tons.	Market value of grapes per ton.
Arizona.....	1,000	300
California.....	155,752	177
Georgia.....	1,938	133
Illinois.....	3,750	200
Indiana.....	3,542	175
Kansas.....	10,000	200
Missouri.....	1,186	300
New Mexico.....	43,350	175
New York.....	4,000	175
North Carolina.....	28,075	180
Ohio.....	1,500	250
Tennessee.....	4,100	200
Virginia.....	45,000	200
Other States and Territories.....	45,000	200

## PUBLIC AFFAIRS.

### California School Lands.

EDITORS PRESS:—It seems that the State has various tracts of school lands for sale; is there no law or authority for advertising them, giving the location, description section, township, etc. As it is now, if a person desires to purchase a tract of school land, he is compelled to pay some land shark or land attorney a high price just to tell him where such land is located, which information he has secured from the State land office. I am informed that land companies send parties out to survey, photograph and locate the more choice tracts of land, and then hold the land for high commission for the information secured. I suppose they have the right to do this, but it seems that the State might spend some of the tax payers' money in giving notice to the public where these lands are located, as well as to appropriate money for portraits, of each succeeding Governor of this State, that the masses of the people never see and have no use for.

San Jose.

EDITORS PRESS:—There is no law authorizing the advertising of school lands. Each and every citizen of the State can get as full and complete information at the land or surveyor's office, Sacramento, regarding the lands, as is possessed by the officials in charge. Locations and surveys, together with field notes, can be had of lands which are not sold or filed on; but even with this knowledge, unless the would-be purchaser goes in person or sends a responsible agent to examine the land, he takes great chances in getting that which is not to his liking. Of necessity, to obtain personal knowledge or information through a trusted agent takes time and costs money. Aside from this, while securing or waiting for desired knowledge regarding the land, it is liable to be filed on by another person. It is the cost of getting this information, through trusted agents, that we are informed school land agents charge to purchasers, when either locating or selling them school lands.

The writer's canvass among those who have sold, and also those who have bought school lands, has resulted in giving him much valuable information, which briefly stated is as follows: The school lands were set apart by the United States to the State, for the benefit of the public schools, the proceeds received from their sale by the State going to the school fund. They comprise the 16th and 36th sections of each township, or the lands selected by the State in lieu. These lands are sold in tracts of from 40 to 640 acres. Residence on, or improvement of, the land is not necessarily required. The title to school lands comes from the State direct to the purchaser, and is based on patent to the State from the United States. The terms of payment are much easier than on any other cheap lands offered.

The school lands are well culled, yet it is said that in some of the northern counties good sections of rolling and plateau lands can be found, and as the localities are settled up, better railroad and shipping facilities are among the possibilities within the next five years. It is said that some prairie lands are offered in the southern part of the State. These lands have heretofore been classed as arid, but under our irrigation system and developments made in the various counties where located, they have fully demonstrated their productiveness. Railroad construction is very active in this part of the State. In the coast and central counties, it is said that there are to be had some choice hill and mountain lands. Many of the most flourishing and best paying hill or mountain orchards were at one time uninviting chaparral-covered lands.

Aside from farming lands there are timber lands, for which, owing to their growing scarcity, there is an increasing inquiry. This demand is probably intensified by reason of the last Congress passing a law withdrawing Government timber land from market.

In connection with the above, the following from ex Governor R. W. Waterman's message to the 28th Legislature of this State is of interest: "While California has been selling her school lands at an absurdly low price, Michigan has been realizing over \$5 per acre; Indiana, about \$4 per acre; Illinois, about \$4 per acre; Ohio, over \$5 50 per acre; Colorado, from \$3 to \$50 per acre; Nebraska, not less than \$7 per acre, for land obtained under the same grant, while in Minnesota \$5 per acre is the minimum price, and she has sold 1,000,000 acres of her school lands at an average of \$6 per acre. In Kansas, school lands are sold after appraisalment, the minimum price being \$3 per acre.

"Immigration is large, lands are rapidly increasing in value, and Section 3494 of the Political Code should be so amended that our remaining school lands be sold for a price commensurate with their value, made subservient to the purpose for which they were donated, and legislation enacted from the standpoint of finance—revenue being the sole object."

J. R. F.

FOR PAINTING WALLS OR OTHER OBJECTS EXPOSED TO DAMP.—A composition of very fine iron filings and linseed oil varnish is said to be much used in Germany; and, when the object to be painted is to undergo frequent changes of temperature, linseed oil and amber varnish are added to the first two coats. This paint may be applied to wood, stone or iron; in the case of the latter, it is not necessary to free it first from rust or oily matters.

## PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

## The Master's Desk.

R. W. DAVIS, W. M. S. G. OF CALIFORNIA.

There are some things we should have constantly with us through life. Old end young, high and low, rich and poor, male and female, each one should always be polite. Politeness costs but little. You can afford to be polite to a scamp. He may not know any better, but you should. He may not appreciate the duty owing to fellow-beings, but you should fully appreciate your station and rank in life. Be polite when others are hoarse; be courteous to strangers; be obliging to old end young, and you will have friends in all the days that are to come. Politeness wins when other more pretentious virtues fail.

As I write, the cheerful, happy innocent children are busy with their play, just underneath my window. Their joy, mingled with the bright sunshine, the fragrant flowers and the opening buds, makes the heart glad, and renews the ambition, which each one of us should have, to do something, and to be something, that will bring joy to the home end happiness to mankind. How much of such labor there is for us to do? Are you willing to perform your part?

Are you a boys' man? That is, are you such a man as the boys like? If you are, it is safe to say you are not a crank, not sour, not dyspeptic, not boorish, not selfish, not arrogant, not self-opinionated, not egotistic, not cheeky. Don't you know that children know whom their friends are? They don't select cranky, grown-up people for friends. If you are a boys' man or a girls' woman, it is safe betting you have hosts of friends, both old end young, and the writer is one of them.

You know that no trees bear fruit in summer that do not blossom in spring. No Grange will report a big harvest this Fall, when we meet at Haywards, unless that Grange does some good, sensible, hard work right now. This is the Spring. Soon the Harvest will be upon us. Which Grange in California will report the greatest number initiated during the year?

There is not much doubt but the coming session of the State Grange will be largely attended. Several new features may be expected; the election of officers, the attraction of Haywards, the reunion of friends and many other things insure a good attendance.

The G. A. R. celebrate their 25th anniversary, April 6th, 1891. The P. of H. will celebrate their 25th anniversary very soon. Both of these organizations have done much good to their respective membership.

The silent, honest vote of the farm is having a wondrous effect in the halls of many of our sister State Legislatures. Before two years shall have passed, this same vote will be felt in California. Men have made written and oral promises to get votes, and then after election, violate those promises. But when the next election comes, the people will say "Depart from our presence ye evil doers; we want officers who have convictions and the courage of those convictions. You have been unfaithful once; we will never trust you again," which is to teach us, keep the eye of the mind on the record of some of those "Honorable" now at our State Capitol, for they may want your vote some day.

Read a few lines at each of your meetings, from the Journal of Proceedings of the State or National Grange. There is much valuable information to be had by so doing.

If your Grange wants to have a "big time," and will arrange to get the farmers and their families to attend that meeting, the State Grange will be pleased to send you a Speaker. Name the person you want, and assure to give the Master plenty of time, and, if possible, that particular person will be sent to you. If he can't go, some one else will be detailed. In asking for Speakers, please name a first and a second choice. The Executive Committee is anxious to do all possible for the Good of the Order. We have Speakers and the money necessary to pay their expenses, but want to utilize both to the best possible advantage. So call for workers if it is for the Good of the Order.

Thanks for copies of Journal of Proceedings of Maine and Vermont State Granges—much valuable reading in each. The W. M. of Maine State Grange is the "prince" of good fellows, end Bro. Messer of Vermont is as sweet as his maple sugar.

Grumbling don't help you any. The grumbler is like unto a tree that has two long, dead branches. Each may attract attention, but neither has friends. Each may have started well in life, but neither has made a success of it. Each is a hiding-place for hooters; one shelters grumbling men and the other is a home for hooting owls. Perhaps each fills a necessary

station in the world's menagerie. But for my part, I prefer the man who sees some good in his fellow-men, and the tree that has plenty of green foliage, where birds may sing end nest, and where life and happiness may find a lodgment. Don't grumble too much! Your station in life might be worse than it is. Better join the Grange, end thus enjoy the sunshine, the life, the joy, the happiness, of the bird in the growing, green-leaved tree, and of a useful man among a thrifty, honest, persevering people.

There are few men in the United States today who command more attention than ex-Senator John J. Ingalls of Kansas. It is not generally known that the ex-Senator is both a poetical and a prose writer of the highest order. Most people know of Mr. Ingalls only as a politician. The following choice gem is from his pen. It was written some years since, and as this is the season of the year when our hills, valleys, dells and slopes are covered with Nature's carpet, it seems proper, appropriate and useful to refresh our readers with the reprint of the sublime words of John J. Ingalls on the subject of

## Grass.

Next in importance to the divine profusion of water, light and air, those three physical facts which render existence possible, may be reckoned the universal beneficence of grass. Lying in the sunshine, among hutterups and dandelions of May, scarcely higher in intelligence than minute tenants of that mimic wilderness, our earliest recollections are of grass; and when the fitful fever is ended, and the foolish wrangle of the market and the forum is closed, grass heals over the scar which our descent into the bosom of the earth made, end the carpet of the infant becomes the blanket of the dead.

Grass is the forgiveness of Nature—her constant benediction. Fields trampled with battle, saturated with blood, torn with the ruts of cannon, grow green again with grass, end carnage is forgotten. Streets abandoned by traffic become grass-grown, like rural lanes, end are obliterated. Forests decay, harvests perish, flowers vanish, but grass is immortal. Beleaguered by the sullen hosts of winter, it withdraws into the impregnable fortress of its subterranean vitality, and emerges upon the solicitation of spring. Sown by the winds, by wandering birds, propagated by the subtle horticulture of the elements, which are its ministers and servants, it softens the rude outlines of the world. It evades the solitudes of deserts, climbs the inaccessible slopes and pinnacles of mountains, modifies the history, obfuscates end destiny of nations. Unobtrusive and patient, it has immortal vigor and aggression. Banished from the thoroughfare and field, it bides its time to return, and when vigilance is relaxed, or the dynasty has perished, it silently resumes the throne from which it has been expelled, but which it never abdicates. It bears no blazonry of bloom to charm the senses with fragrance or splendor, but its homely hue is more ennobling than the lily or the rose. It yields no fruit in earth or air, yet should its harvest fall for a single year, famine would depopulate the world.

## Attend Your Grange.

An important circular has been sent out by the Executive Committee during the past week, to be read in each Grange, which every member should have the benefit of. It explains the Trade-Card system of co-operative buying now being adopted for the benefit of Patrons of this State (end any other should they wish to embrace the opportunity offered California Patrons). Samples of Trade Cards have been mailed each Grange. All Deputies should pay particular attention to this matter. If any further information is wanted, address the Master or Secretary of the State Grange.

## To State and County Deputies.

Deputies are recommended to post themselves on the trade card system, end visit every Grange in their jurisdiction, counselling with and giving information to members as to the means for securing the greatest amount of benefit they can derive from the same. No matter what trading facilities may be offered through other associations, there are few if any farmers who cannot save many times the cost of their annual dues by the additional business privilege available through membership in the Grange.

TEMESCAL GRANGE had a good meeting on Saturday, the 21st. Sister Paine read an excellent and interesting paper on Sanitation and Sanitary influence and conditions surrounding farmhouses and farm life. Some discussion followed on the best methods of securing perfect sewerage and drainage.

The invitation of the President of the Alameda Co. F. A. and I. U. to the Granges of Alameda Co., to send delegates to a meeting to be held at Pleasanton on Saturday, April 4th, at 1 P. M. for the purpose of forming a County Farmers' Institute was considered, and the following were appointed such delegation, namely: Bro. A. T. Dewey, Bro. Walter Renwick and Sister Renwick.

WOODBRIDGE GRANGE will confer third and fourth degrees at a meeting to be held on April 7th, at 10 o'clock, with Harvest Feast. All Patrons that can attend are invited to be with us, as an enjoyable meeting is anticipated.

## Government Ownership of Railroads.

EDITORS PRESS:—In your issue of Feb. 28th there appears a thoughtful article over the signature of W. H. Aiken of Santa Cruz. There is certainly no radical difference between us on the subject of government ownership of railroads. The difference appears to be only in methods end matters of detail. One pertinent inquiry of Mr. Aiken is:

"Why not seek to influence the Government directly to build end equip a road, a highway for the people, without referring in any way to a former effort of the Government to aid others in building the Union and Central Pacific?"

Manifestly the Government will have to take the very course here suggested by Mr. Aiken in the greater portion of the work in providing itself with

## Transportation Facilities

Sufficient to regulate and control the carrying trade.

"No action of Congress can impair or in any way alter the contracts between the Government end the aided railroads."

As a principle of law, Mr. Aiken is certainly correct in this declaration; but when one party to a contract willfully violates its provisions, it is no longer valid or binding if the injured party feels disposed to annul it; end if the report of the Interstate Railroad Commission, made to Congress in 1887, after a thorough investigation of all the facts in the case, can be relied on, the Central and Union Pacific Railroad Companies have violated every vital provision of their contract with Congress; consequently the contract becomes

## No Binding Force on the Government.

Hence said roads can legally be thrown into a receiver's hands at the option of Congress, at any time.

"There are facts in the case that confront the Government in considering the subject of a settlement as to the amount justly due end the extension of the time of payment, such as:

"1st. There is a first mortgage of about \$60,000 per mile that might be paid upon the foreclosure of the second mortgage held by the Government upon the railroad from Omaha to Sacramento.

"2d. That the mortgaged property is not worth the amount due on the first mortgage, because a new road could be made for less money, either by the Government or by private enterprise.

"3d. When the Government surrendered its security on the property and permitted a first mortgage of all the railroad was worth, it was left practically unsecured."

Mr. Aiken is mistaken as to the amount of the first mortgage bonds. Those held against the Union Pacific and Kansas branch amount to \$33,532,000, and against the Central and Western Pacific to \$27,855,680, aggregating \$61,387,680. The number of miles of railroad held liable to the Government for its loan, and for these \$61,387,680 of first mortgage bonds, is: Central Pacific, from Ogden to Sacramento, 737.50; Western Pacific, from Sacramento to San Jose, 123.18; Union Pacific, from Ogden to Omaha, 1035; Kansas Pacific, from Kansas City westward, 333.94, aggregating 2229.62 miles.

Now, dividing \$61,387,680 by 2229.62 miles of railroad gives us the rate of

\$17,532.80 Per Mile.

First mortgage bonds, instead of \$60,000 per mile, as stated by Mr. Aiken.

The estimated value of the Union Pacific and Kansas branch by said Interstate Railroad Commission in 1887 was \$50,757,173; that of the Central and Western Pacific, \$49,331,003, which added together aggregate \$100,088,176. Deducting the amount of the first mortgage bonds, \$61,387,680, we have a remainder of \$38,700,496, valid security for the Government loan to said railroads, which amount is certainly worthy of an effort on the part of the Government to obtain before it entirely disappears, as has the greater portion of the \$447,729,470 given by the Government, counties and cities in bonds, money and lands to aid in the construction of these roads, which actually cost, completed and equipped, only \$96,000,000.

"In view of these facts, does Mr. Webster advise no settlement, and the payment by the Government of the first mortgage bonds for an old railroad, a streak of rust, from Omaha to Sacramento?"

In answer to this interrogative, I will say that I would advise no settlement with these companies providing for

## An Extension of Time

For the payment of their indebtedness to the Government, for we believe, as Governor Patton's report (to which reference has been made) declares that "extension of time for payment, therefore, means in reality an increase in the amount of the debt, and the making of its recovery the more hopeless."

As to the railroad simply being "a streak of rust from Omaha to Sacramento," we have already shown that the most competent authority declares that said bonded roads are worth \$38,700,496 in excess of the value of the first mortgage bonds. I would, therefore, favor the paying off of the first mortgage bonds and taking charge of the roads by the Government as a nucleus, and I further advocate the

Condemnation of Some Line of Railroad Or the construction of a new one from Omaha to New York, and the further condemnation or construction of a more northern route, and one

further south, from the Atlantic to the Pacific oceans—all such construction to be done by contract in sections not to exceed 10 miles in extent—grading, tie-furnishing, end rail-laying to be let in separate contracts, to the end that the citizens along the line of the several sections may be competent and able to contract for such work; thereby securing the distribution of Government money where it is more needed.

I am further in favor of the Government issuing legal-tender notes sufficient to pay for all this work and for the proper equipment of said roads, thereby increasing the volume of currency where it will do the most good.

Three such trunk lines of railroad from the Atlantic to the Pacific, in the hands of the Government, will regulate the carrying trade of the United States, compelling other roads to adopt substantially the same rates as the Government lines or become simply feeders to the people's system. It would probably require the issuance of \$500,000,000 of such legal-tender notes to fully complete the work, all of which is at present greatly needed for actual use. Such legal-tender issue should be redeemable in coin of the United States, or convertible into two per cent bonds, at the option of the Government.

This plan is feasible and practical, without any question of doubt, which in conjunction with a

## Postal Telegraph System,

Acquired in the same way, will relieve the whole nation of its greatest embarrassments end place the worst forms of corporate power under government control. Some relief must be had from the dominant influence of these corporations and other immense concentrations of wealth; otherwise the 30,000 men who now own one-half the wealth of the nation will have another quarter thereof very soon. Then, or even before that time, will come chaos, and the millionaire will realize that he is weaker and more defenseless than the poorest tramp on the streets.

J. V. WEBSTER.

## From Traveling Deputy Logan.

EDITORS PRESS:—I have just returned from a visit to Galt and Elk Grove, about 25 end 15 miles, respectively, south of this city. At the elegant home of Bro. Thomas McConnell, some three miles south of Elk Grove, I was hospitably entertained on two evenings. This homestead consists of 1500 acres of the choicest land in the great Sacramento valley, being one of the pioneer locations of the State. Mr. McConnell came into possession of the property in the early "fifties" with a number of its first-class improvements on the place, so that together with the adornments and attractions which his good taste, skill and industry have since added, it may be classed with the model rural homes of California. Besides the bestowment of liberal attention to the improvement of every species of domestic live-stock, to Mr. McConnell belongs the distinction of being the pioneer importer of thoroughbred American merino sheep, at a cost of nearly \$300 per head.

## Elk Grove Grange

Is classed among the live Granges of the State. It has a membership of 70 odd, who vie with each other in fulfilling the obligations of true Patrons. A portion of my first day's visit was spent in driving around the Elk Grove settlement in company with Mr. McConnell, by means of which I formed some pleasant acquaintances and increased my information on the resources of the soil. Among others we called upon was Mr. Geo. H. Kerr, one of the cornerstones of Elk Grove Grange, and President of Elk Grove Farmers' Alliance. He has a large fruit orchard, besides 50 acres in vines, making most of his grapes into a superior article of raisins—his maxim being "quality rather than quantity."

In pursuance of the suggestion of Worthy Master Davis of the State Grange, Mr. McConnell and I drove to Galt to learn of the advisability of reorganizing Galt Grange. We consulted with a number of the most intelligent farmers and formerly most active members, and found the following impediments in the way: There are at present lodges of Masons, Odd Fellows, A. O. U. W., Chosen Friends, Good Templars, Golden Shore, Rescue I. O. O. F., Encampment I. O. O. F., Iron Hall, K. of P., Uniform Rank K. of P., the Y. M. I., besides four churches, a dancing club, a whist club and several sewing circles, and Farmers' sub-Alliances, all around the village, which, with all the surrounding neighborhood tributary to it, does not contain a population of over 500 souls. With the above facts before us we can easily realize the truth of the assertion made to us in reply to our appeal in behalf of the Grange—"we are already Lodge poor and our time is fully occupied."

While it would seem to us as clearly the part of wisdom for the people of Galt to drop at least one-half of the above societies and unite with and sustain organizations of unquestionable utility like the Grange; to be practical, we were compelled to deal with the situation as we found it. Finding no one sanguine of successfully maintaining the organization should we have effected it, no one with courageous determination to lead the hosts in the struggle for right, justice, liberty and on to final victory, we reluctantly retraced our steps. I am now en route to Yolo county, and will keep you advised of my movements and prospects in the furtherance of the cause of the Patrons of Husbandry.

F. B. L.

Sacramento, March 19, 1891.

### Prison Grain Bags.

As harvest approaches, interest quickens in the available supply of bags from the prison factory. The regulation of the sale of these bags has received much attention this winter from farmers in the grain regions, as has been shown in our columns. By special effort Senator Ostrom's bill has passed both houses, and because of the importance of the subject, we give its full text as follows:

SECTION 1. It shall be the duty of the State Board of Prison Directors, from time to time, to fix the price at which jute goods shall be sold by the State, but at no time shall the price be fixed be more than one cent per bag in excess of the net cost of producing the same, exclusive of prison labor; and it is made the duty of State Prison authorities to confine the sale of jute goods to consumers direct, but no order shall be filled for any one individual or firm, during any one year, for more than 5000 grain bags, except on request of the Warden, and the unanimous approval of the State Board of Prison Directors.

SEC. 2. Demands for jute goods by consumers shall be promptly filled in the order in which they are made, but when the supply is short, demands shall be registered at the prison in the order of their arrival, and filled from the output of the jute-mill in the order of registration; provided, that on and after the 15th day of June of each year, by and with the consent of a majority of the Board of Prison Directors, the Warden may fill orders for larger quantities to actual consumers, as they may, in their judgment, deem expedient; provided, that the orders of farmers and other actual consumers shall take precedence over all others; provided, that ten per cent of the purchase price shall accompany each order, and the remainder must be paid upon delivery of the goods.

SEC. 3. It shall be the duty of the Board of Directors of the State prisons to store the jute goods manufactured at the State prisons at suitable points in the agricultural portions of the State, as they may designate by resolution of the board, in such quantities and upon such terms and conditions as may be for the best interests of the State, and for the convenience of the consumers thereof.

SEC. 4. All orders for jute goods must be accompanied by an affidavit setting forth that the amount of goods contained in the order is for individual and personal use of the applicant, said affidavit to be subscribed and sworn to before some Notary Public or a Justice of the Peace residing in the township in which the applicant resides.

### Current Comment.

EDITORS PRESS:—I note an item and an article in your issue of the 28th of February which requires far more than a passing thought, the item touching as it does on the education of the rising generation, and the article by Geo. Huemann of Napa on information for statistical aid to the Department of Agriculture. The item referred to is from W. M., Davis' column, relating to the "little district school in the lane."

We boast of our educational institutions, and yet President Elliot of Harvard says, and says truly too, that our schools are cultivating memory mainly and crushing individuality entirely. Other prominent educators are reiterating the same fact. Our trade and scientific journals are all presenting the same fact, though from a different standpoint, bewailing, and justly, the fact that all the important positions in our practical arts are filled by foreigners; that our American youth is too anxious for financial results to apply himself to learning his calling thoroughly.

In short, he is averse to bringing patient thought and industry to his real advancement. The schools are not entirely to blame for this condition of things; as soon as our people really see the situation, it is to be hoped that they will require real results from our schools. I noticed, recently, a proposed course of study, issued by the State, that shows plainly that some are on the right track; that some one realizes the necessity of teaching the rising generation to see, and seeing, understand.

Mr. Huemann's article shows either a total disregard of their interests, by the agricultural class, or that they see no good in the effort he is making.

It seems to me that a knowledge of the true situation would be beneficial to every producer who was not compelled to sell.

QUID NUNC.

### What Is Wealth?

Stored labor.

Who makes the wealth?

The toilers.

Who store it?

The speculators, the manipulators. They are known as the upper ten thousand. They hold in financial bondage the lower ten millions—the toilers—together with their wives and children. Besides these two classes there is a vast army of non-producers who realize the folly of toiling for the benefit of others, and are making their living in ways often criminal and debasing, and always injurious to the best interests of society. B. O. BROWN.

Glenwood, Santa Cruz Co.

## FARMERS' ALLIANCE.

SUBSCRIBERS wishing fuller information of the Alliance can have their names changed to the Grange Edition of the RURAL PRESS free, much to their advantage, this department being continued in the same.

### A Little Plain Talk.

[By J. L. GILBERT, Lecturer Cal. F. A. & I. U.]

It is said that our last Congress appropriated for various purposes \$1,081,279,471.92 of the people's money—an amount greatly in excess of the entire National debt.

Probably less than one-fourth of this sum will be used for the relief of the people and in the interest of good government, while the remaining three-fourths will go to reward hoodlums and political tricksters and to grease the wheels of the great machine that is used in the manufacture of millionaires.

All this while the great masses are groaning under the burden of taxation, and hundreds of thousands of our people are suffering for bread to eat and raiment to put on.

No wonder that Americans are truly a patriotic people. No wonder that our virtuous and

their work, and that their deeds are recorded in letters that cannot be effaced, to be passed upon by a tribunal higher, and we hope purer than any American politician of to-day.

You will find that they are aware that the "tariff issue is not a national issue, nor even a local issue, but a class issue, against which an intelligent community will revolt; that they favor no North, no South, no East, and no West, but our one great, common country; that they will favor platforms and parties and laws that are built, not particularly in the interest of the poor man, or the rich man or the middle man; not for the advancement of the red man or the white man, or the black man, but for the greatest interest and the most rapid advancement of man, of God's great humanity, and we here declare that no earthly motive, no lofty summit of human ambition, no proud pinnacle of human power, no loud acclaims of the multitude shall ever seduce us from the God-given sentiment of our great Alliance heart in favor of equal rights for all and special privileges to none.

Who is prepared to say that in making our demands we prostitute the ends of political economy or do violence to the moral law?

We make war on no landable or useful enter-

### Secretary Charles W. Pedlar.

In preceding numbers of the RURAL PRESS we presented photo-fac-simile engravings, with brief life sketches, of President Cannon, pioneer Organizer Barbee, and members of the Executive Committee. Without following any set order of rank, other officers in due course of time will be introduced to the Order at large through the columns of the State organ. We feel confident that in doing this it will prove a benefit in making the rank and file of the Alliance more acquainted with the men who lead in the cause. It will also tend to increase personal confidence, an essential element of strength and harmony in all associations.

In this number we take pleasure in presenting an engraving and also life sketch of Bro. C. W. Pedlar, Secretary of the State F. A. & I. U. of California, one of the most genial and faithful of Alliance workers.

Bro. Pedlar was born in Wisconsin in 1841. He, with his parents, "crossed the plains" in 1852. His boyhood days after arrival were spent on a farm in Yolo county. In his early manhood he learned the carpenter trade and located at San Jose in 1866. In 1872 he moved to Gilroy, where he has since resided, working at his trade. For many years he has taken a prominent part in temperance reform, which gave him a wide circle of acquaintances throughout the State. His wife died 16 years ago. He has two grown up children a son and daughter. The latter is a teacher in the public schools.

Bro. Pedlar has been one of the hardest worked officers in the Alliance since the State organization was formed. His compensation has necessarily been small, but he has worked as faithfully as possible and we believe succeeded well in keeping the rush of business in his department in good system and fairly up to date.

### Gleanings from the Field.

The organization of Congressional District Alliances all over the country is being pushed vigorously. In this form of organization a means is made available for practical effort in securing the demands of the Order through national legislation.—*National Economist*.

As soon as our State is thoroughly organized, the district organizations will be heard from in California.

The *Farmers' Union* (Memphis, Mo.) says: "The Missouri Legislature have indorsed the Ocala platform with the exception of the sub-treasury clause and the clause relating to Government control of railroads. The Legislature might as well have denounced the entire platform." The above holds good everywhere. The two old parties are willing to concede to such demands as can be manipulated to seem one thing and mean another. But when it comes to a frank, open reform measure that can only be used for one purpose, and that one a source of benefit to labor in production, the result is the same as that shown by the Missouri Legislature. The next Legislature in that State will pass a different resolution, without doubt, as the Alliance is about done with such treatment.—*National Economist*.

"We must educate or we must perish."—*Patrick Henry*.

According to the census of 1880, we had over 50,000,000 people in the United States, and \$43,642,000,000 in property—more than enough to count \$800 to every individual, or \$5000 to a family.—*Garden City Alliance*.

It behooves the wealth-producers of the U. S. to diligently inquire into the cause of our present unequal and unjust distribution of wealth, and if there is a remedy (and there is), apply it. Fellow-laborers, organize!

In 1850 [the farmer] owned 70 per cent of the property of the United States; in 1880, 33 per cent; and it is almost certain that the census of 1890 will reduce that to 15 or 20 per cent, and the people wonder at the general dissatisfaction and restlessness of labor while the country is so prosperous!—*Garden City Alliance*.

Salmon P. Chase, before his death, confessed that the scheme to establish the National banks was the greatest blunder of his life. G.

AMADOR COUNTY.—Three branch organizations of the Farmers' Alliance have been effected in Amador county: Julian District—Henry M. Northup, President; Miss Lucretia Swift, Secretary. Shenandoah Valley—S. C. Wheeler, President; J. H. Phillips, Secretary. Union District—A. B. McDonald, President; E. Merkel, Secretary.

D. J. COLE of Kansas, a National Organizer, has organized an Alliance at Jordan, Linn county, Oregon, with Jacob Huher President and Frank Thayer, Secretary. There were 50 charter members.

THE farmers are organizing Alliances among themselves in this county. Prof. M. V. Rusk and W. Sample have organized six Alliances in Umatilla county, Oregon.—*Salem (Marion Co., Oregon) Journal*.

An organization of the Farmers' Alliance at Jefferson, Linn county, Oregon, has been perfected, with Charles Miller, President, Archie Libby, Secretary.

Photo by Fitzgerald & Witham, Gilroy.

C. W. PEDLAR.

Sec'y California F. A. & I. U.

saintly politicians (?) view with surprise and consternation the fact that the great industrial classes are "out on a strike" and that they feel the foundations of their political citadel begin to tremble.

Gentlemen, we are not organized as a band of thieves and robbers. We are not pilferers of other men's purses. We are not clamoring for bread that others have earned. We seek not to destroy existing political parties nor present political affiliations. Justice is what we ask and justice is what we will have.

If we can get it at the hands of either of the old parties, well and good. The party that gives it to us is the party we will support. Since our organization was formed and made its demands, both of the old parties have had an opportunity to do or try to do what they intended to do for the people.

If, after all our legislative bodies have adjourned, it is found that they have dealt out simple justice in "due and ample" form, that will satisfy. If not, we are of the opinion that the ranks of the old parties will look scattered when, in 1892, their candidates take the stump with those old promises "we will do" this, that and the other deed, and thus save the country from ruin.

One half of a century is long enough for any people to stick to a party on the strength of pledges that are made once in two years only to be broken. You will find, gentlemen, that in 1892 party pledges will not do. You will also find that if you have postponed action on measures that embrace the imperative demands of the people with the expectation that out of those measures you can formulate successful campaign documents in 1892, that will not do. Two years hence you will find that the masses are aware that the war is over, that slavery has been abolished, that those who spilled their blood in the cause of freedom have accomplished

prise. We lay no obstacle in the path of civilization or enlightenment; we do not and will not clog the wheels of human progress, but seek to suppress personal, local, sectional and national prejudices and do away with all unhealthy rivalry and selfish ambition, to divert the energies of the saloon-keeper, the usurer, the thief and the gambler into better and more useful channels, to promote and defend the common cause of our race, and to perpetuate the institutions of our fathers.

For the accomplishment of such ends, the good will ever pray and ever act.

SUTTER COUNTY FARMERS' ALLIANCE.—A Farmers' County Alliance for Sutter county, says the Marysville Democrat, was organized at Yuba City, March 20th, under the most favorable circumstances. Every sub-Alliance in the county was represented by delegates and each one was enthusiastic over the prospects and objects of the organization. The assemblage was composed of representative farmers who realize that in union there is strength and that the time has come when they must force from the clutches of land-grabbers and monopolists the reins of government and take into their own hands the welfare of the people. The following officers were elected and installed: President, P. L. Bance; Secretary, O. H. Campbell; Treasurer, Joseph Metteer; Doorkeeper, R. W. Tharp; Assistant Doorkeeper, J. P. Halford; Lectress, Mrs. Phoebe Smith; County Organizer, W. W. Stewart.

No wonder that the movement for the election of United States Senators by direct vote of the people has become popular. Election by the Legislature seems to be little more than a matter of hargain and sale, the corrupt element commonly having the balance of power in that body.—*Marysville Appeal*

### Good Country to Live In.

The German Emperor and I  
Within the self-same year were born,  
Beneath the self-same sky,  
Upon the self-same morn;  
A Kaiser he, of high estate,  
And I the usual chance of fate.

His father was a Prince; and mine—  
Why, just a farmer—that is all.  
Stars are stars, although some shine,  
And some roll hid in midnight's pall;  
But argue, cavil all you can,  
My sire was just as good a man.

The German Emperor and I  
Eat, drink and sleep the self-same way,  
For bread is bread, and pie is pie,  
And kings can eat but thrice a day,  
And sleep will only come to those  
Whose mouths and stomachs are not fees.

I rise at six and go to work,  
And he at five and does the same,  
We both have cares we cannot shirk;  
Mine are for loved ones, his for fame.  
He may live best, I cannot tell;  
I'm sure I wish the Kaiser well.

I have a wife and so has he;  
And yet, if pictures do not err,  
As far as human sight can see,  
Mine is by long odds twice as fair,  
Say, would I trade those eyes dark brown?  
Not for an Empress and her crown.

And so the Emperor and I  
On this one point could ne'er agree;  
Moreover, we will never try;  
His frau suits him and mine suits me.  
And though his son one day may rule,  
Mine stands A 1 in the public school.

So let the Kaiser have his swag,  
Bid kings and nations tumble down,  
I have my freedom and my say,  
And fear no ruler and his crown;  
For I, unknown to fame or war,  
Live where each man is Emperor.

—Boston Globe.

### "Everybody's Easter."

[Written for the RURAL PRESS by ADAH FAIRBANKS BATELLE.]

The rain dropped with a discouraged sound.  
The clouds looked somewhat upset and frowning.  
No wonder, for the discouraged letting-go  
of the drops of water would soon pull those  
cloud-banks to pieces.

It was 10 o'clock in the morning, but the  
house seemed dark. The work department of  
Mrs. Somers' house was scrupulously clean.  
The rooms had an atmosphere that said, even  
to a person outside the door, "We have been  
put in perfect order and will remain empty till  
dinner time.

The sitting-room, too, was in order. Silence  
equally deep and darkness equally profound  
reigned there. Yet a cheerful person would  
not have been cast down. That room, light-  
ened by bright faces would not have depressed  
the most sensitive human barometer.

There were no bright faces in Mrs. Somers'  
sitting-room. The sole occupant, a melancholy  
little figure, stood by the window, discon-  
solately tapping at the pane. A half hour later  
she might have been heard counting the ticking  
of the clock. She could count only to seven-  
teen, so when she reached her limit, she went  
back and counted again, over and over and  
over in a tired little voice. It was pitiful—the  
joyous note in her voice at the striking of the  
clock. Her little face was all eagerness, as the  
noon hour neared. In counting she pro-  
longed each word "one, two, three," with a lit-  
tle oo of delight, and when the twelfth stroke  
had been given, she left the room, and trotted  
to the dining-room door.

She stood there expectantly for several min-  
utes, then the door was opened from the out-  
side, and a burst of child voices filled the room.  
Eager as Bessie was to see her brother and sis-  
ters, she quailed them with many movements  
of her little hand and the words "Mamma  
says," repeated till they listened. Mamma  
says "your lunch is all weddy there, and she is  
not coming down."

"Is mamma sick? She is not, is she?  
What's the matter?" asked Fred, all in a  
breath. "No, but she's looking over Lily's  
finger, and says you must not come upstairs."

A hush fell upon the little group. They  
knew that upstairs the mother sat weeping,  
mourning for little Lily, who had gone from  
the home and whose place no one else could fill.  
The children began to eat in silence, four  
children who ought to have been gleeful, as the  
birds. The lunch was wholesome and daintily  
prepared, but no motherly face smiled over it  
across the table, and the little faces were very  
sober.

"I wish papa came home to lunch." It was  
Jenny who made the daring wish.  
"It would not make any difference" said  
Dora, shaking her head sadly.  
"Poor mamma feels so badly," said Fred.  
"I wish I could go to school. It is so lone-  
some here, Bessie said softly. I wish it had

been me that had died, and not Sister Lily.  
Mamma loved her better than she loved the  
rest of us. She would not have missed me."

"Oh Dora, its wicked to talk that way" ex-  
claimed Jenny.

"I think it's true, don't you Fred," said  
Dora appealing to him.

"I—don't know. Sometimes it looks that  
way. Loyalty to his mother, to the dead sister  
and to the living sister struggled together.

"Poor mamma," he said lovingly, and little  
Bessie said "poor mamma."

The children did not wonder at their  
mother's grief; they had grown accustomed to  
it, but it saddened the world for them. Even  
for little Bessie, who could not remember her  
sister's death.

Nearly three years before, the little Lily, a  
sunny-tempered child had gone from them. In  
the peaceful child death, there was no sting.  
It was a beautiful going to sleep. But Mrs.  
Somers had cried out that she could not part  
from her darling; that her children were dear  
as life, and she could not lose one; that Lily  
had been her favorite. Pity the children whose  
mother has a favorite. In justice to this mother,  
she loved her children impartially. It was but  
natural, that she should think the child she  
had lost was dearest. This was her way of  
measuring her love.

Like many others, "she gave to God with  
tears," and had her training been different, she  
would have rebelled, saying that God was  
cruel. Instead, when her first grief was past,  
she deceived herself with the supposed resigna-  
tion while daily mourning "as one without  
hope."

"There are so many things to remind me,"  
she often said, and whenever called to re-  
arrange some toy or garment of the loved one  
she felt the old sorrow in all its force and  
wept until her aching head sent her to lie down  
for the rest of the day. Husband and children  
were shut out from sorrowing with her. They  
learned to avoid anything that would recall  
their trouble, so in the family circle the name  
that should have been an inspiration and a  
loved memory was rarely spoken.

On this day she had found a bit of Lily's  
work, an unfinished bag of pink like one of the  
child's dresses. The unfinished work and the  
unfinished life—one spoke of the other, and so  
the mother had drawn apart to think of the  
child who needed nothing while the other  
children starved for her love.

The rain had stopped. The children had re-  
turned to school and Bessie was again at her  
lonely watch by the window when Mrs.  
Somers came down stairs. The little sentinel  
left her post and stole to her mother's side to  
kiss the averted face.

"Mamma," she whispered, "isn't it most  
time for your Easter lily to bloom?"

"Yes, dear."

"Will next Sunday be Easter, mamma, or  
the Sunday after?"

"Next Sunday, Bessie."

"Aren't we glad?"

"Yes, Bessie."

"Don't you 'pose Jesus wanted us to be glad?"

The mother did not answer. Two lines from  
something she had read clung in her memory  
as shells and sea moss cling to a ship:

How can the world be gloomy, sick, or sad,  
When Christ, the Lord, has risen for us to-day?

"How can the world," the words sung them-  
selves over, and she could not rid herself of  
their echo.

After waiting for a reply, Bessie went on in  
her odd, old-fashioned way, "I'd like to have  
been at His Easter, and I guess it was 'cause we  
couldn't be that he let us have our own Easter."

"Yes, we keep Easter every year."

"I don't mean that. I mean our Easter  
when we die. Mamma, mamma"—there was  
insistence in Bessie's tone—"don't you think  
we ought to be happy because he made an  
Easter for everybody?"

It was a new thought to the child. Was it  
new to her mother? How often she had heard  
it, but never in just that light. For a moment  
Mrs. Somers stood face to face with this truth, ac-  
knowledging it as a personal visitor. No other  
reception wins. In that moment Mrs. Somers  
had a vision of herself as she had been; of her  
injustice to her living children in her selfish  
grief for her dead. In that moment she felt a  
reproof as from Christ Himself. Would not  
He care for her little one, her "Easter Lily,"  
in His garden?

Was not her work in living for and loving  
the little ones left to her care? With a silent  
prayer for help, she began her new work.

She praised Bessie that she had been such a  
quiet little girl all day, and inwardly resolved  
that the child should spend no more such lone-  
ly days. The affectionate words and caresses  
erased all thought of the long hours, and Bessie  
was blithe as ever.

Presently the little maid ran into the kitchen  
with a scream of delight. O mamma, come and  
see, the Easter lily has bloomed, and it bloomed  
out in the rain, and it looks so—so happy."

How can the world be gloomy, sick, or sad,  
When Christ, the Lord, has risen for us to-day?  
Said Mrs. Somers, reverently, as she kissed her  
daughter.

Fifteen minutes later, Bessie was at the  
dining-room door, telling the children in her  
happy voice, "Mamma is all well again, and  
the Easter lily has bloomed."

O, baby lips, interpreting aright,  
That hidden meaning making all so plain;  
If so, there dawns for us that heavenly light,  
Then Christ, our Savior, has not lived in vain.

### Hosanna He is Risen.

[Written for the RURAL PRESS by GERTRUDE.]

Shout aloud let earth resound;  
Ring ye bells with joyful sound.  
Shout He's risen! Oh shout aloud!  
Till the hills these words will echo  
He is risen, He is risen.

Praise Him early in the morn;  
Praise ye Him from night till dawn.  
For He's risen, and we shall rise.  
Shout Hosanna! loud Hosanna!  
We shall rise for He is risen.

Bring to Him your richest treasure  
Flowers rare and without measure,  
Lay them down at Jesus' feet  
While each heart repeats in gladness  
He is risen, He is risen.

Alameda March, 1891.

### Our State Flower.

[Written for the RURAL PRESS by M. L. S.]

There's a flower that grows in our valleys  
And blooms in our fields of grain;  
It's been crowned at the Court of Flora,  
A Queen o'er the wild flowers to reign.

It is loved by the little children  
For its blossoms of yellow hue;  
They gather them by the armpit,
